RECENT NOTICES OF THE RURAL NEW-YORKER.

THE RURAL NEW-YORKER.—To say anything in commendation of this excellent agricultural and family paper in this section seems superfluous. The large packages which weekly come to every post-office in this county show that its merits are known, and furnish commendation heartier than any words of ours. Still our liking for the paper (and for its genial publisher too) will not allow us to give the advertisement without a good word editorial. We make the word a short one, just enough to say that the RURAL is *the best* paper of its class of which we have any knowledge. And further—since cheapness is a test with many—it is *the cheapest*. Its cost is $3 a year—$2.50 in clubs. Its leading rival is a monthly costing $1.50 a year. Take out the many pages of advertising which swell the bulk of the monthly, and it will be found that the RURAL contains about the same amount of matter weekly which that gives monthly. And the matter in the RURAL is all valuable. Its editors are not only practical men but able writers, and its agricultural correspondents have a pithiness that we have often wondered at. If we were a farmer we should as soon think of doing without a plow as without the RURAL. —*Orleans Republican.*

MOORE'S RURAL NEW-YORKER.—Farmers are requested to carefully read over the advertisement of MOORE'S RURAL NEW-YORKER in another column. We can most conscientiously commend this excellent periodical as a *really first-class* agricultural, wool growers', graziers' and gardeners' paper. In all of these departments and others allied to them, there is in the RURAL NEW-YORKER a scientific thoroughness allied to plain practical utility, which entitles it to the highest praise. It is also an admirable family newspaper, containing much interesting reading of a varied nature, and truly artistic engravings. Price only three dollars a year—the literary matter in it alone being well worth more, and the agricultural reading three times as much.—*Forney's Press, Philadelphia.*

MOORE'S RURAL NEW-YORKER.—This old and model Agricultural and Family Paper is large, beautifully printed, and ably edited in all its departments. As an Agricultural, Literary and Family Newspaper, MOORE'S RURAL stands emphatically at the head of the list. It has no superior in America.—*Monroe (Mich.) Com.*

MOORE'S RURAL NEW-YORKER.—We have heretofore omitted to notice this most excellent journal, which we regard as one of the most valuable of all our exchanges. Our own columns have often been enriched by gleanings from its rich and interesting pages. As a family paper it is not surpassed by any that we have ever seen. It differs from most publications of its kind in being eminently practical in all its hints and suggestions on all the various subjects on which it treats. It is devoted to Agriculture, Horticulture, Rural Life, Literature, Science, Arts, News and Domestic Economy in all their various ramifications. Politics it entirely ignores beyond a brief synopsis of the news of the day, while its moral tone is excellent. Mr. MOORE, the proprietor and principal editor, is known to us personally as a high-toned and agreeable gentleman, while the Department of Sheep Husbandry is under the editorial control of Hon. HENRY S. RANDALL, LL. D., author of the Life of Jefferson, Hon. T. C. PETERS being the Southern Corresponding Editor. It is an eight page paper, containing forty columns of reading matter, and is published at the low rate of $3 per year.—*Old North State, Salisbury, N. C.*

MOORE'S RURAL NEW-YORKER has been an unparalleled success. Every succeeding year since its establishment has made some new feature, some decided and appreciated improvement in its form and matter, placing it far ahead of all rivals as an attractive, instructive and entertaining journal of the farmer, the horticulturist, the stock breeder and the gardener. Bro. MOORE is emphatically a *progressive* journalist, disbursing liberally of his princely income to increase the usefulness of his paper. The result is increase of patronage from year to year, till the RURAL has become standard authority with the enlightened agriculturist.—*Geneva Gazette.*

THERE is no mistake about it, MOORE'S RURAL NEW-YORKER is, taking it as a whole, the best family paper published in America. Why? Because it embraces every department to be found in any other Agricultural paper, with the addition of numerous others, and is served to its readers *every week* instead of *once a month*. Its eminence, popularity and boundless circulation is a convincing proof of its intrinsic value. —*Dansville Express.*

MOORE'S RURAL NEW-YORKER.—If the strong and voluntary commendation of this popular journal by prominent papers all over the country is evidence of merit, then it is by far the most meritorious periodical of its class in America. Of late, especially, its praise seems to emanate from a thousand papers between Canada and the Gulf, and the Atlantic and Pacific. And it is all deserved, for the RURAL has no equal in its sphere, being superior in ability and variety of contents, while, as we have before said, the dress, paper, engravings, printing, &c., are superb. Indeed, the RURAL NEW-YORKER is an honor to Rochester and Western New York, and has done and is doing much to make them favorably known in distant parts of our own land as well as abroad—for its circulation in the West, South, New England, Canada, &c., is large and rapidly increasing. Although its nineteenth year and volume does not commence until January, the RURAL is thus early receiving hundreds of letters and subscriptions daily, giving assurance of a large accession to its already immense circulation during the ensuing winter.—*Roch. Daily Union.*

MOORE'S RURAL NEW-YORKER is, in our honest opinion, the best weekly of its class in the United States, and, consequently, the best in the world. It is one of the choicest of family papers, beside containing more and better agricultural matter than can be found in any other journal. To persons in town or country it is invaluable, and we earnestly recommend it to all those who contemplate sending abroad for a family and agricultural journal, for, indeed, it has no competitor.—*Canton (Ohio) Repository.*

THE contributions to the columns of the RURAL are from the pens of the most gifted of America, and are of a very high literary character. It is ably edited, profusely illustrated, and neatly printed. It is practical, scientific and useful, moral in tone, pure in sentiment and highly entertaining.—*Trenton (C. W.) Courier.*

"THE BEST IS THE CHEAPEST," says the prospectus of the RURAL NEW-YORKER, in our present number, and the remark is true as applied to that excellent and deservedly popular weekly. It is rich in contents, beautifully illustrated, and complete in all respects.—*Houston (Texas) Tel.*

MOORE'S RURAL NEW-YORKER.—The reader is referred to the Prospectus of this spicy, wide-awake, enterprising weekly, published in another column. For three or four years the RURAL has been a great favorite with us; and although we are frequently too busy to even glance at some of our valuable exchanges, we always manage to peruse the well-freighted columns of the universally admired RURAL. We do not think it can be excelled in merits as an Agricultural, Horticultural or Family Paper. All its numerous departments are edited with rare ability. Its Editor-in-Chief, D. D. T. MOORE, Ex-Mayor of Rochester, may truly feel proud of his organ, which is National in aim and circulation, and which has frequently been lauded by the Press in every section of the Union. Great preparations are being made to render the new volume more attractive than its worthy predecessors.—*York Pennsylvanian.*

THE RURAL NEW-YORKER is a cheap and most excellent paper, and well deserves the high popularity it enjoys. It gives every week almost as much good reading as some of the monthlies present in their monthly editions. The RURAL is therefore much the cheapest paper. It is emphatically the People's paper, as everybody seems determined to have it. Its editor and proprietor is one of the best fellows in the world, and one of the saddest lacks in our editorial gathering last summer was his absence. Long may he and his valuable paper thrive like a green bay tree.—*Penn Yan Chronicle.*

MOORE'S RURAL NEW-YORKER.—Those of our readers in want of a first-class Agricultural, Literary and Family Newspaper are referred to the prospectus of this famous Weekly, which is soon to enter upon its Nineteenth Year and Volume. The success of the RURAL has been unequaled by any similar journal, and it is worthy of still greater prosperity and circulation. —*St. Joseph (Ind.) Register.*

CAN YOU DO WITHOUT IT?—Without what? MOORE'S RURAL NEW-YORKER. We should say certainly not. It contains something interesting for every one that can read; but to the farmer it is invaluable. It is without doubt the best agricultural paper in the country.—*Racine (Wis.) Advocate.*

THE RURAL NEW-YORKER. —This is one of the handsomest, best, most readable, entertaining and useful agricultural, horticultural and literary papers published in the United States. It is just what every farmer wants and should have. It is what every wide-awake family should read and profit by. Edited by a large corps of the ablest and most distinguished agricultural writers in the country, and receiving the regular contributions of many literary celebrities, the RURAL NEW-YORKER has established a reputation second to none, while its circulation is not only immense, but extends through every State in the Union. The RURAL NEW-YORKER is no stranger to many of our readers. Clubs of it come to nearly every Post-office in the county, and zealous friends are engaged in increasing its circulation. We wish them success; for it is through the efforts of such practical journals that agriculture is being raised from a rude pursuit to an enlightened science.—*Aledo (Ill.) Weekly Gazette.*

MOORE'S RURAL NEW-YORKER.—We have long been acquainted with the RURAL, and believe it has no equal in the land as an agricultural weekly newspaper. We have noticed that its summary of news is always complete and promptly up to date. On moral and religious topics it is always outspoken and correct. No one in the family is neglected, for each finds a "department" in the paper. We advise all, especially every farmer desiring a good family newspaper, to subscribe for MOORE'S RURAL NEW-YORKER.—*Christian Herald.*

THOSE of our readers in want of an agricultural paper published in the Middle States can find no better one than the RURAL NEW-YORKER, a splendid eight page paper, well edited, fully illustrated and finely printed. It is an agricultural and family paper, and its sheep department of which it makes a specialty is alone worth the price of the sheet.—*Progressive Age, Belfast, Me.*

MOORE'S RURAL NEW YORKER is now conceded to be the best, as it is the most popular, agricultural publication in the country. Its practical departments are especially full and valuable, while it gives a large amount of interesting literary matter. Both as a rural and family paper it is unsurpassed. — *Kansas Chief.*

PRESS OPINIONS OF THE RURAL NEW-YORKER.

THE RURAL NEW-YORKER, we notice, is out with its annual prospectus. Of its great agricultural merit there can be no question. While a remarkable ability and tact is shown in its editorial management, its typography and press work is beautiful, nothing being left lacking, either, in fine, distinct pictorial illustrations of topics treated. Its pages take a wide range with Agriculture, Horticulture, Rural-Life, Literature, Science, Art, News and Domestic Economy. We are glad that a paper of so much worth is so generally taken. Its summary of general news is most admirable. While ignoring any political bias, it still lets its readers know, briefly, all of importance transpiring in this direction. It is scientific, as well as plain and practical, and develops an unquestioned morality in the incidents and original stories introduced in its pages.—*Elmira Daily Advertiser.*

MOORE'S RURAL is full of variety, original and select. We confess to a surprise at the variety and richness of its contents, bountifully illustrated as it is. No paper on our list comes so near our ideas of perfection, for a secular family paper. It maintains a high moral standard.—*New York Observer.*

FROM quite small beginnings, Mr. MOORE has built up a business of an immense amount, and now furnishes to many thousands of readers the best Agricultural paper in the United States. We are glad to chronicle the growing popularity of this excellent paper.—*Batavia Republican Advocate.*

THE frequency with which we publish extracts from the RURAL shows our own appreciation of it. Eminent writers contribute to it.—*N. Y. Eve. Post.*

MOORE'S RURAL.—We take pleasure in calling the attention of our readers—rural and otherwise—to this valuable Farm and Fireside Weekly—the most popular Journal of the kind on this Continent, and doubtless in the great big world. Such an immense circulation and influence could only have been secured on the basis of *substantial merit*, which we affirm without fear of contradiction the RURAL possesses in an eminent degree. For the reading people are decidedly sharp, and are not likely to allow themselves to be humbugged by chaff year after year, even by so clever a man as brother MOORE. We are glad to see the people like the RURAL. Primarily an agricultural journal, it devotes much space to Science, Literature, &c., which it presents in a popular and attractive manner. No one will regret having subscribed for the RURAL.—*Marshall (Mich.) Statesman.*

MOORE'S RURAL NEW-YORKER.—No farmer can well afford to be without this pre-eminently and deservedly leading agricultural weekly of our land. Every department in it is complete—wool growers, graziers, gardeners and agriculturists, each find their needs supplied.—*Cazenovia Republican.*

MOORE'S RURAL NEW-YORKER comes to us freighted with information valuable to all who take an interest in the improvements of the times. We commend it to advertisers who desire to reach the farming communities.—*N. Y. World.*

THE RURAL is not only a favorite in the rural districts, but deservedly popular in the cities. No newspaper in any country ever run a more prosperous career.—*Louisville (Ky.) Journal.*

MOORE'S RURAL NEW-YORKER.—This most excellent Family Newspaper continues to improve in appearance and contents. It is ahead of all competition, and is certainly the best weekly paper published for farmers' families. Every number is a magazine of useful information, and a model of typographical beauty. The RURAL gives a carefully digested summary of news up to the latest dates. It also furnishes engravings, music, and puzzles for the youngsters. It is a complete paper in all its departments, and merits the patronage of the entire reading public.—*Clark's School Visitor, Philadelphia, Pa.*

THE RURAL NEW-YORKER, conducted by HON. D. D. T. MOORE, Ex-Mayor of Rochester, has attained the largest circulation of any paper of the kind in the country or the world; and this pre-eminence has been achieved by careful management, first-rate tact, judicious enterprise and liberality.—*Roch. Daily Dem.*

Now that our citizens are making up their lists of reading matter for the next year, we would call their attention to MOORE'S RURAL NEW-YORKER, which is a first-class family paper, and worthy of a million subscribers.—*St. Joseph (Ind.) Register.*

No one can possibly regret subscribing for the RURAL, as it will be read with profit by every family. It has excellent illustrations.—*Ind. State Sentinel.*

THE RURAL takes the highest rank as an Agricultural and Family Newspaper, and is wide-spread in its influence throughout the Union.—*Mo. Inquirer.*

THE best Agricultural Newspaper in America.—*Ladies' Repository, Cin.*

THE VERY BEST.—Merit always wins, and especially is this the case with newspapers. A good paper will always meet with success. Let a publisher but make his paper worth the taking and he will not lack the takers. The most noticeable instance of this fact which we just at this moment recall is the unparalleled success which MOORE'S RURAL NEW-YORKER has met with at the hands of the people. Mr. MOORE persists in making it the best agricultural and family paper published in this country, and the people, as a natural consequence, persist in taking it.—*Livingston Republican.*

MOORE'S RURAL NEW-YORKER is a large, handsomely illustrated, ably edited, and really valuable paper, devoted to Agriculture, the Markets, Choice Literature, etc. To farmers, such a sheet is invaluable; and indeed the contents of the RURAL NEW-YORKER are so varied, and so interesting, that it is worth a place on any table.—*N. Y. Era.*

THE RURAL is a very valuable paper, eminently practical in its character and pure in tone. Deserves and is achieving abundant success.—*N. Y. Times.*

MOORE'S RURAL NEW-YORKER, conducted by Ex-Mayor MOORE of this city, is an established favorite in thousands of families.—*Rochester Daily Express.*

THE RURAL is the *best Farm and Fireside Journal in America*, and has justly earned all its devoted editor claims for it.—*Chicago Daily Democrat.*

MR. MOORE *ought* to make a fortune out of his journal, and we trust he will, for *he is helping to make the fortune of the country.*—*Ohio Statesman.*

THE RURAL has no superior as a Family Newspaper. All who are in favor of and would promote "Progress and Improvement" in Agriculture, Horticulture, Domestic Economy, Education, and Rural Life, should use their influence in behalf of the Practical, Useful, Instructive and Pure Literature contained in MOORE'S RURAL NEW-YORKER, in preference to the trash and humbug so prevalent and deleterious to the minds and true interests of the People and Community. Those who contemplate subscribing for this valuable paper, either singly or by clubs, should do so at once, in order to commence with the new volume.—*Tribune, Medina, N. Y.*

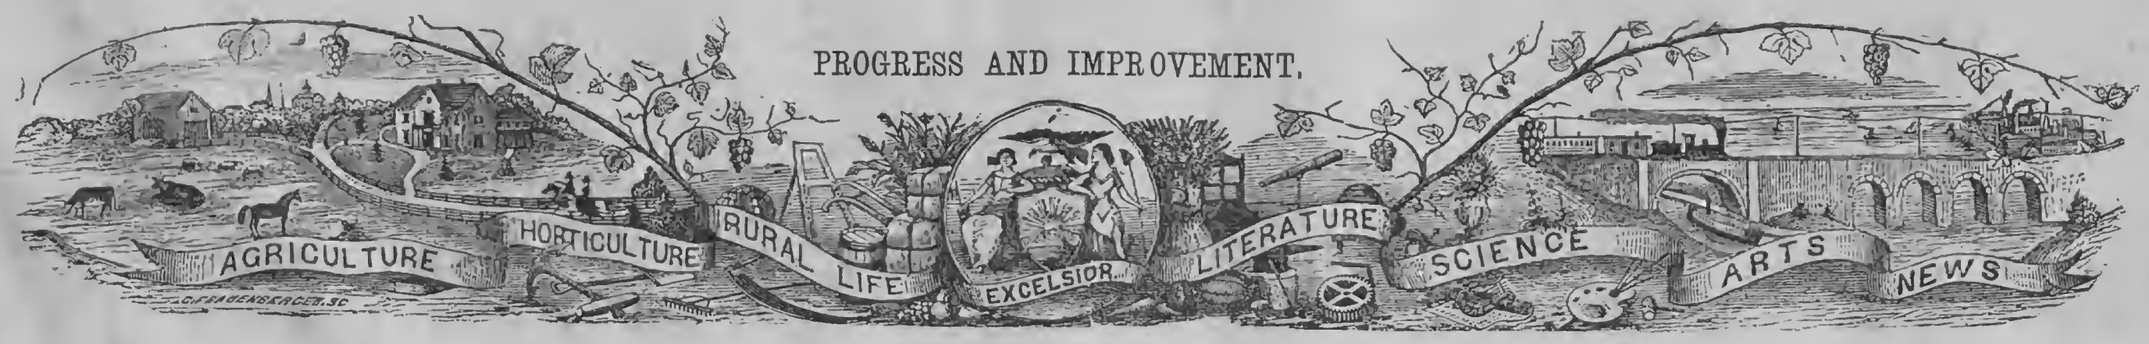
MOORE'S RURAL NEW-YORKER.—This excellent weekly journal has deservedly an immense circulation, as it is an authority on all agricultural subjects, besides being an excellent Literary and Family Newspaper for the country. It prints an edition of 75,000.—*American Artisan.*

WE know of no journal that we can so highly commend to our readers as the RURAL. As a family paper it has no equal. No farmer or mechanic should be without it.—*Economist, Markham, C. W.*

MR. MOORE deserves the most liberal success, for his journal is doing more good to the world, in the advancement of agricultural science and wealth, than any similar paper.—*Gazette, Le Roy, N. Y.*

A MODEL PAPER for the farmer's family. If we were to start a periodical again it would be in imitation of the RURAL NEW-YORKER.—*Am. Agriculturist.*

THE RURAL NEW-YORKER is like a honey-comb having sweets in every cell.—*N. E. Farmer.*



MOORE'S RURAL NEW-YORKER.

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO 1.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, JAN. 5, 1867. [WHOLE NO. 885.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL, D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

OUR NEW YEAR AND VOLUME.

THE initial number of the Eighteenth Year and Volume of the RURAL NEW-YORKER is before the reader. Though gotten up in haste, amid the cares and perplexities of an unusually busy period, we trust it will be found worthy of approval, in style and contents, and a fair indication of the value of the fifty-one succeeding issues of the volume. In sending it forth, we heartily wish all its readers a "Happy New Year," and especially those who have been its long-time supporters. And we propose to do more than *wish*—our aim being to interest, instruct and benefit all who may peruse the pages of this journal during the ensuing twelvemonth. Difficult as may be this task, it is entered upon in good faith, and with a firm and confident determination to accomplish the triple object. And, having a corps of Editors and Contributors who are conversant with the condition and wants of the Industrial Classes of both America and Europe, why may not the RURAL claim, without arrogance or pretension, to speak for and in the interest of the Rural Population of the whole Continent? With subscribers in every populated section of our widely-extended Republic, (and also in the adjacent British Provinces, Europe, etc.,) it behooves us to be well posted in regard to the best interests, and true "Progress and Improvement," of all civilized countries, and we trust the utterances of the RURAL during the year 1867 will demonstrate that our claims are not unfounded.

The tens of thousands who have read this journal for years need no explanation of its character or objects. They know that it is and ever has been an ardent and unflinching advocate of the Right, and condemner of the Wrong—that it ever seeks to promote the welfare of the Rural and other Industrial Classes, never, for either pay or favor, playing the part of the snob or sycophant, but always speaking plainly and independently. In brief, our earnest endeavor will be to make the RURAL NEW-YORKER the most entertaining and valuable, as it is the most popular and widely circulated, journal of its class in the world—a journal that can neither be bought nor sold by sharpers or swindlers, but which constantly strives to enhance the best interests of all engaged in Agriculture and kindred pursuits. When it cannot be conducted "on the square," it will surrender the field to journals which endorse or commend humbugs, knowing them to be such, *for a consideration*.

To those whom we now address for the first time—and the accessions to our subscription list indicate a myriad of such—we may say (as we have on several like occasions) that "Our object from the commencement of the RURAL NEW-YORKER has not been to furnish either an Agricultural, Horticultural, Scientific, Mechanical, Educational, Literary, or News Journal,—but rather to *combine* all these, and thus present a paper unequaled in Value, Variety and Usefulness of Contents. Our earnest desire has been to make it an honest, independent, reliable and eminently useful RURAL, LITERARY and FAMILY NEWSPAPER—correct in its teachings on Practical Subjects, instructive and entertaining to members of the Family Circle, of high moral tone, and entirely free from deception and quackery." Such has been our "platform" for the past seventeen years—brief, explicit and comprehensive; and if it pleases our readers as well in the future as it has in the past, we ought to be content,—for, in the language of the Louisville Journal, "no newspaper in this or any other country has ever run a more prosperous career than the RURAL NEW-YORKER."

Entering upon a new year and volume under the most favorable auspices, we again tender acknowledgments to each and all who have contributed to our success, and bespeak a continuance of their kind offices. Finally, with no desire to monopolize, and wishing well to every honorable contemporary—cheerfully conceding that each Agricultural Journal should be supported by the people of its locality or State, in preference to any other—we shall continuously and earnestly strive to excel all others in efforts to furnish the best combined RURAL, LITERARY and FAMILY NEWSPAPER on the Continent.

HINTS FOR THE MONTH.

Accounts.— The farmer should now be able to show on his books exactly the profit and loss on last year's operations. Many of the *guessing* kind of farmers would be surprised at the result which figures, those truthful exponents of facts, would exhibit. Take an inventory of stock, implements, and crops on the ground, so as to know the amount of capital you employ, and next year, with the account of expenses and receipts, you will have the data for accurately estimating your position. If figures show an absolute loss in growing certain crops you will probably abandon them, unless there is a fair chance for improvement. Thus, acounts will lead you to think about and practice better methods of cultivation.

Farmers' Clubs.—Without doubt you have often learned very useful facts in conversation with other experienced farmers. Would it not pay well, then, to have a weekly meeting of farmers in the town to discuss things and relate facts pertaining to your vocation? You would learn as much in one winter by this method as you have in five years by casual conversalon. Many others would also learn. You can form a club and hold meetings in the district school house, if not on a larger scale, with great profit and no cost to those engaging in the work.

Fodder.— Feed the coarser kinds liberally. Poor hay, stalks and straw should be fed out mainly in the beginning and middle of winter. Reserve straw enough, however, for bedding and to litter the yards with in the spring. Study how to economize food; not by stinting, but by better preparation; it can be done by having comfortable stables, by feeding regularly, by cutting fodder and mixing bran or ground grain with it, by steaming, and by having proper racks, so that stock can waste none by trampling on it.

Ice.— Improve the first opportunity to fill the ice-house. The best ice is that first frozen, if thick enough. Thawing and freezing are liable to render it porous. No matter on what plan your house is built, be sure and put plenty of packing between the ice and walls, and also on the top of the ice. Ventilate from the top and admit no air below.

Cutting Timber.— Fence posts, lumber logs, and rail timber, should be cut early—the sooner the better now—before the sap starts. Post and rail timber may remain on the ground until the milder weather of early spring before splitting.

Horses.— Turn them daily into the yards for exercise if you use them but seldom. Blanket in extreme cold weather. Break colts when there is no snow on the ground. Colts just weaned may require bruised oats to thrive.

Stables.— Use gypsum in these to absorb the liquids and increase the value of the manure pile. Light and ventilate well, but not by means of crevices in the walls or broken doors. Strong currents of air should be avoided.

Cellars.—Pick over the garden vegetables, potatoes, apples, &c., on stormy days, and remove all that are decaying. This is essential on the score of health as well as economy. A trifle of quick lime scattered among roots is beneficial. Keep the potatoes in the dark.

Water.— Sheep often suffer greatly for want of this in winter time; so with other stock. Don't force any stock to turn to a snow bank for this great necessary of life and health.

THE RURAL'S FARMERS' CLUB;

OR, TALKS WITH AND BY OUR CORRESPONDENTS.

Effect of Ashes and Plaster.

MR. N. N. MARTIN sends us the following account of the produce of a seven-acre lot for a period of eight years. When he bought the field it had been plowed continually for seventeen years. Soil, stiff clay loam. He seeded with clover, and sowed, the first year, half a ton of plaster, and harvested four bushels of clover seed per acre; the second year he used half a ton of plaster and the same amount of unleached ashes, and got five bushels of seed per acre; the third year he used half a ton, equal parts ashes and plaster, and the yield was four bushels per acre. The sod was then turned over in the fall, and the fourth year planted with corn and potatoes, on which ashes and plaster were used and a good crop realized. The fifth year forty-eight bushels of oats per acre were taken from the field without using any fertilizer; the sixth year twenty-one bushels of wheat per acre without any manurial application. It was then seeded with clover, which, after the wheat came off, was top-dressed with ashes, and the result was a very heavy crop of clover the two succeeding years. Mr. M. wishes to know if he has been throwing away money and time in buying and using ashes and plaster, as one correspondent of the RURAL says it is a bad practice to mix these fertilizers. He also thinks his land has become so rich that the small variety of clover must be sown.

We think our correspondent may be well satisfied that he has not thrown money away in purchasing and using ashes and plaster; but we venture the prediction that his field will not produce as largely during the eight years to come as it has in the past, if the management is similar.

Answer to a Bee Question.

E. TUCKER, Genesee Co., N. Y., thus answers a question about bees, recently asked in the RURAL:—"The Black bees require a hive of 2,000 cubic inches capacity; about the 16th of June they begin to build their cells, and on the 24th the first swarm may be looked for; about the 3d of July the second appears, being nine days after the first; so their manner of swarming is different from that of the Italian bees. The latter have a yellow band on the upper part of the abdomen, and the whole body is light in color; if not thus marked they are not pure. As the Italians do not build queen cells before swarming, this operation will take place earlier than with the Blacks, and the swarm requires a larger hive. The second swarm of the Italians issues sixteen days after the first, and the swarms are usually much larger than those of the Blacks. The advantages of the Italian bees over the others are these:—They are not so much inclined to rob other bees, and no Black bees can rob them. They breed faster and will gather more honey. I do not think they will stand the winter any better than the Black bees, but full as well."

Food for Cows.

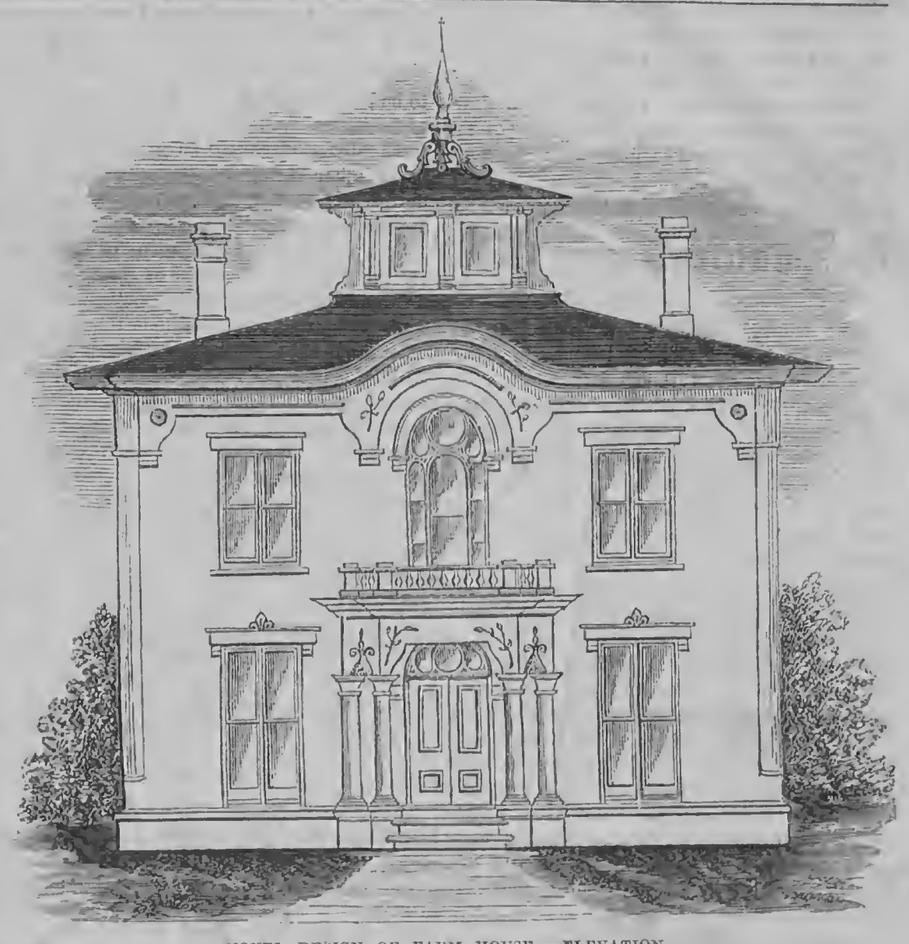
AUSTIN B. CULVER, Chaut. Co., N. Y., recommends "equal quantities of corn and oats ground together as the grain food for cows; feed clear or mix with chopped hay as deemed best. Clear corn meal is too heating for cows before dropping their calves; their udders are apt to cake, in which case the meal mixed with cold water and applied to their udders is an excellent remedy. Hens should not be permitted to roost in the mangers, as their manure is very offensive to cattle, and will foul their mangers so as to spoil their appetites. The eating racks should be cleaned and sprinkled with brine occasionally, and some of the latter put on hay well shook up is a good appetizer."

Horses—Protrusion of the Tongue.

Two correspondents have answered the query how to cure the very disagreeable habit in horses of carrying the tongue over the bit. "H. K. W.," Wayne county, N. Y., writes that he has prevented it by using straight bits and roughening the upper side with a cold chisel, so that it will chafe his tongue; he will soon learn to keep that member under the bit.

MR. JOHN CASSEL, Crestline, Ohio, advises the use of a straight or stiff bit, with a piece of sole-leather riveted to it so that it will project nearly two inches on the upper side. The leather should be placed in the center of the bit, and two and a half or three inches are sufficient in width.

—Several interesting Club items, intended for this number, are necessarily deferred.



NOVEL DESIGN OF FARM HOUSE—ELEVATION.

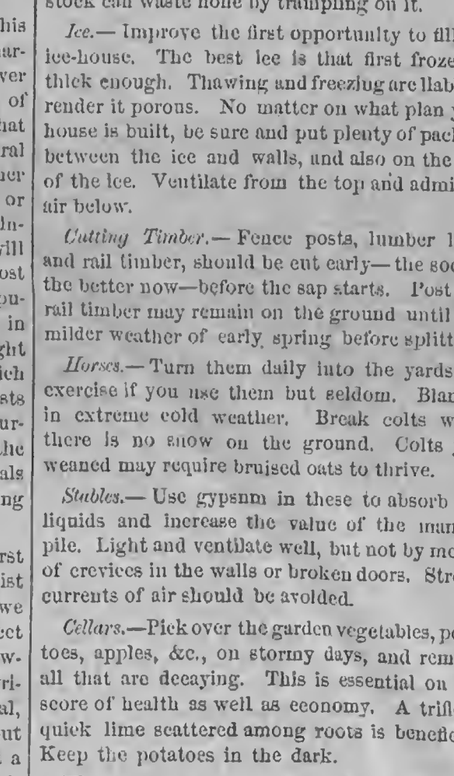
PLAN OF FARM HOUSE.

BY JOHN E. SWEET, ARCHITECT, SYRACUSE, N. Y.

ARCHITECTS, like other people, have to "take the bitter with the sweet." The bitter part to the man who attempts to carry out or combine other people's ideas, is to be employed by persons who acknowledge that they know nothing of building, and employ him because he does, and then at the outset tell him how they want everything, even to the details, and finally decide on all matters of taste as peremptorily as if they were JOHN RUSKIN in *propria personæ*. Dividing society into three great classes, the rich, the poor and the middle class, the latter is by far the hardest to satisfy. The rich can have what they want, and pay for it; the poor are contented to get what they can and make the best of it; but the man of moderate means, who wants the rich man's house for the poor man's money, gets badly "mixed." A large, nice house, well built and *cheap*, is one of the things that cannot be made—and yet this is the substance of the specified requirements when the man of moderate means first consults his architect about his proposed new house. The architect of course proceeds with the work in its natural order and attempts to carry out the instructions. It is easy to make the plans for a "large, nice house,"—in fact, much easier than to economize every inch of space and make the most of every foot of lumber. The specifications say (when do they fail to say it?) that "the work is to be done in a good, substantial, durable and workmanlike manner," and the architect (where it is possible) has the work done accordingly. The result may be a large, nice house, well-built, and perhaps cheap, too, for the money, but it has cost twice as much as the proprietor expected to pay, and twice as much or more as he could afford to invest in a house.

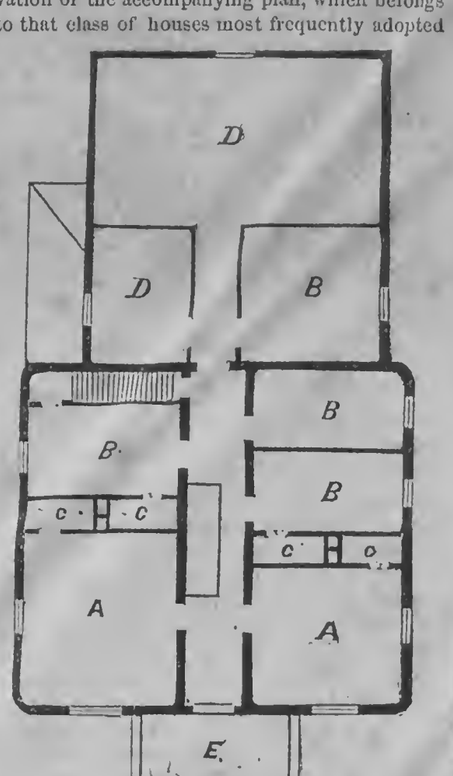
The very best thing those about to build could do would be to employ the most competent man they could get who would take an interest in the matter, give him full information as to the site, amount of money to be expended, size, condition and social position of the family, and the requirements of the farm, and then let him make the plan;—but most people cannot see the matter in this light, and those who pay must have things as they want them, even though the result is an inferior article for the money.

The foregoing remarks have been suggested by the Architect's experience in designing the elevation of the accompanying plan, which belongs to that class of houses most frequently adopted



PRINCIPAL STORY.

A, Parlor, 15+18. B, Hall, 7+18. C, Sitting Room, 15+18. D, Living Room, 17½+19½. E, Family Bed Room, 12+18. F, Closet, 5+8. G, Bath Room, 5+9½. H, Kitchen, 12+18. I, Pantry, 8+12. J, Wood Room. K, Veranda. L, Portico.



SECOND STORY.

A, A, Chambers. B, B, B, B, Bed Rooms. C, C, C, C, Closets. D, D, Store Rooms. E, Balcony.

by those persons who have a little too much money for one man, and not quite enough for two. The arrangement of rooms in first floor plan is nearly identical with that adopted by Mr. O. M. SLOSSON of Pompey, N. Y., and the elevation and design were made for a gentleman residing near Fayetteville, Onondaga Co., N. Y. The plan contemplated 16 inch or 18 inch foundation walls, 10 inch hollow brick walls, cut stone water-table, window sills and caps, and a tin roof. The attempt was made to reduce the cost and add to the convenience by rounding off the corners of the building and filling in the corners of the principal rooms. This latter feature would be a convenience to those who have to dig the accumulations of dirt from out the corners with a broom, and the rounding off of the outside corners reduces the apparent width of the building,—thus in a measure avoiding the extra high walls necessary to make the ordinary square house appear in proportion, and doing away with three or four feet of useless attic. The plan, however, was rejected for a much more costly one, the proprietor preferring to invest his money in a 12 inch solid brick wall, with usual rat and conflagration flues made by furring out. The round corners were rejected on the plea that special brick would have to be moulded, but probably because his neighbors' houses are not built so. Ornamented cut stone caps to the windows are required, cost what they may, and the building must be made, for looks, three or four feet higher than is necessary for the two stories which are to compose it.

That some of the readers of the RURAL NEW-YORKER may take a more favorable view of the plan and accompanying suggestions, is the hope of the designer.

Communications, Etc.

NOTES FROM THE FARM.

FUEL AND TIMBER.

I THINK, Mr. Editor, if there is any one question which ought to be talked about by farmers "everywhere and on all occasions," it is what I call "the timber question," and I will offer some brief hints, which, I hope, will call out something of value from some of your experienced correspondents.

Does it pay for a farmer to use wood entirely for his fuel, even if he possesses a large and well stocked wood lot? Surely not, if the wood, at the stove door, costs more than the coal. It will pay some farmers to figure on this, and, for my locality, I will do it as follows: Timber that is fit for nothing but fuel is worth, standing, at least two dollars per cord; to cut, haul, saw and split it, hiring all the work done, costs me two dollars and a-half per cord. Now, of this sort of wood, it certainly takes two, or two and a-half cords to equal one ton of coal, and the coal can be delivered at my door for nine dollars per ton. So I make nothing by burning my own wood, though I *save* some money; but if the wood lot is not large enough to stand this draft on it forever, it will be economy to burn coal in all the rooms but the kitchen. Obviously, under this state of things, we ought to clear our wood lots of mere fuel timber and then burn coal altogether.

I have an idea (wont claim it as new) about the proper distribution of timber on a farm, which may be suggestive to some. It is this: A farm of one hundred acres has, say, ten of timber. Already we know, and in the future we shall feel the truth of this more forcibly, that one of the chief advantages of this timber lot is the shelter it affords, and the influence it exerts in common with the whole amount of forest in the country, in softening the austerities of the climate and rendering the earth more productive. Now this ten acres of timber would be of more value in the way of protection if in the form of belts—long and narrow strips—instead of being in a more compact body. And it is within the reach of most farmers to accomplish such a change by *planting out* the belts, and, as they grow, gradually clearing off the other timber. No more land need be devoted ultimately to forest, but greater advantages would be secured.

POULTRY AND THE POULTRY HOUSE.

In severe winter weather the farmer's poultry often suffers; fowls are sedentary in their habits and food and water must be liberally and conveniently supplied to ensure profit and thrift. The cheapest way to feed is to give all they will eat in such manner that they can help themselves as their appetite prompts. Thus with a small stock, warm and clean quarters, and a variety of food, there is a profit made even in winter. Many people in cities and villages excel farmers in keeping poultry, simply because they take better care of their stock. The poultry house should have plenty of glass windows to admit sunshine. CHIEL.

BEGIN RIGHT.

THE commencement of a new year and a new volume of the "RURAL" afford an excuse for, if they do not justify, a few suggestions with reference to the future. I would say to my brother farmers, begin the new year's operations with a definite plan, so far as circumstances will permit of the adoption of one. Before settling the matter definitely it may be well to indulge in a careful retrospect of the past season's operations, that errors of plan or practice may be detected and avoided for the future. These retrospective glances will serve the same purpose to the farmer as back sights do to the surveyor, and, if carefully taken, will prove equally effective in preventing deviations from the true course.

It will be good policy at the commencement of the year to decide how each portion of the farm is to be occupied,—how much and what ground is

MR. GAZLEY'S PRIZE COTSWOLD EWES.

THE above engraving represents two of the pen of ewes shown by Mr. E. GAZLEY, of Clinton Corners, Dutchess County, at the late New York State Fair, on which the first premium was awarded as two-year olds, and the previous year as yearlings. They were bred by Mr. G., and sired by the ram "Columbus," purchased of F. W. STONE, Esq., of Guelph, C. W.

to be planted to corn, and the amount and kind of fertilizers available for this purpose. The same calculation should be made with reference to all other spring crops—care being taken to devote each section of the farm to such crops as are the most congenial to the soil.

By a preliminary arrangement of this character the successive portions of spring work will be done with a clearly defined object, and better done by far than if left without thought or calculation till the period of performance arrives. In thus starting out with a well defined plan of operations in the spring, the management of the farm will be greatly facilitated; each day's labor will tell in the right place and in the proper time, preventing the necessity of hurrying the work, which is generally equivalent to slighting or imperfectly performing it. Attempts to carry forward farming operations without a well matured plan may not prove entire failures, but certain it is that they will prove much less effective in results than those guided by well defined preliminary calculations. "Order," says the poet, "is heaven's first law," and it is not irreverent to say that it is, or should be, that of every farmer who would do honor to his calling and reap the rewards which his time and the capital employed ought to accord him. WAKEFIELD.

RENOVATING OLD COTTON LANDS.—No. III.

IN many portions of the Cotton regions orchards have been very badly used in the cultivation of cotton. The land has become so very thin that in many instances the orchard, like an old field, has been "turned out." My orchard had been used in this way. About four years ago I sowed it down to wheat, but it did not return me one fold. Since then I sow it down to peas ever year. When the apples begin to drop I turn in the hogs. It is astonishing how hogs will thrive on peas and apples; and it is further astonishing to me how an orchard will thrive when fed with pea vines and hog manure. Even worms and borers grow beautifully less by the beneficial rooting of the hogs.

Peas should not be grown too thick. Three pecks to the acre is enough. As labor is so very high it will hardly pay to sow them any other way than broadcast. The Speckled Grey pea is the best. It ripens early in August. The Red Eye is about two weeks earlier, and, for this reason, about one-fourth the seed had better be of this pea. The Black pea is about three weeks later, and being very hardy and not liable to rot, for this reason another fourth of the seed had better be of this pea.

By this system we kill three birds with one stone—cheap way of raising hogs, easy way to renovate land, and an excellent way to destroy worms. GEO. F. A. SPILLER.

Somerville, Tenn., Dec. 20, 1866.

Dairy Department.

CARE OF THE COWS.

THIS is a season of the year when milch cows require more than ordinary attention. If not properly cared for they will dry up earlier than is necessary, or if the flow of milk still continues the quantity will be much less than it would be if proper attention were paid to the character of the food supplied. Hay, properly cured, is good in its place, but if fed alone, even lavishly, the results in milk and butter will not be correspondingly increased. It will be found a paying investment to feed cows liberally with roots and cabbages even, as they will pay better in this way than in most others. Slops, variously prepared, with meal, beans or shorts, are eagerly devoured by cows, greatly to their own satisfaction and to the decided advantage of the owner. Properly supplied with food suited to the season, cows will continue to give liberal supplies of milk some weeks longer than they otherwise would do, without any detriment to their productiveness the ensuing season. There is no necessity for a cow to go dry three or four months, and with proper attention to feeding the period of non-production may be considerably abridged.

But in any case, whether giving milk or not, cows should not be allowed to get poor and weak as the season for their coming in approaches. They should be kept in good heart, not fattened as though in preparation for the butcher, that, when the maternal period arrives, they may be able to stand up without propping. Cared for as they should be during the winter, they will come out in the spring in good heart and ready for service during the dairy season. Feed judiciously, shelter well, use the card freely—a pleasurable operation to the animal and a paying one to the owner—and there can be no question but that cows thus treated will do well and pay back with interest for the expense and care bestowed upon them.

CREAM—GREATEST AMOUNT.

A CORRESPONDENT of the Mass. Ploughman, in reference to the production and management of cream, says:—"The best way to secure the greater quantity of cream, as well as to have the butter come without trouble, is to strain the milk in pans as usual, and let it stand several hours, (from morning until night and from night until the next morning) then scald it. Have a kettle of boiling water, into which the pan will fit tightly, like a cover, remove your pan gently from the shelf and set it over the boiling water. The steam will soon scald it. It must not be boiled, but hot, the next thing to boiling. Put it back on the shelf *gently*—remember you are not churning it yet and in twenty-four hours see the cream you will get. The same process will keep milk sweet longer in hot summer weather.

Where there is a large quantity of milk this involves considerable labor, and it can be scalded when first milked, but you do not get the same quantity of cream as by letting it stand several hours after milking before scalding."

THE CHEESE MARKET.

THE Utica Herald of the 25th ult. states that the delivery of cheese at Little Falls, on the preceding day, was light and wholly from farm dairies, consisting of the closing ends of the cheese season. Prices ranged from 13 cents to 15 cents, according to quality. It was generally of poor character and of inferior flavor.

Late advices from London state an advance in price of 2s. per cwt., and that a good demand existed at 68s. for fine and 64s. for second grades. Shipments from New York, recently, have been unprecedentedly large, leaving the market quite bare. The excess of shipments this year over those of the last are equal to nearly 30,000 boxes. Should the foreign demand continue, it is probable that prices here will advance somewhat before the opening of the cheese season the coming year.

Rural Spirit of the Press.

Forests, Rainfall and Water Courses.

The influence which trees or forests exercise in the production of rain and keeping up the flow in water courses, is attracting the attention of the residents of the prairie regions. This influence is much greater than would be imagined by those who have not watched the effect of the gradual removal of the forest on the fall of rain, and the consequent diminution of the volume of water in creeks and brooks. In early days, away back in the beech woods, rainy days in the summer and snowy ones in the winter were the rule, and fair ones the exception. Then the creeks and water courses were flush, and never known to run dry. Ten years ago, on visiting that region, we were surprised to find that what were considerable creeks in early days, and well stocked with fish, had dried up and their courses become partially obliterated. This change was produced by clearing up the forest: hence the inference is fair, that were trees to be cultivated to any considerable extent in the prairie regions, the atmospheric influences there would undergo a corresponding change. As corroborative of this view the following, from Bousingault's Rural Economy, is subjoined:—"The Wolf spring in the Commune of Soubey, France, furnishes a remarkable instance of the influence of woods upon fountains. A few years ago this spring did not exist. At the place where it now rises a small thread of water was observed, after very long rains, but the stream disappeared with the rain. The spot is in the middle of a very steep pasture, inclining to the south. Eighty years ago the owner of the land perceiving that some firs were shooting up in the upper part of it, determined to let them grow; and they soon formed a flourishing grove. As soon as they were well grown a fine spring appeared in place of the occasional rill, and furnished abundant water in the longest douth. For forty or fifty years this spring was considered the best in Clos-du-Doubs. A few years since the grove was felled and the ground turned again to a pasture. The spring disappeared with the wood, and is now as dry as it was ninety years ago."

Experiment with Potatoes.

A CHESTER county correspondent of the Germantown Telegraph states that during the last season he cultivated six varieties of potatoes on land of nearly uniform quality and equal manurial aid. These varieties embraced the Cusco, Mercer, Monitor, Early Goodrich, Nova Scotia Mercer, and Early June. The Cuscos, with three hundred pounds of phosphate per acre, produced at the rate of two hundred and sixty-five bushels of marketable and thirty-two bushels of small ones—two hundred and ninety bushels in all. This potato, with phosphate manure as a fertilizer, is deemed a good one for table use; but with a free use of barnyard manure it is rather strong. Forced with this manure, a yield of five hundred bushels per acre is deemed readily attainable. The Mercer yielded only about eighty bushels to the acre. The Monitors, with the same management as the Cuscos, produced over three hundred bushels per acre of good-sized potatoes, but are two or three weeks later than the others mentioned. The Early Goodrich produced three hundred and fifty bushels to the acre of quite as good a quality as any of the others. The other varieties did not do as well, nor are they regarded with much favor as a potato for table use. The Monitors and Early Goodrich are the favorites with this grower, both as to quality, amount of product and seasonable maturity. The Mercer brings more in the Philadelphia market than any other variety, but the low rate of production per acre renders it less desirable as a farm crop.

Manufacturing in the South and West.

Among the changes which are likely to result from the late conflict between the North and the South, those of a commercial and manufacturing character promise to be the most conspicuous. Before the war the natural course of business was to send cotton from the South to the Northern Atlantic cities for the purpose of being manufactured or re-shipped to Europe, receiving in return such goods as the planting States consumed. Now the tendency is to localize the business of the South—to produce there all the manufactured goods required for home consumption, and send the surplus direct to such foreign markets as may be in need of them. As a symptom of this introversion of trade, it may be noted that between seventy and eighty cotton mills are now in process of erection in the Southern States, besides sundry woolen ones—all tending to the change in trade and business to which we have adverted. Nor is this tendency confined to the South solely; but seems to be actuating the people of the Western States also. There, too, increased attention to manufacturing enterprizes is manifested, promising changes in commercial affairs not anticipated ten years since. These have been expedited in the South by the late conflict in arms; while in the West they are the result of views antagonistic to those entertained by the manufacturers of the Atlantic States.

A Corn Harvester.

The Iowa Homestead last week contained an illustration and explanation of the structure and action of an important implement to the corn growers of the great prairies of the West, where so much of this grain is grown. The cutter is a two-wheeled machine, not unlike the potato digger, with side knives arranged between two arms which embrace the corn hills and press them upon the cutters. The corn by means of machinery is thrown from the cutter in bunches of such size as the operator may choose to make. The horse attached to the machine passes between the rows, two of which are cut and bunched at the same time. It is claimed that this machine will cut over as much ground in a day as a two-horse planter can plant. If this is so, this corn cutter must become a great favorite with corn growers.

Farm Clothing.

THE editor of the Maine Farmer, who joins practice to theory in farming operations, commends to the fraternity a field dress which he uses when at work, and of his own invention. It is a sleeve vest, closed in front, and trowsers in one piece, with only one fastening, with a strap behind the neck. The sleeves were made large enough to wear over a coat, and the trowsers over another pair, if desirable. The material is of blue drilling and may be made into a farm garment of the kind mentioned by any handy housewife in a short time and at small cost. It should be made quite loose, and in very hot weather the laborer will need no other garment, while laboring in the field, but this, with the exception of a shirt. It is easily put on and off, and will be found an excellent thing for farming operations.

Salt and Ashes as a Manure.

A Georgia farmer writes the Southern Cultivator concerning two experiments made by him with salt and ashes mixed as manure for corn land. The salt used was the dirty article which fell from bacon while being stored in a warehouse, and mixed with leached ashes. About eight bushels of this mixture were sown broadcast upon an acre, with most marked an flattering results. The yield of corn per acre on the ground thus fertilized was very much greater than on that not thus prepared, paying the cost af the preparation many times over.

Rural Notes and Items.

A BRIEF NEW-YEAR'S GREETING.—We enter upon the labors of a new Year and Volume under the most encouraging circumstances,—sincerely thanking the myriads of progressives who have, by their aid, enabled us to present the RURAL in attire so attractive and becoming, with contents so valuable. Our aim has been to present, this week, a fair specimen of what we hope to make the succeeding numbers of the volume, in variety, interest and value of reading and illustrations,—but owing to the "noise and confusion" attending the closing of one and opening of another volume, (with entire change of type, etc.,) it has been impossible to bestow proper care upon all departments. However, we hope to improve in future, having resolved to so far excel, in both essentials and details, that the RURAL shall have no peer in its class of journalism. To all our friends—Contributors, Correspondents, Agents, Subscribers, &c.,—we cordially extend "the compliments of the season," wishing each health and prosperity, and the choicest blessings of peace and contentment.

RETURNING TO THE RURAL.—*Monthlies Unsatisfactory.*—In our issue of Dec. 1, (under the heading of "Want the RURAL Again") we said:—"During the "past month we have received letters from a good "many people residing in this and other States, who "were formerly subscribers to the RURAL but have "not taken it for a year or more past, requesting "specimens, bills, etc., to aid them in forming clubs. "They aver in almost every instance that they have "tried other papers as a substitute, but must have the "RURAL again. This is especially true of several "who stopped this journal and subscribed for month-"lies." And now we are daily hearing from old friends who have tried monthlies, and other papers, a year or two, and found them lacking. And they not only return, but not a few bring their friends also. As an instance of many, here is the substance of a letter just received from Mr. N. F. DUTCHER of Niagara Co., N. Y.:

"Inclosed find draft for $55.00 to pay for twenty-two copies of the RURAL for 1867. I took your paper some eight or ten years previous to the last year, when I tried a couple of monthlies, and have felt so lost without the RURAL that I have concluded to return to my *'first love.'* Eighteen of the inclosed list of names are *new* subscribers and four of them *old* ones."

AMERICAN DAIRYMAN'S ASSOCIATION.—From a circular issued by the officers of this Association we learn that its second annual meeting will be held in the city of Utica, on Wednesday and Thursday next—Jan. 9th and 10th. It is expected that this meeting will be one of marked interest, both with respect to the numbers who will be present and the variety and extent of the subjects which will be submitted for consideration and discussion. The annual address will be delivered by X. A. WILLARD, Esq., of Herkimer, and we presume it will embody the observations made by him in his recent visit to the principal dairy districts of England and on the Continent. The topics set down for discussion embrace the principal features of the dairy business, and it is safe to assume that they will be treated in such a manner as to prove interesting to the whole farming community. A report of the principal proceedings, including the discussions, will be given in the RURAL.

MASSACHUSETTS AGRICULTURAL COLLEGE.—After much discussion, difficulty and procrastination, the Trustees of this College have decided to adopt the plan of Mr. FRED. LAW OLMSTEAD, the noted landscape architect of New York City. Instead of the erection of large and costly edifices for the faculty and students, there are to be a number of comparatively small but convenient edifices for the use of the officers as well as the students, thus greatly abridging the building expenses while supplying all the room and conveniences required for the purposes of the College and the educational and industrial interests connected with the institution. A similar course is suggested with reference to the proposed buildings for a like institution in the State of Maine.

WINTER IN EARNEST.—A heavy north-east snow storm, accompanied with high winds, set in on Thursday, the 20th, and continued nearly three days. Not much snow fell in this region, but what did fall was "piled mountains high," making drifts which blocked rail and other roads more than they had been for many years. It is said that in the eastern part of the State the storm was the worst experienced in thirty years. The traveling is bad—the sleighing and wheeling being so badly mixed that people do not know which mode of conveyance to choose. To-day (Dec. 31,) the weather is cold but pleasant.

PRODUCTIONS OF THE STATES.—The Bureau of Statistics supplies an approximate valuation of the industrial products of the United States for the past year. Agriculture, $1,700,000,000; manufactures, $980,000,000; fisheries, $13,000,000; foreign commerce, imports and exports, $190,000,000; domestic commerce, $1,500,000,000; yearly increase of value of domain, $2,400,000,000. Total, $6,000,000,000.

TRICHINA SPIRALIS.—The article thus entitled, on page 9, will attract the attention of the intelligent and investigating reader, and should be carefully perused by all interested in the subject. It was prepared by an able scientific gentleman of this city, (W. W. ELY, M. D.,) and we regard it as the best article on the subject which has yet appeared in the limited space occupied.

DEATH OF N. B. AMENT.—It becomes our painful duty to chronicle the decease of NELSON B. AMENT, which occurred at his residence in Mt. Morris, N. Y., on the 16th ult. Mr. A. was a valued contributor to the RURAL, and has passed away in the prime of life—at the age of 44 years. As a friend writes us, "He died as he had ever lived—among many friends and no enemies."

OUR SHEEP HUSBANDRY DEPARTMENT is omitted this week for the reason that we did not receive the usual supply of copy from its editor, Dr. RANDALL—owing, no doubt, to the detention of the mails by the snow blockade. We regret the omission, but our edition is now so large that the RURAL must be put to press on time.

N. Y. STATE AGRICULTURAL SOCIETY.—The annual meeting of this Society will be held at Albany, Feb. 13th. Persons desirous of voting for officers must become members of the Society at least thirty days previous to the annual meeting.

TO ADVERTISERS.—We are again compelled to defer quite a number of advertisements for want of space. Friends are reminded that we devote but a limited space to advertisements, yet do the best we can for applicants without infringing upon reading pages.

HORTICULTURAL.

FRUIT.—TO GROW A SUPPLY QUICKLY

The pioneer who pushes into the forest and makes a "clearing" just on the borders of civilization, or spots for the first time the wide prairie with improvements, should not delay planting an abundance of the small fruits. To obtain a full supply of fruit for family use as soon as posibe is a very desirable object; therefore the strawberry, currant, raspberry and blackberry should be set before the apple, pear or peach.

Twenty-five or fifty years ago, when the culture of the small fruits and their preservation in a comparatively fresh state during the whole year was but imperfectly understood, the settlers were compelled to wait the slow growth of trees before they could eat abundantly of fruit; and at this day (so hard is it to get out of the ruts,) one of the greatest deprivations anticipated by the pioneer, is that of the "fruits of the old homestead." He may now be compelled to forego the tree fruits for a few years, but by judiciously selecting, and some care in cultivating, an abundance of small fruits, which will very well supply the place of all others, may be had on his table each day in the year after a single season's growth.

These remarks will also apply to most localities where the tree fruits are not sufficiently hardy or fail from other causes,—the small fruits will thrive and supply their place. If necessary, protection can easily be given to the latter by hedges, embankments, or some covering. In all sections where the apple fails small fruits should be grown in abundance for home use.

How shall it be done? Simply enough! Plant strawberries, currants, raspberries and blackberries; these will give fresh fruit for three months in the year, and drying and canning them will provide for the remainder. There need be no failure in any locality if you will only give to the work the thought and labor which its importance demands.

NATIVE FRUITS OF NEBRASKA.

The Far West produces many indigenous fruits, some of which will, doubtless, prove valuable. R. O. Thompson, Nebraska, describes several new varieties in the Agricultural Report, and we make some extracts from his article.

"Over twenty-five varieties of the plum are found in this Territory. In early spring the eye can wander over hundreds of acres of these plums, one sheen of white flowers covering the landscape, and the air is laden with sweet fragrance. The fruit is of all forms and colors which the prune family assumes; here the numbers of the curculio may be truly called legion. Something over four years ago my attention was directed to a thrifty group of these trees by finding the branches literally loaded with very large fruit, while all others were pretty effectively thinned out by the curculio. The fruit of these same trees has each year, since that time, withstood the attacks of that insect, and the bearing has been equal to many of the cultivated varieties. The skin is tough, not very thick, and may be pared like an apple; the flesh is firm, unless very ripe, then melting and juicy.

There are three varieties of the gooseberry indigenous to Nebraska; one—named the Nebraska Prolific—is very promising. It stands two to four feet high, fruit larger than the Houghton, veined, of a clear, transparent green, nearly round, and possessing a rich, vinous flavor. Single specimens have been found nearly an inch in diameter. In the past four years I have examined thousands of bushes and never found mildew upon any of them.

There is a cherry of the size of a well grown May Duke, very sweet, melting, of a rich, delicious flavor, nearly oblong, and of a changeable brown purple color. The fruit is set in heavy clusters on long stems beneath the leaves, and upon a tree never more than one or two feet high. At two years from the seed it produces a bountiful crop of these luscious cherries. It is very hardy; layers as readily as the grape, and will grow from cuttings and single eyes. It ripens in September. Had they no qualities to recommend them other than as ornamental shrubs there would be few finer ones; but add to this a most rich and luscious cherry and we have a shrub of rare excellence and beauty."

GRAPES IN THE NEW YORK MARKET.

NUMBER ONE.

As a general thing the grape crop has been good this season, although very light in some districts. In New Jersey the crop was of this order, yet some of the fruit was very fine; the clusters were large and compact, and the berries very sweet. The first arrivals sold readily at 40 cts. per pound. They were principally Concords of the first class. Some very fine fruit of this variety was received from the lower counties of the State, which counties are growing them largely, and very successfully. One crop received from Ocean Co. was the poorest fruit I ever sold; there was not one good cluster among them, and much of the fruit was dried on the stem as hard as dried currants. The mode adopted for sending them to market corresponded with the crop; the grower made use of the Burlingtou berry chest, which contains sixty quart boxes, packing them in the small boxes. Being rather early in the season for wine dealers to purchase grapes, they were sold to the street peddlers for about 6 cts. per pound.

The crop of the river counties of this State was quite light, although many growers had a good yield; but the finest was of a choice quality, and sold readily. Some early Isabellas from Croton Point sold for 20 cts., and Catawbas for 25 cts. per pound. Some very handsome Delawares, from Nyack, sold for 40 cts.; but they soon fell to 20 cts., at which price they sold readily.

Just at the closing of the river crop, and before that of the central counties arrived, grapes became very scarce, and prices ranged up to those of the beginning of the season. This advance was unfortunate for those central counties, for the news was sent to all the grape growing districts extending to Ohio, and the result was that we received an immense quantity, and there was a grand break-down in prices. Those growers who succeeded in getting in their Isabellas before the break-down were very fortunate, some of them realizing from 17 to 18 cts. per pound for their crops.

The first fruit received from Hammondsport was some very choice Delawares and Catawbas, on Oct. 10th, from Willard & Burgess, packed in their superior five-pound boxes. They arrived in beautiful order, and sold readily at 25 cts. per pound, and were quite an ornament in the window of the Broadway dealer who purchased them. Some Isabellas of the same brand sold at 18 cts. For a few days the trade was lively, and they continued to sell at good prices; then the reverse shock came, and down they fell, and grapes were a drug in the market; none selling, none wanting,—every dealer full, and all sick of the trade,—wishing they had never seen a grape. Soon the letters came in thick and fast. Why don't you sell my grapes? Did you receive my grapes? What *is* the matter with the grape market? &c. The dealers finally dreaded to see the postman when he made his deliveries, the complaints being so numerous. After a few days people began to eat grapes again. The former high prices had prevented the mass of persons from buying them, and now the prices having settled down to about 8 to 10 cts. for a fair article of Isabellas, grapes were to be seen at every street corner and on every fruit dealer's stand, and after a long and tedious seige the great bulk of stock was worked off. Much of it in a damaged condition was sold for wine at 6 cts. per pound, and when this poor stock was sold good fruit was in demand again, and good Isabellas sold readily at 14 to 15 cts., while Catawbas brought from 18 to 20 cts. per pound.

The Hammondsport grapes were not as fine as last year, the early frost having caused the leaves to fall, which prevented the fruit from ripening as thoroughly as it usually does in that valley, yet I think their sales will average higher than any other grape growing district in the State. Many of their Catawbas sold from 18 to 20 cts., and their Isabellas averaged 14 cts. The Bloomfield and Naples grapes went down to a very low figure. Ohio sent us large quantities of Catawbas which were in good order, and, as a general thing, sweeter than the State grapes, but owing to their style of packages were sold from 10 to 15 cts. per pound. One chief cause of the stagnation of the trade in our market was, that all of the other large cities which usually procure their supplies from us, were supplied direct from the country, and grapes were cheaper there than in New York.

The great difficulty with grapes this season has been that they were almost all damaged by the frost; this not only prevented them from ripening thoroughly, but the action of the frost on the stems caused them to mould, and the grapes to drop from the stem. This was very unfortunate for the crop; the grapes not being fully ripe were very sour, so much so that many persons would not purchase the Isabella's at all, but fell back on the Catawbas, and by so doing did not better themselves much, for they were more sour than I have ever before known them. Still, they must have grapes, and they were the best that we could get. The Hammondsport Catawbas proved to be the best article in market.

New York City, Dec., 1866. Now and Then.

THE WALTER GRAPE.

Messrs. Editors:—In your issue of Dec. 1st, (last volume,) I find a spicy article on the Walter grape, in which I, among others, am called upon for an opinion. An opinion, to have any real value, should be based upon a knowledge of the habits of the plant, as well as the quality of the fruit. My personal knowledge of the Walter is confined to the fruit, my opinion of which you are welcome to; in fact, I am glad of an opportunity to put it upon record, in order that I may not be represented by half a dozen different persons to have as many different opinions on the same subject—a melancholly fate which has just overtaken a friend of yours, and mine too.

I have seen the fruit of the Walter grape for three years past; on the last occasion at Mr. Charles Downing's, who had just received some of the fruit. The Walter grape, in my opinion, is a seedling of the Diana, and exceedingly like its parent; so much, indeed, as to require a very nice taste to distinguish the one from the other. If the vine should prove to be vigorous and healthy, and the fruit ripen as early as it is claimed to, the Walter will have much value; otherwise not. I think the originator of the vine should have placed plants in the hands of his friends in different localities, in order that its vigor, hardiness, and time of ripening should be better known. The public has a right to be well informed on all these points.

"Penn Yan" is evidently a master in the vineyard, and should handle the pen frequently.

Yours, Horticulturally, Peter B. Mead.

Newburg, N. Y., Dec., 1866.

Curculios—Scions.—(G. W. C., Waterloo, Wis.) Our correspondents have given, from time to time, various methods of preventing the curculio from stinging plums and other fruit. Probably the surest and most generally resorted to, is that of jarring them off. Place a coop of chickens under each tree and jar off the curculio twice each day in the proper season. Scions for grafting may be cut any time after the leaves fall until the sap starts in the spring. December is a good time to cut them, or the present month; they should be packed in moss or sawdust slightly dampened, and placed in the cellar. The object is to retain their natural moisture, and keep them from freezing or heating.

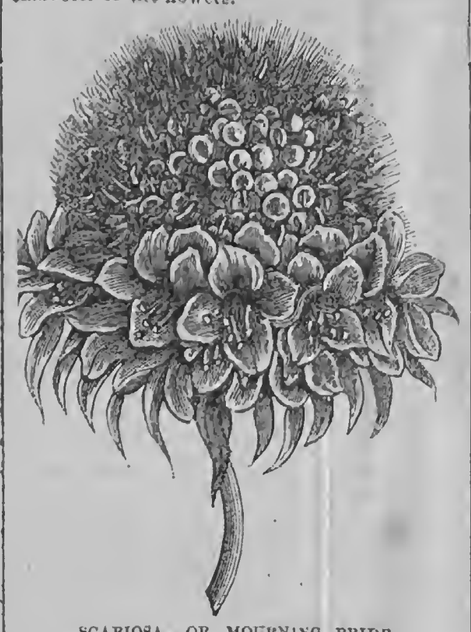
THE SWEET PEA.

TWO BEAUTIFUL COMMON FLOWERS.

BY JAMES VICK.

The greatest blessings enjoyed by us are those that are cheap—almost without money or price. Health, pure air and pure water, how invaluable, and yet how freely dispensed to rich and poor alike. Many of our common hardy flowers, that will prosper with anything like decent care, are among the most beautiful flowers we have, and certainly the most valuable, because they are within the reach of all the lovers of Nature's floral beauties.

It is almost as hard to select one flower and say this is the best and sweetest, as it is to select one flower out of a family of children for a favorite, but I have sometimes thought if I could have but one it should be the old favorite *Sweet Pea*. I must acknowledge, however, that at other times I might have been quite ready to select some other favorite. The Sweet Peas, however, are among the sweetest and most beautiful of our hardy annuals. They are as fragrant almost as Mignonette, flower early, continue in bloom a long time, and nothing can be better for cutting for table bouquets and other ornaments. For a garden hedge or screen, or for little clumps, supported with common pea sticks, or other support, they are very desirable. In a rich soil they will grow four or five feet in height, that is if sown early in the spring, so that they get a good start before warm weather. If sown later they become somewhat dwarfed and never reach more than two or three feet. Put the seed in as early as possible in the spring and nearly four inches deep. Then keep the soil well hoed up and furnish support as soon as the plants show the least disposition to climb. The engraving shows, as well as a wood-cut can do, the character of the flowers.



SCABIOSA, OR MOURNING BRIDE.

Another fine, old-fashioned flower is the *Scabiosa*, often called the *Mourning Bride*. They are singular and beautiful flowers, of every variety of color almost, from white to black, excellent for cutting, and making a good display in the garden.

The English Cottage Gardener gives an account of a grape vine on the coast between Tire and Sidon. It branches into two stems, one was 50¾ inches in circumference, the other 40 inches.

Horticultural Notes and Queries.

"Now and Then."—The articles which have appeared in the Rural from time to time over the above *nom-de-plume*, and which have attracted wide and favorable attention, are contributed by Mr. C. W. Idell of New York City. In the present number will be found the first part of an interesting and valuable paper on "Grapes in the New York Market," from Mr. Idell's pen, and we can safely promise our readers "Now and Then" communications from the same source, of equal value. We had the pleasure of meeting Mr. Idell at the Hammondsport Fair last fall, (some months after he became a contributor to the Rural,) and found the estimate we formed of him in no wise suffered by personal acquaintance. We take pleasure in directing attention to Mr. Idell's business card, and in cordially commending him to our readers.

Protect the Trees.—The orchard demands but little care at this season of the year, yet there is one point that owners of young orchards should not overlook, and that is the injury which mice or rabbits may effect. A hint in season may be worth a great deal to some. There are several methods of protection; gas tar may be applied. Some think it injurious to young trees, but it is not, unless used in too large quantities. Smearing the trees with blood or fresh liver is another method; a shield may be formed by cutting cornstalks into pieces a foot or two in length and tying them around the base of the trunk with twine. Many ways of protection will be suggested to the watchful owner. Go out and examine your young orchard, trample down the snow close to the trees, and destroy the harboring places and roads of the vermin.

The Quince on the Thorn.—A correspondent of one of our exchanges describes a specimen of Quince grafted on the Thorn as being "12 or 15 feet high and 6 or 8 inches through the stem, the Quinces being at the top and center of the tree, protected from marauders by their position and the thorny defences of their adopted parent. It is said the Thorn is never attacked by the *borer*, that dreaded enemy of the fruit grower."

Missouri State Horticultural Society.—By a circular just received we learn that the eighth Annual meeting of this Society will be held at St. Louis on the 8th, 9th 10th and 11th of January, 1867. A cordial invitation is extended to Delegates of all local Horticultural and Agricultural Associations, and to all friends of Horticulture and Pomology, to be present and participate in the discussions.

The Lees of Grapes.—In grape growing regions where wine is made, the residue after pressing, should be returned to the soil whence the grapes are taken. Although manuring the grape is now generally denounced, it is still a question whether purely mineral fertilizers would not prove beneficial. The soil may be over-rich in humus, but not in ash-constituents.

Grapes Received.—Mr. F. W. Lay, Greece, this county, placed on our table two boxes of fine grapes, Isabellas and Catawbas, the day before Christmas. Mr. L. is a successful cultivator of fruit, and a contributor of valuable articles to the Rural. Of all such Horticultural contributions we are *tastefully* appreciative.

Fruit Growers' Society of Western N. Y.—The annual meeting of this Society will be held at the City Hall, Rochester, on Wednesday and Thursday, the 23d and 24th of January, 1867. As no meeting of the Society has taken place since the one of last summer, great interest will doubtless be manifested, and a large attendance secured.

Flies Infesting the Monthly Roses.—Will some of the readers of the Rural tell us how to get rid of the little white flies, which have destroyed the beauty of rose bushes for some years past, and which have now made their appearance on monthly roses in the house?—H. H. H.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

To Make Good Apple Jelly.—Take apples of the best quality and flavor (not sweet,) cut them into quarter slices and steam them till soft; then strain out the juice, being careful not to let any of the pulp go through the strainer; boil it to the consistency of molasses, then weigh, and add as many pounds of crushed sugar, stirring it constantly until the sugar is dissolved; add one ounce of extract of lemon to every twenty pounds of jelly, and when cold set it away in close jars. It will keep for years. Those who have not made it this way will do well to try it. They will find it superior to currant jelly.

To Preserve Fruit Jellies from Mould.—Cover the surface one-fourth of an inch deep with fine pulverized sugar. When thus protected they will last for years free from mould.

To Prevent Graining in Jams, Preserves, Etc.—A teaspoonful of cream tartar to every gallon of the fruit.

Lemon Cream.—Take a pint of thick cream, and add to it the yolk of two eggs well beaten, four ounces of fine sugar, and the thin rind of a lemon; boil it up; then stir until almost cold; put the juice of the lemon in a dish, and pour the cream on it, stirring it till quite cold.

Fruit Creams.—Put six ounces of isinglass in a little water; then one pint of good cream, sweetened to the taste, and boil it; when nearly cold lay some apricot or raspberry jam on the bottom of a glass dish and pour it over it. This is excellent.

Raspberry Cream.—Put six ounces of raspberry jam to a quart of cream; strain the pulp through a lawn sieve; add to it the juice of a lemon and a little sugar, and whisk it until thick. Serve it in glasses.

To Color Cotton Blue.—Take one ounce prussiate of potash, one ounce of copperas, and one ounce oil of vitriol; put the potash in half pail of hot water, the copperas the same; then dip the goods in the copperas water, then in the potash; drain out and put in the vitriol; then put the goods back in a few minutes; then take a pail of warm water, add a half teacup of grease, and rinse the goods in it; the grease is to prevent its rotting the goods. This will color two pounds of goods.—Mrs. A. L. Bunn, *Litchfield, Mich.*

Soft Gingerbread.—One cup molasses; one egg; one-half cup of butter; one cup of warm water; one spoon of ginger; two cups of flour; one teaspoon and a half of soda; do not stir until your ingredients are all together.

Pork Cake.—Take one-half pound of pork, let it stand over night in a cup of warm water; then chop fine, and turn over it one cup of boiling water; after which add two and a half cups of sugar, one-half cup of molasses, cloves, cinnamon and nutmeg; stir quite stiff; bake in a moderate over for two hours; fruit improves it.

Marble Cake.—One cup brown sugar; one-half cup molasses; one cup butter; one-fourth cup sour milk; one-half a nutmeg; one spoon cinnamon; one-half spoon allspice; one-half do. cloves; one fourth do. pepper; one-half teaspoon soda; yolks of four eggs.

The White Recipe.—Two cups of white sugar; one cup butter; one-half cup sour milk; whites of four eggs; two teaspoons cream tartar; one teaspoon soda; two cups of flour. Bake this in two tins, after you mix the two cakes as you please, and it will give you a beautiful cake, besides being most delicious. Try it.

Hard Ginger Cake.—One quart of molasses; one pint of water; one-half pound of butter or lard; two ounces of soda; ginger to the taste.—Bell C. B., *Grand Blanc, Mich.*

Beef—Cutting up and Preserving.—In cutting up beef for salting regard should be had to the size of the pieces, and their relation to each other when put down. In other words, a family resemblance should be pursued in the different strata, as placed in the barrel. When designed for family use it will be found convenient to cut into pieces suited to a day's consumption. For preserving the meat the N. E. Farmer says: "Pack the pieces in casks, giving a slight sprinkling of salt between each piece; cover with a pickle by boiling together, in four gallons of water, eight pounds of salt, three pounds brown sugar, three ounces saltpetre, one ounce pearlash, for one hundred pounds of meat. Keep a flat stone on the meat, that it may be immersed in the pickle. Put down in this way, beef will keep a year, and rather improve by age.

Coffee—A Substitute.—The Louisville (Ky.) Industrial Gazette, remarking on the many substitutes employed by a large portion of the people for the real article of Java Coffee, says none approach so near it in flavor as the sweet potato. Mixed in equal quantities of coffee and potato the presence of the latter can hardly be detected. Take the small potatoes, wash them clean, cut them into pieces about one-fourth of an inch in diameter and dry them in an oven. Put them away in a box or can and when wanted for use, brown the pieces and grind them like coffee and prepare in the same way. This preparation will take the shine out of all other substitutes for real coffee.

Don't Use Soda—Nor any of the common kinds of Saleratus in making bread, if you value health and desire to have bread that is palatable. Always use D. B. De Land & Co.'s *Best Chemical Saleratus* and you will have a pure article. It may be had at the grocers. It is put up full weights; others are short weights.

Ladies' Department.

THE UNWISE CHOICE.

BY ALICE CARY.

Two young men, when I was poor,
Came and stood at my open door;

One said to me, "I have gold to give;"
And one, "I will love you while I live!"

My sight was dazzled: woe's the day!
And I sent the poor young man away;

Sent him away, I know not where,
And my heart went with him unaware.

He did not give me any sighs,
But he left his picture in my eyes;

And in my eyes it has always been;
I have no heart to keep it in!

Beside the lane with hedges sweet,
Where we parted, never more to meet,

He pulled a flower of love's own hue,
And where it had been came out two!

And in the grass where he stood, for years
The dews of the morning looked like tears.

Still smiles the house where I was born
Among its fields of wheat and corn.

Wheat and corn that strangers bind—
I reap as I sowed, and I sowed to the wind.

As one who feels the truth break through
His dream, and knows his dream untrue,

I live where splendors shine, and sigh
For the peace that splendor cannot buy;

Sigh for the day I was rich, though poor,
And saw the two young men at my door!

Written for Moore's Rural New-Yorker.

WOMAN'S DRIFTING—No. I.

HOME again!—No, "*back again*," says "O. VON K.;" he doesn't say *home*. I've been drifting too, but not like him. Men take the oars in their hands and row out, with or against the current of the world's life-tide, crossing and re-crossing its channels at will, and when they are ready, anchor safely "back again."

You've seen a boat fastened with a long, strong cable, and it sat on the waves cheerily or restlessly, rocked or tossed, silently near its moorings, or tugging away at the farthest possible reach, and going back to settle down quietly by the shore when the wind was still, but *tied*, through all and after all. That's the way women "drift." True, pure women, I mean—those who see only just so much of the world because they *are* women. We go from home sometimes, sit in the cars with an escort, wait in the depots for trains, all the while taking patterns of somebody's apparel for our own benefit, or sneering at it for theirs, if they chance to hear,—whirl through wide or narrow and more uniformly nasty city streets,—and if we chance to be publicly interested, listen to what somebody else says he has seen inside of great walls we look at through brown veils or dirty windows,—and learn, not to get views of human genius and energy, but our little brains grow wonder-wide that "*he*" knows so much, and we settle gladly into the dependence we feel the more, the more his superior strength and protection unfolds itself to our appreciation.

Some of us do and some don't. There are women who see, and think, and talk for themselves. "O. VON K." saw Detroit. We rolled into one side of it on the D. & M. R. R., past the Water Works, under Jefferson Avenue, and along streets where we were told the feet of purity seldom or never stepped. It was a long, long way; we rode slowly, and to think of the crime there! There was one comfort,—it was the worst street of the city,—the darkest side of the great picture. Women called it home; beautiful, grand, stately women, huddled together with the filthiest of the equally low. Women who had mothers once,—women who have mothers still, weeping for lost ones and dreaming them dead, as they might better be,—mothers whose spotless, innocent babes they were once, and in whose own arms, many of them, the innocent have slept. And we forget they have souls, and despise and hate them, and "go by on the other side," the bright side. But men come there—from the hot-beds of passion, the theater and the dance, and too often from the parlor and the drawing-room, where they have mingled with the virtuous. (?) Have the best of us never a shade of the guilt of others? We shall see, by-and-by.

Into the depot, with its dirty walls and floors. A little girl on her mother's lap begged, crying, not to be sat down "in 'iss nasty place." A bit of sweetmeat from a stranger's basket comforted her. Pretty child, how often will the little form shrink back from contact with the vile, and the poison sweets of deception beguile and win her? None answer. May the angels watch and guard. Strange voices, strange faces, mingle together, yet nearly all find *one* face and form familiar and friendly, if no more, and that one at such a time and place is worth more to its companion than all the world beside.

By the way, cousins are most convenient appendages in traveling. We may look to them for all we might ask of a husband or a brother, with none of the obligations to them in return. They are so nice to care for one and one's paraphernalia when one is tired, or sleeping or thinking. And yet when we remember that a faithful Newfoundland dog would do the same, we may be slightly ungrateful. And knowing that were our luggage in the baggage car like his, and our checks and money safely stowed away *out* of pockets and portemonnaies, we should need no guard at all. It is quite easy to let them go when the journey is ended with as little regard as at its beginning,—no matter how much pains they may take to make themselves useful to us. Humanity is just like this all the world over.

It is not for what people do, or are, or try to be, *according to their means and advantages*, that we bless them, but for what we receive of them when we can't get it any other way, that we thank them, and it is not every one that remembers his indebtedness to that extent for five minutes. And so love and charity freeze to death. We women are quite likely to estimate men too highly for our own good or theirs either, to overlook their faults too freely, and accept them too readily when "below par," for the reason, I suppose, that without them we are so like a kite without a—ahem—a *narrative*, all flutter and but little advancement; but on the other hand too many papers attached in the form of little responsibilities make it all balance and no go. There is one in the seat in front of us. Only one and never has been. Every line of her face and every motion says it. If I could get a plaster cast of her face and have it "sculped," I'd make myself famous for the statue of an "old maid." She's trying to rest now, lying on the seat, with her hat and veil on. May-be we we ought to pity her. May-be her head aches and no shoulder to lean it against. Her hair is rumpled and no hand to smooth it. Humph! just as well. Such applications may relieve an imaginary heart-ache for the time being; head-ache won't be cured by them, unless magnetism is abroad, which is worse;—I tried them once, and I know.

Out of the depot on the Southern train. A glimpse of masts and sails on the river and a ship building on the shore, and a memory of HANNAH F. GOULD'S "Mary Dow," in an old school reader. Oh! childhood days. Childhood's school-days, bitterest, sweetest of all. Bitter in the taking, but growing sweet on the tongue as the lips touch cup after cup of gall in later years. What rich fruit grows on the tree whose seed is the dull, wearying A, B, C,—if only the little ones could realize it. And if we, learning one stern alphabet whose Y, Z, & is the grave, could see as our Sovereign and Teacher sees, would we struggle so rebelliously and leave so slowly.

Ionia Co., Mich., Dec., 1866. GRACE GLENN.

WEAVING AND EMBROIDERING.

IT was the custom, in feudal times, for knightly families to send their daughters to the castles of their suzerain lords, to be trained to weave and embroider. The young ladies, on their return home, instructed the more intelligent of their female servants in these arts. Ladies of rank, in all countries, prided themselves upon the number of these attendants, and were in the habit of passing the morning surrounded by their workwomen, singing the *chansons a toille*, as ballads composed for these hours were called. Estienne Jodelle, a French poet, 1573, addressed a fair lady, whose cunning fingers plied the needle, in words thus translated:

"I saw thee weave a web with care,
Where at thy touch fresh roses grew,
And marvelled they were formed so fair,
And that thy heart such nature knew.
Alas, how idle my surprise,
Since naught so plain can be:
Thy cheek their richest hue supplies,
And in thy breath their perfume lies;
Their grace and beauty all are drawn from thee."

If needlework had its poetry, it had also its reckonings. Old account-books bear many entries of heavy payments for working materials used by industrious queens and indefatigable ladies of rank. Good authorities state, that, before the sixth century all silk materials were brought to Europe by the Seres, ancestors of the ancient Bokharians, whence it derived its name of Serica. In 551, silkworms were introduced by two monks into Constantinople, but the Greeks monopolized the manufacture until 1130, when Roger, King of Sicily, returning from a crusade collected some Greek manufacturers, and established them at Palermo, whence the trade was disseminated over Italy. In the thirteenth century Bruges was the mart for silk. The stuffs then known were velvet, satin (called samite), and taffeta—all of which were stitched with gold or silver thread. The expense of working materials was, therefore, very great, and royal ladies condescended to superintend sewing-schools.

THE ELDEST DAUGHTER AT HOME.

To be able to get dinner, to sweep the room, to make a garment, to tend a baby, would add greatly to the list of a young lady's accomplishments. Where can we behold a more lovely sight than the eldest daughter of a family, standing in the sweet simplicity of her new womanhood, by the side of her toiling, careworn mother, to relieve and aid her? Now she presides at the table, now diverts half a score of little folks in the library. She can assist her younger brothers in their sports, or the elder ones in their studies; read the newspaper to her weary father, or smooth the aching brow of her fevered mother. Always ready with a helping hand, and a cheerful smile for every emergency, she is an angel of love and blessing to the home-circle. Should she be called out of it to originate a home of her own, would she be any less lovely or self-sacrificing?

TILTING HOOPS IN THE CARS.—If anything had been required to give the much-abused tilting hoops their death-blow, it would have been found in the mortifying inconvenience to which they have subjected ladies traveling in the cars. In the narrow space between the rows of seats it was impossible to prevent them from catching at every step, and therefore half a dozen ladies, each hurrying with the traditionary little box, big box, carpet-bag, and bundle in hand to get a seat, would all at once come to a dead lock, unable to move without leaving part of their machinery behind, and unable to extricate themselves with their hands full of packages. Certainly there will have to be some change in hooped skirts before another traveling season.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

VINA-DEL-MAR.*

THE lowland is fragrant with clover,
And sunset just tinges the spray
Where the breakers roll over and over
The coral reefs out in the bay;
And up through the valley forever,
Softly it seems from afar,
Floats the song of the sea and the river
That mingle at Vina-del-Mar.

The streamlets wind down from their fountains
Like silver threads woven in green,
And snowdrifts lay white on the mountains
With vineyards and blossoms between:
And homeward when vespers are ringing,
And purple and gold fill the skies,
The olive cheeked maidens come singing
With laughter and love in their eyes.

But sweeter than ballads or vespers,
Or even the sound of the sea,
Are the magical echoless whispers
That twilight brings hither to me;
Low voices, care-soothing and winning,
Like those of the dear ones at home,
That tenderly chasten for sinning
And cheer me wherever I roam.

I sit by the palm tree and wonder
When Vina-del-Mar and I part
If winters or oceans will sunder
These beautiful hours from my heart—
If dreaming of life's early pleasures
In the coming years I shall not find
Those sunsets, and fair, golden treasures
With unfading memories enshrined.

I think when my exile is ended
And wanderings from those I love cease,
The best of the past will be blended
With dreams of this Valley of Peace:
The days that are gone will seem nearer
When counted through vistas so clear,
And country and kindred be dearer,
For visions I had of them here.

Santiago-de-Chili, S. A., Oct., 1866. S. M. C.

* *Vina-del-Mar* is a beautiful little valley on the sea shore near Valparaiso, Chili, South America. It is a great resort for pleasure parties, picnics, etc.

Written from Moore's Rural New-Yorker.

POSTHUMOUS PRAISE.

THE opening stanzas of the ninth Canto of BYRON'S "Don Juan" are very severe on the Duke of WELLINGTON. His Grace was then in the zenith of military fame, and multitudes were ready to do him honor. The subsequent political career of the "Iron Duke" justified the truthful sarcasms of the noble poet. Many millions of men afterwards discovered that they had no rights that the military hero felt bound to respect. And yet only a few years ago the governing classes of Great Britain decreed him a public funeral, and he was consigned to kindred dust with all the pomp and circumstance that ecclesiastical, military and royal pomp could bestow. Many sensible people think his fame infamous, and pertinently inquire:

"And I shall be delighted to learn who,
Save you and yours, have gained by Waterloo."

Let us take some examples of a different nature. One is tersely contained in the well-known couplet:

"Seven cities claimed the illustrious HOMER, dead,
Through which the living HOMER begged his bread."

JOHN MILTON was blind, poor, and in contemporary times was almost unnoticed and unknown. Posterity has done justice to these great names; competent critics have pronounced the Iliad and Paradise Lost, the most perfect heroic poems that have been penned up to the present time.

The inquiry of the little girl, on reading the inscriptions on the tomb-stones of a cemetery, "Where are all the bad people buried?" is suggestive. Why is it that the social and personal worth of so many are unknown, until they sleep "the sleep that knows no wakening?" It is becoming to throw a veil of charity over the errors of the dead—to "judge not, lest we be judged." Let us, both to the living and the dead,

"Be to their faults a little blind,
And to their virtues very kind."

This end is not always gained by avoiding indiscriminate praise. There is a "vaulting ambition that o'erleaps itself," and many honorable records are known to be a mockery and delusion. The poet BURNS said:

"Even ministers, they hae been kenn'd
In holy rapture,
A rousing whid at times to vend,
And nail't wi' Scripture."

Does it never happen, in our day, that the characters of some of the wealthy dead are made to appear better than we knew them to be? Is not the funeral sermon sometimes highly colored? Does not the officiating clergyman, on "improving the occasion," occasionally give credit for virtues not possessed? Let us be pure in heart; let us abound in that charity which thinketh no evil; but oh! let us beware, that no so-called Christianity takes this method of doing homage at the shrine of mammon.

Penfield, N. Y., Dec., 1866. F.

OVERWORK AND UNDERWORK.—"While overwork," says a medical writer, "is a great evil from which one class of society suffers, another class suffers still more from underwork, or idleness. Better wear out than rust out, if it is done in a good cause; for then some good will be accomplished, and humanity will be the better for it. But the true course is to avoid both extremities and pursue the even tenor of a happy medium. By so doing, a far greater amount of labor can be accomplished, at less expense of health, strength and vitality."

SHORT and false pleasures deceive us, and, like drunkenness and revenge, are the madness of one hour for the sad repentance of a lifetime.

HAWTHORNE'S NOTE-BOOK.

SOME of the passages from Hawthorne's Note-Book, which are appearing in the Atlantic Monthly, are curious enough. Many of them are the first suggestions of stories to be wrought out by the author's rare and fertile imagination. We take a few from the November number.

"Concord, 1843.—To sit at the gate of heaven, and watch persons as thy apply for admittance, some gaining it, others being thrust away."

"To point out the moral slavery of one who deems himself a free man."

"A young girl inhabits a family graveyard, that being all that remains of rich hereditary possessions."

"To write a dream, with all its inconsistencies, its strange transformations, which are all taken as a matter of course, its eccentricities and aimlessness, with nevertheless a leading idea running through the whole. Up to this old age of the world, no such thing ever has been written."

"The history of an almshouse in a country village, from the era of its foundation downward,—a record of the remarkable occupants of it, and extracts from interesting portions of its annals. The rich of one generation might, in the next, seek for a house there, either in their own persons or in those of their representatives. Perhaps the son and heir of the founder might have no better refuge. There should be occasional sunshine let into the story; for instance, the good fortune of some nameless infant, educated there, and discovered finally to be the child of wealthy parents."

"The conversation of the steeples of a city, when their bells are ringing on Sunday—Calvinist, Episcopalian, Unitarian, etc."

"To consider a piece of gold as a sort of talisman, or as containing within itself all the forms of enjoyment that it can purchase, so that they might appear, by some fantastical chemical process, as visions."

"The magic ray of sunshine for a child's story—the sunshine circling round through a prisoner's cell, from his high and narrow window. He keeps his soul alive and cheerful by means of it, it typifying cheerfulness; and when he is released, he takes up the ray of sunshine, and carries it away with him, and it enables him to discover treasures all over the world, in places where nobody else would think of looking for them."

THE NEWSPAPER APPRECIATED.

WITHOUT my newspaper, life would narrow itself to the small limits of my personal experiences, and humanity be compressed into the ten or fifteen people I mix with. Now, I refuse to accept this. I have not a sixpence in consols, but I want to know how they stand. I was never—I never in all likelihood shall be—in Japan; but I have an intense curiosity to know what our troops did at Yokohama. I deplore the people who suffered by that railroad smash; and I sympathize with the newly-married couple so beautifully depicted in the *Illustrated*, as they drove off in a chaise, and our old gent at the hall door waving them a last adieu. I like the letters of correspondents, with their little grievances about their unpunctual trains, or some unwarrantable omissions in the liturgy. I even like the people who chronicle the rainfall, and record little facts about the mildness of the season. As for the advertisements, I regard them as the glass and mirror of the age. Show me but one page of the "Wants" of any country, and I engage to give you a sketch of the current civilization of the period. What glimpses of rare interiors do we gain by these brief paragraphs! How full of suggestiveness and of story are they!—*Blackwood's Magazine.*

NATURAL ELOQUENCE.

DANIEL WEBSTER once said, when speaking of the source of eloquence, that "it must exist in the man and in the occasion." An illustration of this is furnished in an incident that occurred at a meeting in a neighboring city a few nights ago. The meeting was called apparently for the purpose of raising money to aid the men now being tried in Canada on account of the Fenian invasion. There was an old man present who subscribed five dollars, and said that it was all the money he had; that he gave it freely, and that he would give besides a Springfield musket and his own body. This was all the wealth he had. As the scene is described, it was not so much these few words as it was the uplifted hand, the earnest, fervid tone and the flashing eye, which accompanied them, that sent a thrill through the audience, and caused the entire gathering to rise to their feet as one man, and the building fairly shook with their applause. This eloquence was in the man and the occasion.

AGREEABLE QUALITIES.—The most agreeable of all companions is a simple, frank man, without any high pretensions to an oppressive greatness—one who loves life, and understands the use of it; obliging alike at all hours; above all, of a golden temper, and steadfast as an anchor. For such a one we gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker.

PASSIONATE MEN HONEST.—He who is passionate and hasty is generally honest. It is your old, dissembling hypocrite of whom you should beware. There's no deception in a bull-dog; it is only the cur that sneaks up and bites you when your back is turned.

ENJOYMENT OF MEMORY.—It is often debated which is the most enjoyable, the anticipation of a pleasure or its realization; but the power of recalling, mellowed and hallowed by the lapse of time, is more potent than either.

ART is the revelation of man; and not merely that, but likewise the revelation of nature speaking through man.

Sabbath Reading.

ALL'S WELL.

THE day is ended. Ere I sink to sleep
My weary spirit seeks repose in thine;
Father! forgive my trespasses, and keep
This little life of mine.

With loving kindness curtain Thou my bed;
And cool in rest my burning pilgrim feet;
Thy pardon be the pillow for my head—
So shall my sleep be sweet.

At peace with all the world, dear Lord, and Thee,
No fears my soul's unwavering faith can shake;
All's well! whichever side the grave for me
The morning light may break!

OUR BURIED TREASURES.

THERE are many graves in this world of ours, many hillocks of consecrated ground where rank grass draws nourishment from sacred dust. Many mourners there are in this same strange world,—an endless train of sorrow-stricken ones, hearts bruised and sable-clad, inner sanctuaries forever tenanted by the unforgotten dead. There are few hearts that have not a veiled recess, wherein is treasured up and hidden away from profane eyes the record of a sacred grief. Few are the mortals who cherish not in their bosoms the remembrance of something that has been and is not,—who weep not over the grave of a departed joy. For there are other graves than those containing human forms; not all are heaped up and turfed over by the sexton's spade. Bright hopes fade and die, cherished projects fail, dearest purposes are rudely uprooted, whole life-plans overthrown; and all these lie buried in the human heart. But, whether enclosed in grassy church-yards, arrayed side by side, with gleaming marble at the head, and rose bushes, may be, at the foot—or, unmarked by marble slab, all unseen by mortal vision, hidden in the innermost recesses of one's own soul, they are still graves, and mourners have bent above them.

Thus it is ordered. To some, sorrow may seem an heritage, while to others are vouchsafed pleasant pathways under propitious skies; yet rarely shall one complete his life-journey without, at some time, the heavens be overcast and the storm of affliction burst with fury upon him. Blackness surrounds him, the pleasant pathway has become a slippery steep, the trees in whose friendly shade he had rejoiced afford him now no shelter, the music of birds and laughter of children give place to the roaring of the tempest, the fierce raging of the winds and the hoarse thunders of an offended GOD. There is no escape from the pitiless outpouring of the angry clouds; alone and defenceless, he is at the mercy of the storm. Anon, the clouds break away, and, drenched and shivering, he pursues his journey. No longer does he view a sunny path, smiling with flowers, and leading, far as the eye can reach, through fairest regions; but a gray mist closes around him, chilling winds sweep over him and whistle in the tree-tops which send down their showers of tears upon the miry pathway. No gleam of sun appears; the future is shrouded in impenetrable gloom. The benumbed and weary traveler longs to be at his journey's end.

And thus it is wisely ordered. Were this life all sunshine, who would take thought for the life to come? Did this world afford us continuous pleasures, even mixed, as they are, with some alloy, who would seek for higher? Oh! these graves have strange efficacy to bring us to our senses. Tempted by evil influences, lured by ambition, beckoned on by pleasure, there comes up before us, oftentimes, one of these little grass-grown mounds, and while we stop to weep, the tempting vision fades, and our souls are rescued from the threatened danger. There is no safeguard against the thousand allurements which surround us, nothing to soften the heart and open it to good impressions, nothing to bring us near to GOD, like the memory of a buried treasure. It comes to us in the hour of temptation, and the seductive voice of the tempter loses its charms; in the hour of mirth, and checks our extravagance; it interposes itself between us and the dazzling prize Ambition holds up to our view; it seeks us out when elated with success, and humbles us. In the silent watches of the night, when the soul holds communion with the past, and we live over the happy hours gone by, the memory of our loss returns, not in all its first bitterness, but with a subdued and quiet sadness befitting the silence and the darkness. 'Tis then that the heart of the strong man becomes as the heart of the child. We breathe softly to ourselves the names that our lips never pronounce,—we recall the features that once glowed with life and with love,—we hear again the voice that once thrilled us with pleasure,—we meet once more the eager uplifting of the earnest eyes,—and then, as we think of the eyes closed, the voice hushed, the features stiffened and white, and the name, that sacred name, carelessly read by the indifferent stranger from off the white marble—'tis then that we forget our pride, our ambition, our engrossing cares,—'tis then that distinctions of rank, of education and of wealth, vanish, and we become as children at the grave of a parent.

There is no perfect development of the heart of man without such a memory. He who has never been bereaved has never tasted the sweetest consolations of Divine Grace, possesses not the key to the heart of his fellows, is shut off from sympaty with the vast majority of the human race. He lives in an unreal world, and sees not life in its true colors.

BLESSINGS.—Run not after blessings; only walk in the commandments of God, and blessings shall run after you, pursue and overtake you.

Useful, Scientific, &c.

TRICHINA SPIRALIS.

THERE are few persons who have not heard of the minute worm, named at the head of this article, as a parasite of the hog, and as a cause of disease and death in man, from eating the lean part of this animal when it happens to be infested with it. Fears, not altogether unreasonable, have been excited by reports of the Trichina disease since it began to appear in this country; and some over-sensitive people have been led to discard altogether the use of pork as an article of food. While no one can deny the facts upon which such a conclusion is founded, it does not follow that the danger is so imminent as to justify the entire disuse of pork, or that the risk may not be altogether avoided if proper precautions are taken. Hence we propose to bring together the main facts in relation to Trichinæ in order to place the subject before our readers in its proper light.

FIG. 1. FIG. 2.

Our knowledge of the Trichina (pronounced Tre-ki-na, or Tre-ké-na,) dates from 1835. It was first described by Professor OWEN of England, from specimens of muscle sent to him by a London anatomist. The muscle contained small, whitish specks, visible to the naked eye. These had been seen before, but Prof. OWEN discovered that these minute cysts contained a microscopic worm, coiled up in such a manner as to suggest the name given to it — the spiral, hair-like worm. The cysts are oval in shape — one-thirty-sixth of an inch long, and the worm they contain is about one-twenty-fifth of an inch in length. Fig. 1 represents the appearance of a piece of muscle dotted with these cysts, which have become invested with calcareous matter. Fig. 2 shows one of these cysts highly magnified, the worm being drawn as it was seen coiled, under the microscope. Two worms are sometimes found in a cyst. In looking for the worms in recent cases, it must be remembered that they are at first merely coiled up in the muscle, and do not exhibit the perfect cyst until several weeks have elapsed. Fig. 3 represents the trichina from the muscle, highly magnified. The worm in this state is immature, but endowed with extraordinary vitality, as it will remain unchanged, supported probably by contact with the living tissues which surround it, for ten or more years. The pointed extremity is the head of the worm; the mouth is round and small; the intestinal canal is twisted on itself for a part of its length and terminates at the fissure-like opening at the larger extremity. The female is much larger than the male, as is usual in this class of worms.

FIGURE 3.

From the time when the trichina was first described by OWEN, until a few years ago, it had been occasionally seen in the bodies of persons examined after death; and its existence in the pig was also known, but nothing had been learned to justify the belief that it was the cause of suffering and death in man. It remained, therefore, merely a matter of scientific interest to those engaged in the study of internal parasites; and the discovery of Prof. OWEN continued for twenty-five years destitute of any practical value.

It has long been known in Germany that sickness and death have resulted from eating sausage made from pork. This is a favorite food of the Germans, and is often eaten raw, or but slightly cooked. Cases have occurred in which legal investigations have been instituted on the supposition that deleterious substances had been intentionally added to this food. Physicians were in the habit of regarding the "sausage poison" as something peculiar and inexplicable. It now appears, from the effects produced by the so-called "sausage poison," that the symptoms were due to the existence of trichinæ. A remarkable instance of this kind occurred in Hettstadt in 1864. One hundred and three persons, mostly men in the prime of life, partook on a festive occasion, of the German sausage, duly smoked and fried. The trichina disease appeared in several of these individuals the next day, and eighty-three out of the above number eventually died from the malady.

Between the years 1858 and 1862 there were frequent epidemics of the trichina disease in Saxony, Prussia, &c., of which many persons died. The disease resembled typhoid fever, but its exact nature was not ascertained until 1860, when Prof. ZENKER of Dresden, first discovered the connection between trichinæ and the malady in question. Since that time the subject has been fully investigated. Proofs have been obtained by feeding animals with trichinous flesh. It has been found that the trichinæ will breed in different animals and produce a fatal disease in them as well as in man. In the instance above given as having occurred in 1864, after all the food eaten by the party had been tested for various poisons, it was discovered that the sausage contained trichinæ, which were also found in the muscles of individuals who perished from the effects of this fatal feast. It would be satisfactory to know whether trichinæ, and the disease caused by them, have always existed; but upon these points we must confess our entire ignorance. We know that a species of tapeworm is derived from "measly" pork, and that the hog was pronounced an "unclean" animal by the Jewish law-giver; but it is not certain that the maladies in question were the grounds for the prohibition of this article of food.

The trichina is normally present in the rat, and is occasionally found in other animals, but its evil effects in the human family are due entirely to the use of pork. We will therefore confine our description to its life-history in the hog and in man. How it originates in swine is a matter of conjecture only. It is found in immense numbers in the animal which happens to be infested with it; and, except in recent cases, only in the lean or muscular parts. A pound of meat may contain 600,000 worms, and the hog affected to this extent may appear in good condition and find a ready sale. We have remarked on the strange vitality of the trichina. It will remain alive after meat has become putrid or frozen. When taken into the human stomach, the cyst dissolves and liberates the worm. In two days it increases to two or three times its former size; and in about a week the female trichina brings forth its living young, each mother producing from 100 to 200, and perhaps repeating the operation several times before it dies or is expelled from the body. The minute young worms penetrate the intestines, and in a very short time find their way to the muscles, where they rest, and after a short period cease to grow. They then become invested with the cyst already described. All the voluntary muscles of the body become thus filled with them;—at an early period they are also found in the intestinal mucus, in the mesenteric glands, but rarely if ever in the heart, or other important organs. It is estimated that 30,000,000 may thus exist in an adult subject—a computation which will not appear extravagant to one who has seen fresh muscle filled with them.

The parent worms do not penetrate the muscles. It is supposed that these, and some of the young, are expelled from the body of the animal, and are received into other animals, and that thus the race is perpetuated, while the greater number, lying dormant in the muscles for an indefinite period, await their chances of development in the manner already described.

The symptoms produced in man by trichinæ relate first to the stomach and bowels. They make their appearance in from twenty-four hours to several days after the infested food has been eaten. Painful irritation of the stomach and intestines, diarrhea and fever occur at this stage. A bloating (œdema) of the face is one of the early symptoms. When the young trichinæ begin their migration into the system, inflammations of internal organs supervene—the bloating attacks the lower, then the upper, extremities and the muscles become affected with disagreeable sensations or painful rheumatism and contraction. They may also give rise to inflammation of the lungs, hoarseness, fever of a typhoid type, profuse sweatings and eruptions on the skin. These symptoms last several weeks, and terminate in a slow recovery, or prove fatal. A majority of persons thus affected recover—but the suffering is generally in proportion to the amount of trichinous food eaten by the individual. As to remedies, we may add that nothing is known capable of destroying trichinæ which it would be safe to administer to a patient. Thorough evacuation of the stomach and bowels as early as possible is all that can be done, with appropriate care and treatment of symptoms to keep the sufferer alive until the animals, having reached the muscles, cease from their migrations. When this point is attained, a person harboring millions of them may live for years unconscious of their presence.

The liability to be affected by trichinæ is certainly not great. The trichinous disease is rare in this country, yet cases have occurred at the East and the West; and in our ignorance of its limitations, we may underrate as well as overestimate the danger. No breed of swine is exempt from trichinæ. It is supposed, but not proved, that filth and overcrowding predispose to trichinous infestation—but we have yet much to learn in respect to the cause of trichina in swine, and its propagation among them.

In view of the foregoing facts it would seem superfluous to urge the careful examination of pork by the purchaser and consumer. The existence of disease in the hog should be carefully noted, and its cause ascertained if possible. From a communication to the writer by a physician in Iowa, it appears that "hog-cholera" has been produced by feeding one of these animals with pork which proved to be trichinous. The animal after death was found filled with trichinæ. It is to be hoped that further attention will be given to this subject to ascertain whether this disease in the hog is caused in all cases by trichinæ.

It is some satisfaction to know, if we must eat trichinæ, that they are harmless when thoroughly cooked. Their vitality is destroyed by a heat of 212°, or the boiling point of water. They are also killed by long salting and thorough smoking —but the ordinary salting and smoking of ham does not always destroy them, so that this article when eaten raw has often proved fatal in its effects. It is difficult to ascertain their presence in sausage. This article, therefore, should always be thoroughly cooked. A temperature below 150° does not necessarily prove fatal to trichinæ. It has been ascertained that a large piece of meat boiled for half an hour does not become heated in the center above 140°. In roasting pork, if the interior remains bloody, the heat has only reached about 150°.

In conclusion we may remark that the trichinæ disease has as yet prevailed epidemically only in Germany. The use of raw or imperfectly cooked sausage and ham in that country is proverbial. Perhaps the same practice in this country would be attended with like results. In one family in Linn Co., Iowa, five persons out of nine who had eaten raw ham died from this cause. In another family six persons who used raw ham were made very sick, but recovered. It is not unlikely then that trichinous disease would become an American "institution," wherever pork eating prevails, if the necessary precautions in regard to cooking were neglected. W. W. E.

JAPANESE WINTER COSTUMES.

WINTER DRESS IN THE COUNTRY. WINTER DRESS IN TOWN.

EVERYTHING relating to Japan possesses an interest, from the fact that, until very recently that country allowed no intercourse with other regions of the world. Now that the barriers have been broken down, we find in the character and habits of the Japanese much that is novel and striking and worthy of attention. In their state of semi-civilization they have made creditable advances in certain arts, and, like the Chinese, are wonderfully ingenious and imitative. The distinctions of rank are sedulously maintained, and the contrast between the higher and lower orders of society marked by unmistakable lines.

Our engravings illustrate the winter style of dress in town and country, which indicates the superiority in polish and refinement of the citizen over the rustic.

Various Topics.

THE WONDERS OF SEED.

Is there upon earth a machine, is there a palace, is there even a city, which contains so much that is wonderful as is enclosed in a single little seed—one grain of corn, one little brown apple-seed, one small seed of a tree, picked up, perhaps, by a sparrow for her little ones, the smallest of a poppy or a bluebell, or even one of the seeds that are so small that they float about in the air invisible to our eyes? Ah! there is a world of marvel and brilliant beauties hidden in each of these tiny seeds.

About a hundred and fifty years ago, the celebrated Linnæus, who has been called "the father of botany," reckoned about 8,000 different kinds of plants; and he then thought that the whole number existing could not much exceed 10,000. But, a hundred years after him, M. de Candolle of Geneva, described about 40,000 kinds of plants, and he supposed it possible that the number might even amount to 100,000.

Well, have these 100,000 kinds of plants ever failed to bear the right kind of seed? Have they ever deceived us? Has a seed of wheat ever yielded barley, or the seed of a poppy grown up into a sunflower? Has a sycamore tree ever sprung from an acorn, or a beech tree from a chestnut? A little bird may carry away the small seed of the sycamore in its beak, to feed its nestlings, and on the way may drop it on the ground. The tiny seed may spring up and grow where it fell unnoticed, and sixty years after, it may become a magnificent tree, under which the flocks of the valleys and their shepherds may rest in the shade.

PUNCTUALITY.—A punctual man is rarely a poor man, and never a man of doubtful credit. His small accounts are frequently settled, and he never meets with difficulty in raising money to pay large demands. Small debts neglected ruin credit; and when a man has lost that, he will find himself at the bottom of a hill he cannot ascend.

A HEAVENLY WONDER.

ASTRONOMICAL phenomena appear to be the order of the day. Since the failure of the meteoric shower, another subject has been started which is creating much interest and discussion among the savans. Somewhere between the 6th and 15th of December, 1866, an astronomical phenomenon occured, the like of which will not be again visible for four thousand years. This heavenly wonder is the conjuntion of the sun, moon, Mercury, Venus, and the earth. At the time of the occulation, all five could be intersected by the same straight line—tit, tat, too; five in a row. A well known astronomer, alluding to the event, says:—"I have turned the planetarium back two thousand years, and during that space of time no event of a like character has occurred; I have turned it forward two thousand years in the future, and in that long period the occulation will not be repeated. What effect will be produced on our globe by the intervention of so many bodies between it and the sun I am unable to say. The attractive power of the solar influences may be weakened, but to what extent no calculations based on precedent and philosophy can afford any idea. The completeness of the occultation, owing to the rapid movements of the planets, will be of short duration, and the occasion may pass without any physical indication that such a maze in the dance of stars had taken place.

MEAT AT BREAKFAST.

A RECENT writer expresses his belief that meat should be taken at the morning meal, and thus gives his reasons:

It may not be digested so quickly as some starchy substances; but, as a rule, it is digested easily, and it certainly satisfies the system, and carries us farther in our work than vegetables alone. At this time meat should be taken in a palatable and easily digestible form—stewed, with the nutritient juices saved in the sauces, and the aromatic principles developed by the heat; or, better than all, broiled, for here the juices are retained in the tissue, and the flavor is developed by the hardening and carmelization, as it were, of the exterior. 'Above all, avoid the abomination of frying fresh meat; not alone as a matter of taste, but as a violation of scientific laws. A fresh animal tissue which has soaked up a mass of fat is not in a proper condition to be taken into the system. Salted articles, which are generally so hardened that they will not so readily absorb the fat, as fish, and articles which are exposed for but a short time to the very high temperature to which all fried articles are subjected, may be cooked in this way, but never good fresh meat.

PANTOSCOPIC CAMERA.—Several of the new instruments called the Pantoscopic Camera have been brought to this country. There is in the mechanism a clock-work arrangement by which the camera moves slowly round the arc of a circle, pointing successively to each section of the horizon, the plate which receives the picture being "fed" at a corresponding rate on a sliding rail, so that a panorama of a city, large estate, or of the whole horizon, may be taken at once, thus obviating the lack of continuity both in form and shape, which is a defect of pictures taken in sections and pasted together, as is the present practice.

BIRDS OF A FEATHER.—An *ornithological* match recently made in a parish near Edinburgh has set the whole neighborhood in a *flutter*. Miss *Henrietta Peacock* espoused Mr. *Robin Sparrow*, the bridesman being Mr. Philip *Hawk*, and the bridesmaid Miss *Larkins*. The marriage fees were taken by J. *Crowl*

Reading for the Young.

READING FOR YOUTH.

A WISE man once said, of the making of books there is no end. This is more literally true now than when spoken some three thousand years ago. Thousands of new books are every year published in this country, and many more in England, and France, and other parts of Europe. A lifetime devoted entirely to reading, would not afford time for the perusal of one-tenth of the books already published, to say nothing of the vast annual increase, and the great amount of periodical literature. As, therefore, with the time young men have for reading, only a very small portion—not one in a hundred — of the existing books and of the periodical matter can be read, it becomes necessary that the youth should be very select in choosing works to which they devote their time and attention. If this is not the case, valuable time is, at least, wasted.

In selecting books, act as in choosing friends. There are those with whom we cannot associate, and books we cannot read, without receiving positive injury. Then there are light, trifling and foolish people and books, whose company tends to dissipate the mind, and give it a distaste for everything manly and noble. Select only a few books for perusal, and those calculated to improve the mind and heart. The manner of reading, too, is important. Books should be read not merely for amusement, but for a purpose. COLERIDGE divides readers into four classes. "The first," he says, "may be compared to an hour-glas, their reading being as the sand; it runs in, and runs out, and leaves not a vestige behind. A second class resembles a sponge, which imbibes everything, and returns it in nearly the same state, only a little dirtier. A third class is like a jelly-bag, which allows all that is pure to pass away, and retains only the refuse and the dregs. The fourth class may be compared to the slave in the diamond mines of Golconda, who, casting aside all that is worthless, preserves only the pure gem."

Another author says it is necessary to have a fixed, noble purpose behind a disposition to read, as behind physical strength in secular pursuits, otherwise what is read will be of comparatively little service. These few hints on reading are designed as merely suggestive of thought, and perhaps discussion among our young readers.

LITTLE WRENS.

THE British Workman gives the following curious incident that occurred near the house of a friend:

A number of birds, of different species, have nests around his house; and a few days since his family heard a great outcry and commotion amongst them, and found that their cat had caught a female wren, one of a pair who were rearing their offspring in a neighboring tree; and it appeared that the whole feathered population had gathered together to express their indignation at the outrage, and condolence with the survivor.

Presently they all flew away, the male wren with them; who, however, shortly returned, bringing with him a new mate, who immediately took charge of his infant brood, and has, in her devotion to them, been a pattern for step-mothers. The query to me is, how, with the limited intelligence, and power of communicating ideas, which we are willing to accord to them, he made known to her his loss, and induced her to remedy the misfortune so effectually.

The instinct that the great Creator gives to these creatures of his hand is truly wonderful; and yet how very far below the intelligence with which he has endowed man is this instinct!

LINES IN A LITTLE LADY'S ALBUM.

HEARTS good and true
Have wishes few,
In narrow circles bounded;
And hope that lives
On what God gives,
Is Christian hope well founded.

Small things are best:
Grief and unrest
To rank and wealth are given;
But little things
On little wings,
Bear little souls to heaven.

SELFISHNESS REBUKED.—A poor old man busily planting an apple tree was rudely asked, "What do you plant trees for? you can't expect to eat the fruit of them." He raised himself up, and, leaning upon his spade, answered, "Some one planted trees before I was born, and *I* have eaten the fruit. I now plant for others, to show my gratitude when I am dead." Thus should we think and act for the welfare of others.

LOST TIME.—Lost wealth may be restored by industry; the wreck of health regained by temperance; forgotten knowledge restored by study; alienated friendship smoothed into forgetfulness; even forfeited reputation won by penitence and virtue; but who ever again looked upon his vanished hours—recalled his slighted years, stamped them with wisdom, or effaced from heaven's record the fearful blot of wasted time?

CONUNDRUMS.—Why are railway stations like groans? Because they are (*deep oh's*) depots.

Why is a "non-resident" like a Tartar? Because he leads a *no-mad*-ic life.

If you asked one of the antipodes whether he lived under the zenith, what would he say? Nay, dear (Nadir.)

Why is an astronomer like a press-gang? Because he will see stars (seize tars.)—*Our Young Folks.*

THE virtue of prosperity is temperance; the virtue of adversity is fortitude.

The Publisher to the Public.

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly. Any one using deception will forfeit premium,—but of course no honorable man or woman (and all our recruiting friends are supposed to be such) will attempt any dodge or deception in the matter.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 5, 1867.

NEWS OF THE WEEK.

From the National Capital.

THE Committee on the Tariff, it is published, will make their report the 3d of January.

The receipts of internal revenue the 29th ult., was $684,286; for the week, $2,500,000.

Amount disbursed for the week ending the 29th, for the War Department, $673,472; for the Navy Department, $1,087,545; for the Interior Department, $29,139.

During the week the Treasury Department issued $305,950 in National Bank currency; whole amount issued, 300,376,951; whole amount in circulation, deducting bills returned, 298,614,519. Amount of securities, for National Bank notes held by the Government, $370,207,100.

On the re-assembling of Congress a bill is to be introduced prohibiting an increase of national currency of over three hundred millions of dollars.

The President, it is understood, has given his opinion to Southern gentlemen that it would be unwise for the Southern States to ratify the U. S. Constitutional Amendment.

A case is soon to be tried before the United States Supreme Court, which will involve the question whether Alabama is a State in the Federal Union, or what her present status is, if she is not a State.

Judge Redfield of Boston, it is reported in Washington, has been selected as counsel for the Government in the cases pending in England, which involve the title to $20,000,000 worth of property belonging to the late rebel government.

Affairs at the South and South-west.

COL. SAWYER, Adj.-Gen. on Gen. Sherman's Staff, died in St. Louis on the 26th ult.

The loss of life by the burning of the steamer Fashion on the Mississippi River, will reach sixty.

The "Dutch Gap Canal" dug by Gen. Butler in Virginia, is being filled up by the owner of the land through which it passes.

The "Stay Law" of Texas, providing for the payment of debts in four annual installments, has been declared unconstitutional.

Bishop Green of Mississippi, has written a Pastoral Letter to the Church of that State, in which he commends the subject of negro education.

The Congressional Committee to investigate the matters connected with the massacre in New Orleans last summer, are hard at work in that city—"investigating" twelve hours a day.

The U. S. Collector of Internal Revenue for Lafayette, Jackson and adjoining counties, Missouri, has been suspended, and is a fugitive in St. Louis, in consequence of the troubles in his part of the State.

The Legislature of North Carolina has passed "a bill granting general pardon and amnesty to officers and soldiers of the United States, for offences committed against the criminal laws of the State in the discharge of their duties."

The trial of George W. Gayle, the Alabamian, charged with inciting the murder of President Lincoln by an advertisement offering a reward for his body, has been commenced in Montgomery, but continued to the next term of the court.

Efforts are being made in various parts of the Southern States by distinguished men—ex-rebels as well as Unionists—to induce the Legislatures to ratify the U. S. Constitutional Amendment. No other course, they allege, can be pursued to "reconstruct" the States permanently—to place themselves for all time once more by the side of those States with whom they once helped to form the "E Pluribus Unum" of the Nation. There are many men, and in authority, who seem determined to prevent the "ratification," or to acknowledge Congressional jurisdiction until the States are represented in the National Capitol.

Great Fires in Elmira.

THE most terrific and devastating fire that ever occurred in Elmira, (N. Y.,) broke out at half past one o'clock on Sunday morning, the 23d ult., in the drug store of Gregg & Co., on Lake street. When first discovered it was burning among some chemicals and combustible matter with which the cellar was stored. The steamers were got out as speedily as possible, but owing to a difficulty in making connections with the hydrants, some time elapsed before they were at work, and the flames were well under way. They spread in either direction along the very best portions of the street, which were entirely devoted to business. Twenty-six large stores were burned. The Advertiser reports the loss at half a million dollars, upon which there were insurances to the amount of two hundred and thirteen thousand dollars.

Another fire broke out on the 26th, in the wholesale boot and shoe manufactory of W. A. Bigelow & Co., situated on Wisner, near Water street. The building was totally consumed. It was nearly new and one of the finest business structures in the city. The total loss on the building and stock is estimated at $100,000. The property was insured in the Security Insurance Company for $75,000.

From Canada.

TORONTO, Dec. 27.—Immense donations of Christmas cheer, enough to last for several days, were furnished to the Fenian prisoners. The House of Providence was the principal contributor and the prisoners greatly enjoyed the treat. The Governor of the jail allowed them as much latitude as was consistent with their safe-keeping.

OTTAWA, Dec. 27.—The river opposite the city is crossed by foot-passengers on the ice, but it is not yet strong enough for sleighs. The wolves are numerous on the north side of the river, and have committed considerable depredations on sheep.

BELLEVILLE, Dec. 27.—Numbers of persons are still passing here en route for the Madoc gold regions. Much Government land is being purchased.

The N. Y. Herald's Montreal special, the 26th ult., says that the Fenian prisoners who have been tried as American citizens and discharged for want of evidence to convict them, have signed a petition, which is to be forwarded to Mr. Seward at Washington, asking that he collect damages from the British Government for depriving them of their liberty for over six months.

SWEETSBURG, Dec. 28.—Michael Crowley, a Fenian, was found guilty, yesterday, of "waging war" against the Queen's dominions, and sentenced to be hung the 15th of February.

TORONTO, Dec. 28.—Col. Lynch, learning that thirty-five overcoats had been forwarded by President Roberts to the Fenian prisoners, has refused to accept them. The "President" has also sent $200 to the "House of Providence," to be given to the prisoners.

Indian Hostilities.

A DISPATCH from Fort Laramie of Dec. 26, says a terrible massacre occurred on Friday, the 21st inst., near Fort Phil Kearney. Brevet-Colonel Filterman, Captain Brocan and Lieutenant Drummond, of the 18th infantry, with ninety-one enlisted men of the 2d cavalry and 18th infantry, were surrounded by Indians and every officer and man killed.

Another dispatch, the 27th, from the same place, says a messenger just in reports the formation of a grand coalition of twelve tribes of Indians for common cause against the whites in the Territories of Dakota and Montana. The number of warriors is estimated at eleven thousand.

A St. Louis telegram the 29th, says that the Indian massacre on the 21st, was five miles from Fort Phil Kearney, on the road to Montana. The Indians numbered 3,000. The loss of the Indians greatly exceeded the whole number of troops in the command. A sufficient number of soldiers to protect the route has been sent from Fort Laramie.

From Mexico.

LATE advices from Mexico state that the solemn declaration of the Emperor Maximilian to remain in the country at the head of the Government, has given occasion for demonstrations of content among a large number of the people. The Empire has been divided into four military divisions, three under command of Mejia, Marquez and Miramon, and the fourth, Yucatan, is to remain in its present state. General Blanco has been appointed Minister of War. The Emperor will soon return to the Capital.

The Custom House at Vera Cruz has been seized by the pretended allies of the Emperor, the French, and this will cause a temporary embarrassment, which the Church party are relieving.

Mejia has triumphed over the forces of Escobado with fatal results to the enemy.

The reported death of Escobado is true. He was overtaken by Cortinas and Canales when in flight from Matamoras, and brought back to that city. Consequent upon his capture a general insubordination of all the Liberal cliques occurred in Matamoras, and Canales gaining the upper hand, executed Escobado on the morning of the 21st of December, claiming to act as the representative of Ortega. The reported panic in Matamoras has been confirmed, and a general fight was expected to result.

The Herald's city of Mexico correspondent of December 8th, says that the return of the Emperor to his throne was received with public rejoicings throughout the country. His army, independent of the French, numbers 35,000 men, all well fed and clothed. The Imperialists say that if they have no United States troops to contend against, they will ultimately succeed. They desire the withdrawal of the French, and consider that it would be the best thing for Maximilian.

The Mexican Imperial Minister of Foreign Affairs, says the Emperor has charged his Ministry with the duty of convening a National Congress without delay.

The Minister concludes with the following important sentence in reference to the relations between the French and the Emperor:—His Majesty, the Emperor, has received within the few days past the most explicit assurance from Marshal Bazaine, who in conformity with the commands of his sovereign, Napoleon, will co-operate with him in the interest of order and peace, and give his Majesty's Government assistance in carrying out their plans as long as the French troops remain in the national territory.

The Liberals are very active in the State of Oaxaca. Juarez is said to have two brigades of well organized troops.

Guerrillas abound everywhere on the road to Vera Cruz. The retiring of the Imperialists from San Luis Potosi is confirmed.

The Inspection of Flour.

GENERAL attention has recently been directed to frauds in the manufacture and sale of flour. The extent to which corrupt practices of this character are carried, is almost inconceivable. Unsound wheat is ground up in mixture with the good article, and sold under "superfine" and "extra" brands. Deleterious substances, such as plaster, are introduced in such quantities as seriously to affect the health of those by whom the article is used. Short weight is rather the rule than the exception. These facts have been brought to public notice by the investigations of the Sanitary Superintendent and other officers of the Health Commission for the metropolis. It is the opinion of Dr. Harris that certain classes of fevers, and disorders of the digestive organs, prevalent in New York, may be traced to this source. Of course the same causes will produce like results everywhere. At a meeting of the Farmers' Club, yesterday, a committee appointed to investigate the subject, urged some action on the part of the Legislature to re-establish the inspection of flour. The committee holds that the section of the Constitution of 1846, abolishing general inspections, makes a special exception in favor of those which relate to matters of public health—such as hygienic precautions, or the examination into the quality of food. This is undoubtedly the fact. The existing evil is one in the prevention of which everybody has an interest—for all must eat. And the Legislature will do wisely if at the ensuing session it shall enact some efficient statute to end the shameful operations of the conscienceless speculators who are deliberately introducing poisons into our dietary.—*Albany Eve. Jour. of Dec. 27.*

ACCIDENTS ON THE N. Y. CENTRAL RAILROAD.—The following is an enumeration of accidents on the New York Central Railroad, between October 1st, 1865, and October, 1866:—The number killed by accident was fifty-two, and the number injured eighty-one. Of these five were killed by falling from the cars and one injured; by jumping off or on trains while in motion, five killed and four injured; by walking, standing, lying, sitting or being on the track, twenty-seven killed and eight injured, at work on or near the track, or in making up or detaching trains, four killed and four injured; by trains being thrown from or running off the track, six killed and six injured; striking bridge, one killed; by collision of trains, four killed and nine injured.

TEXAS.—Senator Roberts of Texas, paints a horrible picture of affairs in that State. He says that twenty-seven hundred freedmen have been murdered within a year, and the persecution of the unfortunate blacks is so fearful that they are praying for a restoration of slavery as a protection against the murderous hate of the reconstructed white rebels.

Texas papers, just come to hand, report that Gen. Sturgis had assumed command of the military post at Austin, and that he had declared his purpose to do anything in his power for the protection of the frontier.

THE METROPOLIS.—A young man in St. Louis recently wrote to Horace Greeley to use his influence in obtaining him a situation. He received the following in reply:—"New York is just entering upon the interesting process of starving out 200,000 people whom war and irredeemable paper have driven hither. It is impossible to receive and employ more till these are gone."

THE "CENTRAL SYSTEM."—The Albany Board of Trade has concurred with the Boards of Buffalo, Chicago and other cities in fixing the first day of March next as the day upon which the "Central System" shall be practically put in operation. Wheat, rye, corn, barley and oats will on and after that day be sold by weight, and the prices named will be for 100 pounds.

WE have the authority of the London correspondent of the New York Times for saying that the exports of British manufactures to the United States in 1866 were double what they were in 1865. For eight months of 1865, twenty-two principal articles came to $40,000,000; for the same time in 1866, $80,000,000.

AN organized gang of robbers have taken to the practice of passing themselves off, at the East, as revenue officers or agents, acting under special orders, by which they operate on the distilleries and adjoining stores or warehouses to forward their thieving operations.

A VERY general movement is being made by the New England press for Senator Fessenden as the next Presidential nominee. It is maintained that as all other sections have had a turn-about at the Presidency of late years, it is only fair to give New England a chance now.

THE papers say there is another surviving soldier of the Revolution, who lives in Noble Co., Ohio. His name is John Gray, and is 103 years old. He enlisted in 1781, and served but three months—not long enough for a pension. Congress is asked to "remember" him.

NEWS PARAGRAPHS.

SEVENTEEN papers in Pennsylvania have declared for Governor Curtin for United States Senator, six for Simeon Cameron, and three for Thaddeus Stevens.

THE raid on the New York distilleries has rendered whisky comparatively scarce, and it has advanced from ten to twenty cents per gallon since last week.

IT is reported that General McClellan will return in a short time from the "Old Country," and take up his residence at his country house, in Orange, New Jersey.

AMONG the young men recently admitted to the New York Bar, we perceive the name of Sidney Oak Smith, son of Seba Smith, Esq., the original "Jack Downing."

A MAGNIFICENT Masonic Temple is projected at Philadelphia. The lot, corner of Broad and Sanson streets, has been bought for $150,000, and the building will cost $500,000.

OF the nine Judges of the Supreme Court of the United States, five, including Chief Justice Chase, were appointed by the late President Lincoln. Eight of them are Northern men.

A LETTER from Lagos, on the coast of Africa, says that the King of Dahomey was preparing to go to war with a neighboring prince, and had ordered 200 men to be sacrificed to the idols.

QUEEN VICTORIA has ordered a discontinuance of the prayer for relief from the cattle plague. That terrible epidemic has been finally "stamped out" of the English Isles by the thorough measures taken against it.

THEODORE TILTON, in a letter about Western matters, says that Iowa will be the first State in the Union to acknowledge the political equality of men and women, as citizens entitled each alike to the citizens' franchise.

IT is ascertained from an official source that Minister Campbell has been instructed by our Government to remain in New Orleans for the present, in order to await future events in Mexico, and for further instructions.

GEN. B. F. BRUCE, N. Y. State Canal Commissioner, was, on the 26th ult., the recipient of a magnificent gold watch and chain, presented (at Syracuse) by the officers and employees of the Middle Division of the N. Y. State Canals.

ISAAC N. SURRATT, a brother of John, who was formerly a captain in the Texas rebel cavalry, was in Baltimore not long since. He went from there to Canada, and is loud in his denunciations of President Johnson as the murderer of his mother.

THE "grand finale" of the Mercer Expedition to Oregon, in which several hundred New England young ladies went out into the wilderness, is reported, by a Pacific correspondent, to have been the finding of a "lodge" by most of them, with a man in it.

AN enormous steam engine, of over 4,000 horse power, is to be placed in position at the building of the Paris Exhibition. This engine, which is now being transported from Havre to Paris, is intended to work the pumps which supply the water to the building.

THE Commissioners appointed by Congress to determine upon a site for the new Post Office in New York, held a meeting in the Post Office Building last week, and decided that the lower portion of City Hall Park was the most eligible locality for the institution.

AT St. Paul, Minnesota, W. P. Wilson, the old U. S. Assessor, having refused to yield his office to Colonel Wood, President Johnson's new appointee, that gentleman has set up an opposition assessor's office, and the competition in revenue promises to be a lively one.

MAJ.-GEN. SAMUEL R. CURTIS, the Hero of Pea Ridge, Arkansas, in March, 1862, died last week at Council Bluff, Iowa. Gen. Curtis served in the Mexican war under Gen. Taylor, as Colonel of an Ohio regiment. At the time of his death he was U. S. Commissioner to inspect the finished work upon the Union Pacific Railroad.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Jan. 1, 1867.

THE year 1867 opens with a fairly easy money market in Western New York. The first of January is a more general settlement day than any other in the year, and the call for money is always active at this season. In Rochester, and vicinity, the Banking institutions have been conducted with prudence, and they are therefore in condition to afford their regular customers such accommodation as they may require. Money is easy in the seaboard towns, and there is no special stringency at any point West. The storm blockade of last week greatly disturbed the regular flow of remittances from different commercial points, which was unfortunate, particularly at this time, and must cause serious inconvenience to weak houses.

The price of gold the past week has been variable. It sold down to 131, but rallied toward the close of the week, and on Saturday sales were made at 131. On the last day of December, 1864, gold sold at 237, and Dec. 31st, 1865, at 144. Yesterday (Dec. 31st, 1866,) the current rate in New York was 133¾. Thus it is seen that the fall in the last two years has been very large and the decline the last year is 10¾. There has also been a very decided decline in prices of most descriptions of merchandize and produce. Wholesale prices have fallen much more than retail figures. The retail dealer, however, must soon conform to the wholesale markets. Trade is dull in almost all branches of business, and has been for some weeks. The decline in gold, in merchandize and produce, has created a feeling of uncertainty in regard to the future that has restricted operations. Values have been tending to a lower level, and most persons have declined to buy, except what was absolutely necessary, until they felt assured the bottom was reached, or until there should be greater stability. The fall has worked injuriously to those holding heavy stocks, and could not be avoided; but a large decline from war prices must come, and is certainly for the "greatest good of the greatest number." The caution now observed in making new contracts is one of the most favorable indications of the times—and will go far to ward off future financial embarrassments. We advise our readers to avoid, for the year 1867, making debts they have not the ability promptly to meet; and if farmers and mechanics will keep their expenses within their income—pay as they go—they will be disturbed but little by any financial storms that may affect the commercial world.

The bank dividends, for Jan. 1st, have been unusually large, as heretofore noticed, yet they have retained a large surplus of earnings to provide for future contingencies. This shows their soundness and that the business of the year has been profitable. The reserve fund of some Eastern banks is so large, that stockholders have complained that funds should be "kept back for their grandchildren."

Some self-styled "Merchants Union Law Co." is sending to bankers and others throughout the county, blank petitions to Congress asking that body to refrain from "the passage of any act authorizing the curtailment of the National currency, or having in view within a limited time the return to specie payments." Also, to "refrain from the enactment of any law compelling National Banks to redeem their notes in New York." These petitions, we apprehend, will find few signers among sound bankers or commercial men in this State.

The first business of Congress, on its assembling after the holidays, will be the consideration of bills to be reported for the revision of the tariff and of the internal revenue law.

The latest reports from London, by Atlantic cable, dated at noon yesterday, show a decided advance in 5-20s. Sales were made in London yesterday at 72¾. At Frankfort, yesterday, U. S. bonds were sold at 76¾.

WHEAT AND FLOUR.—There has not been a large business in wheat and flour recently, and the market is rather quiet. Many of the mills in Michigan and other Western States have stopped grinding. The stock of wheat and flour at the seaboard is less than last year at this time, and Western warehouses show no great surplus. If, as is contended, there is less first quality wheat in the hands of farmers than usual at this time of the year, the best brands of flour cannot be low the coming season.

COTTON.—Cotton is quiet. The advance in gold caused a firmer market at the close of the week. The St. Louis Republican says a careful observer, who has recently made a tour of the Cotton States, estimates the crop of 1866, at 1,400,000 bales. On the Southern plantations there is great scarcity of corn and pork.

PORK.—Hogs are lower and some packers at the West have ceased buying, as at present rates they see no money in mess pork. Buyers for shipment in this city yesterday paid 7@7¼c. Buyers for home consumption are taking dressed hogs at a trifle higher figures.

WOOL.—There is no movement West. At the East fine fleeces continue in demand, and prices are firmer for qualities suitable for spring goods. The Journal of Commerce, of Saturday, says:—"We notice sales of 240,000 lbs fleeces at 32@65c for State, Western, Ohio and Western Virginia."

POULTRY, &c.—The supply in this market is small for the season. In Boston, last week, the market was largely overstocked. The loss in that city on the Christmas supply is estimated at $50,000. The Western markets are largely supplied with poultry, game, &c.

BEEF.—In beef cattle there is no material change in the New York market. The Boston market is overstocked and prices are lower. The last Boston Daily Advertiser says:—"We have seldom, if ever, closed our report with so few sales as we are obliged to do to-day. The drovers say they don't want the name of selling for less than half what their cattle cost, and the butchers declare they do not wish to buy unless they can buy at lower figures than heretofore."

FOREIGN NEWS—BY TELEGRAPH.

PARIS, Dec. 25.—The Emperor Napoleon yesterday gave a reception to Gen. Dix, the new American Minister. He expressed the highest friendship for the United States.

COWES, ISLE OF WIGHT, Dec. 25. — The yacht "Henrietta" (from New York) passed the Needles on the westerly end of this island this afternoon at 5.45, winning the Atlantic race. The "Fleetwing" and "Vesta" not yet heard from.

COWES, Dec. 26.—The Fleetwing and Vesta arrived early this morning. The former had a rough passage; six seamen washed overboard; four of them were lost.

LONDON, Dec. 26.—The repulse of the French in Corea is confirmed. Another battle has taken place between the Turks and Greeks in Candia. The former was defeated with heavy loss.

MADRID, Dec. 28.—It is currently reported that the Queen of Spain will dissolve the Cortes.

PARIS, Dec. 28.—The Berlin Journal declares that Austria meditates the invasion of Turkey. It is announced that the United States have entered into negotiation with the Spanish Government for the cession of the Island of Minorca.

BREMEN, Dec. 28.—Orders have been received to arrest Prussian subjects about to emigrate from the Kingdom to evade military service.

DUBLIN, Dec. 26.—Gen. Millerd, President of the Fenian Military Council of Ireland, denounces James Stephens as a humbug and a rascal.

FLORENCE, Dec. 28.—Mazzini, the Italian patriot, has issued an address calling on the people of Rome to demand a republican form of government. It is not known what answer has been returned by Turkey to the Italian Government in relation to the demand for indemnity for firing into an Italian steamer in Candian waters.

LONDON, Dec. 30.—It is decided that Parliament will meet the 5th of February. Queen Victoria, it is expected, will open the session in person. Orders have been issued for the return of two regiments of troops from Ireland. It is thought the Christian Powers will interfere in the affairs between Turkey and Greece.

FLORENCE, Dec. 29.—The bad feeling between Greece and Turkey is increasing. Parliament has adopted an Address to Victor Emanuel.

$20 A DAY TO AGENTS!
The Fastest Selling and Best Map ever Issued. Lloyd's Great Map of North and South America, or The United States Continent In 1960. 24 square feet, engraved on steel, mounted and varnished with rollers, and colored in forty States and Territories; cost $100,000 and four years' labor; finished to-day; worth $20, yet retails for $4.00; shows 3,000,000 places, 500 railways, and 60,500 railway stations, 800,000 towns, villages, post-offices, cities, gold and silver mines, 20,000 stations on the Overland, Dispatch, Mail, Telegraph and Emigrant routes across the Plains and Rocky Mountains. The whole Continent is shown, from the spot in the Arctic Ocean where Sir John Franklin perished, westward through Behring Strait, to the Pacific, and southward 25,000 miles, around Cape Horn to Greenland—water entirely surrounding this mighty Continent—all seen and comprehended at a single glance. By the study of such a map is geography only learned. This is the first map ever made which shows the correct source of the Missouri, Yellowstone and Columbia Rivers and their hundreds of tributaries. I refer to the War Department, or the American Fur Company, St. Louis. This is a map for the world to consult; a map for the Student and Statesman; a map for the crowned heads of Europe to ponder over—showing the greatness of the United States Territory, which has doubled since 1842, and its greatness when its wings shall have expanded over the whole Continent, from the North Pole to the South Sea. To insure this map being hung up in every house throughout the civilized world, we have engraved a large separate Map of the United States portion of the Continent on a scale eight times as large as the main Map, and colored it in 4,000 distinct counties and printed it on the reversed side, so by raising the bottom roller the County Map faces you, showing every minute village, railway station, and distances between, and County seats, 400,000 names and 350,000 railroad stations. Both Maps for $4.00. County Rights given each Agent. Send money for a sample, and see the Map first. If not sold, taken back on demand. Agents are averaging 20 copies a day. Printed Instructions how to canvass well furnished our agents. Ladies do as well as men. J. T. LLOYD, American Map Publisher, 23 Cortlandt-st., New York.

Wholesale agents with capital could make a fortune on this great Map, in California, France, Germany, Canada, Spain, South America, Cuba, Texas, New Orleans, and the Western States. $8 to $10 a copy could be easily obtained.

DODGE'S MOWER AND REAPER
AGAIN VICTORIOUS!
Grand Gold Medal Awarded to it!

In the New Orleans Daily Picayune, of Nov. 23d, we find an account of the proceedings of the Louisiana State Fair. The following entries were made of Mowing and Reaping Machines:
1st. Bush & Co., of Saint Louis, Mo., DODGE'S MOWER AND REAPER.
2d. Adriance, Platt & Co., BUCKEYE MOWER.
3d. C. Aultman & Co., Canton, O., BUCKEYE MOWER AND REAPER.
4th. Warder, Mitchell & Co., Springfield, O., do.
5th. Walter A. Wood & Co., Hoosick Falls, N. Y., WOOD'S MOWERS AND REAPERS.

The editorial correspondent of the Prairie Farmer says, L. J. Bush & Co., of Saint Louis, Mo., in connection with J. W. Norris & Co., of New Orleans, made much the most extensive display of machinery and implements. They exhibited DODGE'S PATENT REAPER AND MOWER, made by the DODGE AND STEVENSON M'F'G COMPANY of Auburn, N. Y.

The trial of Mowers was held within the enclosure upon a very rough piece of ground covered with a *dense* growth of fine *Bermuda* grass and weeds. After a thorough trial the premium,

A GOLD MEDAL,
WAS AWARDED TO THE
DODGE AND STEVENSON M'F'G CO.'S MACHINE.

The Gold Medal was also awarded to Dodge's Reaper and Mower as a COMBINED MACHINE.

THE DODGE AND STEVENSON M'F'G CO., of AUBURN, N. Y., Manufactures this unequalled MOWER AND REAPER AND SELF-RAKER.

50 MAKE YOUR OWN SOAP PER CENT. SAVED BY

USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the strength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 5 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 885-13t

CUMMINGS & MILLER.
Carpenters and Builders,
Your attention is invited to a NEW and PRACTICAL WORK ON ARCHITECTURE, giving in detail on a working drawing scale, the exterior and interior of various classes of buildings—with 332 designs and 74 illustrations, containing street fronts, suburban houses cottages, rat stone work, &c., &c. It is 11 by 14 inches in size, containing only practical work, designs and illustrations that separately would cost hundreds of dollars. Price, $10. Sent, post-paid, on receipt of money order or otherwise. A. J. BICKNELL,
Dealer in Architectural and Monumental Works, 282 River Street, Troy, N. Y.

LELAND, JOHNSON & CO.,
GENERAL AGENTS FOR
GRAY'S PATENT
LADIES' COLLARS.

THESE COLLARS, which are manufactured by the American Molded Collar Company, under license of the Union Paper Collar Company, are made of the same quality of selected stock used in the manufacture of bank-note paper and on which depends the even pearl tint, smooth ivory surface, and linen-like strength for which the productions of this Company are celebrated. They are made in several different styles and patterns, among which are the following:

Ladies' Molded Collars.

This style was suggested by the Gentlemen's Molded Collars, which are so generally known as the best and most popular paper collars ever manufactured, and from which the present style is patterned, being made, however, more delicate in form, and thus especially adapted to ladies' use. The term "Molded" refers to a process by which the collars are formed or stretched, so that they lay snugly to the neck without wrinkling, and by which a setting is secured absolutely impossible to any other collars, of whatever material. They are pronounced unique by those who have worn them, and they are evidently destined to work a revolution in the matter of ladies' collars. Put up in neat blue boxes of ten each, the sizes ranging at half inches, from twelve to fourteen and one-half inches.

Ladies' Crimped Collars.

These, as indicated by their name, are linted or crimped turn-over collars, made of pearly white paper and properly curved to fit the neck. By a slight tension or pulling upon the ends, just sufficient to destroy the curvature, they can at once be transformed into neat and tasty "Garrotes," which can with equal ease be turned into pairs of cuffs by cutting in halves. They are beautiful in appearance, easy to adjust, comfortable to the wearer, and are being extensively adopted for children's and misses' wear, as well as for ladies. Put up in neat circular boxes of ten each.

Printed Crimped Collars.

These are the same as the previously mentioned style, save that instead of being plain white, they are tastefully ornamented with lines and figures in a variety of colors, closely imitating printed linen. Each box contains ten collars including different designs and colors.

Gray's Imitation Collars.

These are so named from being capital imitations of the prevailing style of tacked or plaited linen collars. They are made of heavy white paper, and are furnished in two styles, "Turnovers" and "Garrotes," the former having a narrow neck band by which the collar can be attached to the dress. Put up in boxes of ten each.

Sample Boxes.

To facilitate the introduction of these collars the undersigned will, for the present, send a sample box of either of the above styles to any address, post-paid, by return mail, on receipt of thirty cents. Be particular to give your address plainly, including town, county and State. Address

LELAND, JOHNSON & CO.,
81 Devonshire Street, Boston, Mass.
☞ Dealers Terms furnished on application.

BRICK MAKERS BUY THE BEST.—Lafler's Improved Iron Clad Brick Press and Grind Mill Combined—makes Common Brick with great rapidity, superior quality, and Press Brick that have no equal, with the same machine. Address for circular and description, J. A. LAFLER, Inventor and Manufacturer, Albion, Orleans Co., N. Y. 883-eotf.

A LADY who has been cured of great nervous debility, after many years of misery, desires to make known to all fellow sufferers the sure means of relief. Address, enclosing a stamp, MRS. M. MERRITT, P. O. Box 368, Boston, Mass., and the prescription will be sent free by return mail. 881-10t

PORTABLE STEAM ENGINES—Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application.
Address J. C. HOADLEY & CO., 877-13t Lawrence, Mass.

THE AMERICAN JOURNAL OF
Horticulture, & Florist's Companion.
ILLUSTRATED.

We shall commence with the coming year the publication of an Illustrated Monthly Magazine devoted to Horticulture. For a long time the demand has been felt for a Journal in this department, of high tone and liberal ideas, employing not only the best talent in America, but the selection of all that is good from the English, French, German, and other foreign works. This demand we design to supply. A glance at the list of names which we present as among its contributors, will give assurance that our columns will be filled with valuable matter.

List of Contributors.

Hammatt Billings,	Joseph Breck,
E A Brackett,	P Barry,
Henry Ward Beecher,	C N Brackett,
B K Bliss,	E W Buswell,
D M Balch,	Fearing Burr,
P M Copeland,	H A Dreer,
Geo Davenport,	Francis P Denny,
John Ellis,	Andrew S Fuller,
F R Elliot,	Alex Hyde,
Charles L Flint,	J F C Hyde, President Mass. Hort'l Soc'y,
Peter Henderson,	Dr Geo B Loring,
Dr J P Kirtland,	D G Mitchell, (Ik Marvel,)
J M Merrick, Jr.,	S B Parsons,
Francis Parkman,	E S Rand, Jr.,
P B Parsons,	E S Rogers,
John L Russell,	C J Sprague,
Solon Robinson,	Wm Saunders,
W C Strong,	Gregory B Sanborn,
Ed A Samuels,	James Vick,
Samuel H Scudder,	Wm Webster,
Geo B Warren, Jr,	

Also a host of occasional writers.

It is quite impossible to give a full list of contributors. We are receiving additions daily, and from all parts of the country come letters from our best culturists offering encouragement and assistance in support of the enterprise which all feel the need of so much.

An important and novel feature of the Magazine will be the department of Floriculture. Receiving contributions from all of the known talent in America, with copious extracts from the best foreign works, it will be an Encyclopedia of Floriculture. To the lady who has only a window for her garden, or the front of a city residence, as well as to the proprietor of the largest garden and green-house, it will be a necessary companion and guide. Every novelty introduced will receive proper attention in our columns. We have secured the services of Hammatt Billings, who will furnish a series of articles accompanied by designs from his pencil on "Rural Architecture."

The subscription price will be $3.00 per annum, so that it may be within the reach of all who desire such a work. Each number of the Magazine will contain 64 pages of reading matter, including illustrations.

Thus it will be seen that for three dollars we give nearly eight hundred octavo pages of illustrated Horticultural matter, selected from the best the country can produce. The January number is now ready.

TERMS—Three dollars per annum, strictly in advance. Liberal terms will be made with those desiring to form clubs, or to act as agents in enlisting subscribers. Sample numbers sent by mail on receipt of 30 cents.

Agents wanted in every city and town in the country.
J. E. TILTON & CO., Publishers, 161 Washington-st., Boston, Mass.

$30,000 FOR A FORTUNE, AND NO deception. Address 883-13t HARRIS BROTHERS, Boston, Mass.

THE HOWE LOCK STITCH

THE HOWE MACHINE COMPANY,
(ELIAS HOWE, Jr., President, and original inventor of the Sewing Machine,)
Proprietors and Manufacturers of the world-renowned
HOWE SEWING MACHINES,
FOR FAMILIES AND MANUFACTURERS.
They were awarded the highest premiums at the World's Fair in London, and six First Premiums at the New York State Fair of 1866.
☞ **Send for Circular. Agents Wanted.**
875-48t **699 Broadway, N. Y.**

ATTENTION! ALL WANTING FARMS! Cheap Farm and Fruit Lands, Village Lots, Water Powers for manufacturing, for sale, at Bricksburg, Ocean County, New Jersey, 41 miles from New York on railroad to Philadelphia. Soil, fine loam, superior for all crops. Country just rolling enough for beauty and utility. Climate mild and proverbially healthy. Water soft and pure. No fever and ague. Sold only to actual settlers, on easy terms. Price per acre, $20 and upward.
For circulars and maps, address as above.
873-13t W. J. PARMENTIER, Agent, Bricksburg.

MARYLAND and VIRGINIA FARMS FOR SALE.—Owing to the civil war fine Southern farms are now offering for sale at reduced prices in the most fertile portions of Maryland and Virginia. The mildness of the climate and variety of productions offer peculiar inducements to Northern farmers. The subscribers have constantly on hand farms improved and unimproved. Dairy, fruit and grazing farms; country seats, coal and timber lands in all sections of Maryland and Virginia. Also, residences and building lots in and around Baltimore and Washington. Faithful and accurate descriptions can be had by addressing JOHN GLENN & CO., No. 59 Second-st., Baltimore. 873-tf

GOULD, BECKWITH & CO., Offer for sale, for the fall of 1866, a most complete stock of FRUIT AND ORNAMENTAL TREES, SHRUBS, PLANTS, VINES, BITTERNUT ROOTS, BEDDING PLANTS, &c., &c. We would invite particular attention to our splendid stock of ROSES, on their own roots, mostly Hybrid Perpetuals, consisting of over 200 different varieties of all the old sorts and many new ones, recently imported from France, which we offer in large or small quantities, to suit purchasers. It gives us great pleasure to say that *all* our stock is *remarkably well grown*, a fact that purchasers will duly appreciate. Prompt and careful attention given to all orders, and packing done in the most careful and thorough manner. More full particulars will be found in our Catalogues, which we should be pleased to send on application. Nos. 1 and 2, Fruit and Ornamental; No. 3, Wholesale.
GOULD, BECKWITH & CO.,
870-tf Monroe Co. Nurseries, Rochester, N. Y.

THE PRACTICAL SHEPHERD.—This is the latest and best of Dr. RANDALL'S works on Sheep Husbandry—the Standard Authority on the subject. It tells all about the Breeding, Management and Diseases of Sheep, and should be in the hands of every flock-master on the American Continent. Over 20,000 copies already sold. One large 12mo. volume of 454 pages,—printed, illustrated and bound in superior style. Sent post-paid on receipt of price—$2. Address
D. D. T. MOORE, Rochester, N. Y.

CANCER. A New Method of Treating CANCER, by Drs. Babcock & Son, which has already been proved, by over two thousand cases, to be the most successful treatment for Cancer that has ever been used by man. The method of treatment is simple. This terrible disease is removed in a solid mass, without the use of the knife, loss of blood, poisoning of pain, caustic burning, or affecting the sound parts. We will give any number of testimonials; also, will answer all letters of inquiry. Address Drs. BABCOCK & SON, 845-tf No. 769 Broadway, New York.

FARM FOR SALE.—FIRST CLASS FOR Grain, Grass, or Fruit—180 acres, 25 timber, balance improved; 61 acres in wheat; 15 minutes drive from Batavia, N. Y. P. P. BRADISH.

ANDRE LEROY'S NURSERIES, AT ANGERS, the largest and richest in France. New Descriptive Catalogue sent on application to BRUGUIERE & THEBAUD, 51 Cedar Street, New York. 867-tf

MALLORY & SANFORD'S FLAX AND Hemp Brakes, Combers, Shakers and Pickers, are the best and most approved for working Flax, &c. Send for circular or see machines at work.

MY NEIGHBOR'S FAULTS AND MINE.

BY KATE WOODLAND.

I'm well acquainted with *my* faults,
I've known them long and well—
Together many, many years
We've been content to dwell:
And though to many very strange
Such statement may appear,
Still I must say no other faults
To me are half so dear.

My *neighbor's* faults I do not love;
They're not such faults as *mine*,
They're drawn upon another plan,
And by a different line:
Whereas *my* faults are peaceable,
Scarce bringing me a tear,
My *neighbor's* faults are troublesome,
And cause me pain severe.

'Tis true I *say* I hate my sins,
But 'tis not really so,—
If I disliked them very much,
I would not keep them so:
It is my *neighbor's* sins I hate,
They give me so much care,
I have no time to watch my own,
Or know how bad they are.

If I could see my neighbors all
From imperfections free,
My *own*, (although such trifling ones,)
Should be discharged by me.
But since I cannot do it all,
And *theirs* are much the *worst*,
I think I should be *neighborly*,
Attending others first.

Van Buren Co., Mich.

The Story Teller.

Written Expressly for Moore's Rural New-Yorker.

UNSATISFIED;
OR, MISMATED FOR LIFE.

BY CLIO STANLEY.

CHAPTER I.

From her earliest childhood, Helen Warner could remember with what a longing, what an intense yearning, she had looked out upon life; not the life of the outer world as we see it stretched bare before us every day, but upon the life others around her really lived. She could remember how, as a little child, she had looked with contempt upon the out-door and in-door games which her playmates took such delight in, turning away from them to find what comfort and company she might in her books, or in gazing up into the far, blue sky, vainly striving to imagine what lay beyond it; in watching the masses of snow-white clouds just tinged with grey; in picking up common stones by the way-side, building with them fair palaces; or, oftener still, seeking some quiet spot where she might sit down unnoticed and listen to the musical twitter of the little birds. A thousand times she had wished she *was* a bird, so that, on rapid wing, she might pierce the very clouds, resting only on the loftiest tree-tops, or flying to the sunny South-land where naught but sunshine and gladness should greet her all the year long. But she remembered, too, how vain all these dreams had been; how vague and unsatisfactory had been the sympathy she had met when she had ventured to give expression to her feelings; and had learned as she grew older, to keep back the out-gushings of her young heart and to control even the outward *look* of the gladness and happiness which she did *sometimes* experience. She was more lonely than most children, though a brother and sister were near her with sweetest suggestions of companionship in the very names; still, she seemed to others and felt herself to be an isolated one in each circle of enjoyment.

Mrs. Warner was a vain and fashionable woman, thinking of her children only as intended for display and admiration, and even then, true to her selfish nature, caring for them more because they were parts of *her* household and models of *her* taste than for any other reason. She was an ignorant woman, one who had obtained a husband early in life, simply because she was fortunate enough to be gifted with a pretty face, and Mark Warner imagined that her soul looked out through her features and that she was born to make him the happiest man in the universe; but when the lover was merged in the husband, he found to his sorrow that his dreams of happiness and contentment in a home of his own were never to be realized—that he had taken as a companion for life a woman with no love for what was really good and beautiful in his eyes—no ability or desire to cultivate in herself those qualities to which she had been a stranger all her life; and worse than all, when children grew up about them, appealing to all their best and holiest feelings, he discovered in her such a lack of all a true mother's instincts and refinements, that he turned away shocked and disgusted, tired of his own home and almost tired of living. So he went daily to his counting-room, and looked over dusty ledgers, counted great piles of money, and at night passed away the hours, which at home he thought would be too dull for endurance, in a club-house, where he met with other men, some of whom were disappointed like himself, and others, bold and unfeeling, who came only to profit by their disappointment.

Meanwhile, Mrs. Warner, feeling his strange neglect, though taking no pains to win back any token of that affection which had once been hers, grew disdainful and more selfish than ever; and it was when these feelings had taken root, sprung up and borne fruit in their hearts, that Helen, their youngest child, was born. Was it any wonder that she was unsocial and discontented, weary of life before she was old enough to rightly appreciate either its joys or its griefs? She had been sent away to boarding school with her elder sister three years before, and they had just returned, "finished," as the highly accomplished and very consequential preceptress informed Mr. Warner by letter; a letter written on tinted paper and scented with some delicate perfume, but which he threw down most contemptuously when he had seen the writing and spelling, neither of which bore testimony for her boasted capabilities of finishing the education of those committed to her care.

"See here, Ann, is this the kind of education you have been getting at Daifield Hall? Look at this writing and tell me if that is the style you have been taught?"

"Indeed, papa, I never paid much attention to that or to spelling either, for I should like to know what use I can make of them when I get into society? And I wish you wouldn't call me Ann, it sounds so common; everybody calls me Annie but you."

"Ann is a very good name; my mother had it before you, and if you only make half as good a woman as she was, I shall be proud of you," said her father.

He turned to question Helen, but she had escaped to her own room, unwilling to seem to compare herself with her sister after her father's remarks. While at school Helen had always written the letters home, and though short and almost cold in their tone of expression, there was no fault to find in their execution. No one need have been ashamed to own the clear, beautiful hand-writing which had always marked her productions.

Ann inherited largely her mother's indolent nature, and she had not applied herself closely enough to any branch of study while away to thoroughly master it, except her music, which she really took delight in. Her master had often said she was his most brilliant pupil, and she gloried in the reputation. But her selections betrayed the tone of her mind,—dashing bravuras, stormy galops, and variations where you could discover scarce a trace of the original melody, but which she executed with such skill and rapidity that she always won golden opinions from her audience. She had been a favorite with both principal and pupils, for her fund of good humor was inexhaustible, and her lively sallies drove away the bluest spirits that threatened any homesick maiden. Helen was never less at ease than when in company with her sister, for she felt so strongly the difference in their powers of pleasing. The girls voted her stupid and without a spark of feeling, and it was only in the eyes of subordinate teachers that she won any favor; for in mathematics, the sciences and languages she evinced a patient determination to overcome difficulties that few others manifested. She had taken pains to learn well whatever she undertook, and though not rendered more brilliant by her acquisitions, she had come home with a greater capacity for enjoyment; still the old feelings would oftenest claim possession of her mind, rendering her society anything but attractive to strangers.

Their brother Philip, who had been away from home, first at a boarding school and afterward at college, while they were children in the house, and whom, consequently, they had not often seen, until this time, except during his vacations, was the only one in the home-circle who could or would appreciate the quiet, undemonstrative Helen. He felt that she was not understood, and he in the overflowing abundance of his gladness and light-heartedness could pity her loneliness and tried to lessen it. He did in some measure succeed, for after she had been at home a few weeks, she learned to turn to him for sympathy in some of her thoughts, though her inmost aspirations she locked up securely within her own heart and said they should perish there before she would expose them to the cold, calculating eyes of the world, to be sneered at and perhaps trampled on with rude feet.

Would she ever find a hand to open that sealed fountain, her wayward heart, and bid its clear, sparkling waters gush forth? Would she ever find a heart that would greet her coming with joy—eyes that would see beauty in her plain face, and ears to which her voice, with its perpetual under-current of sadness, would become melodious, even as the songs of the birds she used to listen to when she was a child! Every woman's heart knows that she must sometimes have questioned thus within herself—Would she always remain unsatisfied?

CHAPTER II.

Almost every evening the parlors were lighted and thronged by those who called themselves friends, to obtain a word or a bright look from Annie Warner, who had become as general a favorite in her own home as she had been among her girl-friends at school. Philip would laugh whenever she used to rehearse the numerous compliments she had received, in his hearing, telling her if she was not Ann Warfer, the wealthy banker's daughter, she wouldn't have so many to boast of; but she only pouted her rosy lips at him and held to her own opinion of the subject.

One evening after another, Helen was urged by her mother and Annie herself, to go down to the parlor and join the company there, but to both she returned the same answer, "I should only mar the enjoyment by showing my face there, and besides, I like better to be alone."

"But," Annie would say, "you don't know what fine fellows some of them are who come to see me, and I wouldn't be jealous a bit, even if they should pay you some attention."

"Thank you," her sister would reply; "I will not risk your jealousy in such an important matter," and so she was finally left alone.

One evening, however, when it was quite early, and the light had not been turned fully on, she was sitting by herself in the music-room, which opened from the parlor, singing some simple ballad which she loved to sing, and to which her voice lent rare expression, when the parlor door opened and some one came quietly in and sat down at the further end of the room. When she had finished the song she took up another, and sang again with her whole heart in her voice, unmindful now of the light which had just been turned on, unheedful of anything but her own longing, which rang through and through the simple melody, making it almost too sad to listen to without tears. But she was brought suddenly back to the realities about her by hearing Annie exclaim close by her side, at the close of the last verse,

"Well, this is too good; here's my sober sister, whom I never can persuade to sing for anybody, singing of her own accord to my most grateful friend, Hebert Belden. What will happen next?"

Helen sprang up from her seat, with cheeks pale and red by turns, and after a moment of awkwardness, said coldly, "I did not know anyone beside myself was in the room." She turned to leave them when Mr. Belden stepped up to her, saying, "As your brother Philip's friend, will you not grant me the privilege of your acquaintance, and let me thank you for the song to which I only accidentally became a listener."

"Well done!" said Annie, her eyes dancing with fun, "so far you have said just right; and now, sister mine, won't you stay where you are for one evening?" As Helen was hastily declining, the door opened to admit other visitors and she was obliged, as Annie hastened to meet them, to sit down and try to talk.

Her efforts, though, seemed to be almost fruitless; she could not utter more than single sentences, until her companion led the conversation away from the present company and occasion, to topics more congenial to her taste, and then, battling against her unwillingness to stay, she listened, finally becoming fairly interested in his remarks and criticisms on books which they had both read. Annie seemed to be entirely engrossed with the society of the three gentlemen at the lower end of the room and to give no further thought to Helen. By and by, however, one of them asked for music, and she came gracefully across the room, pausing a moment to introduce Mr. Hamilton, Mr. Banks, and Mr. Trall to "my sister Helen." Helen acknowledged their salutations, and as Percy Hamilton and Ernest Trall stood for a moment as if undecided whether they should follow Miss Warner and Mr. Banks to the music-room, or remain where they were, she rose and proposed that they should all go into the other room, for she well knew that nothing would vex Annie more than to have but one apparent listener when there were four gentlemen in the room. They all stepped forward hastily as Annie commenced a brilliant Valse, and in a moment they were in the other room, standing near the fair performer. When she paused, turning half way round on the stool, Mr. Hamilton turned to Helen, asking if she too did not play!

She replied, "Scarcely ever, and then more for my own enjoyment than with any expectation of contributing to that of others."

"But will you not favor us this evening?"

"Please excuse me; my effort would be but an indifferent one."

"Let us be the judge of that," pleaded two of the gentlemen, and Annie rose from the piano with forced acquiescence as her sister left her seat.

Helen sat down and played one or two pieces, selections from her favorite Opera, when one of the company asked for "La Rive," and without looking up she began to play it. As she went on, she became absorbed in the exquisite transcription and under her fingers the notes seemed to throb with the feelings that possessed her. As the sad, sweet melody swelled up beneath her touch they all drew nearer, and listened almost with measured breath while she struck the heavy chords in the second part, and then the little, tinkling notes that sounded like joy-bells after the sadder strains preceding them. Finally she touched a few notes again of the simple melody in conclusion, and rose from her seat, her face all aglow with the pleasure it had left her own soul, never thinking of the others until Mr. Belden's voice recalled her. "A thousand thanks, Miss Helen; you have given us a rarer treat than you can imagine."

The other gentlemen added their voice to his praise, but she could no longer bear this, and bowing to each she wished them good-evening and went quietly out, just noticing that it was not Mr. Belden but Percy Hamilton who held the door open for her to pass. It was but a few moments after she closed the door of her own room, when she heard the street door close, and then a knock came at her own.

"Is it you, Annie?—come in." Annie entered and flung herself down in a low chair near her sister and said abruptly, "Well, which of them do you like best?"

"Annie, what do you mean" said Helen, proudly.

"Just what I say; I'm sure it's an easy question to answer, and beside I've a particular reason for wanting to know."

"Nonsense!—what should I have to say? They all seem to be very polite, well-behaved young men, but as for liking, I need to know more of a man than I would learn in half an hour's conversation, before I could tell whether I should like him, as you term it."

"Well, don't look so cross at me; I am sure you seemed quite interested in your 'half-hour's conversation.'"

"Annie, cannot you understand common sense in common language; I wasn't speaking of Mr. Belden particularly."

Annie only laughed a little; then said "Good-night," and went out, leaving her sister alone again. For a long time after Annie had left the room, Helen sat by the fire wrapped in her own quiet meditations, then taking out a Bible from her work-stand drawer, read two or three chapters and laid it aside for the night. The light was put out and her eyes closed, but no prayer for safety, or word of grateful acknowledgment, rose to her lips to hallow the night. But while she owned not the love she should have owned to her Creator, she longed for human love, and this feeling obtained almost passionate utterance in her heart. At last she fell asleep, but only to dream that a fonder love than any she had ever known was hers, and that Annie had snatched the treasure from her grasp.— [To be concluded next week.]

Wit and Humor.

A Gentleman's Diary of his Wife's Temper.—Monday—A thick fog; no seeing through it. Tuesday—Gloomy and very chilly; unseasonable weather. Wednesday—Frosty, at times sharp. Thursday—Bitter cold in the morning, red sunset, with flying clouds, portending hard weather. Friday—Storm in the morning, with peals of thunder; air clear afterward. Saturday—Gleams of sunshine, with a partial thaw; frost again at night. Sunday—A slight south-wester in the morning; calm and pleasant at dinner-time; hurricane and earthquake at night.

"Come till Queensland, Pat!" writes a son of the Emerald Isle to his friend in Ireland. "'Tis a fine country to get a living in. All ye have to do is to get a three-cornered box and fill it wid brick, and carry it till the top of a four-sthory building, and the man at the top does all the work!"

How to Keep Corn.—The best place to keep corn is in a corn-house, though some prefer to keep it in their system—*in the juice.* If they don't keep corn, they keep *corn'd.*

To Make Stone Fence.—Equal parts of whisky and cider. This is the reciprocal stone fence; the more you lay of it, the more it will "lay" you.

The question why printers do not succeed as well as brewers, was thus answered:—"Because printers work for the head, and brewers for the stomach, and where twenty men have stomachs, but one has brains.

When Sheridan taught school, he had in one of his classes a boy who always read partridges for patriarchs. "Stop," exclaimed the wag of a teacher, "you shall not make game of the patriarchs."

To Drain Lands.—Drink whisky, and spend all your time at the village tavern. This will drain you of all your lands in a short time.

An Irish schoolmaster wrote the followign copy for one of his pupils:—"Idleness covereth a man with nukedness."

Troches are used with always good success.
Singers and Public Speakers
will find *Troches* useful in clearing the voice when taken before Singing or Speaking, and relieving the throat after an unusual exertion of the vocal organs. The *Troches* are recommended and prescribed by Physicians, and have had testimonials from eminent men throughout the country. Being an article of true merit, and having *proved* their efficacy by a test of many years, each year finds them in new localities in various parts of the world, and the *Troches* are universally pronounced better than other articles.
Obtain only "Brown's Bronchial Troches," and do not take any of the *Worthless Imitations* that may be offered. Sold Everywhere. 881-13teo

VICK'S ILLUSTRATED CATALOGUE
OF
Seeds and Floral Guide for 1867,
Is now published. It contains nearly 100 pages, 100 fine Illustrations on wood of
CHOICE FLOWERS AND VEGETABLES,
AND
A Beautiful Colored Flower Plate,
for frontispiece. Also, descriptions of the *FINEST FLOWERS AND VEGETABLES* grown, with full and plain directions for culture.
☞ Sent to all who desire, postage paid, for 15 cents—not half the cost. Sent free to all my customers of 1866 without being ordered. Address
JAMES VICK, Rochester, N. Y.

FOR MARKING LINEN!
The Patent Indelible Pencil,
1866. Greatly Improved. 1866.
Superior in economy and convenience to indelible inks.
EVERY PENCIL WARRANTED!
AGENTS WANTED. Circulars and sample Pencil will be sent, post-paid, on receipt of fifty cents. For sale by Stationers, Booksellers, Etc. Address THE NORTHAMPTON INDELIBIE PENCIL COMPANY, Northampton, Mass.

AGENTS WANTED!—In all parts of the United States, to sell THE LIVES of THE PRESIDENTS, a new work, by John S. C. Abbott, the great historian. The work is finely illustrated, complete in One Volume, and ready for subscribers. The author, the theme, and the elegant style in which it is issued, combine to render it one of the best books for Agents ever published in this country. Exclusive territory may be secured by addressing B. B. RUSSELL & CO., Publishers, Boston, Mass. 882-4t

AGENTS DO YOU WANT TO MAKE Money?—If so, you have now an opportunity by engaging in the sale of the Patent Excelsior No-Chimney Burners. Everybody wants them. Saves the expense of chimneys; no smoke or smell. Differ from all others as no draft will extinguish them. Samples, post-paid, 25 cents; circular illustrating this and other articles free. Address EDGAR & CAVAN, No. 95 Maiden Lane, New York. 882-8t

TO THE LADIES.—MISS GUILD OFFERS to the public her superior Crystal Palace Chart for Cutting Dresses, which is conceded by competent judges to surpass any invention of the kind ever offered to the American public. She feels fully warranted in saying that it is as perfect a fit as human ingenuity can render it, and should be in the possession of every lady. It is simple, easy, and graceful, adapted to fit every form and size, from little girls of seven years to the largest adults. Directions printed in full on every Chart. None genuine unless the Crystal Palace is engraved upon it, and the address of the inventress printed. Copyright secured, and no infringement allowed. Agents are wanted in every part of the country. This Chart will be sent to any person on receipt of $2 addressed to
Miss LUCY GUILD, Rupert, Vt.
☞ Ladies wishing a tape measure must inclose 15 cents extra. 873-13teo

MAKE YOUR OWN SOAP WITH Saponifier
OR CONCENTRATED LYE!
By saving and using your waste grease. No lime necessary. 12 Pounds of excellent Hard Soap, or 25 Gallons of the very best Soft Soap, for only about 50 Cents. Directions on each Box. ☞ For sale at all Drug and Grocery Stores.
Beware of Counterfeits.
Be Particular in Asking for PENN'A SALT M'F'G. CO.'S SAPONIFIER.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read Randall's Practical Shepherd, the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

CANCERS CURED OR NO CHARGE, BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

COLGATE'S AROMATIC VEGETABLE SOAP.—A superior Toilet Soap, prepared from refined Vegetable Oils in combination with Glycerine, and especially designed for the use of Ladies and for the Nursery. Its perfume is exquisite, and its washing properties unrivalled. For sale by all Druggists. 839-52t

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.
Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:
Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.
☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL, D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

FARMING.—DO WE GAIN OR LOSE?

EVERY farmer may pertinently ask and thoughtfully consider this question—Is my farm, under my present system of culture, growing less productive? And the answer would generally be a sure index of the pecuniary result of his farming operations. There are cases where the farmer accumulates money by practicing the skinning process on his land—if he buys and sells his farm at suitable prices, and at the right time—but no wealth is created in this manner. The soil and its fertility is the farmer's true capital, the use, or interest, legitimately belongs to him; that alone is profit—the principal is held by him in trust for posterity. It is evident, if the yield of products has been steadily diminishing on your farm, if its fertility is not so great as formerly, then you have been encroaching on and squandering your capital, and it needs but a grain of common sense to teach that the ultimate end of such a course is ruin.

But, perhaps, you look over your fields, smooth and beautiful to the eye, at your fences, strong and durable, your buildings ample and in order—you think of your notes and mortgages and bank account, and, knowing that the farm has produced all these by the labor of your hands, you conclude that the ruin we speak of is a long way off—not much to be dreaded, though the soil does seem to grow poorer and the crops more uncertain. Well, you may not see it—your life will not reach far enough into the future—but by-and-by your sons come into their inheritance. One takes the notes, the mortgages, and the money in the bank, and the other for his share receives the homestead; but if he inherits your system of farming, and clings to it, when the point is reached where the crops only repay cost, how can he accumulate notes and mortages and money in the bank? You have squandered his capital; how can he repair even buildings and fences and replace worn out implements? This is not an overdrawn picture; it is the reality which thousands have experienced; the worn out lands all over the older settled regions of the country bear witness of its truth. The true remedy is judicious farming—the temporary one, selling out and removal to the West.

Now is the time to scan closely your system of farming, and if defective, plan and adopt a better one. Enrich the land. If capital is lacking to undertake much at once, lay down most of the farm to grass and stock it; plow less and the stock will enable you to manure well what you do plow. Underdrain, subsoil, top-dress, plow under green crops, cultivate thoroughly. Feed sheep and cattle, but keep few hogs and horses. Increase the average yield of your cultivated fields, and resolve to have a profit from your farming besides a mere living and pay for your labor.

WHEAT IN CALIFORNIA.—In remarking on the grain harvest in California, the Farmer says that the product of wheat there the past year will range from ten to fifteen millions of bushels. That the yield per acre, on the best fields of wheat, will be from 40 to 60 bushels, and barley from 60 to 100.

TEMPERATURE OF STABLES.

THIS question is annually up for discussion, but so far no authorative decision of it has been reached that we are aware of. Opinions and practices differ with respect to the proper temperature of stables for stock among those who regard the matter as important, while not a few pay no attention to it whatever. It is assumed, by the latter class, that beasts are made equal to any climate where they may be propagated, and that no particular care of them, as respects shelter, is necessary. But this conclusion, though acted upon by many, is manifestly erroneous and would be so prononnced by the beasts themselves, had they a voice in the matter. Comfortably sheltered, stock will thrive better and eat less than when exposed to storms in a climate as rigorous as is common to most of the States and the Canadas.

The degree of warmth which stables should have should vary with the latitude, but in all locations, North or South, entire exposure in winter should be avoided both on the score of economy and humanity. In countries, where forests yet predominate, shelter in winter is of much less consequence than in regions where the ax has performed its allotted task. In England, where the extreme rigor of our winters is rarely if ever known, we learn by Mr. WILLARD, that a stable temperature of 55 to 60 degrees is most in favor with the owners of dairy Short-horn stock, but for working cattle a lower temperature was deemed preferable. Stables, which turn their stock out in the morning smoking with perspiration, are evidently toned too high, not only for comfort, but for the performance of the labor required of the animals thus over-carefully provided for. Shield, but do not roast or parboil stock, since excess of care may be nearly as injurious as entire neglect.

ROTATION OF CROPS.

THE physiology of plants is such that scarcely any two of them take from the ground or the atmosphere the same kind of nutriment in equal proportions. Hence it follows that in continuous cropping, of the same product, much of the productive power of the soil and of the fetilizers combined with it, is lost or remains inert. This loss may be retrieved by a judicious system of rotation, by which means all the elements of growth are brought into successive action and rendered available for farm products.

Perhaps the order of the crops is not of special importance. One might begin a system with roots; follow with the cereals, peas and beans, and then pasture or meadow according to the taste or necessities of the farmer. Some lands will do well in pasture for a series of years. So of the meadow, but as a general rule the best results are attained by changes every three or four years at the most. If oftener made the chances of remuneration are believed to be improved, while the soil is relieved from the thousand noxious plants which impair its vitality without returning any thing of value by way of recompense.

RURAL FARMERS' CLUB.

Sowing Plaster in February.

C. E. HOOD, Oak's Corners, N. Y., writes us in this wise:—"I should like to inquire through your columns what is the best time to sow plaster, and whether it will do as well to sow in February or March as it does in April or May, if the ground is clear of snow? I have heard men argue that it will do as much good, but I have never tried it. Does it make any difference what kind of soil it is sown on? I want to sow it on clay soil, and the most of it on timothy meadow. I should also like to know whether it will pay to sow clover seed after barley and oats when you drag your seed, and intend to sow it to wheat in the fall? I have heard it argued that the clover would make the ground enough richer to pay."

As this is a Farmers' Club, we leave these queries to be answered briefly by some of the experienced farmers who belong to it.

Pan for Evaporating Sap.

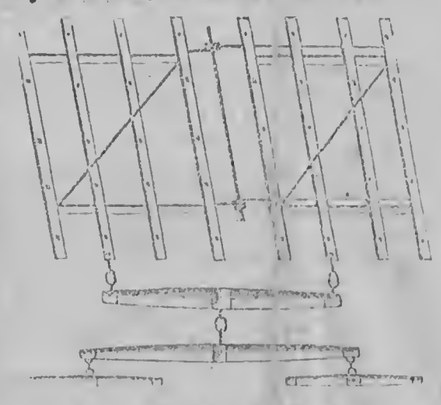
S. S. BOGARTH, Tipton, Iowa, writes us on this subject as follows:—"Various patent contrivances have been tested among us, the most of which have proved worse than useless, and after a fair trial it has been found that none of them answers the purpose better than the common pan with wooden sides and galvanized sheet-iron bottom. These are constructed of various sizes, from two to three and a half feet wide, and from six to twenty-five feet long, owing to the work which they are required to do. Some use these all in one apartment, while others divide them into a number of smaller ones by transverse partitions with small orifices at alternate ends, through which the sap slowly passes from one apartment to another. The pan has a slight inclination from the mouth of the furnace back, and the sap, or juice, is admitted in a small, steady stream into the highest apartment, and passing slowly from one to another, after boiling for a short time in the lowest one it is ready to be drawn off through a stop-cock, in the form of molasses. This, I think, is probably the best form of pan for common use, but it is said (whether true or not I do not know,) that it is an infringement on COOK'S Patent Evaporator." Whether it is or not there are a great many of them in use in this region. With a properly constructed furnace, and a damper in the chimney, to regulate the draft, but little heat need be lost."

Protrusion of Horses' Tongues—Remedy.

J. W., Jacksonville, N. Y., writes:—"A. B. inquires how to prevent a horse carrying his tongue over the bit. I will give him and the "rest of mankind" the method as practiced by the "horse tamers," viz:—Take a thick piece of patent harness leather, about four inches long and two wide; cut off the ends rounding; near the edge on each side punch two holes, through which put a leather string and tie on top of a joint bit; when you put in the bit place this on top of the tongue; take the side pieces of the head stall pretty well up. This will prevent him running his tongue out over the bit. If he runs it out *under* the bit, use a straight bit; drill two holes through the bit from the under side, about an inch and three fourths apart; to these attach a piece of large wire, bringing it under in the shape of the bowl of a spoon; when you put in the bit, pull the tongue through between this wire and the bit, seeing that the space is large enough for it to set easy. These plans will soon break up this bad looking habit. I once cured a colt of hanging the tongue out of its mouth by pricking it sharply with a pin, or point of a knife, every time I saw it out. Half a dozen "applications" were enough.

A Forty Tooth Harrow.

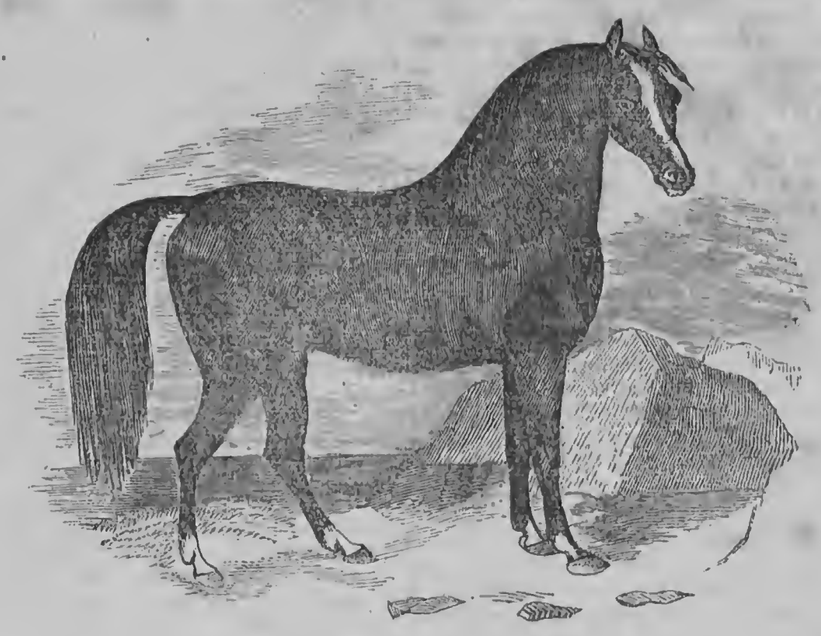
H. R. N. asks for a plan for a forty tooth harrow, and we reply by giving an engraving with description of one that has been found very satisfactory in practical operation.



On loamy lands that are tolerably free from stone care should be taken not to make the harrow too heavy, as it would then weary a team more without doing a proportionate increase of work. The frame work in which the teeth are inserted should be of the best seasoned white oak, two and a half inches square; the teeth three-fourths of an inch square. As the engraving shows, it is not framed together square, but diagonally, which increases the sweep of the harrow. The pieces which hold the teeth are four feet five inches long, with eight inches of space between. Two smart horses will readily pass over twelve acres in a day with this harrow, and *lap* one-third.

The Table Lands of Tennessee.

A. J. SPENCER, Crossville, Cumberland Co., Tenn., sends us a communication, in which he says:—"I would like to give those who wish to seek a home in a congenial clime, the knowledge which I have gained by actual observation of the high lands of Tennessee; and especially of Cumberland county, which is situated about six thousand feet above the sea. The soil is a rich loam, and the surface gently undulating; fruits, as apples, pears, peaches and grapes, grow most luxuriantly, and have a flavor not attained anywhere this side of California. Wheat is grown that weighs 66 pounds to the bushel. Irish potatoes will produce from four to six hundred bushels per acre of a superior quality, and sweet ones grow equally as well. Fever and ague are unknown, and there is no prevailing disease. On the contrary, many diseases are readily cured by the pure air and the numerous mineral springs. Land can be bought for five to ten dollars per acre. The people are loyal, and anxious for Northern men to settle in their midst, and help develop the resources of the country."



ARABIAN HORSES.—PORTRAIT OF A BAY ARABIAN.

THE deserts of Arabia have produced a breed of horses that for centuries have been celebrated. Although the pedigrees of some of the best breeds are claimed by the imaginative sons of the East, to reach back to the stud of SOLOMON, yet it was only in the thirteenth century that the Arabian horse became famous; there is no record, indeed, that the Arabs possessed horses of much value, or began to improve their breeds, before the seventh century. There are now said to be three varieties, which are classed as the inferior, and are found wild in some parts; the half breeds, and those whose pedigrees can be traced far back, and which may be termed the Arabian thorough-bred. These latter are principally reared by the Bedouins in the remote deserts.

It is not, however, probable that the Arabian owes his excellencies to the hardship that have been imposed on him while young, or that he is reared in the very bosom of arid deserts. The real fact is that the Arabs select for their breeding places the fertile and delightful oases, where, though all is dry and barren around, the pasture is unrivaled for its succulence and nutritions properties. The powers of the young animal are developed by the mingled influence of healthful food and moderate exercise.

The Arabian is remarkable for his intelligence and speed, bottom, strength, and a courage that would cause him to die rather than yield—a combination of good points, in which no one is prominent at the expense of others, and which render him valuable for all purposes.

It is now claimed that the English thoroughbred is swifter and stouter than the famed coursers of the desert, and that in all contests for superiority the English racer has won the prize. But the English racing horse may be said to be only the Arabian perfected by British climate and skill in breeding and training. The Darley Arabian, which was brought from the Desert of Palmyra in the latter part of the reign of Queen ANNE, was the parent of the best English racing stock. It was not until Arabian blood was freely mingled with the English stock that the latter rose to a position capable of contesting claims to superiority.

As a faithful specimen of the general form of these horses we give the portrait of a bay Arabian introduced into England—a present from the Imaum of Muscat. The neck is long and arched and beautifully joined to the chest. In the formation of the shoulder, next to that of the head, the Arabian is superior to any other breed; the withers are high, and the shoulder blade has its proper inclination backward. The chest may be considered by some as too narrow, but behind the arms the barrel swells out. The legs are firm, the muscles swelling, and the bone of the densest character.

Peach Blow Potatoes.

A "PRACTICAL FARMER," Janesville, Ohio, writes:—"White Peach Blow potatoes are highly recommended here just now; do you know anything about them?" We answer that they are one of the best varieties of potatoes for market or yield. They are hardy, produce well, and are not liable to rot. They take the lead in the New York market in the spring, as they are good keepers. They require to be planted early, and they will then be the very last sort to ripen. The vines grow rank and they will not bear crowding. The tubers run a great deal in the hill, which makes the digging slower, more laborious and costly, than almost any other variety.

Overstocking the Land.

J. R. HURSAY, Tuftonborough, N. H., strikes the key-note of profitable farming in a few sentences about keeping a certain kind of stock. The principle holds good for all stock, and for all methods of cultivation, viz., keep only what stock you can keep in the best manner, and cultivate only such a number of acres as will return a certain profit. "The point where many stumble," says Mr. H., "is this: they overstock their farms—only half feed their animals—let skeleton cow frames drag themselves about their premises, and then complain because their dry bones do not give milk like the cows of farmer B., which are well kept. When cows are kept for the dairy it is possible and proper—yes, it is a duty—to keep them in the best manner for profit. If you cannot keep four well, try two; the two well kept will return more net income than the four half-starved, and labor and the use of capital are saved. The value of the cow is determined partly by her pedigree, but the *keeping* has *more* to do with making her profitable or otherwise."

Pipe Wells.—More Light Wanted.

THOMAS HAZARD, Monroe County, this State, writes:—"On our hills we have to dig from fifty to sixty feet before we find water; the supply is abundant, but the quicksand is so troublesome that it is difficult to dig *deep enough*, and after the well is dug and stoned it frequently fills with quicksand so as to prevent getting water either with a bucket or ordinary pump. Why don't the patentee of those wells and pumps let his light shine through the RURAL and other agricultural papers by advertising? We want to ask several questions through the RURAL.

"1st—Will one of those wells operate in quicksand, such as I have described, and will the pumps draw water from a depth of sixty feet? Perhaps the pipe might be driven below the quicksand, and in that way obviate the difficulty.

"2d—What is the expense of such wells?

"3d—Who is the manufacturer?"

Those having an interest in this patent should give the desired information about prices and manufacturing in the advertising columns.

A COLORADO FARM.—There is a farm in Colorado 18 miles long by 12 wide, which pastures 3,000 head of cattle and 6,000 sheep, and last year yielded $80,000 worth of grain. It is worked by Mexican laborers, who are fed and managed by officers, like an army.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To CORRESPONDENTS.—Mr. RANDALL'S address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

PROGRESS.*

A "HAPPY NEW YEAR" to our readers. Eighteen hundred and sixty-six sleeps with the dead past. Now is a good time for men in every pursuit to pause and look backward and forward—backward to see what has been achieved,—forward to see what there is yet to achieve.

As Agriculture is the basis of an adequate supply of human subsistence, improvements in it have always justly ranked high in importance. In every nation possessing territorial possessions sufficient for the production of its agricultural supplies, the advance in this art has kept pace, with wonderful evenness, with the advance in general civilization. Gigantic strides in both have been effected by the present and immediately preceding generations. Improvements in sheep breeding have gone on in a steady and even rapid course from the days of BAKEWELL to the present time. If recent ones have been less visible and startling, it is because it is more difficult to scale the steep mountain peak than it was to mount up the more gradual acclivities at its base. When BAKEWELL commenced his career, every thing was to be done. The most miserable rough-hewer in breeding could scarcely have gone amiss in an attempt to make a more profitable animal out of the gaunt, leggy, Long-wooled sheep of England. BAKEWELL was no rough-hewer, no specimen of lucky mediocrity in his art. He was a genius; and no man probably ever came nearer ascending from the base to the peak, in improving a race of animals. Yet there are better Long-wools in England now than he ever bred or saw.

ELLMAN in like manner manufactured the splendid English Middle Wools out of the scraggy sheep of the Sussex Downs; and he traveled well up the mountain. WEBB commenced where ELLMAN left off, and ascended higher; and Britain and America are now filled with keen competitors for superiority, who, in the aggregate, are unquestionably still advancing the limits of improvement. The same may be said of the other English families of sheep which are original subvarieties, offshoots, or crosses of the preceding. Every year heralds a new successful experiment with them. Every year bears record of further general improvement.

The Merino was a less plastic material to work upon, when subjected to modern experiment. Its blood had flowed far longer in a fixed channel without intermixture or change, and had therefore acquired more uniform and unchangeable forms of external development. It had, it is believed, altered little for ages, when it went forth from Spain, about the beginning of the present century, to colonize the world. Its naturalization in England proved a failure. It met neither the wants nor the tastes of its people. In France it was more successful, and improvements were effected in it which visibly increased its adaptation to the National uses. Germany wrought a great, but a one-sided, improvement in the Spanish Merino. The fineness of the fleece was materially increased, but the body and the constitutional stamina were deteriorated. There has been, however, a reaction on these subjects, and a considerable portion of the German breeders now produce large, and, we suppose, strong sheep. Of the later results of the Merino experiment in other European countries, we are not specially informed. They have not at least been sufficiently successful to attract foreign notice. The Australian and South American Merinos are principally offshoots from the German stem, and have not yet attained a sufficiently distinctive local character to require notice.

The American Merino has been moulded by circumstances. His ancestors came here under the most favorable auspices. The country needed them. Their introducers and sponsors were statesmen. But American politics, and consequently policies, are like trade winds.—They blow strongly in one direction, and then as strongly in another! In 1815 they *blew away* the sheep which the LIVINGSTONS, the HUMPHREYS and the JARVISES had introduced with so much pride and care, as public benefactions to their country. In the long eclipse which followed, but a feeble remnant was saved. Meanwhile the "Saxon" irruption took place, and these delicate sheep spread over the country. They were found unsuited to our markets and systems of husbandry, and were condemned. The public again called for the "old-fashioned" (i. e., the Spanish) Merinos. They came back into public favor more thoroughly acclimated—changed for the better for American wants, somewhat by climatic influence and more as the result of judicious breeding.

From that day to this their progress has been onward. They have seen seasons of adversity, comparatively speaking; but American farmers (some of them at least) have learned that all kinds of stock equally have their "ups and downs" in the public markets and favor; and they have clung resolutely to their sheep and their *improvements*. The fruit of this constancy and skill is the American Merino—an animal as different from the Merino of any other country as is a Morgan horse from an English dray, or a Moorish barb. He might not be the most profitable fine wooled sheep in Germany or France. That is a point of no consequence to us. It is enough that he best suits our climate, our markets, and our modes of management. A material improvement has taken place in our best bred Merino flocks within the last five years. An intelligent West Virginia sheep farmer, who spent some time in Vermont, last winter and this, wrote to us that he thought he could clearly see a change for the better in the best flocks within the intermediate period. We can say the same for New York; and it is probably true of the other Merino growing States. This is, surely, a pleasant backward view.

In looking forward, the breeders of all kinds of sheep should carefully study the present character of their flocks—note their deficiencies—and aim to rectify these while they continue to strengthen their good points. There can be no more absurd mistake for any man to make than to fancy he has scaled the last and loftiest peak—that he has reached perfection. The very best rams of five years ago are not up to the present mark, and are not used, even where they are retained by their breeders. Five years hence the best rams of to-day will stand equally in the shade.

We do not propose here to point out in detail the points or qualities in which our best sheep are susceptible of improvement. This will be our business for the year to come, as it has been through years past. The best flocks exhibit greater or lesser positive defects. Nay, this is true of almost, if not quite, every individual sheep. We never, for example, yet saw a Merino ram which, judged even by the present standard of excellence, was not below the highest mark in some one or more particulars. And even excellence is but a comparative term—signifying the best which has *yet* been attained, not the best which is attainable. The longest wool may be bred on longer. The thickest may be bred on thicker. In a word, every quality sought for may be improved, and, as we have already said, is now being annually improved. Nor should this circumstance chill or discourage the emulation of the breeder. On the contrary, the breeder who brings intellect and high motives to his task, should rejoice that there is no limit to progress in his art.

* This article was intended for the preceding number of the RURAL, but was detained in the mails.—M.

MR. L. J. BURGESS' RAM "CASHIER."

CASHIER, bred and owned by LOAN J. BURGESS, North Hoosick, N. Y., was got by PERCY & BURGESS' Gold Mine, out of Little Queen. The pedigrees of both sire and dam have been published in this paper. Both have taken first prizes at State Fairs. Mr. BURGESS writes: "Cashier is one year old. His first fleece weighed 17 lbs. 14 ozs. He received what I term the sweepstakes premium at the late Fair of the State Ag. Society—that is, on sheep and fleece."

[Mr. BURGESS has had two portraits of Cashier, one of which (the first and poorest taken,) was given in our last volume—the wrong engraving being sent us. Above we give the latest and best portrait of Cashier, and the only one Mr. B. intended for publication.

Condensed Correspondence, Items, &c.

THE WOOL TARIFF.—Our last advices from Washington show that the tariff on wool and woolens, passed by the House last winter, continues in great danger of being cut down in the Senate. Nothing but vigorous exertion will prevent it. Let petitions be poured into the Senate from every part of the wool growing States. We are receiving letters from all quarters urging our personal attendance at Washington. It would be our duty to be there, as one of the committee appointed by the National Wool Growwers' Association for that purpose, were it in our power. But the condition of our health is such as to render it wholly impracticable. We mention this to save ourselves the trouble of answering many letters on the subject, and to let our friends, generally, know why we are not at the post which was assigned to us. Those who have written us that they are circulating petitions for signatures are entitled to the thanks of the wool growers of the country. It is to be hoped that not a school district will remain uncanvassed.

SHEEP KILLED BY SALT.—CHARLES E. CRANE, Bridport, Addison county, Vermont, asks if we "can give any information respecting the disease in sheep which is caused by eating salt after being for some time without." He says he has lost several from that cause; that they usually die within thirty-six hours after eating the salt; and that "the most prominent symptoms are a violent shivering of the whole body, and difficult respiration as the case advances." We have never seen a case of this kind, but have often heard of them. An excessive amount of salt is liable to produce inflamation of the inferior lining (mucous membrane,) of the stomach, and this is doubtless the disease in question. To arrest the corrosive action of the salt and put it in a form to be carried off, it would be proper immediately to administer lukewarm water, say a quart. Stirring the whites of three or four eggs in the water would render its effect more soothing. Flax seed tea would be an excellent remedy. If administered properly and in time either of the remedies proposed would probably be effective.

NAME CLAIMED.—HENRY T. CUTTS, Orwell, Vt., claims the name of Gold Dust for an Infantado ram teg, got by F. H. DEAN'S Little Wrinkly, bred by Mr. HAMMOND, by Sweepstakes. Gold Dust's dam, bred by ROLIN GLEASON, was got by the Hinds ram by the Cross ram, both bred by W. R. SANFORD.

HOOF ROT.—DAVID W. HUTZEL, Ann Arbor, Michigan. The disease you describe is hoof rot. There are twenty remedies for it in popular use, either of which will cure, *if properly applied*; and a hundred more might be added to the list. But if they are not used often enough—if the foot is not suitably cleaned and pared—and if it is not kept from mud, water, &c., long enough to allow the application to have its full effect—a "permanent cure" is out of the question. Mr. HUTZEL will find the results of our experience in the Practical Shepherd, and the whole subject has been repeatedly discussed in these columns.

We consider blue vitrol the great remedy in light cases, and butter of antimony in severe ones. People generally like to use a compound of drugs. Almost every published *recipe* includes a dozen of them. It is well if these do not neutralize each other. The multiplication of ingredients is in scarcely any instance a benefit. All the addition which *we* desire to make to the two applications we have named is tar, to form an external coating which will to some extent keep dirt out of the sores and prevent the bad effects of moisture.

CROSS RAMS.—"R. P. S." asks us "how to manage a cross ram." A whipping about the face with a light, limber rod, administered every time the ram offers to butt—and vigorously followed up until he runs away completely cowed—will sometimes break the habit when it is beginning to be formed. No fear should ever be betrayed, even if you are not prepared for him. In default of other weapons, give him your boot in the face so rapidly and effectually that he cannot charge, until he loses all stomach for the attempt. An old bruiser who has learned his power, cannot be broken of the habit. But he can be made safe by putting a cap or hood of leather over his face so that it will prevent him from seeing except backwards. This can be properly secured to the horns, and by a strap under the jaws. A ram that strikes sidewise with his horns must always be looked out for by those who approach him closely. The tips of his horns should be sawed off, or knobs fastened on them.

CLAIMING NAMES FOR RAM TEGS.—We have published a few of these "claims," because they have come mostly from gentlemen whom we know would not request their publication, except in the cases of animals supposed to be remarkably valuable on the score of pedigree and individual excellence. In *such* cases we are willing to continue to publish a few of them. But as a general thing it is time enough to publish a ram's name and pedigree after he has made his mark and demonstrated his superior value.

SALT IN WINTER.—"S.," Redwing, Minn. By all means, sheep should have salt in winter, and it is better that they have access to it at will.

MR. WELLS ON WOOL AND WOOLENS.—In his Report Mr D. A. WELLS, Special Commissioner of the Revenue, briefly discusses the tariff on wool and woolens. We annex what he says on the subject, presuming the editor of this department will comment upon the same in a future number: M.

In respect to wool and woolens, and especially to so much of the House Bill No. 718 as proposes to increase the duties on the importation of these articles, the Commissioner would report as follows:

A careful examination of the whole subject, the opportunity for which, owing to a limitation of time and the pressure of other business, was not afforded to Congress or its committees at its last session, leads the Commissioner to the conclusion that the schedule of rates in question, proposed as the basis of the future tariff on wool and woolens, is of a character not warranted by the circumstances of the case, and prejudicial alike to the true interests of the wool grower, the revenue, and the great mass of consumers and taxpayers throughout the country.

In presenting these views the Commissioner would not be understood as advocating any reduction of the present rates of duty on wool, except so far as regards the combing wools. On the contrary, he favors and recommends their retention. But he is, at the same time, of the opinion that the duties, as they now stand, afford all the protection which this interest has a right to expect—having due regard to the questions of revenue and prices—and all that they ought on the grounds of expediency to receive.

OHIO FARMER—*Fun Ahead Spoiled.*—Our genial friend, Gen. S. D. HARRIS of the Ohio Farmer, was "indulging in a hope" that the close of the last year would enable him to throw off the editorial harness and elevate his heels in the pasture of retirement, to which he supposed himself bound. But a change in the business relations of the publishing firm has dissipated this vision of ease, and lengthened him to the "grindstone" again. He thus patiently submits to the martyrdom:—"Since it must be so, I give my neck cheerfully to the yoke, and if my vehicle should ever drag heavily in the ruts, I shall expect my friends to give me a lift at the wheels." M.

AN OLD FARMER.—The Frankliuville (O.) Pioneer says that there is now living in Sandusky, in that State, a farmer named MATTHIAS BAKEMAN who is 111 years old—having been born in the year 1755. He is quite active yet.

Rural Spirit of the Press.

Steam in Agriculture.

THE Canada Farmer has an article tending to enforce the propriety and advantage of plowing by steam rather than by the use of horses and oxen, as is now done in the States and the Canadas. The advantages claimed for steam over animal power, in the preparation of land for crops, are celerity of execution, greater depth of plowing, and hence a greater readiness in killing out noxious weeds upon a farm. There are doubtless many portions of the older settled portions of Canada and the prairie regions of the West where steam plowing might be advantageously used, but on small farms, with undulating surfaces, we doubt whether steam can be profitably substituted for the animal power now employed in breaking up and preparing the ground for crops or in cultivating them during the growing process. A few experiments in steam cultivation have been made at the West, and though the results have not proven very satisfactory, we are still confident that success will be achieved.

Plowing on the Prairies.

A WRITER in the Mass. Ploughman furnishes an interesting account of a visit recently made by him to the prairie regions of the West. With respect to the operation of plowing there he says:—"Four or five yoke of oxen make the team, all driven by one man, and no one holds the plow, that being confined in a frame work, running on wheels, which keeps it in place. The furrow was about 15 inches wide, and as black as our Massachusetts swamp-land, although on the top of a roll of the prairie land. This dark color is supposed by some to be caused by the annual fires which have heretofore swept over the prairies, and burned the large crops of grass which they produce."

Home Manufactures.

THE Iowa Homestead urges, with much spirit, the erection of manufactories in the Western States for the purpose of bringing the producer and consumer together in their mutual industrial operations. It adds:—"We have been too long sending to Eastern States for our implements of husbandry, furniture and clothing, when the profits of their manufacture should be added to the wealth of *our own State*. New England and Old England have turned too many honest pennies which Iowa should have turned. * * * Let us say to the East, you can only retain our custom by transplanting your factories upon our soil, and they will soon be transplanted." The West is getting restive.

Assumption Rebuked.

THE Northern Farmer, in referring to the American Agriculturist, pertinently says:—"To read the paper referred to one would infer a wish to have it understood that all the agricultural talent of the country was centered in that paper, and what was not written for them or by them, was of little account. We believe there is some talent outside of the City of New York, and that the editors of the Country Agricultural Papers have better opportunities of knowing the wants of the farming community, and of gaining information by actual observation and association with farmers themselves, twenty or more of whom he sees where the city editor sees one."

Green vs. Dry Wood.

A DISCUSSION is going on in the columns of the Miner and Farmer (N. H.) on the comparative value of green and dry wood for fuel. One writer contends that green wood radiates more heat than does the seasoned article, quantity for quantity. The other denies this for sundry specified reasons. The dry wood advocate had the floor last and propounds this very pungent inquiry:—"If green wood gives out so much more heat, how does it happen that men who run glass-works, steam engines, and the like, where the production of the greatest heat at least expense is made a study, have never been able to find it out?"

Sharpening Tools.

IT is said that the easiest way to sharpen razors and other edged tools is to place the blade for about half an hour in water containing one-twentieth of its weight of sulphuric or muriatic acid. Upon taking the razor out, wipe it off lightly on a piece of soft rag, and in a few hours afterwards "set" it on a strop. The acid supplies the place of a whetstone, by corroding the entire surface uniformly, so that nothing but a good polish is afterwards needed. This process never injures good razors, whilst poor ones are often improved by it.

Corn in the Ear.

IT is customary for western farmers to sell their corn in the ear, allowing seventy pounds of corn for a bushel. The Prairie Farmer says this is being too liberal, on the part of the farmer, as seventy pounds of old corn in the ear will make nearly sixty-six pounds of shelled corn—a surplus more than sufficient to cover the cost of shelling.

Good Advice.

THE N. E. Farmer says: "It should ever be a rule with the farmer to winter no more stock than he can winter well. A single sheep or cow, properly cared for, and provided with a sufficiency of wholesome and nutricious food, water, and comfortable shelter, will be of more value to the owner than two poorly kept. It is a singular error in domestic policy, to appropriate to two or more animals the food necessary for one."

STOCK IN NOVA SCOTIA.—The authorities of Nova Scotia have purchased a farm of 350 acres, which is to be placed under the supervision of the Board of Agriculture for the special purpose of rearing pure stock.

Rural Notes and Items.

THE RURAL NEW-YORKER—*Progress, Receipts, &c.*—The success of the RURAL for 1867 has thus far been unprecedented—greatly in excess of any former year, and largely in advance of our expectations. We are daily receiving hundreds of *new* subscribers, in addition to more than the usual number of renewals—indicating decided progress. Although we offered no special inducements for agents to remit early (as we have formerly,) our subscription receipts during the first week of this year, were *over one-third more than those of any corresponding period!* For example, our receipts for the first five days of January, 1866, were $13,400.87:—for the corresponding five days of 1867, they were **$20,133.83!** These figures, which don't lie, tell the story, and comment would be superfluous. We give them in no spirit of boasting, but to assure its hosts of ardent and influential working friends and well-wishers, all over the land, that the RURAL is achieving a success unparalleled in the history of its class of journalism—for which we are largely indebted to the efforts and co-operation of its earnest advocates, to whom we bend in grateful acknowledgment.

—We commence the new year with a *bona fide* edition of *Seventy-Five Thousand Copies*, in the belief that we shall have that number of subscribers. But whether we shall increase or diminish this edition will depend upon the efforts and success of Agent-Friends throughout the Country. What say, Gentlemen and Ladies, Boys and Girls of the gallant "Rural Brigade?" Must we recede, or will you cause a demand for full One Hundred Thousand Copies of Volume XVIII of the RURAL NEW-YORKER?

THE EDITOR'S PORTRAIT WANTED AGAIN.—For years we have now and again been requested to give our "picter" in the RURAL, and on two or three occasions named reasons for declining—among which, if we remember rightly, were the lack of gray hairs, dignity and 100,000 subscribers! But the requests are becoming more frequent, and as the subscribers are fast arriving, we shall have to "hurry up" the gray hairs and dignity, or—say nay again. The last request is in a letter from WM. TRONE, Esq., a P. M. in Licking Co., Ohio, who (in sending a handsome club for 1867,) says:—"Now, first, I, with others, friends of the RURAL, earnestly and sincerely request you, if you please, to give us a good likeness of yourself, in some early number of the RURAL," &c. Albeit our modesty and firmness are proof against many things, the expression "earnestly and sincerely," causes us to relent to some extent, and to say that, if we can get a good-looking picture, (i. e, *a likeness!*) perhaps our friends will be gratified ere long, even though we may be accused of vanity. However, we think the closing sentence of the following extract from a notice of the RURAL (given in the Phrenological Journal about a year ago,) suggests the best manner of learning about the editor hereof:

"When the editor was elected mayor of Rochester, we feared the RURAL would lose something of its spirit, but we find it 'all alive' to the best interests of the farmer and the family as before. We intend to watch our opportunity to 'show up' this time-honored editor and model mayor in the PHRENOLOGICAL JOURNAL. But the best way to study his character is to read his paper."

THE RURAL'S NEW DRESS.—In the haste of getting our last number to press we neglected to state that the new and becoming attire of the RURAL was mainly furnished by Messrs. FARMER, LITTLE, & Co. of New York, (proprietors of "White's" New York Type Foundry, established in 1810,) and copper faced under their direction. Of the beauty and clearness of the type we trust our readers have already received favorable *impressions*, and hence any adjectives would be superfluous. The border rules, corners, &c., are from the foundry of Mr. NATHAN LYMAN of Buffalo. We take pleasure in again commending both of the above named firms as among the most prompt and honorable in the country.

WHEAT, CORN AND POTATO CROPS.—The wheat crop of 1866 is estimated to be 153,045,967 bushels—an increase over that of 1865 of 5,000,000 bushels. The crop of Illinois, Indiana, Michigan, Wisconsin, Iowa, Kansas and Nebraska aggregates 88,986,169 bushels. The crop of Minnesota is not given.——The corn crop of 1866, excluding the eleven Pacific States, is put at 679,000,000 bushels—25,000,000 bushels more than the crop of 1865. The estimated deficiency in the quality of the crop of 1866, as compared with that of 1865, is 75,000,000 bushels, making a total deficiency of 100,000,000 bushels.——The estimated crop of potatoes, including all except the Pacific States, is 104,000,000 bushels.

AGRICULTURAL EXHIBITION AT PARIS.—It is announced that in connection with the Universal Exhibition to be held at Paris from April to November next, a great show of live stock, agricultural implements, together with general farming operations, will also take place, and under the auspices of the Imperial Commission. As there is not sufficient room in the exhibition building and its surrounding grounds to admit of the proper display and trial of stock and implements, the island of Billancourt-on-the-Seine has been selected as the scene of operations. The field chosen contains fifty-four acres of excellent soil, and is within a short distance of the Great Exhibition.

THE COTTON YIELD.—A gentleman in Missouri, having traveled over most of the cotton growing regions of the South, and paid particular attention to the cotton crop, writes that the entire yield will not exceed 1,400,000 bales—or less by a million of bales than was anticipated in the earlier portions of the season. Only about 400,000 bales have, as yet, been sent to market. This estimate is about one-third of the crop of 1860.

MONTHLY NEW ENGLAND FARMER.—The publishers of the N. E. Farmer, weekly, have resumed the publication of a monthly edition under very favorable auspices. No. 1, Vol. I of the new series (for Jan., 1867,) is a capital one in both style and contents—being made up of the cream of the weekly. We wish the enterprise abundant success. Published by R. P. EATON & Co., Boston, at $1.50 per annum.

BOOTH'S COMBINED SHAKER.—This valuable Western New York invention, heretofore commended in the RURAL, is being extensively manufactured by Mr. W. C. QUIMBY of this city, and is having a large sale, not only in this State, but at the West. During the past week an order for a number of shakers was received from California. See advertisement.

AN AILMENT IN HORSES.—D. M. HUNTER, Meadville, Pa., inquires "the cause and cure for swelling of the sheath in horses confined in the stable. Is there any danger attending it? Does it constitute unsoundness?" Who will answer?

CORNELL UNIVERSITY PRESIDENCY.—The Hon. ANDREW D. WHITE of Syracuse, has been chosen to fill the President's chair of this institution. The appointment is generally commended.

HORTICULTURAL.

THE PEACH BUDS IN WESTERN N. Y.

FRIDAY morning, Dec. 21st, 1866, the mercury stood as low as 18° below zero in many places in this vicinity. Some reliable observers reported it as low as 20°; others at 5° or 6° The morning was very clear and still, there being only a gentle current of air moving from the East. In vallies exposed to the sweep of this current the thermometer marked the highest degree of cold; on western slopes, sheltered also by forests, it was in some instances we know, twelve degrees warmer—so much will the shelter of a belt of timber soften the iciest touch of winter. The sun shone bright after this cold morning, and the weather rapidly softened down to a thaw, which carried off most of the snow.

We believe this weather destroyed the bulk of the peach buds in this vicinity, and probably throughout Western N. Y. All orchards that we have examined are badly injured. H. N. LANGWORTHY, an experienced fruit grower residing near this city, writes us as follows under date of January 5th:—"Having made a pretty critical examination of the peach buds on my grounds to-day, I find them, almost to a solitary bud, killed by the severe cold of Friday, Dec. 21st. My neighbors, with one or two exceptions, have also expressed the conviction that the peach crop is destroyed in this locality. It is a question not easily answered how the peach buds pass through an ordeal of cold in some seasons, and escape harm, while in others one much less severe proves so disastrous. I can account for it with no other theory than that, owing to a late, warm fall, the sap remains active later in the season, thus exposing the delicate tissues and sap vessels of the bud to be ruptured by severe cold, and making a failure inevitable."

GRAPES IN THE NEW YORK MARKET.

NUMBER TWO.

Varieties.—The Concord being one of the earliest varieties, sold readily, and gave good satisfaction to both consumers and dealers. Although possessing much of the foxy flavor, that is overlooked, as there is no other variety to compete with it. The Delaware has proved very popular this season, coming in, as it does, just after the Concord. Its fine flavor, together with a great degree of sweetness, produces a striking contrast to its predecessor, and its color being pleasing to the eye combines to make it attractive. The wine dealers are very partial to this variety, but owing to the scarcity of it the prices ranged too high for them. Some, which were received in very bad condition, sold readily at ten cents per pound, and at the close of the season there was quite a demand for them from the wine dealers, but they had neglected to inform themselves that it was an early variety, and found none in market. The Diana will prove a very strong competitor to the Delaware, as its size gives it a great advantage, and, although not received in our market to any great extent, it is a great favorite; but after all, the Isabella is the standard grape in our market; it has been tested for a long time, and has always proved a good article. Selling at a medium price it suits the trade of the great mass of fruit dealers; in fact, many of our dealers know but little about varieties, and any dark grape can be sold to them without inquiry. The most serious objection to it is, that it is not much in demand by the wine dealers, and only an extremely low price will induce them to buy. The Catawba is *the* favorite of the market; coming in a little later than the Isabella it is eagerly sought for by all classes of dealers, and gradually absorbs all the demand of the trade. In fact, as a late grape, it has no equal, either for flavor or keeping, and those from Crooked Lake can be kept in a good state of preservation until Christmas, without any more care than a barrel of apples. The wine dealers are always ready to purchase them, even in a slightly damaged condition, and will pay ten and sometimes fifteen cents per pound for them in this state for wine. There are a number of other varieties in our market, but in such limited quantities that they are hardly worth mentioning.

Packages.—The form of packages is more varied than ever; our growers appear to be on a strife to get the most stylish or favorite package, and by actual experience find out the one which is the most profitable. Some few growers have used small, round paper boxes containing about one and a half pounds of grapes. The lids of these boxes are ornamented with the figure of a beautiful female, which, I presume, is intended to convey to the mind of the purchaser that the contents of the box are as handsome and sweet as the outside represents; but from my experience they come far short of it, as the variety is the Isabella, and not then of the first class. The economy of these boxes I cannot understand; as the boxes cost 20 cents each, the grapes must sell at a very high price to pay the grower for the box. The round paper boxes are also generally used by the Bloomfield and Naples growers. The Hammondsport growers send theirs in five pound wooden boxes made by FAIRCHILD BROS., with a neat label on top having the variety, and grower's name. This box is *the box* for grapes, and fruit in these boxes will sell in preference to any other in our market, and I think they can show larger returns for their fruit than any other grape growing district in the State. While on this subject I will contrast these with the round paper boxes. One grower in that Valley had a few of the paper boxes left from last season, and not wishing to throw them away, filled them with grapes and sent them to market. While selling any good mark of Isabellas for 15 cents his were sold from 8 to 10 cents at slow sales. Another new box made its appearance this season; in form and size resembling the Hammondsport box, but the sides, top and bottom are formed of one piece of wood. The lid laps over the front of the box about one and a half inches without fastening. These are packed in skeleton cases. All of the old style boxes were on hand this season. Ohio did not send many of the 20 pound boxes; most of them contained from ten to twelve pounds. A few five pound square paper boxes were sent, but they were not profitable; neither will any paper boxes ever prove as good as a wooden box made of the right kind of wood. I have no interest in recommending the FAIRCHILD box, but truth and justice compel me to say that the grape growers of that Valley are greatly indebted to these gentlemen for inventing this box for their use, and as for preserving grapes after being packed, it is the best box in this country. It is made of a species of pine which is very light, free from smell, and possesses remarkable preserving qualities.

Dealers.—I am aware there has been much complaint about dealers this season on account of delay in making returns for the fruit. This could not well be avoided, on account of such an immense quantity arriving in market, and in order to make more prompt returns, a great deduction must have been made in the prices, which would have caused more dissatisfaction. I think in many instances the dealers held their stock too high, considering the quantity and quality of the fruit; still, as they did it with the idea of doing better for their patrons, they were excusable.

Many consignors think that all we have to do at any time is to offer their goods and they are sold; but that is not the case, for there are times when there is no demand at any price. We sometimes receive orders to close up a lot of fruit immediately, and having done so at a reduced price, of course, the owner frequently writes in return, and wants to know *why* his fruit did not bring as much as his neighbors; so the dealer is complained of for doing just what was ordered to be done. Another difficulty frequently lies in our way of closing up a lot of fruit, particularly if it is a new customer. We generally have on hand the fruit of some well known and favorite brand, and our purchasing customers refuse the new mark as long as we have those that they have tested, and know to be reliable. In this case we must depend on some customers who have no preference, or deal with us only occasionally. NOW AND THEN.

New York, Dec., 1866.

LANDSCAPE GARDENING.—No. II.

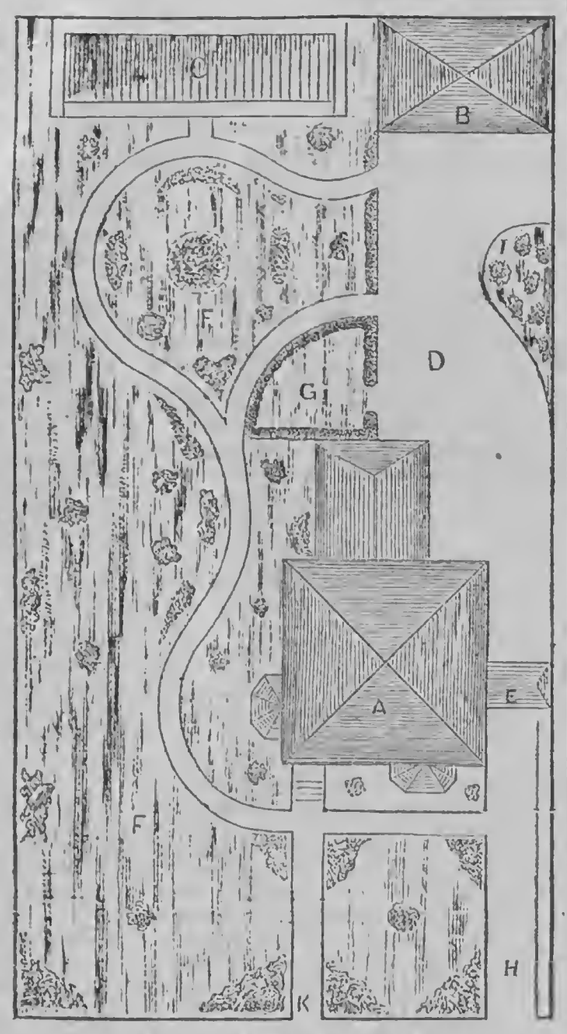
BY WILLIAM WEBSTER.

IN continuing my series of Plans for small gardens, I cannot but again allude to the fact, that, as they abound all over the country, so does a desire for the requisite knowledge to lay them out properly and manage them afterwards continue to increase. In confirmation of this I need but mention that a well known writer in one of our popular Magazines remarks,—"Books have been written on 'Our Farm of Two Acres,' 'Four Acres,' and 'Ten Acres,'—I shall be glad to see as good a book as these on 'Our Garden of One Acre,' or 'Half,' or 'Quarter of an Acre.'"

To the man of moderate means, the amateur, and all who desire to enter into the philosophy of gardening, this question how to lay out a garden and manage it afterwards becomes a pertinent one. It cannot well, however, be answered except by asking another. Do you desire to combine the ornamental with the useful in the formation of your gardens, or do you intend it solely as a means of profit without any regard to the combination I have mentioned? If the latter, then our advice is to grow such things only as you can derive the most profit from — but if your aspirations lead you to adopt the former, then we are with you, because we hold that there is scarcely anything which can produce a greater attachment for home than an orderly and well arranged garden. And is not this home-feeling engendered, in a great measure, through our associations connected therewith, which tend to remind us of the hand of some dear one that can be traced through all its beautiful arrangements? If there are any whom the pleasures of a garden have never yet tempted, I would say begin at once; the season is at hand, the year is before you. Commence by forming some definite Plan in your mind for the improvement of your garden, and by which you may be guided in all your future operations.

The design which is here presented is not a plan for general adoption, but merely one for study. The reason for this is obvious. Circumstances scarcely ever admit of a plan which is designed for any one particular place being fully carried out in another. Either the location of the dwelling, the stables, or other object, requires some modification which, however, interferes with the essentials. Thus, in studying the plan in order to adapt it to our own particular wants, we find it may become necessary to change the shape of the walks; this of course involves an alteration of the whole, yet the space remains which must be appropriated to the same purpose, only in a different form.

The drawing represents a place of half an acre. The dwelling is of moderate size, 40 ft. square, with an addition in the rear 22 x 25 ft., being rather ornate in character. The surroundings require to be in keeping in this case, and no part is appropriated to a vegetable garden for the reason that so much is required to be in lawn to correspond with the dwelling; but to compensate, in a measure, for this, there is a cold grapery at C—a glass house for vines trained under the rafters in which no artificial heat is used— the temperature being raised solely by solar influence. The ground part of this house can be used for the production of early salads and such things as are usually grown in hot-beds. On further reference to the Plan we find at



PLAN FOR LANDSCAPE GARDEN.

A, the dwelling. B, Stables. C, Cold Grapery. D, House Yard. E, Porte Cochere. F, F, Sections of Lawn. G, Laundry Ground. H, Entrance to rear of Dwelling and Stables. I, Groups of evergreens to screen Stables. K, Walk to Dwelling.

Space will not admit of entering more minutely into details at present; that I reserve for another paper, simply stating that the flower beds are cut out of the grass on the Lawn, as represented in the engraving.

Rochester, Jan. 2, 1867.

DISCUSSION ON GRAPES,

AT MEETING OF THE OHIO POMOLOGICAL SOCIETY.

BY M. B. BATEHAM.

AT the meeting of the Ohio Pomological Society, held at Zanesville, Dec. 6th, the following discussion on new grapes took place:

The Longworth.—Dr. WARDER said this was a delightful fruit and very healthy and productive vine, found in the garden of the late N. LONGWORTH, Esq., in Cincinnati. It was marked by him as his No. 20, and as it was a great favorite with that pioneer of American viticulture, it was proposed to give it his name. This grape is of the same class as the Herbemont, but earlier. The bunches are large and shouldered; the berries are rather small, round, black, very piquant and refreshing for the table, and promise to make a superior wine.

The Lyman we find at the same place. It has the appearance of the *Vitis viparia* species. The vine is remarkably thrifty and healthy, with no signs of mildew on the foliage. It is very productive, yielding handsome, large bunches, (sometimes shouldered,) of medium sized berries, that are round, dark blue, or black, and full of sweet juice. This promises to be one of our best wine grapes, and has been cultivated to some extent for that purpose in the vicinity of Louisville, Ky.

Ives' Seedling and Rintz.—Dr. WARDER also spoke of the value and popularity of these, as *wine grapes*, in the vicinity of Cincinnati, since the failure of the Catawba in that region. The Ives, especially, is claimed to make a better wine than the Catawba, and is more productive, besides being exempt from disease. The cuttings of this variety have all been bought up at $40 per 1,000, and great call for more.

Saratoga.—Referring to the report on this grape, at the Cleveland Exhibition, Mr. CAMPBELL of Delaware said he had been informed that some persons had asserted that it was only the *Catawba*, but he was convinced they were mistaken. He read a letter from Mr. FANCHER in support of this opinion, and said he had a vine of the Saratoga growing in his own grounds; it differed essentially from the Catawba.

Martha and Black Hawk.—Mr. BATEHAM expressed a desire to hear something about these two seedlings of the Concord, originated some years ago by SAMUEL MILLER of Lebanon, Pa., and said to give promise of value. He believed that Mr. KNOX could give information about them.

Mr. KNOX of Pittsburg said he believed these two grapes were destined to become quite popular, when sufficiently known. The *Martha* he regarded as bearing the same relation to white grapes that the Concord does to black ones. Both are very sweet and good, and the vines, like the parent, remarkably vigorous, hardy and healthy—just such as are wanted to withstand the vicissitudes of our climate.

The Iona.—The Secretary read his minutes of the discussion on this grape, at Cleveland, and asked those present to correct any errors that might occur to them. None of consequence were mentioned.

Mr. CAMPBELL said he did not express confidence in the "hardiness" of the Iona vine; for he had some doubts on that point, and also in regard to its exemption from mildew. He was pleased with its vigorous growth, and the quality of the fruit, though with him it was not quite as tender and delicious as reported, and did not ripen quite as soon as he expected.

Mr. HOOPER of Westchester, Pa., said, in his section grape vines generally mildewed the past two years. Adirondac and Iona mildewed badly.

Mr. TEAS of Richmond, Ia., said Iona vines grew well till the latter part of summer, then mildewed and leaves failed; still several bearing vines in his vicinity ripened their fruit well, and he thought in ordinary seasons the variety would prove healthy. The past summer was very wet, and nearly all grape vines mildewed.

Mr. A. B. BUTTLES of Columbus said he planted 500 Iona and 200 Israella vines in the fall, a year ago, and hilled the earth over the vines, but nearly all were killed by the winter—soil gravelly loam. He planted again the past spring, and the vines grew well at first, but afterwards mildewed and shed their leaves before ripening the wood—Delaware and Creveling the same. But the season being remarkably wet, he does not count it a fair test of the variety, and shall try again.

Mr. MORRISON of Belmont County, and Mr. IMLAY and Dr. HILDRETH of Zanesville, related similar experience to that of Mr. BUTTLES, only on a smaller scale.

Mr. CLARKE of Lancaster said he had seen many vines of Iona during the past few months, in Fairfield and adjoining counties, and they were generally mildewed; some complaint also of winter killing.

Mr. LIMPERT of Groveport had several Iona vines in bearing, along side of Delawares; the Ionas shed half their foliage before the fruit was ripe—Delawares not so bad.

Mr. KNOX, being called on, said he had very little to say on the Iona; and would not say anything if not called on. A few years ago the friends of the Delaware were so loud in its praise as almost to abuse a man who expressed any doubts respecting its perfect health and hardiness. This should be a warning to the public and the advocates of the Iona, not to be too enthusiastic till time has elapsed for further trial; for where would the friends of the Delaware be now, if they had no other variety to depend upon? He approved the Iona fruit—good as well ripened Catawba—no better—and that is good enough; but with him the vines mildew so badly that he had very little hope of any success with it.

Mr. BATEHAM of Painesville said he had traveled along the lake-shore region the past summer and fall; had known many Iona vines along with Delaware, Catawba, and other hardy sorts, killed by the past winter; lost a considerable number himself that way; but he did not consider this a proof of the want of hardiness of the vines; and he had seen hundreds of Iona vines that endured the past severe winter without any protection; and he had seen no mildew to speak of; so that with his high appreciation of this grape he should plant it in preference to any other for that region—if the high price of plants did not prevent.

Mr. BUSHNELL, agent for Dr. GRANT, was invited to state what he had observed or learned as to the success of the Iona in the Eastern States. He said he was not present to advocate or defend the Iona; he only desired that all the facts possible should be made known respecting it. The friends of the Iona were quite willing to bide the decision that time and experience shall award to it. He could say that in some places eastward it had shown less liability to mildew than any other varieties; and some persons were digging out their Concords to make room for Ionas. And in the neighborhood of Hammondsport, as well as along the south shore of Lake Erie, the Iona was being planted so extensively for wine, as well as for market, that there was no reason to fear that all the plants now on hand will not be wanted the coming spring. He did not suppose that the Iona or any other grape would be found to succeed perfectly in all portions of our extended country, especially in such avowedly unfavorable seasons as the past one.

THE PROFITS OF A CROP OF TREES.

WE find in Fuller's "Forest Tree Culturist," interesting matter both of a practical and somewhat speculative character. Few, he says, have ever calculated the value of an acre of oak, hickory, chestnut or white ash. Taking hickory—which is always in demand for hoop-poles—Mr. Fuller proceeds to figure up the profits of an acre of land as follows. His calculations are at least interesting, and we doubt not, reliable:

"Now the young one or two-years old plants, or even the nuts, may be put in rows four feet apart, and the plants one foot apart in the rows; this will give 10,890 to the acre. At this distance they should reach this size in five to eight years, according to the soil and the care they receive. Then they should be thinned, by taking out every alternate tree; this should be done by cutting them off near the ground. We therefore take out 5,445 trees suitable for hoop-poles. Their value will of course depend upon the market, but we will say four cents each, or $40 per 1,000, which would be a low price in New York; this would give $217.80 as the return for the acre's first crop. In three or four years they will need thinning again, and we take out, as before, one-half, or 2,722; these will, of course, be much larger; and if they will reach ten feet, and are of good thickness, they will readily bring ten cents each, or $272.20 for the second crop. In a few years more they will require thinning again, and each time, the trees being larger, will bring an increased price. But we are not by this means exhausting our stock; far from it, for those we cut off at first have been producing sprouts which have grown much more rapidly than the originals; and if a little care has been given them so that they shall not grow so thickly as to be injured thereby, we can begin to cut small hoop-poles from the sprouts of first cuttings before we have cut our third or fourth thinnings of the first crop; consequently we have a perpetual crop, which requires no cultivation after the first few years. As soon as the leaves become numerous enough to shade the ground, no weeds will grow among them, and the annual crop of leaves that fall will keep the soil rich and moist."

Horticultural Notes and Queries.

VICK'S ILLUSTRATED CATALOGUE AND FLORAL GUIDE.—We greet this publication as an old friend, and, altho' termed simply a Catalogue, there has been during the past year no work issued of more worth and value as a Floral guide and companion. Its frank and friendly gossip with the lovers of flowers, and its useful hints on sowing seeds, transplanting, &c., while containing great practical information, are told in the genial and entertaining style which during Mr. VICK's long career as a Horticultural editor, was a marked characteristic of his writings. The Catalogue contains 88 pages and averages a splendid engraving to each page. The frontispiece, drawn and engraved by GEORGE FRAUENBERGER of Rochester, on wood, and printed in six colors, is a masterpiece of that art. Mr. VICK sends the Catalogue free to all of his former customers, and only charges others the low price of fifteen cents.

THE AMERICAN JOURNAL OF HORTICULTURE AND FLORIST'S COMPANION.—This is the title of a new Monthly Magazine, published by J. E. TILTON & Co., Boston, the first number of which is issued—for January, 1867. It contains over sixty pages original matter, embracing original articles by FRANCIS PARKMAN, T. M. MERRICK, Jr., HAMMATT BILLINGS, JOHN LEWIS RUSSELL, E. S. RAND, Jr., WILLIAM C. STRONG, F. C. HYDE, E. A. SAMUELS, together with selections from foreign publications. It is illustrated and handsomely printed, but not in all respects what was anticipated from the Athens of America. Terms $3 per year.

SPECIMEN FRUITS.—(F. M. GROVE, Me.) We cannot inform you where specimens of fruits, preserved expressly for the use of nurserymen's agents, can be purchased. If nurserymen cannot supply their agents, they will probably have to depend on their own resources for obtaining them. Handsomely executed colored plates, such as are advertised in this paper, may be substituted.

REGISTER THE ORCHARD.—The young orchard should be mapped out and the trees registered. This will save some trouble and confusion in after years. You are liable to forget the names, and the labels will soon be destroyed. Registering is preferable to attempting permanent labeling.

ANCIENT APPLES.—We have received a sample of Russet apples, in a fair state of preservation, grown by JOHN MILLS, Smithville, Jefferson county, N. Y., in the year 1865. They were kept on shelves in a cellar without any special effort at preservation. Their *endurance* is noteworthy.

Domestic Economy.

CLEANING ROOMS, FURNITURE, &c.—Make your whitewash in the ordinary way, and put into it twenty cents worth of chloride of lime. This will purify the walls. For the furniture, make a suds, and put in ten cents worth of the lime, as above, and wash with it. When the furniture is perfectly dry, put on a coat of varnish. To cleanse clothing, make a suds as above with chloride according to the quantity of articles to be cleansed; boil them, and drop in twenty drops of spirits of turpentine. This process will prove ample for cleansing and rendering the rooms and clothing sweet.—AN ENGLISH WOMAN.

SCALLOPED OYSTERS.—Wash out of the liquor two quarts of oysters, pound very fine eight soft crackers, or grate a stale loaf of bread; butter a deep dish, sprinkle in a layer of crumbs, then a layer of oysters, a little mace, pepper, and bits of butter; another layer of crumbs, another of oysters, then seasoning as before, and so on until the dish is filled; cover the dish over with bread crumbs, seasoning as before; turn over it a cup of the oyster liquor. Set it into the oven for thirty or forty minutes to brown. This is an excellent way to prepare oysters for a family dinner.

CRANBERRY ROLL.—Stew a quart of cranberries in just water enough to keep them from burning; make it very sweet, strain it through a colander, and set it away to cool; when quite cold, make a paste as for apple pudding; spread the cranberries about an inch thick; roll it up in a floured cloth, and tie it close at the ends; boil it two hours, and serve it with sweet sauce. Stewed apples, or any other kind of fruit may be made in the same way.

USEFUL INFORMATION.—The gloss upon shirt collars made in factories is done by pressure and friction upon curved surfaces of hard pasteboard. The linen must be pressed upon a hard, smooth surface, or no gloss will be produced. Those who make it a business to dress linen have all the necessary appliances to glaze it. All kinds of cotton and linen cloth can be glazed by pressure and friction between smooth rollers; this is the way calico is calendered and glazed.

ABOUT PICKLES.—A correspondent at the West wants to know how the pickles they receive from New York are put up. They are put down in salt. When about to be shipped they are freshened and the vinegar added. This is the customary way of managing these matters.

TRY IT ONCE.—The manufacturers of the *Best Chemical Saleratus*, Messrs. D. B. De Land & Co., show their readiness to have the merits of the article tested, for they authorize all who sell it at retail to refund the money when by fair trial it does not prove to be as recommended. That is fair and shows their confidence in the article. It is better than Soda.

Ladies' Department.

A HUSBAND WANTED.

I want a dear,
My life to cheer,
Who does not think himself a "beauty:"
But in whose mind
I'll ever find
A mirror for my ev'ry duty.

I want a dear
Who's ever near—
A noble, gen'rous-hearted creature;
"One who can pass"
A pretty lass,
"Nor stop to glance at every feature."

I want a dear
Whose brow is clear;
Who never yet was known to mutter;
"Who will not roam,
But stay at home"
To cut the wood and churn the butter.

I want a dear
Who will not sneer
When begged to lay aside the "weed;"
But some "greenbacks,"
To buy knicknacks,
Will always furnish for my need.

I want a dear
I will not fear
To trust beyond the limits of my sight;
One who can be
Still true to me,
Tho' bright eyes cast on him their light.

"If such a one
Dwells neath the sun,"
And does not mind a tit for tat,
Why come along,
With love and song,
And ask my pa—and all that.

[*Baltimore Sun.*

AUNT PERCIOUS.

How often we hear it said that the worst of folks have their virtues, and the best their failings; but are there not some whose good and bad qualities are both so prominent that we know not where to place them? My aunt PERCIOUS was a distinguished specimen of that class whose virtues were so endearing, and whose weaknesses so conspicuous, that your opinion of her was no two days alike. She was one of those *weak* women, (of which the present generation probably furnishes few specimens,) who turn their backs to their husbands whenever they venture humbly to suggest "that they would like to go to the store," and when the household sovereign tells them it is entirely useless to think of such a thing, responds, "We'll, call it so, THOMAS," and goes about her work with the air of a martyr.

That was the way aunt PERCIOUS took such things; but before night she always knew how many dozen eggs she could spare, and had them securely packed in oats ready to slip into the first neighbor's wagon that came along, when her respected husband was out of sight,—and perhaps the next day, while uncle THOMAS had gone off to mill, she put on her best bonnet and went to town as brisk as a bee and bought a quantity of things necessary to keep her wardrobe up in a passable condition, with the butter, eggs and lard which her self-satisfied lord supposed safely stowed in the cellar, and when he came home at night she got his supper and poured his tea as demurely as if she was willing he should know her late financial operations. One thing was a source of satisfaction to her, and that was that THOMAS didn't know one piece of calico from another, and once in the house, her purchases were safe from his researches. I never could exactly make up my mind whether her proceedings arose from a laudable desire to avoid a fracas with her husband, or a natural love of deceiving. Her moral philosophy was badly mixed up, but she probably had a way of making it right to herself.

Aunt PERCIOUS was the best and the worst mother at the same time that I ever knew. If her children were sick nothing could exceed her devotion to them, only she couldn't bear to make them feel bad by insisting on their taking medicine against their wishes; neither could they do anything in her eyes which required punishment. If one of them took a dish from the table to throw at the cat, she showed a great deal of combativeness if she said, "O, don't, my son,"—and in consequence those of her children who lived to grow up were unruly and disagreeable, much to her grief. I never decided, though I have often tried it, whether her conduct was actuated by an uncommonly strong affection, or a weakness of character which made her as little able to keep up her dignity with her children as she was to contend with her husband about her shopping excursions. (N. B. I should like to have seen the ballot-box opened to women in uncle THOMAS' time. He would have been as modest as a late contributor to the Ladies' Department of the RURAL, writing on that subject—and willing not only to represent himself voting, but his wife, too, generous man! — thus saving the labor of counting votes.) But amiability will always cover glaring faults, and this is the case with aunt PERCIOUS, whose memory is more tenderly cherished than many who lived far more consistently than she did. B. C. D.

Elkhorn, Wis., Jan., 1867.

WEDDINGS.—One year from marriage makes a paper wedding; five years makes a wooden wedding; ten years a tin wedding; twenty-five years a silver wedding; fifty years a gold wedding; and seventy-five years a diamond wedding.

MISS ANNA E. DICKINSON has recovered sufficiently to return home. Her lecture engagements have been cancelled.

A GOOD MAXIM.—No matter how long you have been married, never neglect to court your wife.

Written for Moore's Rural New-Yorker

MAKE HOME PLEASANT FOR YOUTH.

PARENTS, make your home pleasant for yourselves and your children. Do not think because you were brought up in a log house, with only one room, wore home-spun dresses to church, and never went to any but a district school, that your children ought to do the same. Times have changed since you were young; then your advantages were as good as anybody's, and so you were contented. But now boys and girls are more aspiring; they want as good an education, and to make as good an appearance in the world as their associates. If you are able, give them these advantages, and direct their minds so they have an object ahead for which to labor.

Many people in the country, who have large houses and well furnished rooms, do not use them for the comfort of the family; but are kept "in order" for *company*. The kitchen has to serve for cooking, dining and sitting-room, and if the daughter ventures to assert her rights, and thinks they might afford to keep two fires, why, she gets a long sermon on "economy," the extravagance of the age, and the ingratitude of children now-a-days, until it is no wonder that she gets melancholy and dyspeptic, and wishes she was married and had all the wood she wanted. Economy is a very good thing, but to be more prudent than wise is not a good thing.

If you would have your children keep out of bad company, remain at home, be sunny-tempered and a comfort to you in your old age, make your home attractive for them; and indulge them in the use of the family sitting-room and parlor. Pleasant surroundings have a great influence upon the mind, refining the taste and inducing a spirit of content. MARY VINTON.

Maple Grove, Dec., 1866.

AN ADIEU TO THE OLD YEAR.

GOOD-BYE, Old Year! I can but linger as I bid thee thus, as I linger when I bid dear friends adieu. As I look back upon your beautifully pictured walls, and meditate upon the many pleasures and sorrows connected with those scenes, I can but ask, Is it so?—are you so soon to leave us never to return? Ah, yes! 'tis but too true. And as we bid adieu to you, Old Year, we behold your successor approaching, and exclaim, "Welcome! New Year!" Did we not greet *thee* thus, and with many hopes and bright anticipations for the *future*, now the *past?*

Ah, yes, and as Memory recalls "*The Past*," we sigh, and for what? Because *some* dear one that was with us, and joined us as we greeted thee, is not here to bid you a fond farewell. With us Death, that dread messenger, called, and we with sorrow and deep humiliation bade her adieu! She is dead, but not forgotten. As we greet your successor, so we hope to greet her, but not until we have left this sinful world and entered the presence of Him to whom one day is as a thousand years, and a thousand years as one day. ELIDA.

Southwest Oswego, Dec., 1866.

FRIENDSHIP OF WOMAN.

NOTHING could be more severe than this picture of friendship, written by Lady Clara Cavendish:

Men — that is, men who are worth anything—are capable of a good deal of solid friendship for each other, at all events they are governed by a certain principle of honor, and you will hardly ever hear one of the sterner sex entering a parlor full of guests with the foibles and failings of his most intimate friend, or with sarcastic remarks on his personal appearance. We wish we could say the same of our own sex, but, alas, we cannot. Sometimes we doubt the existence of friendship in feminine bosoms altogether, and wonder at the revelations which women make of their own meanness to each other.

When Augusta and Amelia seek each other's society constantly, twine their arms around each other's waists, kiss at parting, and exchange the most affectionate little billets, the supposition is that they are friends; but ten to one, if you meet Augusta by herself, to your surprise, you learn that her opinion of Amelia is by no means a high one. She wonders what you can see in her to admire, assures you she is very vain, and entertains you with an account of certain mysteries in her toilet, which "you mustn't mention to any one, but, really, the idea of those curls being her own, and that color." There is something horrible in treachery. Why need women be false to each other? They are very constant, as a general thing, to those of the other sex.

AN INCIDENT ON THE CARS.

As a train of cars was approaching the suspension bridge, near Niagara, the conductor found a young man who could not, unfortunately, pay his fare. The poor fellow was evidently in the last stages of consumption, and emaciated to skeletonic proportions. He sat by himself and his eyes were red as though he had been weeping; but the laws of the company could not be transgressed, and he must leave the train. Not a person moved or spoke as the conductor led him from his seat, shivering with the cold; but just as he reached the door a beautiful girl arose from her seat, and with bright sparkling eyes demanded the sum charged for the poor invalid. The conductor said eight dollars, and the noble young girl took the money from her pocket-book, and led the sick youth back to his seat. The action put to shame several men who had witnessed it, and they offered to "pay half," but the whole-souled woman refused their assistance. When the train arrived at Albany the young protectress gave the invalid money enough to keep him over night in that city and send him to his friends the next morning. Two-thirds of the women of the world would suffer by comparison with her. The man who gets that noble girl for a wife will be a subject of admissable envy.

Choice Miscellany.

DREAM OF THE YOUNG WINTER NIGHT.

BY COUSIN MAUDE.

LIST to the low moaning lake close by!
Lying beneath the drear darkened sky:
Moaning and groaning and tossing in pain;
For the Ice-King is coming to regally reign.
Over the bosom once sparkling and bright,
He spreadeth a strongly made mantle of white;
He holdeth it firm in a warm clasp of love,
But he shutteth it out from the arched sky above.
So, repining, it moaneth in sorrow and pain,
Till the springtime shall give it its freedom again.
The winter wind whistles my wide window by;
Gray clouds are now draping the once shining sky;
And little I heed how the dreary days go,
Or the dead earth now lying deep under the snow.
We'll heap the bright fire still higher and higher,
And let the wild winds sweep along in their ire;
With the warmth that's within by the red fire's glow,
We heed not the dead earth lying under the snow.
We'll let the sky frown on the Ice-Kings cold pomp,
While we sit by the light of our own cheerful lamp.
The flowers sweetly sleep in a drear, darksome grave,
And the hoarse winds above them now mutter and rave;
All the last summer's color, its warmth and its glow,
Are sleeping beneath the pure beautiful snow.
Yet float down, oh snow! from the pure realms of love,
To the dead earth beneath from the dim sky above;
With all thy cold blustering, dearly thou art
Enshrined with the image of cheer in each heart;
With the merry sleigh-ride, with the skater's loud song,
As on steel-bounden feet they glide gaily along.
So we will not repine; by sure tokens we know
That the flowers are but sleeping, far down 'neath the snow.
The splendors of springtime are coming again,
And the violet and crocus will rise from the plain,
And the strong fetters forged by the dread Ice-King's hand,
In his rough, rocky forts in the chilly northland,
Will be quickly dissolved by the spring's genial breath,
And the grim, uncrowned King sleep the still sleep of death.

Cazenovia, N. Y., Dec., 1866.

IDEALS.

THOUGHT is life; life is destiny; destiny is *eternity*. The three Fates, to whom submitted even JUPITER with his thunderbolts, still hold the distaff, spin and cut the thread of life. Daily we follow the hearse and listen to the dull fall of the first clod. Silently we listen to the click of the years, and, all tremulous, see, at hand, the pale outposts of Eternity. *Life the germ—Eternity its unfolding!*

To *live*, then, is *grand;* to live in such an age as this is sublime; but to live in this age, and live *well*, is *Godlike*. There is a spark of Divinity in every soul; and to dwarf, to warp, to entomb beneath the rubbish of sensuality and demonian lust, and to enlarge, to purify, to develop, to ennoble it, is the province of each. But where this power? you ask. I answer *will* is power, and the *efficient* element of *all* power. Circumstances may *modify*, but they should never *mould*. We form our own world and people it with our own ideals; among these we live, we think, we act. They are to us *all* the *real* in this wide universe. They guide the will and shape our destinies. Every heart, not covered deep with the dark damps of corruption, or stained by the foul blots of sin, has in it aspirations for the better—contains the *leaven* of *heaven*. It follows no misshapen shadows, no "barbarism or dogmatism," but the noble, the lofty, the beautiful, tinged with the rainbow and bathed in sunset. It matters not that the world cry "deception" so long as to *me* there is nothing so real as that glittering ideal.

Did ever man enter the maelstrom of dissipation who saw the whirling abyss at its center? Young America sees manhood and maturity in a piece of meerschaum, a glass of ale, a pack of cards, and follows his ideal till "spades" are winners and "hearts" "turned down."

But the canvas has a brighter side. The industry, the politics, the intelligence, the morals, the religion of an age are found in its ideals. The history of a nation is found in its ideals; and as not all these are worshipped by historians, history is partial, and biographies eulogies of ideal virtues. The silent cities of Thebes and Babylon are not less the imprints of ideals than they are tombs of nations and thrones for owls. Bunker Hill is the index to the ideal of American liberty as well as the "sepulchres of our fathers." The wild and mythological tales of the ancients are but histories of this principle in minds, which, groping blindly for the higher, the better, the good and the Godlike, attempted to satisfy this immortal longing with a JUPITER and JUNO, a VENUS and VULCAN, a MARS and MERCURY.

There is a subtle, spiritual principle pervading the world which charges the dreamy boy as a battery, and the sleeper of yesterday is the lion of to-day. He boldly interrogates this soul of things if happily he may find some niche whereby he may ascend toward his ideal. The world becomes suggestive, and he breathes a new atmosphere. Root, stone and statue yield to this chemist a vital spark which enables him to follow the ennobling and uplifting of his ideal, which is the *soul* of his *soul*. He pities the farmer whose aim is his wheat-field, the tradesman whose soul is the size of his purse, the priest whose hope is ritual, for *his* thoughts are above and beyond, and he sees in man his Creator's masterpiece. The small green bud is turned to a laboratory in which roses are made by the delicate working of sunbeams and moonbeams and starbeams. He sees the sunset, but goes behind the screen and boldly watches the fairy fingers that pencil the clouds, while he sees the face of his Maker as the "loud thunder shakes the tangled sunbeams from the clouds." He learns that with an incorrect ideal of life he is wrecked, and that, too, in accordance with the great law of moral gravitation "by which spirit is drawn to spirit, and each soul to the best." WEBSTER and BACON are placed in his crucible, but they come out part of himself. He sees KEPLER measure the heavens, and Ross, with telescopic eye summon the moon and stars to friendly discourse, and they obey him. To him nothing is lost; his ideal takes a loftier stand and allures him on. He catches inspiration from the air, and what once was dead matter is now living thought. The concert gives him the tone of the world, and he attunes his soul to the symphonies of heaven;—his soul a string in GOD'S great *harp* of the *world*.

An inventory of ideals is an inventory of the man. The idolater worships neither stick, stone, or statue, but his own ideal,—*deified*. Ascertain the Christian's ideal of CHRIST, and you have a key to his religion. If that be lofty, pure and holy, his heart will be filled with purity and piety. When the last bar is removed from the dark cage of depravity, and the heart is firm fastened to the throne of GOD by the gold chain of knowledge, then may our souls find rest, *true, beautiful*, and *eternal*, as we repose upon the bosom of an "Infinite Perfection." ENEN.

ENGLISH SNOBS.

RICH or poor, educated or uneducated, your genuine snob betrays his brutality, not only in his look and manner, but in every word he utters. You will meet him on the continent as a "howling swell," cursing the "garcons," of the hotel in execrable French, with a glass in one eye, turning up his nose at everything he sees, and affecting the *nil admirari* in the midst of wonders and beauties he cannot appreciate. Everything is "beastly," from the weather to the waiter. Let us relate a little anecdote of one of these haw-haw fellows, and how the conceit was taken out of him. In passing recently from Newhaven to Dieppe, the Channel being calm, we found ourselves seated at the dinner-table, with some fifteen or twenty passengers. The dinner seemed to give satisfaction to all but one burly-looking Englishman, who was evidently out for a tour on the continent. For him, nothing was good enough; even his favorite "Bittah-Beah" seemed to have lost all its excellence since quitting Newhaven only an hour before. He found fault with everything and monopolized all complaints. When the cheese appeared he began denouncing that also, and said he "always traveled with a few pounds of cheese in his box (nice perfume,) for they had no cheese in France fit to eat." At this remark a gentleman opposite mildly mentioned "Roquefort" as being an excellent cheese, as good even as "Stilton. "Not fit to eat," shouted Haw-haw. "I profess to be a judge of the article." "Perhaps, sir," was the ready reply, "*you are a dealer in it.*" The gas bubble was effectively pricked. The *thing* wilted, vanished, and disappeared amidst the universal roar of the table. Behold a fair specimen of an unmitigated English snob!

POOR PEOPLE AND POOR MONEY.

IN a sermon on the disadvantages of being poor, preached by Henry Ward Beecher recently, occurred the following:

In all the trouble and mischiefs that arise from false weights and spurious currency it is usually the poor that suffer most. Here is a spurious quarter of a dollar. The merchant in whose hands it chances to be, thoughtlessly of course, (for merchants are always honest!) passes it to the trader, and he, seeing that it does not look quite right, but not thinking it worth while to scrutinize it too closely, passes it to the grocer; and he, glancing at it and not liking the looks of it, but not wishing to be over particular, and saying, "I took it and must get rid of it," passes it to the market-man; and he, saying, "It might as well be kept traveling," passes it, as he is journeying, to the conductor; and he, knowing that it is not good, but disliking to say anything to the man, says to himself, "I will keep it and give it to somebody else," passes it to the sewing-woman. She is poor, and a person that is poor is always watched, and when she offers it, it is discovered to be spurious, and is refused; and, she looks at it, and says, "It is nearly my whole day's wages, but it is counterfeit, and of course I must not pass it;" and she burns it up, and so is the only honest one among them all! Bad bills, spurious currency, almost always settle on the poor at last.

GLUTTONY AND DRUNKENNESS.—"The intellects which lie shrunk in sluggishness through over-feeding the stomach," says an eloquent writer, "are incomparably more numerous than those which are slow and stupid by nature. The authors themselves of their own condition, the gross and imbecile through over-feeding do not belong to society proper; they are not human, yet neither are they brutes, for no brute is intemperate; no longer men, gluttons and drunkards form an outside class by themselves, the nobleness of their nature to be estimated, as in all other cases, by the quality and end of their delights. It is worthy of remark, that nothing is more speedily and certainly destructive also of the beauty of the countenance. Diet and regimen are the best of cosmetics; to preserve a fair and bright complexion, the digestive organs need primary attention."

SIGNS OF PROSPERITY.

Where spades grow bright, and idle swords grow dull;
Where jails are empty, and where barns are full;
Where church paths are with frequent feet outworn;
Law courtyards weedy, silent, and forlorn;
Where doctors feel it, and where farmers ride;
Where age abounds, and youth is multiplied;
Where these signs are, they clearly indicate
A happy people and well-governed state.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

WAITING.

WHEN shall these weary hands be folded
Above my breast,
Finding release from life's long labor
In perfect rest?

When shall these weary eyes (now aching,)
Weep nevermore,
Closed in a sleep that knows no waking
'Till time is o'er?

When shall this weary heart of sorrow
Its rest begin,
Waiting that morn, which hath no morrow,
And no more sin?

These weary feet, which now are hasting
Through storm and wave,
Shall rest at last; for life is wasting,
Rest in the grave.

Welcome that happy hour—I wo'd not linger
Along the way;
Faith points me—with unerring finger—
To realms of day.

I see the traces of CHRIST'S footsteps ever,
All will be well—
I see the pearly gates beyond the river,
Vain world, Farewell.

Brook's Grove, Dec., 1866.

POWER OF A GOOD MAN'S LIFE.

THE beauty of a holy man's life, says Chalmers, constitutes the most eloquent and effective persuasion to religion, which one human being can address to another. We have many ways of doing good to our fellow-creatures, but none so efficacious as leading a virtuous, upright and well-ordered life. There is an energy of moral suasion in a good man's life passing the highest efforts of the orator's genius. The seen but silent beauty of holiness speaks more eloquently of God and duty than the tongues of men and angels. Let parents remember this. The best inheritance a parent can bequeath to a child is a virtuous example, a legacy of hallowed remembrances and associations. The beauty of holiness beaming through the life of a loved relative or friend, is more effectual to strengthen such as do stand in virtue's ways, and raise up those that are bowed down, than precept, command, entreaty, or warning. Christianity itself, I believe, owes by far the greater part of its moral power, not to the precepts or parables of Christ, but to his own character. The beauty of that holiness which is enshrined in the four brief biographies of the man of Nazareth, has done more, and will do more to regulate the world, and bring in an everlasting righteousness, than all other agencies put together. It has done more to spread his religion in the world, than all that has ever been written on the evidences of Christianity.

"THAT'S ME."

A POOR Hottentot in South Africa lived with a good Dutchman who kept up family prayer daily. One day he read, "Two men went up into the temple to pray." The poor savage, whose heart was already awakened, looked earnestly at the reader, and whispered, "now I'll learn how to pray."

The Dutchman read on, "GOD, I thank thee I am not as other men."

"No, I am not, but I am worse," whispered the Hottentot.

Again the Dutchman read on, "I fast twice in the week; I give tithes of all I possess."

"I don't do that. I don't pray in that manner. What shall I do?" said the distressed savage.

The good man read on until he came to the publican, who "would not lift so much as his eyes to Heaven."

"That's me," cried his hearer.

"Stood afar off," read the other.

"That's where I am," said the Hottentot.

"But smote upon his breast, saying, GOD be merciful to me a sinner."

"That's me; that's my prayer," cried the poor creature, and smiting on his dark breast he prayed, "GOD be merciful to me a sinner," until, like the poor publican, he went down to his house a saved and happy man.

ENCOURAGING TESTIMONY.—Mr. George H. Stuart, President of the United States Christian Commission, writes:—The following is a Bible incident, taken from the report of one of our delegates: —"One man, about fifty-seven years of age, who had led a godless life up to within three or four months, said to me, '*I have learned to love the Bible* by reading it for myself, to see whether those things are as Christian people affirm.' He had gradually struggled towards the light, and is now resting on Christ. The Bible is his great delight, and he desires to tell his family and acquintances what GOD has done for his soul through its instrumentality."

FRENCH PRIESTS.— In France there are 78,584 priests, and 108,119 minor ecclesiastics, 86 archbishops, 3,518 cures and 189 vicars-general belonging to the Roman Catholic Church. Of this clerical army, only 65,000 are paid by Government, the remainder being supported by the Church. The sum thus supplied amounts annually to 218,092,690 francs. The religious communities are divided into three classes — educational, hospitable and contemplative. Of the latter there are 12,141 who remain in a perpetual state of prayer and meditation. There are 1,085 Jesuits, of whom 233 meditate and pray.

TRUTH.—There is nothing as pleasant as the hearing or speaking the truth. For this reason, there is no conversation so agreeable as that of the man of integrity, who hears without any intention to betray, and speaks without any intention to deceive.

Educational.

Written for Moore's Rural New-Yorker.

AGRICULTURAL COLLEGES IN GENERAL—MICHIGAN IN PARTICULAR.

EDS. RURAL NEW-YORKER:—In your issue of Dec. 15th, I find an article by "B.," commenting upon a former article of mine. He there expresses certain conclusions which I beg leave to be allowed to correct.

B. asserts that a general "plea of guilty" was entered by me. I presume B. was led to this conclusion by logical habits which he acquired when attending some of our ordinary literary colleges, and if so this fact alone would show the necessity for some institution in which men like B. might perhaps be ultimately taught to reason correctly—a faculty which he evidently does not at present possess, or he would not argue that Agricultural Colleges, as such, are failures merely because friends of such institutions have failed in their efforts to establish them. Our common schools are certainly not failures, and yet if it were not for legal enactments the friends of such schools might fail to be able to establish them;—a result which is actually to be seen in some parts of the country. Men of B.'s habits of thought would thence argue that *common schools* are a failure.

In stating that some of our Agricultural Colleges had seen fit to change their plans, I said that B. would probably construe this statement into an admission of failure. Nor was I mistaken. But who that is able to reason correctly would give the name of *failure* to mere change of plan? What B. calls failure, ordinary business men—men whose experience has led them to doubt their own absolute perfection—call *progress*. But who ever heard of progress on the part of those that never change?

B. objects to the appropriation of public money for the special education of farmers. Does he object to the appropriation of public money to our Common Schools? Why should Agricultural Colleges be excluded from such support, when nearly every college in the land has received government support?

B.'s logic is equaled only by his candor. In his first article he was quite willing, without investigation, to give currency to the charge of failure on the part of the Michigan College, and this too, in a periodical of the extensive circulation of the RURAL. Although pretty certain that these charges were unfounded, I preferred to examine into their truth, and now I am able to state unqualifiedly that every one of the charges made in the article of your correspondent B. is false. These statements were:—"The College located at Lansing, Michigan, has not met public expectation, and an effort is making to procure its removal to a more favorable locality. Under present arrangements it is pronounced to be pretty much a failure, being open only during the summer months and then with only a very limited attendance." With regard to public expectation, it is difficult to say what "public expectation" means. Let us, however, take the case of a somewhat similar institution, *a paper*. If your paper, during 1867, has a wider circulation than it had in 1866, it is pretty good evidence to you that you have "met public expectation." During 1865, the number of students in the Michigan College was not quite 100; during 1866 the number was 108, and now the number is so much greater than can be properly accommodated that the trustees propose to ask the Legislature for means to erect more buildings in the old location. Is this meeting public expectation? No effort is being made to remove the college from its present location, which is abundantly accessible, two railroad trains passing it, each way, every day. I observe that in your paper of the 8th, President ABBOTT has attended to the other charge.

I have no doubt that "B." will retract his good opinion of me as expressed in his last, but in that case I can only say that there is a couplet in HUDIBRAS exactly in point. I make no apology for thus intruding upon your space. The question of Agricultural and Technological Colleges is one which lies near the great heart of the American people, and we have faith that in due time the people will arise and show their strength. But unfortunately for the institutions that are most dear to them, they too often show so much apathy that ere these institutions can receive the aid which they require, their very existence is endangered. J. P.

Havana, Dec. 29, 1866.

NATURAL LAWS.

LOOKING at the demand for reform, at the inconsistency of the Reformers, at the condition of the press, at the quackery of government, or at any other portions of society, we cannot fail to be convinced that it is governed by laws of its own, which set at defiance all the schemes and contrivances of politicians. From such facts it is now to be deduced that public interest should study the former much more than the latter. They, however, led astray by the writers of history, who have chronicled the deeds of kings, and neglected to notice those of nature, in general study only what politicians have done. On this account they are now very imperfect and unsafe guides.

To realize the idea of a successful statesman—he who guides his conduct by a correct knowledge of what has been the progress of society, and adapts his measures to what it is likely to be—we must study much more closely than public writers and politicians now do, the natural laws which have determined the past and determine the present condition of society, including the mind, as its thoughts and exertions are determined by the wants of the body.

THE passions are at least bold, generous, though destroying lions; egotism is a quiet, deep-biting, ever-sucking, venomous insect.

GEORGE PEABODY.

AMONG the eminent business men of the present day, few, if any, occupy a higher or more available position than the man whose portrait heads this notice—GEORGE PEABODY, Esq., of London. He was born in Danvers, Mass., in 1795, and in early life evinced an inclination and aptitude for mercantile pursuits. About the year 1830 he became a member of a leading mercantile house in Baltimore which had London connections, and in 1836 took up his residence in the latter city, where he has resided ever since, acquiring, in the mean time, a world-wide reputation as a banker. This notoriety is based not alone on his great wealth, which is reported to be of collossal proportions, but on his purity of character and the multiplicity of his munificent bequests to charitable institutions, both here and in the country of his adoption. It was owing to his prompt pecuniary interposition that America was enabled to participate in the great London Exposition in 1851, thereby securing a reputation in Europe which would have been impossible but for such liberal and timely intervention.

It was owing to his sagacity, integrity and fact that a more generous feeling towards America and Americans was inspired in the breasts of the English people. At the time ABBOTT LAWRENCE was Minister at the Court of St. James, Mr. PEABODY conceived the project of a formal celebration of the Fourth of July in London. The concurrence of the Duke of WELLINGTON was first obtained, and, after this, the purpose was easily accomplished. The celebration took place and was participated in by leading dignitaries of England, inducing a marked change in the feeling of the two people towards each other—a change which promises to be salutary and lasting in its effects upon both.

As a man of business Mr. PEABODY has been eminently successful. On this point a well-informed correspondent of the National Intelligencer, alluding to the recent visit of that gentleman to the United States, says:—"The amount of Mr. PEABODY'S means is a matter of conjecture. In 1851 he was numbered among the millionaires of London, and during the next ten years his business largely increased. Assuming the value of his property at that time to have been £1,000,000, it ought in 1860 to have been £3,000,000. During the last three years he has endowed charities to the amount of £800,000, and he had previously given away about £150,000—in all close upon $5,000,000. It is safe to say that he cannot now be worth more than $10,000,000.

Free from the vices too common to men of affluence, unselfish, stern in rebuke of wrong, prompt in assistance to merit, never provoked into the use of profane language, and discountenancing it in others, reticent of censure, forgiving of injury, generous to the fallen, and hopeful of every promise of amendment, he has always gained the respect of the good and the love of his associates, beyond what his wealth, multiplied ten-fold, could have given him."

Various Topics.

HOW AND THEN.

How many thinking people of the present day have given or do give a thought to the postal expenses of this Government, now and when Dr. FRANKLIN was Postmaster-General of the then American Colonies? Over a century ago the sage, BENJAMIN FRANKLIN, the first Postmaster-General of the American Colonies, set out to make an official tour of inspection, in his old gig, of the principal post-routes, and when he held the same office under the authority of Congress, over ninety years since, a small folio, containing but three quires of paper, lasted as his account-book for two years. It would require Postmaster-General RANDALL now over six years of incessant railroad travel, at 130 miles daily, to pass over the established routes, while it would take a life-time to pass over them in an "old gig." Instead of a small folio of three quires, the post-office accounts now consume every two years over 6,000 ledgers of the largest size, employing over one hundred clerks in recording transactions with more than 35,000 contractors and other persons. This shows us but one branch of the enlargement of our Government departments in the last ninety years. In what ratio must the others have grown since the days that "tried men's souls?"

Rochester, Jan., 1867. SENEX.

READERS.—Coleridge thus aptly classifies the reading world:—1. Sponges, who absorb all they read and return it in the same state, only a little dirtier. 2d. Sand-glasses, who retain nothing and are content to get through a book for the sake of getting through the time. 3. Strainbag, who retain merely the dregs of what they read. 4. Moral diamonds, equally rare and profitable, who profit by what they read, and enable others to profit by it also.

INTEGRITY.—Perfect integrity and a properly cooked beef-steak are rare.

THE PIGEONS OF VENICE.

A CORRESPONDENT writes:—"An immense flock of pigeons at the Place St. Mark has been, from time immemorial, as is generally known, fed at the expense of the Republic. They still assemble, from all directions, at two in the afternoon, and, alighting on the square, take the food thrown to them. No one ever disturbs them, and they do not fear even the children. They know that they are sacred. Who feeds them I cannot say, but their pittance is always there at the usual time. At two o'clock on the day that Victor Emanuel entered Venice, one hundred thousand persons were packed close together on the Place St. Mark, and when the clock struck the pigeons appeared as usual. They flew backward and forward, but not a space was left vacant on the ground where they could set their feet, nothing but human heads could be seen. The lady tourists—French, German and English—who take a great interest in the pigeons, were much amused at this incident, but the poor pigeons remained without their dinner that day."

OF WHAT PRECIOUS STONES ARE MADE.

FIRST, as to the diamond—which, though the king and chief of all, may be dismissed in two words—pure carbon. The diamond is the ultimate effort, the idealization, the spiritual evolution of coal—the butterfly escapes from its antenatal tomb—the realization of the coal's highest being. Then the ruby, the flaming red Oriental ruby, side by side with the sapphire and the Oriental topaz—both rubies of different colors—what are they? Crystals of our commonest argillaceous earth, the earth which makes our potter's clay. In every 100 grains of beautiful blue sapphire, 92 are pure alumina, with one grain of iron to make that glorious blue light within. The ruby is colored with cromic acid. The amethyst is only silica, or flint. In 100 grains of amethyst 93 are pure flint, the same substance as that which made the flint in the old tinder-box, used before our phosphorus and sulphur-headed matches, and which, ground up and prepared, makes now the vehicle of artists' colors. Of this same silica are also cornelian, cat's eye, rock crystal, Egyptian jasper and opal. In 100 grains of opal 90 are pure silica, and 10 water. It is the water, then, which gives the gem that peculiar changeable and iridescent coloring which is so beautiful, and which renders the opal the moonlight queen of the kingly diamond. The garnet, the Brazilian—not the Oriental—topaz, the occidental emerald, which is the same species as the beryl, all these are compounds of silica and alumina. But the beryl and emerald are not composed exclusively of silica and alumina. They contain also another earth known as glucina—from *glukos*, sweet, because its salts are sweet to the taste. The hyacinth gem is composed of the earth, not long since discovered, called zirconia—first discovered in that species of hyacynth stone called zircon. The zircon is found in Scotland. To every 100 parts of hyacynth 70 are pure zirconia. A crysolite is a portion of pure silicate of magnesia. Without carbonate of copper there would be no malachite in Russia, or at the Burra Burra mines; without carbonate of lime there would be no Carrara marble. The turquoise is nothing but a phosphate of alumina colored blue by copper; and the lapis lazuli is only a bit of earth painted throughout with sulphuret of sodium.

GEOLOGICAL SPECULATION.

PROFESSOR AGASSIZ comes to the conclusion that the continent of North America was at one time covered with ice a mile in thickness. The proof is that the source of the Alleghany range of mountains is glacier-worn on the very top, except a few which are above the level of the icy mass. Mount Washington, for instance, is over six thousand feet high, and the rough, unpolished surface of its summits, just below the level at which glacier marks come to an end, tells us that it lifted its head alone above the desolate waste of ice and snow. In this region, then, the thickness of the sheet cannot have been much less than six thousand feet, and this is in keeping with the same kind of evidence in other parts of the country; for, wherever the mountains are below six thousand feet, the ice seems to have passed directly over them, while the few peaks rising still higher are left untouched.

The glacier, he argues, was God's great plow, and when the ice vanished from the face of the land, it left it prepared for the hand of the husbandman. The hard surface of the rocks was ground to power, the elements of the soil were mingled in fair proportions, granite was mingled with the more arid and unproductive regions, and a soil was prepared fit for the agricultural uses of man. There are evidences all over the polar region to show that at one period the heat of the tropics extended all over the globe. The ice period is supposed to be long subsequent to this, and before the advent of this earth.

Reading for the Young.

LOSING THE HAPPY OF A HEART.

A MOTHER who was leaving her home on a visit, told her little boy and girl not to go through a gate at the bottom of their garden, which opened into the wood. The children were very happy for a long time after their mother had gone, but at last, in their play, having reached the gate through which they were not to pass, the little boy began to feel an earnest desire to go into the wood. He persuaded his sister to follow him. Nothing appeared to disturb them, and after rambling and playing about, they returned, having concluded not to tell their mother where they had been, unless she asked them; she had not expected them to disobey, and never thought of inquiring. Notwithstanding this, the little boy did not feel comfortable. He knew he had done wrong, and he could not help feeling unhappy.

When Sunday night came, and the little boy had been washed for bed, he and his mother commenced to have a nice talk, as they usually had at that time. James could not keep his sad secret any longer from his kind mother, so he told her what he and his sister had done; and then in some sort to show that her command was needless, he said that nothing had happened to them. The mother let him know that something did befall them, and that they had lost something, and urged her little boy to think what it could be. Perhaps she meant they had lost the habit of obedience, and would be easily led to do wrong again; or perhaps she meant they had lost her confidence.

The little boy could not think for a long time of anything he had lost. He knew that he had left his ball safe, that his knife was in his pocket, and that his slate-pencil was at hand when he wished to use it. But as he continued to think, he remembered how uneasy and uncomfortable he had been all the week, and at last, in a low, sorrowful voice, he said, "Mother, I did lose something in the wood, I did; *I lost the happy out of my heart.*"

THE PATH OF LIFE.

WHY not strew the path of life with flowers? It requires no stronger efforts than to plant thorns and briars. Is it not strange that we bend all our efforts in cultivating those plants which afford no pleasure, but, on the contrary, abridge our happiness; while we suffer to spring up, spontaneously, the few stray flowers that occasionally throw a smile along our way? It need not be thus. The few happy men around us should teach us an important lesson. There is no reason in the world why we should not be as happy as they. If we would look on the path of life as a road, we must cultivate ourselves, and go diligently about it. Less frequently would we have cause to mourn over the bitter past, or the dark and cloudy present. If our years have run thus far to waste, let us with care influence the future, and with all care and attention cultivate those fruits and flowers that will yield a harvest of agreeable pleasure.

A PLEASANT IN-DOOR AMUSEMENT.

FROM a work entitled "The Play Room," containing descriptions and illustrations of numerous in-door sports for boys and girls, we copy the following interesting amusement for the young folks:

THE BALANCED TURK.

A decanter, or bottle, is first obtained, and in its cork is placed a needle; on this is balanced a ball of wood, having a cork or wooden figure cut out, standing on the top. From the ball project two wires, bent semi-circularly, having at their extremities two bullets. Push the bullets, and the whole will turn round on the needle, the figure standing upright all the while; and twist it about from side to side as much as you like, it will always regain its erect position. The two bullets, in this case, cause the center of gravity to fall below the ball on which the figure is placed, and, in consequence, as the center of gravity always assumes the lowest position, it cannot do so without making the figure stand erect, or, in other words, until the bullets themselves are equally balanced. Any boy may whittle one of these toys out with a jack-knife.

TRUE ROYALTY.

What makes a king? Not riches.
What makes a queen? Not power.
What man can give and take back,
May vanish in an hour.

But he or she is monarch
Who craves not after self;
And each one has a kingdom
Who rightly governs self.

IS IT WORTH MY PEACE?—If you are disquieted with anything, you should consider with yourself, "Is the thing of that worth, that for it I should so disturb myself and lose my peace and tranquility?"

MISCELLANEOUS ENIGMA.

I AM composed of 27 letters.
My 8, 10, 3 is a boy's nickname.
My 11, 19, 14, 1, 5, 20 is spoken of in the Bible.
My 23, 13, 7, 16, 24 is what soldiers fight for.
My 12, 8, 6 is not the beginning.
My 17, 4, 11, 15 is a musical instrument.
My 18, 22, 26, 20, 3 is a useful animal.
My 9, 16, 21 is a man's name.
My 21, 4, 25, 27 is a place containing many inhabitants.
My 25, 26, 16, 27 is a city in New York.
My 22, 1, 7, 16 is one of the United States.
My whole is a popular saying.

The Publisher to the Public.

Patience, Agent-Friends!—We had hoped to be able to enter names of new subscribers and send all premiums therefor without delay, but the unexpectedly large number of club remittances received during the past two weeks—a third greater than ever before at this season—has overwhelmed us, and we must ask the indulgence of agents who do not receive their premiums promptly. It is impossible to enter names, mail papers, and also compare lists (to ascertain as to new subscribers) and send premiums at once—so we send papers, and defer comparing and sending prizes for a few days. Are doing the best we can, and trust friends will excuse temporary and unavoidable delay—not forgetting to keep on recruiting!

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly. Any one using deception will forfeit premium,—but of course no honorable man or woman (and all our recruiting friends are supposed to be such) will attempt any dodge or deception in the matter.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 12, 1867.

NEWS OF THE WEEK.

State Affairs at Albany.

GOVERNOR FENTON entered upon his second term of office on New Year's Day. The Governor and the Lieut.-Governor elect, STEWART L. WOODFORD, were escorted from the Executive Mansion to the Capitol at half past ten o'clock. The oath of office was administered to them in the Executive Chamber by Gen. BARLOW, the Secretary of State, in presence of the State Officers, Judges of the Court of Appeals, Members of the Legislature and other dignitaries, both civil and military.

The Legislators assembled in their respective Chambers immediately after the Inauguration ceremonies were completed. The Lieut.-Governor, on taking the Chair in the Senate as presiding officer, made a few well-chosen remarks, ending with, "I bid you, Senators, a 'Happy New Year' welcome." A Committee was appointed to inform the Assembly and Governor of the Senate's readiness to proceed to business. Gov. Fenton sent his compliments to the Senate and Assembly (the latter body also having sent a Committee to him) and informed them that he would communicate with them on the following day. The Senate adjourned till the next day at 11 A. M.

The Assembly organized by the election of Edmund L. Pitts (Rep.) of Orleans county, as Speaker, by a vote of 80 to 43 for Jarvis Lord (Dem.) of Monroe. Luther Caldwell of Chemung, was elected Clerk; John H. Kemper of Wayne, Sergeant-at-Arms; P. B. Davis of Onondaga, Door-keeper, Charles J. Gardiner of Jefferson, and James Tanner of Schoharie, First and Second Assistant Door-keepers. The usual Committees were appointed to wait upon the Senate and Governor and inform them of their organization. After some further preliminaries, and the exchange of notes with the Senate and reception of the Governor's compliments, the Assembly adjourned till eleven o'clock the next day.

Upon the re-assembling of the two Houses the 2d inst., Mr. Hastings, Private Secretary to Gov. Fenton, presented them with "the Message."

The Governor regards the expression of the people at the late election as a vindication of the policy of Congress, and recommends the immediate adoption of the U. S. Constitutional Amendment. The Legislature is called upon to speedily provide for the election of delegates to the Convention which was authorized to be held this year by the people at the last General Election. The indebtedness of the State is nearly $100,000,000. The U. S. Government may properly remit to the State a portion of the National tax to be applied to the liquidation of the military debt. A Council of Pardons is recommended, and also an appropriation to build a new Capitol. The penal and charitable institutions of the State, the canals and other internal improvements, the military, the educational department and other great subjects connected with the State polity, are dwelt upon at great length—showing the wealth, the power, the enterprize, the stability, the prosperity of the people. Well may the State of New York—now far more powerful than the "Old Thirteen" were when peace was proclaimed in 1783—be honored with the title of "Empire," and her worthy sons look upon the State Motto, "Excelsior,"—more elevated,—with increased feelings of pride and admiration.

Gov. Fenton last week made the following Staff appointments:—Adjutant-General—Selden E. Marvin. Inspector-General—Geo. S. Batcheller. Engineer-in-Chief—Charles W. Darling. Judge-Advocate-General—Campbell H. Young. Surgeon-General—James E. Pomfret. Quartermaster-General—Edwin A. Merritt. Paymaster-General—Dudley Olcott. Chief of Bureau of Military Statistics—A. J. H. Duganne. Aids-de-Camp—Elliott F. Shepard, Bradley Martin, J. H. Liebenau, Ephraim A. Ludwick. Military Secretary—Daniel W. Merchant.

The Annual Report of the Superintendent of the Banking Department of this State shows that the circulation of notes of State Banks is $10,002,491; in 1865, $27,009,449. No. of State Banks the 1st of last September, 85; in 1865, same date, 114. The decrease of notes and the number of State Banks is owing to the abundance of National currency and the formation of National Banks out of the State moneyed institutions.

It is announced that the next Annual Meeting of the "Military Association of the State of New York," will be held in Albany on the 15th and 16th inst. Gen. Batcheller will deliver the Annual Address on the evening of the 16th, in the Assembly Chamber. All commissioned officers of the National Guard are invited to attend the meeting of the Association.

The Senate on the 3d inst., ratified the U. S. Constitutional Amendment—ayes 23, nays 3. A bill passed the Senate on the 4th, repealing the act of last session which prohibits the granting of "free passes" on railroads.

The "Metropolitan Excise Law" (for New York city) has been declared Constitutional by the Court of Appeals.

From the South and South-west.

ON the 2d inst., snow fell at Galveston, Texas, the first time in seven years.

The New Orleans Riot Committee have closed their labors after taking 2,000 pages of testimony.

A snow storm occurred in New Orleans the 2d inst., during which the ground was covered with the slaying material to the depth of four inches.

A Convention of Loyal Unionists was recently held in Arkansas. They favored the Constitutional Amendment and the thorough reorganization of the State.

Gen. Price has got back to New Orleans from Mexico. The Emigration Scheme was a failure. The distinguished Confederates who went to Mexico because they wouldn't live "under Northern rule," have found out, to their sorrow, many of them, that "there is no place like home."

Advices from the interior of Louisiana show that the freedmen and their former masters are gradually coming together again; the latter are preferred by the former to strangers.

Several hundred freedmen have left Georgia recently, and others are about leaving, to work the cotton lands of Texas for one-fourth of the crop. The U. S. Government offers to send free of charge to Texas, such freedmen as are now receiving rations, and who are disposed to make themselves useful in the "Lone Star State."

The 11th and 20th regiments of United States infantry at Richmond, Va., have been ordered to the "plains" to fight the Indians.

The message of Gov. Saulsbury of Delaware, to the Legislature, strongly opposes the ratification of the Constitutional Amendment. The Governor appears to think that the selling of negroes into slavery as a punishment for crime is a "fine thing" when authorized by law. Negro emigration into Delaware he wants prohibited; the law against negroes possessing arms will be enforced; believes the Civil Rights Bill is not free from Constitutional objections.

Orders have been received at Louisville, Ky., to commence recruiting infantry for service in the Department of the Gulf.

From Mexico.

THE steamer Florida, which left Vera Cruz on the 18th ult., arrived at Havana on the 24th with about nine hundred and fifty-five French troops on board, on their way to France. She brought a rumor that a French war vessel had arrived at Vera Cruz from New Orleans with cable news dispatches from Napoleon, to the effect that all the transports would arrive in January, and the troops should all be embarked within three weeks. The Emperor remains at Puebla, and will most likely stay there until the French leave, when he will make other and new endeavors to perpetuate his empire.

Although there are many rumors concerning the difficulty of the Emperor with Bazaine, it is even said that Bazaine will join Juarez to prevent Maximilian from succeeding in any of his plans. The Liberals are ready to take possession of the city the moment that Bazaine leaves. A quantity of muskets were secretly sold to the Liberal agents, having been condemned as useless by the French. Marquez and Miramon are using their endeavors to raise the necessary funds for their expenses. La Patria says that Carbonjal, with some 300 men, endeavored to seize Pexecco on the 12th, but retreated on the arrival of a French force after committing the usual amount of robbery.

In a recent address to the people of Mexico by the Ministers of State, they say that the sources of revenue having been deranged, everything possible will be done to place them once more in regular operation. The Emperor asks that vigorous arrangements be made for the restoration and maintenance of peace. Much he says will depend upon the people protecting themselves and institutions against the numerous bands of malcontents and murderers. What they had most to fear was a fresh rising of these outlaws when the French troops were withdrawn. The Emperor expresses his regrets at the attitude which the United States has chosen to exhibit toward him.

The N. Y. Herald's New Orleans correspondent of the 3d inst., says a U. S. gunboat had sailed from that port to Vera Cruz and Tampico for the purpose of watching events between the two points.

Mejia was said to be lying dangerously ill in San Luis Potosi, and two columns of Liberals were marching upon that town. The Liberals had advanced a strong line to within eight miles of Mexico city.

Bazaine has been putting money in his purse by selling old muskets, arms and munition to the highest bidder, whether Imperial or Liberal. The French Minister, M. Dano, becoming alarmed at this, telegraphed to Napoleon for instructions.

A dispatch from Galveston of the 5th inst., says the Rio Grande Courier of the 23d of December is received. Escobado had not been captured or hung as reported, but was well on his way to Monterey on the 21st. The Liberals were then evacuating San Luis Potosi and approaching Monterey. Cortinas had joined fortunes with Canales and proclaimed against Juarez, but in favor of no one in particular. They were going to Tampico.

Canadian Matters.

AN Ottawa correspondent says two or more of the Canadian Ministers will remain in England until the Confederation Act is carried through Parliament, and that Hon. John A. McDonald will be offered a Baronetcy.

QUEBEC, Jan. 4.—One hundred pounds sterling has been received from the Emperor Napoleon for the French Canadian sufferers by the great fire.

During the season of 1866 fish and oil to the value of $357,537 have entered the port of Quebec. The number of vessels employed in the trade is 253; total tonnage, 15,362.

About one hundred laborers waited upon the Mayor yesterday to solicit employment. The Mayor replied that though there was corporation work to do there was no money to pay them for it, and he therefore could not help them.

MONTREAL, Jan. 4.—Major-Generals Russell and Sistead have arrived, the former to take command of the District of Lower Canada; the latter of Upper Canada.

It has transpired that by directions from England the death sentence of the Fenians has been commuted to twenty years' imprisonment. The prisoners now in Sweetsburg will arrive here tomorrow en route for the Kingston Penitentiary.

TORONTO, Jan. 5.—Thirty-five overcoats for the Fenians, which have arrived here addressed to the House of Providence, are detained at the Custom House for duty.

MONTREAL, Jan. 5.—An English correspondent says that the Fenian and Reform questions will take the precedence of Confederation in the Imperial Parliament, and consequently Confederation cannot be proclaimed in Canada until May.

The total tolls received in 1866 on the St. Lawrence Canal are $67,300; an increase of $4,000 over the previous year. The number of steam vessels which passed through the canal in 1866 was 2,700; number of sail vessels 8,000.

Lumbering operations on the Ottawa River are very brisk this season.

FROM WASHINGTON.—Congress re-assembled the 3d inst. The Senate has passed the bill to repeal that section of the Confiscation Act which empowers the President to issue a proclamation of general amnesty. It had already passed the House. A Washington telegram the 7th inst., says the President has prepared his veto of the District of Columbia Suffrage Bill; it would be sent to Congress the 8th. The new Tariff Bill prepared under the supervision of the Secretary of the Treasury, has been presented to the House and referred. It makes a deduction in taxes which, it is thought, will amount, the present year, to $35,000,000. Mr. Ashley of Ohio, on the 7th, introduced a resolution in the House charging the President "with high crimes and misdemeanors," preferring the articles, and directing the Judiciary Committee to inquire into the matter with power to send for persons and papers. A motion to lay the resolution on the table was negatived—ayes 39, nays 105. It was then referred. It is reported that the Committee of Ways and Means will not recommend any reduction of the tax on cotton. The "gold bill" will be acted on in about a week. It authorizes the sale of gold in the U. S. Treasury.

THE INDIANS.—The late attack on our troops near Fort Phil. Kearney, was made just before daylight, the camp being surprised.

A dispatch from Leavenworth, Jan. 4, says the Sioux and Cheyennes have combined to make war against the whites, and are in camp between the Republican and Platte Rivers.

The Apache Indians in the northern part of Arizona are committing depredations, and the 14th U. S. Infantry has been ordered to proceed to the "seat of war."

The Indians in the Owyhoe and Boise country, (Idaho,) continue their depredations upon stock, and several fights have occurred between them and the settlers.

A SECRET MISSION.—Mr. F. W. Seward, the U. S. Assistant Secretary of State, accompanied by Vice-Admiral Porter, sailed from Annapolis a few days since in a Government steamer, the destination of which is said to be the Island of Hayti. The object is supposed to be the establishment of a U. S. Naval Station on the Bay of Samana in the eastern part of the island, the Peninsula being peculiarly well adapted for the purpose.

THE Congressional party, during their Southern tour, in all their speeches, urged the acceptance of the Constitutional Amendment; and now express the opinion that a great and favorable change is in progress at the South.

QUEEN EMMA in her recent visit to England and the United States, obtained $50,000 for the erection at the Sandwich Islands, an Episcopal Church of large dimensions. Work upon the building has already commenced.

THE late storm in California was the most terrific ever known in that State. Large houses were picked up by the wind, carried some distance, and thrown a mass of ruins on the ground.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Jan. 8, 1867.

MONEY affairs continue without essential change in this locality and at the East. At St. Louis, Cincinnati and Chicago, the market has been stringent since about the first of the month, and bankers have found considerable difficulty in supplying their customers with currency. The greatest call for funds is from the Pork trade.

Mr. Wells, the Special Commissioner of the Revenue, has submitted his report in reference to the modifications required in the Tariff and the Internal Revenue laws. It is a document exhibiting much care and research, and is prepared with ability. It will form the ground-work of the discussion on the important matters considered, that must soon come up in Congress. The report contends that the law, as it now exists, invites deception and fraud in many cases. The tax on spirits is instanced, and it is stated that where three gallons pay a duty, five evade payment; so of tobacco. In one locality the loss on tobacco is estimated at $20,000 daily. The report opposes the repeal of the tax on raw cotton. It is to be regretted that Mr. Wells did not give more attention to the evils of the income tax. He recommends the repeal of the tax on carriages, watches and plate as inquisitorial, and says the amount received from these sources affords no compensation to the annoyance of the people. With much greater propriety, and for the same reasons, might he denounce the income tax, especially as now administered. It is the most annoying, unjust and unsatisfactory of any branch of taxation, and nothing but the peculiar condition and supposed necessities of the Government have made the people patiently submit to it thus long. The people now so generally complain that the press everywhere is beginning to denounce the law and to demand its repeal. The New York Times justly says that to the inquisitorial character of one or two other species of taxation this "adds a vexation and an injustice peculiarly its own." We have not space today to allude to the other suggestions in this important report.

Secretary McCulloch has just submitted his monthly statement of the public indebtedness. In December $6,000,000 of the National debt was paid. The total average reduction in the last sixteen months is $13,400,000. The legal tender circulation has been reduced about seven and a half millions in the month. The coin balance in the Treasury January 1st was $97,841,967. The statement throughout must be satisfactory to the people, and show our neighbors across the water that we know how to manage a public debt. Our financial credit in Europe is good, as shown by the call for, and enhanced prices of, our National securities. The last week 5-20s have advanced both at London and Frankfort.

An abstract of the report of the Commissioner of Agriculture for December has been published. The Report contains more than the usual amount of valuable information on the industrial and agricultural interests of the country. We note with satisfaction the report in regard to Sorghum. In the West and Southwest it is becoming almost a universal crop. For some cause Illinois, Iowa and Missouri have produced less this year than last season. In no State is the soil better adapted to this crop than in those named as raising less than last year.

WHEAT.—There was little change in wheat last week, though the market was firmer both East and West. At Chicago and Milwaukee there is more disposition to buy for delivery ahead. The English market is tending upward. The telegraph at the close of last week quoted wheat at Liverpool 4d. higher. Corn was selling at 41s. 6d., equal to $0.96, in our currency, per quarter of eight bushels, which would make the Liverpool price of corn about $1.24 per bushel.

The Chicago Board of Trade has just resolved to adopt the Cental system, in their grain dealing, after the first of March. So many of the grain marts have now resolved upon the same thing that the change will doubtless be universal after March next.

HOGS.—Our local market was well supplied last week. Shippers were not anxious to purchase largely at the ruling rates. The price paid yesterday was $7.50@8. Buyers for home consumption paid something above these figures. The Cincinnati Gazette of Friday says:

The provision market was rather heavy to-day. Some sales of mess pork were made early in the day at yesterday's prices, but at the close it would be difficult to repeat them. The market for hogs was dull and drooping all day, the receipts being over 9,000 head, and the prospect of fully as large arrivals to-morrow depressed the market, and prices declined to $6@6.50 gross and $7.25@$7.60 net; the latter rate is extreme, and obtainable only for hogs of 300 lbs. average and over.

WOOL.—Messrs. Bailey, Jenkins & Garrison of Boston, in their last Circular, say:—"The New Year opens on a quiet market. The uncertainty which has so long depressed Wool is not yet removed, but it is safe to say that a feeling of confidence is gaining ground. The stock in market is not large, for this season, and receipts of Fleece are very small. Fine Wools are wanted chiefly, and coarse lots drag. Pulled Wools accumulate steadily."

HOPS.—The market is dull. New prime are quoted in New York at 50@55c. The foreign market is dull.

The market for other articles is unchanged and exhibits little activity.

Rochester Wholesale Prices Current.

THE TILDEN TOMATO!
GET THE GENUINE!
TRUE SEED WILL GIVE SATISFACTION!

Seldom, if ever has a new Fruit or Vegetable seeking public favor, met with so flattering a reception as has this Tomato. Hundreds in attesting to its value, declare it to be the only and truly *Perfected Tomato*. There seems to be no room for or want of an improvement; it possessing every quality which goes to make up a good Tomato. It is very prolific, early, fruit large, smooth, free from ribs or wrinkles, of excellent flavor, very solid, few seeded, and admits of being pared without waste as readily as an apple. Its keeping and carrying qualities are all any one can ask for. I take the utmost pains in securing seed, using none but the best specimens. No other varieties are grown on or within one mile of my place. Single packets, containing seed enough for 200 plants, sent post-paid, on receipt of 25 cts; 3 packets, 50c; 12 do, $2; 100 do, $12,50. Address
886-2otf HENRY TILDEN, Davenport, Iowa.

TERMS: Two Dollars a year; Single or Specimen Number, 20 cents.

Every Saturday

"Is made up of the freshest and best writings of the leading writers of Europe. Its pages contain the best contributions to periodical literature furnished by the leading minds of the age. It is a marvel of variety, excellence, and cheapness."—*Cleveland Herald.*

This is the general opinion of the Press. TERMS: Single Number, 10 cents; $5.00 a year.

TICKNOR & FIELDS, Publishers, Boston.

The "January Thaw" often leaves many unpleasant mementoes in the shape of sudden Colds and Coughs. They are, however, easily controlled by COE'S COUGH BALSAM. It is agreeable to the taste, effectual, and no family with children subject to Croup can afford to be without it, as it is infallible for Croup if taken in season.

THE HAIR, SCALP AND FACE.

DR. B. C. PERRY,

DERMATOLOGIST, author of the above valuable Book, published and for sale by JAMES MILLER, 522 Broadway, can be consulted at No. 49 Bond street, New York, for all cutaneous diseases of the head or scalp. Loss of hair and premature grayness; *moles, wens and warts* permanently cured; moth patches, freckles, pimples, comedones (called black worms,) and all brown discolorations removed from the face.

To remove moth patches, freckles, or any brown discoloration from the skin, ask your druggist for Perry's Moth and Freckle Lotion, or send to Dr. Perry.

No charge for consultations—personally or by letter.

Itch. Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 855-52t

FOREIGN NEWS—BY TELEGRAPH.

PARIS, Jan. 5.—Dispatches received this morning announce the occurrence of a terrible earthquake in Algeria. Many villages were destroyed and a large number of lives lost.

BERLIN, Jan. 4.—The Duke of Augustenburg has given in his allegiance to the King of Prussia, and relieved the people of Holland from their oaths of allegiance.

LONDON, Jan. 4.—The Ministers will introduce no Reform Bill at the coming session of Parliament, but will order Parliament to be dissolved in preference to doing so, and appeal to the people to support their action. They will not resign.

PARIS, Jan. 6.—It is denied that France and England asks for a Conference on the Eastern Question. It is asserted that France has arrived at an agreement with Turkey such as the peace of Europe imperatively demands.

LONDON, Jan. 5.—The heaviest snow storm which has been experienced in England for very many years has just visited us. The poor are suffering severely.

BERLIN, Jan. 6.—Several of the Northern German Governments have formally concluded that the Parliament shall meet on the 15th of February next. The Prussian Government is taking active steps to hasten the election of delegates to Parliament prior to the first of February. The Cretan question in the East is assuming threatening proportions, and its final settlement is looked upon as involving serious complications.

LONDON, Jan. 6.—A telegram from the East reports that the Turkish forces have been successful in another severe battle with the Candians. The London Times says the relations of England with the powers of Europe were rarely if ever better. The only difficulty is with the United States; it is most desirable that the greatest friendship should prevail. The Government is urged to speedily adjust all differences. Great honors are being paid to the American yachtmen.

MADRID, Jan. 3.—The Spanish Government has decided to send four iron-clads to the Pacific. The Duke Serrano has been arrested by the order of Queen Isabella.

LISBON, Jan. 4.—The King opened the session of the Cortes yesterday.

WANTED—A GOOD AGENT—Male or Female—in every town in the country to sell "THE CHILDREN'S ALBUM OF PICTURES & STORIES,"

BY REV. ASA BULLARD.

The book is now ready for agents. It contains more than One Hundred Pictures, and is the best book in many respects published for children. Address W. J. HOLLAND & CO., Rochester, N. Y.; Springfield, Mass.; Philadelphia, Pa.; Chicago, Ill.; Columbus, Ohio. 856

BOOTH'S COMBINED SHAKER!

The Best Machine in the World for Separating Oats and Wild Seeds from Wheat.

Agents wanted throughout the United States, to sell machine and territory. Machines furnished on application to [1836-13t] W. C. QUIMBY, Rochester, N. Y.

BRINKERHOFF'S CORN-SHELLER, SEPARATOR and CLEANER.

The following is the report of the judges on this machine, at the great trial of Agricultural Implements, held at Auburn, N. Y., in July, 1866, under the auspices of the New York State Agricultural Society:

Among the machines on exhibition was a Hand Corn-Sheller, Separator and Cleaner, exhibited by J. Brinkerhoff, Auburn, N. Y. We have carefully examined and thoroughly tested this machine, and have no hesitation in pronouncing it the *best Corn-Sheller we ever saw.* It readily adapts itself to ears of any size or shape, shells clean, and with great rapidity and ease, and at the same operation separates the corn from the cob, and the chaff from the corn, and delivers the corn, ready for market; and it requires but the labor of one person to operate it. The whole affair is simple in construction, and durable.

United States Agency for the Paris Universal Exposition, No. 40 Park Row, (Room No. 9,) Times Building, N. Y.

NEW YORK, Dec. 8, 1866.

Mr. J. BRINKERHOFF,—Dear Sir:—My Advisory Committee, appointed to select Implements for exhibition at the Universal Exposition in Paris, in 1867, have selected and recommended to me, your Corn-Sheller, as the best in America. I have accepted their report and will forward your Sheller, if delivered here, ready for shipment, on or before January 1, 1867. Yours truly,

J. C. DERBY, U. S. Agent, &c.

Sample Shellers shipped on receipt of the price, $20, and warranted to give satisfaction, or the money will be refunded. A portion of the territory will be sold. The balance supplied with Shellers by the Patentee, for which Agents are wanted in every town, to whom liberal terms will be given. Dealers supplied at the usual discount. For further information address

JACOB BRINKERHOFF, Box 576, Auburn, N. Y.

WANTED—AGENTS—In Every County for a new and important work, from a new stand point. Sold only by subscription.

THE RESULTS OF TWENTY YEARS' PRACTICE.

The American Farmers' Horse Book,

BY ROBERT STEWART, M. D., V. S.

Complete in One Large Octavo Volume, Finely Illustrated.

Meeting a want long felt in this country by all classes of persons interested in the care and management of the horse or mule. It embodies the results of twenty years of highly successful practice under circumstances the most favorable for the development of the most rational, economical and effectual modes of treatment for all curable diseases to which the horse is subject, including some diseases pronounced by others incurable. It also contains a most timely and sensible treatise on Stock Raising and Stock Management, including Breeding, Food, Stable Management, Gentling, Breaking, the Marks of Age, Abuses, Shoeing, &c., &c. Written in plain, simple language, and wrought out with the skill of a master, from an actual and successful practice of twenty years, it will more fully meet the wants of the people than any other book extant. This is not a reprint or rehash from European works, but *purely American,* as its title indicates, which, with the great celebrity of its author commends it to the confidence and patronage of every owner of an American horse, however many old, cheap and unsatisfactory works he may possess. Agents are meeting with splendid success. One reports 24 subscribers the first day; another 9 the first half day; another 35 out of the first 100 solicited; another 7 per day for first week; another 10 out of the first 11 solicited. Send for our fine illustrated circular, giving full particulars. Exclusive territory given, and the most liberal terms offered. For territory in New York State west of Fulton and Delaware Co.'s, or the northern tier of counties in Pennsylvania, address R. H. CURRAN, Main and Water Sts., Rochester, N. Y. For territory in other parts of the United States, address either of the undersigned, as may be most convenient:—C. F. VENT & Co., Cincinnati, O.; E. P. STARR, 46 Courtlandt St., N. Y.; J. S. GOODMAN & Co., Chicago, Ill.; ZEIGLER, MCCURDY & Co., St. Louis.

STARTING

OF THE

Great American Tea Co.

The proprietors became fully convinced, several years ago, the consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized the GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea trade, we will start with the American houses, leaving out of the account entirely the profits of the Chinese factors.

1st. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their houses in China.

2d. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

3d. The Importer makes a profit of 30 to 50 per cent. in many cases.

4th. On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 3,000 packages, at an average profit of about 10 per cent.

5th. The Speculator sells it to the Wholesale Tea Dealer in lines at a profit of 10 to 15 per cent.

6th. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

7th. The Wholesale Grocer sells it to the Retail Dealer at a profit of 15 to 25 per cent.

8th. The Retailer sells it to the Consumer for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

The Company continue to sell at the following prices:

OOLONG (Black,) 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₩ lb.

COFFEE DEPARTMENT.

Our Coffee Department is very extensive—the largest perhaps in the country. We run three engines constantly, and sometimes four or five, in roasting and grinding our Coffee. Our Coffee buyers are experts, who examine most of the Coffees Imported, and select the best and finest flavors for our trade. We employ the most experienced and skillful roasters, who exercise the greatest care that it shall be cooked in a perfect manner. It is always fresh, for our orders crowd our facilities to their utmost capacity.

A considerable portion of the Coffee put upon the market of late years is picked while the pods are green, and subjected to artificial heat to open the pods. This is not so good as that which matures and ripens in the natural way, upon the plant. Our Coffee buyer thoroughly understands this business, and can readily distinguish the naturally ripened from the artificially cured; and he only buys the fully matured and naturally cured Coffee. This is what gives our Coffee a superior flavor to many others, and the same flavor it used to have in days gone by. It is a common saying that most Coffee does not taste as well as it formerly did. The reason for it is, that a considerable portion of it is picked before it is fully ripe. We sell none but the fully ripe, richly-flavored Coffee.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warranted to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY.

Nos. 31 and 33 VESEY-ST., corner Church-st.
No. 610 BROADWAY, corner Bleecker-st.
No. 503 EIGHTH-AVE., near Thirty-seventh-st.
No. 299 SPRING-ST., bet. Hudson and Greenwich-sts.
No. 205 FULTON-ST., BROOKLYN, cor. Concord-st.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Our friends are getting up Clubs in most towns throughout the country, and for which we feel very grateful. Some of our Clubs send orders weekly, some not so often; while others keep a standing order to be supplied with a given quantity each week, or at stated periods. And in all cases (where a sufficient time has elapsed, Clubs have repeated their orders.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

We return thanks to parties who have taken an interest in getting up Clubs; and when any of them come to New York we shall be pleased to have them call upon us and make themselves known.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY.

Nos. 31 and 33 VESEY-ST., corner of CHURCH.

EVIDENCE AFTER A YEAR'S TRIAL.

TREASURY DEPARTMENT,
FOURTH AUDITOR'S OFFICE, Dec. 1, 1866.
GREAT AMERICAN TEA CO., Nos. 31 & 33 VESEY-ST., N. Y.:

Inclosed herewith I send you our regular list for December. It is now twelve months since we began the use of your Teas and Coffees, and I am pleased in being able to say that the satisfaction derived from the use of said articles by the members of this Club, instead of being confined to individual instances, is universal, and I think I may safely say without exception. Thanking you for the many favors received at your hands, I am, sirs, very respectfully, your obedient servant,

L. CASS CARPENTER.

WILLIAM PENN WORKS, NEAR SHENANDOAH CITY,
Schuylkill Co., Pa., Dec. 3, 1866.
GENTS: We received our orders of Tea and Coffee all right; and each package put up so nice as to give us but little trouble. They have given great satisfaction, both as regards weight and quality; and so cheap that we have saved 56¼ cents per lb., beside getting a better quality; and we are all satisfied that they are as good—both Tea and Coffee—as your advertisement represented them to be.

I remain, yours, THOMAS ROGERS.

XENIA, DALLAS Co., IOWA, Nov. 8, 1866.
GREAT AMERICAN TEA COMPANY;

SIRS: The order that I sent to your house the fore part of the Summer gave universal satisfaction, and all of the Club have been trying for some time to get me to make up another. The complimentary package which I received was the best Tea I have drank in Iowa. Please fill the following order, and express to me at Boonsborough, Iowa. ZERAH E. COTTRELL.

INDIANAPOLIS, IND., Dec. 7, 1866.
GREAT AMERICAN TEA COMPANY;
Nos. 31 and 33 Vesey-st., New York.

GENTS: Yours of the 1st inst. is before me, and I would state that the Tea has been received, and gave entire satisfaction. The money has been forwarded per Adams' Express. You may expect another order.

Respectfully, &c., WILLIS G. OVERSTREET.

BERNARDSTON, Franklin Co., Mass., Dec. 3, 1866.

TO THE GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey-st., New York—GENTLEMEN: The Tea that I ordered from you gives general satisfaction, and I this day mail you another Club order, No. 3, for Tea and Coffee, amounting to $33,10, which you will please fill and send to my address by express. Please accept my thanks for the complimentary package. Respectfully yours,

E. D. RICHARDSON.

LOWELL, Nov. 20, 1866.
GREAT AMERICAN TEA COMPANY; *Gents:* I herewith send second order of Merliman Club for Tea and Coffee. In regard to the first order, would say your promptness in answering it and quality of goods sent gave entire satisfaction, as you will see by an increase of $24 in this order, C. O. D. Respectfully yours, S. D. GORDON,
No. 159 Colburn-st., Lowell, Mass.
Great American Tea Company, Nos. 31 and 33 Vesey-st, New York.

ST. PETER, Minn., Nov. 26, 1866.
GREAT AMERICAN TEA COMPANY: It has been but one month since I commenced getting up a Club for Tea, and this is my third order, and amounts to nearly $300. All are well satisfied, and say that the Tea is as good as we get here at $2,50. I will send your circulars to all the different towns in my reach, and try and get the whole trade turned in the Tea line so that the consumers can save these great profits. Yours truly,

W. O. POWELL.

NEW-LONDON, Nov. 15, 1866.
GREAT AMERICAN TEA COMPANY;

SIRS: I herewith send you another Club. We are well suited with that which we received before, and much obliged for the complimentary package. We find that it is 50 per cent cheaper than we can get it here, and at least 50 per cent better. Please send me two or three blanks for Clubs and circulars to go with them, as I know of some in adjoining towns who would like to get up Clubs. Yours truly, L. M. DAY.

FRANCONIA, N. H., Nov. 10, 1866.
THE GREAT AMERICAN TEA COMPANY;

GENTLEMEN: My last order for Tea of 50 pounds came to hand in due time all right, and has given entire satisfaction, and, if you continue to send us as good Tea as you have sent, you are sure of a permanent trade in this place. The Imperial was the best of anything we have had in this place. Several of the Club have told me it was better than the Tea they had paid $2 a pound. I send you another order for $68,65. Please forward as before by Express to Franconia, N. H., Grafton county. I thank you for the complimentary package. Address

PRIEST YOUNG, Franconia, N. H.

OHIO AND MISSISSIPPI RAILROAD LINE,
AURORA STATION, Nov. 20, 1866.
GREAT AMERICAN TEA COMPANY;

GENTS: Here is your sixth Club from these "diggins'," making an aggregate amount of nearly $300. Some of the country storekeepers here say that your Tea is of no account, but the *people* who use it think otherwise, as is demonstrated by the increasing demand for it. We send enclosed an order for $191,65, and next month we expect to beat that. Yours, &c., E. K. LONG.

BALTIMORE, MD.

WHAT IS A YEAR?

What is a Year? 'Tis but a wave
On Life's dark rolling stream,
Which is so quickly gone that we
Account it but a dream;
'Tis but a single earnest throb
Of Time's old iron heart,
As tireless now and strong as when
It first with life did start.

What is a year? 'Tis but a turn
Of Time's old brazen wheel,
Or but a page upon the book
Which death must shortly seal;
'Tis but a step upon the road
Which we must travel oe'r;
A few more steps, and we shall walk
Life's weary road no more.

What is a year? 'Tis but a breath
From Time's old nostrils blown;
As rushing onward oe'r the earth,
We hear his weary moan:
'Tis like a bubble on the wave
Or dew upon the lawn,
As transient as the mist of morn
Beneath a summer's sun.

What is a Year? 'Tis but a type
Of Life's oft-changing scene:
Youth's happy morn comes gaily on
With hills and valleys green:
Next Summer's prime succeeds the Spring,
With flowers everywhere;
Then comes old Winter—death and all
Must find their level there!

The Story Teller.

Written Expressly for Moore's Rural New-Yorker.

UNSATISFIED;
OR, MISMATED FOR LIFE.

BY CLIO STANLEY.

[Concluded from page 12, last number.]

CHAPTER III.

A few mornings after, at the table, PHILIP announced the fact that a sleigh-ride was the subject of discussion among some of their friends, and handed ANNIE a note of invitation from Mr. BANKS, which she read and then tossed on the table, looking anything but pleased.

"What's the matter, sis? Don't the prospect of the first sleigh-ride of the season tempt you? Such a grand one as it will be, too!"—but seeing he was to meet with no reply he turned to HELEN, saying, "You will go with me, won't you?"

"No, indeed," said she, giving him an arch glance; MAY BELDEN is in my way, and I do not feel badly about it, either."

PHILIP laughed.

Mr. WARNER said, "Yes, PHIL, you must carry your rejected invitation there, and if HELEN doesn't get another before night, I will take her myself."

Mrs. WARNER hastened them, and they soon left the table and adjourned to the sitting-room, where ANNIE fidgeted around until her father told her she might take a premium for perpetual motion; and then as he left the room with their mother who was going out, she broke out with "I wonder who will invite you, NELL; don't you hope it will be HERBERT BELDEN?"

"My hopes don't jingle about to the music of sleigh-bells as yours seem to," replied her sister.

"Well, I must acknowledge mine do, and I cannot settle quietly down to anything. Did PHIL say when it was to come off?"

"To-morrow evening, I believe."

"I wish it was to-night! What if the snow should melt to-morrow!"

"Even in that case, I suppose more will fall this winter, so there is no reason to lament."

"Oh, HELEN, you are the most matter-of-fact kind of a person I ever knew. I think you are just cut out for an old maid; but I do not believe you feel badly even about that."

HELEN WARNER made no reply, but bent her eyes, which had been wandering aimlessly around the room, once more to her work.

"What are you doing there?" was ANNIE'S next venture; "a little dress as I live; who is it for, pray?"

"Mrs. DEAN'S little LUCY."

"What! that little hump-back child?"

"Yes."

"Well, I'm glad I do not fancy any such thing; I never can endure to go near an ugly person."

"What is there ugly, as you express it, about little LUCY DEAN?"

"Why, she is so crooked; I never thought to look at her face, to be sure."

Meeting no answer here, she went dancing out of the room, and HELEN sat very quietly there sewing for the next two hours. The sunbeams shone in upon the deep red of the carpet, making a warm light there and crept up on to the folds of her dress; but still she sat there, the bright little needle flashing in and out of the dark, soft flannel. Her face was very grave, but whether she was thinking of poor LUCY DEAN, or whether her thoughts had taken a wider range, no one looking at her could have told. There was much to admire in HELEN WARNER'S face, plain though it was, as she sat there that morning, and perhaps there were others than her father, (who was fast learning to admire her,) and her brother PHIL, who thought the same thing, even while they kept their thoughts to themselves.

She was only eighteen years old, though she looked even older than ANNIE, who was petite in figure, had blue eyes, sunny hair and a fair complexion, where the pink and white blended like the inner hues of a sea-shell. HELEN was tall and straight, her form almost too thin, and her skin dark like her father's. Her features were irregular, and at times there was an expression of scorn lingering about her mouth that took away all pretensions to beauty from what might otherwise have been called the one redeeming feature. But as she sat there now, so still, there came a positive smile over her face, and dropping her work in her lap, she folded her hands listlessly one over the other and sat idly watching the sunshine on the carpet, until she was startled by hearing the little French clock on the mantel strike eleven, and at the same moment the door-bell rang. She caught the sound of retreating steps and of others which entered the parlor. In a moment more ANNIE entered with a note addressed to Miss HELEN WARNER in a bold, manly hand, which HELEN opened and read while her sister stood watching her. When she concluded she folded it up, saying simply, "Mr. BELDEN wishes me to go with him to the ride to-morrow night."

"Shall you go?"

"Yes, I think so, if it is pleasant."

"Then you had better reply immediately, for I am just going to send down town an errand, and DICK can take your note at the same time."

"Very well; thank you." And seating herself by the window, she indited a polite acceptance. ANNIE took the note and hastened down stairs with it where she met the servant who had been delayed a few moments, and who now came up to her, saying, "If you please, Miss ANNIE, Mr. HAMILTON is in the parlor, and wants one of you, but I can't tell which."

ANNIE'S eyes sparkled with pleasure, as she hastened in with her pleasantest smile and salutation. They stood conversing a few moments on indifferent topics, when Mr. HAMILTON said "I asked for your sister, Miss WARNER, is she disengaged."

"I—I believe she has gone out for a little while; but I will see," turning toward the door.

"Do not trouble yourself; I called to invite her to the sleighing party to-morrow evening; perhaps you will give her the invitation when she comes in?"

"You are half a day too late, for she has promised to go with HORACE BELDEN, and I do not believe even *your* invitation would tempt her to break that engagement."

"I should be sorry, indeed, if my invitation could do as much as that with any one—but are you also engaged?"

"No! I have been overlooked as penalty for being so small, I must suppose."

"Will you accept a seat in my sleigh, then?"

"Yes, indeed," she said, looking up at him with a bright glance, which seemed to find favor in his eyes, judging from the look of admiration which he bent upon her.

"Then I will call for you at seven; please present my compliments to your sister when she returns."

A moment later he had left her, little thinking that in ANNIE WARNER'S blue eyes lurked cunning and deceit, and that even then her hand was closed over that note which she has hastened HELEN to write, because she saw him come in, and feared the occasion of his call. Still less did he dream of the thoughtful eyes bent upon his form from that upper window as he went down the street. ANNIE stood for a few moments where PERCY HAMILTON had left her with a look of determination on her face which was very unusual to see there, then went hastily out and up the stairs again, pausing at the sitting-room door a moment to tell HELEN that Mr. HAMILTON had been there to ask her to ride with him, and she should leave Mr. BANKS to go with whomsoever he could get.

"But, ANNIE," said her sister, Mr. BANKS invited you last night."

"Well, I did not get his note until this morning, and have not answered it yet."

"Why, I thought you sent a reply by DICKY."

"I could not find him when I went down, but I will send your note now."

She rang the bell, gave HELEN'S note to the girl who answered the summons, telling her to find DICKY and send him with it to Mr. BELDEN'S office. Then she went to her room and left HELEN again to her own reflections. What these were, whether pleasant or regretful, was known only to herself, but she sat there a long time, and when her father, at noon, congratulated her upon her invitation, she scarcely smiled.

Friday night came, as bright and beautiful a night as one could wish, and there was a clear sparkle on the snow that gave promise of fine sleighing. By half-past seven the party was fairly started, and before they had gone two miles HELEN'S coldness was fairly thawed by the genial influence of her companion, who exerted all his powers of pleasing, and HERBERT BELDEN was a man who seldom failed to please. PHILIP and MAY were in a sleigh just ahead of them, and PHILIP often turned back that evening to note the happy expression on HELEN'S face, for it was a different one from any he had seen there for many days. Faster and faster went the light sleighs, and merrily chimed the silver bells, while eager voices sang snatches of wild, winter songs or rang out gaily in laughter. It was a night for enjoyment, and they all realized it; but HELEN sat back in quiet, only smiling at the gaiety of the others or answering in a low tone her companion's questions.

The whole party spent two hours, pleasantly, at the house where they stopped for refreshments, and HERBERT BELDEN'S attentions to HELEN were the subject of many comments. HELEN herself seemed a little absent-minded, and rather too quiet for the occasion; but ANNIE was all life and animation, awaking admiration even in HAMILTON'S eyes, and admiration from *him* was all she cared for just then. She had gained her point she thought, when, after hearing all about a contemplated tour to Europe which his sister, Mrs. DESALLE, and himself were about deciding upon, he said, seeing the sparkle in her eyes, "You should persuade Mr. WARNER to let you go with NELL, Miss ANNIE; you, I am sure, would enjoy it so much, and NELL would be so delighted to have you go with us."

She said nothing—only heaved a little bit of a sigh, as if she *knew* how pleasant it would be; but she decided in her own mind that if NELL DESALLE *should* ask her, her father's consent should not be wanting.

BRINKERHOFF'S CORN-SHELLER, SEPARATOR AND CLEANER.

The days after this passed swiftly away—the sleigh-ride was an old topic, and the tour to Europe was the all-absorbing one, for Mrs. DESALLE had asked and Mrs. WARNER had given her permission. Mr. WARNER had only said, "Why didn't she ask HELEN, too?" and his wife had said such things didn't suit HELEN somehow, and there the matter rested.

And how was it with PERCY HAMILTON'S heart, meantime? He loved HELEN WARNER with a strong man's love, seeing all her woman's grace and loveliness, and waking each day most sorrowfully to a sense of all he should lose when she became HERBERT BELDEN'S wife, for this was a settled thing, ANNIE had assured him, and of course her sister must know. The thought sometimes crossed his mind then that he should love at least to call her sister, and be able to be near her often and share her happiness, but no thought came into his mind of the only *way* in which he could become HELEN WARNER'S brother.

The eventful day came at last, and the good-byes were all said. HELEN'S hand trembled a moment in PERCY HAMILTON'S warm grasp, as he gazed into her eyes and wished her all the happiness she so richly deserved, but ANNIE interrupted them, and he did not see the tear HELEN brushed so hastily away, nor see the white, pained look she cast upon the hand he had held in his own a moment before. If he had seen it even, would he have understood it?—or, if HELEN had seen the look in his eyes when her's were bent upon the floor, would her heart have been more at ease?

CHAPTER IV.

Four years have passed away. ANNIE has long ago returned from her grand "tour," and for two years has been PERCY HAMILTON'S wife. HELEN herself, with grief, pride and resolution all struggling for the mastery, has at length gained outward composure, at least, and learned to meet her brother's watchful tenderness with a quietness of manner that commpletely deceived ANNIE; but PERCY himself had long ago guessed the truth, and while his will held him to his duty, his fancied love for his wife had long ago melted into thin air, and he walked by her side a disappointed man.

HERBERT BELDEN at length gained the prize he had waited for those long years. HELEN became his wife, and was a *dutiful* one, but words of affection rarely fell from her lips. She grew cold and hard to all about her, and while others said "They always knew HELEN WARNER would make just such a kind of a woman," her sister's husband saw beneath the calm exterior the broken spirit and heart-wretchedness of the woman he had loved so fondly, and he almost cursed the woman who had stood between them. They had each their separate burden to bear through life, and GOD alone could give them the requisite strength and courage to bear it.

Outwardly HELEN'S life was one almost of perfect beauty. Comfort and elegance surrounded her, and she could not fail in being satisfied with everything but *herself*. She had wished for a love as broad as the earth, and she found it in her husband's earnest, entire devotion to her daily happiness. She had wished for admiration that came from the soul, and she could read it now in every tone of her husband's voice and in his face—in the quiet, grave way in which he held her to his heart as he returned from each day's duties, and the bright expression which lingered in his eye if she occasionally granted him an unwonted caress. She had wished for care and tenderness, and what woman could ask for greater than she received constantly,—but she, herself! There was the trial! She had given herself away for selfish ends, when the whole, strong love of her woman's heart belonged to another—and now she must reap the bitter fruits of such base betrayal of her heart unto the end, and in the end be written down—*Unsatisfied.*

THE GREATEST.—The greatest pleasure of life is love; the greatest treasure, contentment; the greatest possession, health; the greatest ease, sleep; and the best medicine, a true friend.

RESOLUTION.—There are multitudes of people who destroy themselves through irresolution. They are eternally telling about what they mean to do, but they never do it.

New Inventions, Etc.

BRINKERHOFF'S CORN-SHELLER, SEPARATOR AND CLEANER.

HEREWITH we present RURAL readers an illustration of the Corn-Sheller which officials of the U. S. Government have designated as the best in America, and one has accordingly been sent by the Government to Paris, France, to represent this country in the corn-sheller line at the Great Exhibition to be held there next summer. We have taken pains to examine and test this machine, that we might speak of it from our own knowledge, and we cheerfully add our testimony in its favor—and can say to our readers that it is the most complete and perfect working corn-sheller we ever saw. It requires but one person to turn and feed. It is worked very easily, and not only shells rapidly and clean, but at the same time cleans the corn and leaves it in merchantable order. And it does not matter what the size or shape of the ear, or whether the corn be seasoned or not—it *must come off* if it gets into the machine. For further information we refer our readers to Mr. BRINKERHOFF'S advertisement on another page.

INVENTIONS OF BRITISH ARTISANS.

AT a recent industrial exhibition in London sixteen hundred British artisans were the exhibitors, and 320 different occupations were represented. Of the exhibitors 44 were printers, 41 engineers, 36 carvers, 38 carpenters, 35 engravers, 14 watchmakers, and 10 laborers. The London Times says:—"It is a remarkable fact, and one highly creditable to our operatives, that, in the class of 'Inventions, Improvements, and Ingenious Contrivances,' there were no fewer than 134 entries. It is not a little curious also that some of the inventions were about the last we would expect from persons of the calling of the inventors; for instance, a butcher exhibited a decimal calculator; a short-hand writer exhibited a mill to grind crusts into flour; a clerk exhibited a novel machine for cutting meat for pies; and a printer exhibited a teapot and a silk hat."

A NEW GUN.—It is stated that the U. S. Government is having manufactured, at Hartford, Conn., one hundred battery guns, of a new invention, which are thought to be the most destructive implement of war ever used. It has a series of barrels, with a carrier and lock cylinder fastened to a main shaft and rotating simultaneously and continuously by means of a crank. The cartridges are put into the feed boxes, and thence driven, end-wise, into the rear end of the barrels, and exploded at the rate of two hundred shots per minute. These shots can be concentrated upon a single point or scattered, at the will of those operating the guns.

NEW WEAPONS.—It is stated that Herr von Dreyse, the inventor of the needle-gun, has completed several new weapons, said to surpass the old one in many respects. One is a rifle entirely of iron, with a semi-circular hook where the butt-end ought to be. By the shoulder fitting in this horse-shoe like termination the aim is considerably steadied. The barrel has a peculiar coating of some composite substance to prevent its scorching the fingers after several discharges. It is 3 lbs. lighter and 7s. cheaper than the present needle-gun, can be fired eight times in a minute, and hits at the distance of 1,000 paces.

ZINC IN TENNESSEE.—At Mossy Creek, on the East Tennessee and Georgia Railroad, zinc is known to abound. A company was formed to develop these mines in 1860, but the war in 1861 put a stop to the enterprise. Another company has recently been formed for the same purpose, and the prospects of success are very flattering.

MR. ALFRED THORPE, an American student of architecture has just passed a brilliant examination at the *Ecole des Beaux Arts*. He was the only student out of eighty, from the same *Atelier*, to whom the distinction of *mention honorable* was awarded.

RESTORE YOUR SIGHT!
USE

DR. J. STEPHENS & CO.'S PATENT
CORNEA RESTORERS,
OR RESTORERS OF THE EYESIGHT.
They will Restore Impaired Sight, and Preserve it to the Latest Period of Life!

BIRDSELL'S PATENT COMBINED
Clover Thrasher and Huller,
Patented May 13, 1858, Dec. 13, '59, April 8, '62, May 13, '62,
MANUFACTURED AND FOR SALE BY
JOHN C. BIRDSELL, SOUTH BEND, INDIANA.
This Machine operates in clover thrashing similar to grain seperators, doing all the work at one operation and is too well known to require comment. Please send for Circular. B. H. Ketchum, of West Henrietta, N. Y., will fill orders from Western New York, as he has made arrangements with me to manufacture the same; also furnish repairs. As my right to this machine has been so fully established by the recent trial in the United States Court, at Canandaigua, buyers will see the importance of purchasing of a manufacturer whose right has been established. JOHN C. BIRDSELL, South Bend, Indiana, formerly of West Henrietta, N. Y. [862-eotf.

PRESSES, BOTH HAND AND HORSE-POWER,
For baling all kinds of material, on hand and made to order. Also, a practical machine for sawing down trees. Price $25. For price list and full information, call on or address the manufacturers. INGERSOLL & DOUGHERTY, Greenpoint, (Brooklyn,) N. Y. [869-12tom

COLGATE'S AROMATIC VEGETABLE SOAP.—A superior **Toilet Soap**, prepared from refined **Vegetable Oils** in combination with **Glycerine**, and especially designed for the use of **Ladies** and for the **Nursery**. Its perfume is exquisite, and its washing properties unrivalled. For sale by all Druggists. 839-52t

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.
Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:
Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.
☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

MOORE'S RURAL NEW-YORKER.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL, D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the Important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

ARE AGRICULTURISTS BENEFITED BY ASSOCIATION?

YES, most certainly, if the objects of such association are legitimate and practical. And we are glad to see farmers as a class taking hold of this work, and combining in earnest, thoughtful, straight-forward efforts to advance and protect the interests of the most important branches of Agriculture. We are glad to see the indications presented by forming and stoutly upholding Societies, Conventions and Associations; they mean that agriculturists are abandoning the "dog-in-the-manger" policy, and have learned that by well directed, persistent, associated effort alone, can they hope to wield the influence and command the attention and respect of the legislative bodies of the land, which are due to their interests in consideration of their extent and importance. At present the great interest of wool growing is threatened with a most serious blow, by the possible failure of Congress to impose a sufficient duty on low-priced foreign wools. To counteract this, the wool growers, through their organizations, are bringing an influence to bear stronger than they possibly could have done at any previous time. And if the Association was as strong and perfect as it might be, and as the value and extent of the wool growing interest would warrant it in being, they might support their just demands with an influence which gentlemen in Congress would not dare to disregard. Wool growers! it is possible you may fail this winter, but if you will strengthen your Association, as you are capable of strengthening it, the ultimate compliance of Congress with your demands is certain.

The dairy interest shows a marked example of what may be accomplished by farmers through practical, well-directed, associated effort. Probably no single Agricultural interest in the United States ever advanced so rapidly and reached such importance in an equal length of time, as has this since the idea of associated effort in manufacturing butter and cheese was first put in practice. The uniformity of the product, and the increased amount resulting from the factory system, have created, and enabled the producers to supply, a large foreign demand. There is no agricultural interest in the country that is more prosperous, or has better prospects before it, at present, than the dairy interest; and this prosperity results from associated effort, skillfully directed.

The aim among farmers in associating together should be to make progress—not for offensive or defensive purposes solely, although these are lawful to a certain extent. By association strength is gained and progress is more rapid, and there is no neighborhood where association for purposes of common interest should not exist among the farmers. Let Farmers' Clubs, Societies, Associations, Conventions, and like mutually beneficial organizations, increase and prosper,—and that they may we should all unite in efforts for their proper formation and efficient action and maintenance.

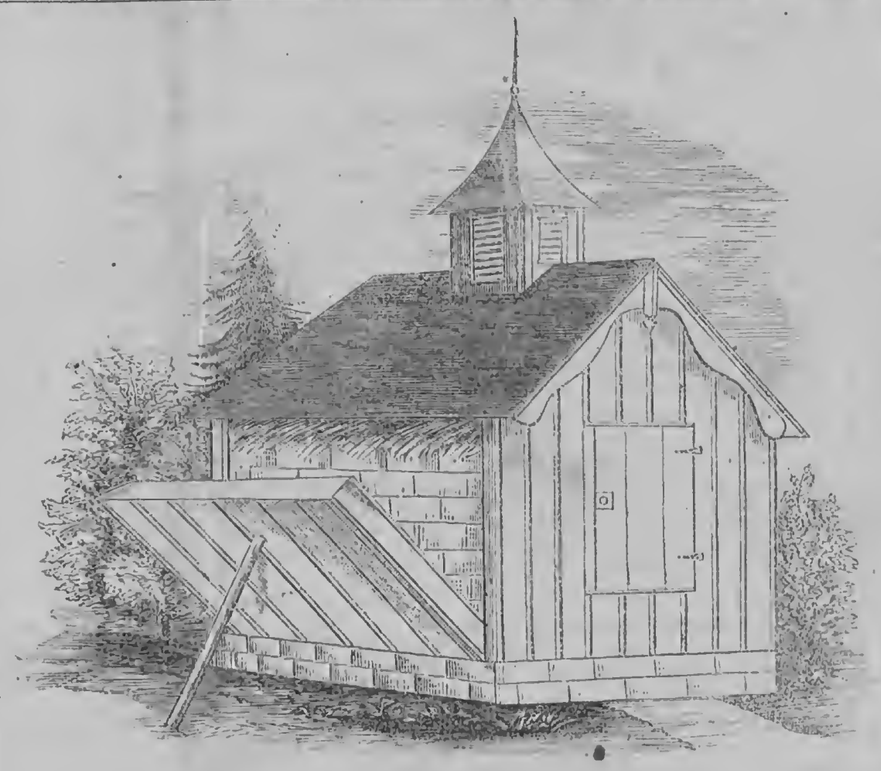
AMERICAN FARMING:
RETROSPECTIVE AND PROSPECTIVE.

THE opening of a new year suggests a review of the past, and plans for the future. American farmers, encouraged by present rewards, and instructed by experience, should revise and improve their methods. It would be a very interesting and profitable inquiry, How far are we governed by precedents, customs, and habits, and how far by the fitness of things? If we are disposed to honor the *forefathers*, regard usage as law, and custom as authority, we are still bound to inquire whether the precedents we follow apply to our case. The farmer who moved into the woods fifty years ago, without means and without markets, had to make his ends meet by a process utterly heterodox in 1867. He may have been a very nice man indeed, and what is very greatly to his credit, *our* grandfather!—but he has no more business to guide us in farming, than Feejee jurisprudence has to govern our courts.

It may safely be put down as the great misfortune of American farming that it follows methods that have outlived their usefulness. When it first took shape, *fertilizers* were as superfluous as a bag of extra hair on the back of a lady's head. A very little scratching in the early days insured a crop. Subsoils were of small account, odds and ends were not worth gathering up, the cheapest way was considered the best, and the breed that could *endure* the most, was the most popular. This gave rise to the *American*, or *slip-shop method* of farming. It does not require a very acute physiognomist to trace a strong family likeness between what I what I have described and the present method of farming.

We need to be cautioned against the dominion—the almost absolute dominion—of habit. In farming more than in other departments of business, we persevere in practices that would be regarded as utterly absurd if they were not more than a year old. The new programme for 1867 must secure—First: A careful revision of our methods, so as to introduce into all the departments of agricultural industry every possible economy. Order, arrangement and organization should be resorted to for the purpose of economizing materials and cheapening production. Within a few years a revolution has been effected in almost every branch of manufactures; old methods are superceded, and everybody persevering in them has been driven to the wall! A similar revolution must take place in farming. Whoever omits to get the best implements, neglects to introduce labor-saving machinery, or fails to economize his resources to the best advantage will find himself undersold in the market, and driven from the field by a competition that he cannot meet. Farming, like other business operations, has got to stand the test of the closest and most uncompromising competition.

When the North, the South, the East, the West, the great Mississippi Valley, shall be reduced to cultivation by the teeming population which will soon pervade all our borders—when every rood of ground ripens an abundant harvest—when capital, which is rapidly increasing, finds employment in agriculture, and labor-saving machinery lends its utmost aid—then farm products will be produced in great abundance, and sold lower than the slip-shod farmer can afford to sell them—he will have to wind up his business, or mend his ways. Let us illustrate: A farmer who carries unground and uncooked corn, several rods, in a basket, on his back, and pours it down in the mud to poorly lodged swine, will find his pork costing twice as much as the farmer who keeps twenty hogs in a warm, clean pen, with good accommodations for storing, steaming, and feeding meal and vegetables. Adopting rotation to a necessary extent, farmers must still confine themselves to a few things. They must select some branch of business for which they, and their soil, climate, and location are specially adapted, and pursue it to such an extent as will justify the introduction of implements, machinery, &c., to economize production. Large manufacturing establishments can undersell small ones, and the same principle will extend to farming. Room in a large building costs less than in a small one; one hundred cows or sheep can be fed at less than double the cost of feeding fifty; the farmer who keeps a team to plow and cultivate twenty acres, pays more for team work, per acre, than the man who has business for his horses all the season; a mowing machine runs you in debt with ten acres of meadow, and pays you largely with



ORIGINAL PLAN OF ICE-HOUSE—ELEVATION.

thirty; a complete assortment of plows, cultivators, and tools of all kinds needed on a farm, would absorb all the profits of a small place; you can market a ton of produce about as cheap as you can five hundred pounds.

This suggests the propriety of being less *miscellaneous* in our farming, giving more attention to fewer things; it also suggests the possibility of conducting farming through joint-stock companies, or some form of combination. Very much may be accomplished by a judicious arrangement of farm buildings so as to facilitate the unloading of hay, grain, and vegetables, and the convenient distribution of them to the stock.

Second—The New Programme should provide for bringing every part of the farm to the highest state of productiveness by means of drainage, the removal of stones, logs, brush and briars.

Third—It must provide for saving and applying manure with the most scrupulous economy.

Fourth—More thorough and cleaner tillage.

Fifth—*Increased attention to household conveniences*, so as to do away with the outrageous aspersion that American farmers are more thoughtful for their cattle than for their wives and children! Under this head the home may be made pleasant and attractive, and farm-life raised from drudgery and too much dust to pastime and pleasure.

H. T. H.

PLAN OF AN ICE-HOUSE.

IN the construction of an ice-house three things are necessary and indispensable. First, so constructing the walls as to render them non-conductors of heat. Second, to provide for thorough drainage from and beneath the whole body of ice, and at the same time absolutely to exclude all currents of air. Third, to provide for the introduction of currents of air around, about and above the packing which encloses the body of ice. Another important feature in its construction should be to render the interior easily accessible for storing the chrystal boulders. To meet this last requirement, and to combine all others in the most satisfactory manner, is the object of the accompanying plans.

The ice-house may be built of any desired size from eight to twenty feet square. A floor of masonry is first laid, upon which is erected the walls of the building, commencing with a water table of fifteen inches in height. The entire thickness of the walls is fifteen inches. The outside, consisting of one-inch pine boards, in a vertical position, well matched and battened; then a space of three inches to a partition one inch thick, then a space of nine inches to the inside lining similar to the first. The nine-inch space is to receive the non-conducting material, which may be either sawdust, spent tan-bark or straw. The three-inch space is an air space. The air entering through holes at the bottom flows to the top, thence to the interior over the top of the packing of the whole body of ice, and passes out through the ventilator at the top of the building. The roof is covered on the outside and lined inside with one-inch boards and the space filled with the non-conducting material similar to the walls. It should also be well shingled, or what would be far superior, thatched with straw after the fashion of "ye olden time." The last condition required, viz., to render the interior easily accessible for filling and packing the ice, is obtained in a novel yet simple manner by hanging one side of the house upon large hinges at the bottom, so that it may be lowered down to a level with the ground, thus opening the entire side of the building as shown in Fig. 2, and in Fig. 1 partially open, showing also the ice stored therein.

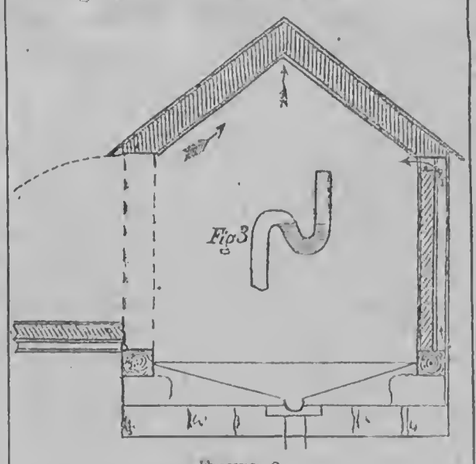


FIGURE 2.

The floor is composed of a series of two or three inch planks set up edgewise, between each of which is placed two of the angular pieces of the same thickness to serve as conductors of the melted ice to the trough and pipe in the center. This pipe terminates in what is called a "trap," shown in Fig. 3, which is simply a double bend in the pipe, which will always remain filled with water and thus effectually prevent the admission of air. [The pipe, Fig. 2, is given inside of Fig. 3 to save the space that would be required for a separate engraving.]

To fill the ice-house, first cover the tops of the planks forming the floor with straw to the depth of eight or ten inches, and proceed to build up a solid cube of ice, leaving a space of at least twelve inches between it and the side-walls. Close up the hinged side and fasten it securely in any suitable manner. Then enter through the door at the end, and fill the twelve inches space left around between the ice and walls with sawdust or straw, and cover the top to the depth of two feet. The ventilating cupalo should be in free communication with the interior of the building and provided with a small venetian blind on each side.

It is preferable to build the ice-house upon the north side of other buildings, or under a group of trees, to protect it as much as possible from the sun in summer. It should be painted of some light, modest tint, and may be ornamented to any desired extent, and thus be made the means not only of furnishing one of the greatest luxuries of summer, but also a pleasing and attractive feature of the farm.

Syracuse, N. Y., Jan., 1867. WM. R. BROOKS.

CRUDE vs. CONCENTRATED MANURE.

"ARATOR," in the Albany Cultivator, says:—"An interesting experiment would consist in attempting to raise the largest possible crop by means of, first, guano; second, barnyard manure; third, both combined—the amount of manure being in each case unlimited, and the culture in all cases the same." I have tried these experiments often, on a well drained, calcareous clay loam, substituting well pulverized hen dung for guano; but I could never see any difference, if the yard manure was worked in in the fall. It is true that as old, dry hen dung, like Peruvian guano, holds its nitrogen in the state of urea, it is much more soluble than ordinary stall manure; but my soil was rich, both in nitrogen and phosphoric acid, and only needed that mechanical porosity which makes a heavy soil absorptive and retentive of moisture so as not to crack open in hot, dry weather.

There can be no doubt but concentrated manures, like guano and superphosphate, are worth much more on a gravelly or sandy soil, than on a tenacious clay loam, as clay needs the mechanical action of coarse farm-yard manure, and having a strong chemical affinity for nitrogen, it is not so soon exhausted of ammonia salts as the more silicious soils. S. W.

FALL PLOWING.—MOVING STONE IN WINTER.

Too much cannot be said in favor of fall plowing. It can be done in fine, cool weather when the ground is moist and the plow does not require one-half the points that it would in the spring or summer. I have made it my practice to use the points that have been laid away after summer plowing, as worn out, and they answer the purpose just as well as new ones. The days being short and generally cool, and the horses having had a long rest after seeding, they have got fleshy again, and may do the fall plowing, if they have plenty of hay, without any grain. In the spring there are many things crowding, such as drawing manure, repairing fences, preparing summer's wood, trimming fruit trees, planting garden, and a hundred other things, all to be done in a short space of time. The teams, also, have been idle all winter, and their muscles have become soft flabby and weak, and much care will be necessary in putting them to work or they may be injured for the whole summer. The weather is sultry and warm, and both team and driver are faint and oppressed by the sudden approach of hot weather.

But these are not the only reasons why I am in favor of fall plowing. If it has been done in the fall clay spots have been pulverized by the frosts of winter, and by harrowing and gauging the soil is made fine and friable to receive the seed early, instead of having to wait to do the plowing when the seed should be in the ground. The seed bed is much finer than it can be made, I care not how much you use roller and harrow on the spring plowing. I have found it an excellent time to remove all stones in the reach of the plow. In plowing a field last fall, which appeared on the surface to be entirely free from stones, I found them in great abundance from about the size of a four-quart measure to that of a good sized wash-tub. I carried a light crow-bar on my plow, and whenever it struck a stone I would stop the team and remove it, which I could often do without taking the lines from my shoulders. The ground being soft it did not require one-quarter of the time to remove them that it does when the ground is hard. I was surprised to find how large a stone I was able to remove on account of the softness of the subsoil. I consider it by far the best time there is in the whole season to remove such stones, and when they are once out of the way, there is no more danger of the plow bouncing out, and no necessity of backing up and dragging the heavy plow back to get it to its place again, which requires almost as much time as it would to remove the stone, and is far more labor.

Then when the ground is frozen it is the best time to remove the stone from the land. Two horses can draw all the stones that can be put upon an ordinary stone-boat. The best weather for drawing is when the thermometer stands a little below freezing; then it will not be muddy nor too cold to handle them.

I recollect some twenty-five years ago, or thereabout, my father bought the first reaping machine that was ever used successfully in Monroe county, and using it we found that the large stones on the surface of the ground were the

greatest obstruction of anything we met with. The next winter we went on the wheat fields with team and stone-boat and removed all the large stones when the ground was frozen, with very little trouble, and since that time I have preferred the winter for removing such stone.

J. C. M.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

TO CORRESPONDENTS.—Mr. RANDALL'S address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

THE WOOL TARIFF.

WE have not at the time of this writing (Jan. 11,) seen the report of Commissioner WELLS entire. But from abstracts of it given in the New York papers, it appears that he proposes no increase of the present duties on wool, and a reduction of the existing ones on long or combing wools to six cents per pound. The papers furnish an outline of his reasoning in the premises, but if we think it worth while to comment on it at all, we will wait until we have his own words.

A leading free trade paper in New York declares that it is by no means a free trade document—but it is delighted with it. All the free trade papers are delighted with it. It does not go for entire free trade, of course, for all know the country must and will have a revenue derived from duties on foreign imports; but it probably goes in that direction quite as far as the advocates of free trade think it expedient now to propose going. And it proposes a scale of duties which will tend to the diminution, if not overthrow, of at least one of the great industrial interests of the country.

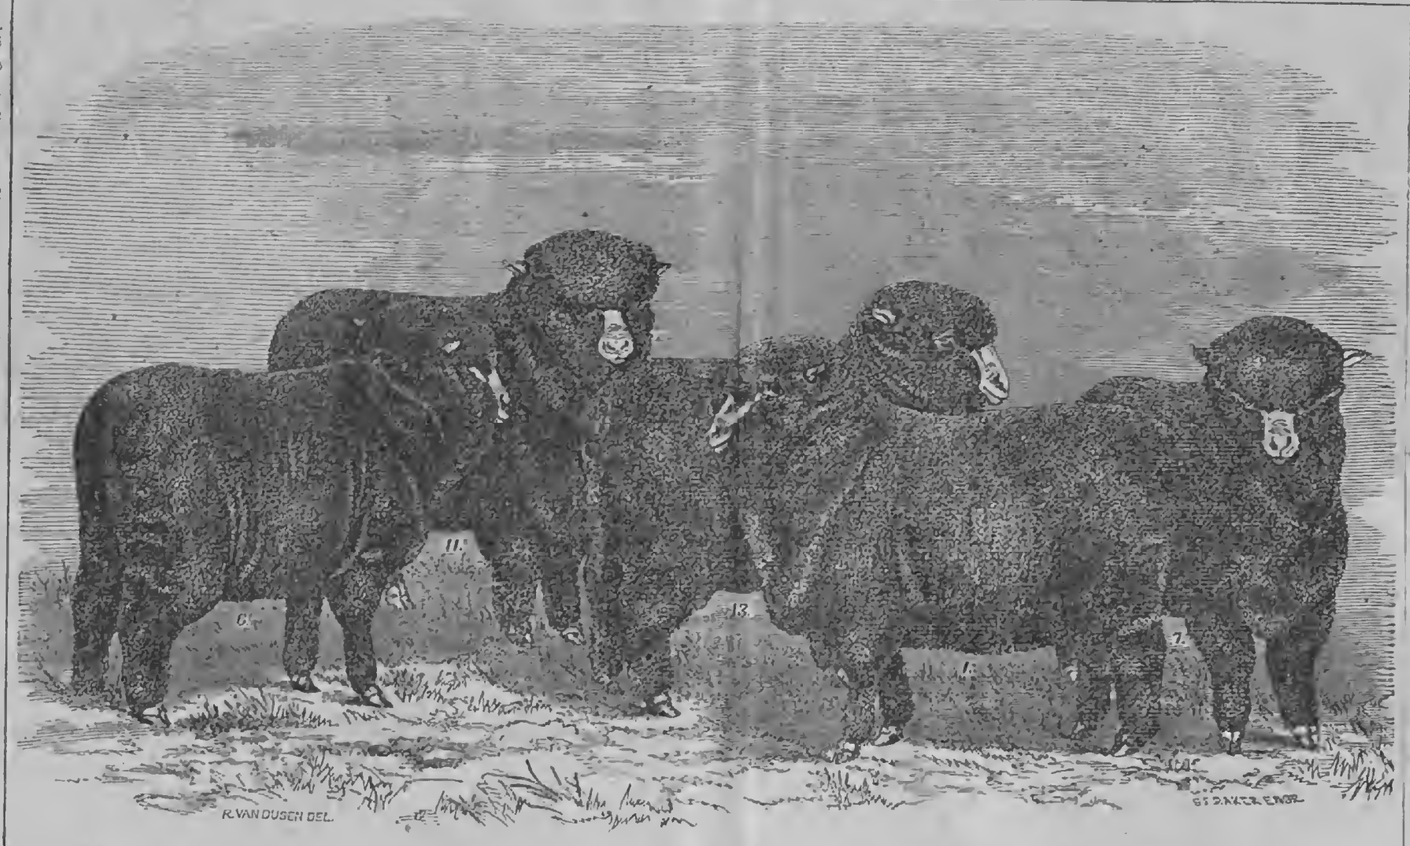
Mr. WELLS is quite a *young* man. We do not know his history, but presume his business education has been a commercial one. He can "make figures." He can cook up and arrange statistics. He can sing the old free trade song over again, with certain "variations" of his own, making his *statistics* bear a burthen to it. What smart young lawyer could not do the same after a couple years of cramming, (he has been Commissioner two years,) and a year spent in preparing his points? How great and incomprehensible is the wisdom of Congress in delegating to an *outsider*, not we imagine thirty-five years old, the preparation of a bill, or the *projet* of a bill, affecting all the great industrial interests of the country! He tells us poor sheep farmers all about our interests; he tells Congress how it should legislate for us; yet we would like to bet something that he does not possess one iota of practical experience in sheep husbandry, in its profits and losses, or in many of the circumstances which affect and produce those profits and losses. Is such a gentleman's *theories* to outweigh, in the estimation of Congress, the results of the *experience* of tens of thousands of practical and intelligent men, many of whom were engaged in this business before Mr. WELLS was born? Is it any more proper to impute interested motives to them, than to the trumpeters of free trade? Have the wool growers of the country shown themselves either greedy or importunate in their demands? Have they besieged Congress with petitions for protection often or when they did not need it? And finally is Congress made up of representatives of the people, or of automatons to be moved round like chess-men by this or that specious theorizer, who has spent a year in getting up free trade arguments and figures?

We grant that the tariff bill of last winter would somewhat increase the burthens of the customer. But what of that? Does not the wool grower bear additional burthens to foster other industries? Is it not the true policy of every industry to "live and let live?" Are not our *people* willing to act on this principle? Have *they* complained of the wool and woolen tariff bill of last winter? Have *they* sent in remonstrances to Congress against the passage of that bill? Have the manufacturers complained? Have they not, on the contrary, constantly and strenuously urged its passage? Has not their National Association—comprising almost every leading manufacturer in the Union—now its accredited agents in Washington, making every effort to procure the passage of the bill? Who then is aggrieved? Oh, the foreign wool merchants in New York are aggrieved. Wool speculators are aggrieved. The owners of a few vessels engaged in the foreign wool trade are aggrieved. A lot of men who, taken together, scarcely represent a perceptible proportion of our country's aggregate population, or wealth, or pecuniary interest, are aggrieved.

Will Congress be guided by the "smart" spokesman of this class — will it listen more to WELLS' report than to the united voice of National and State Conventions and the petitions of the *people?* Will it legislate for the interests of a *handful* of commercial men, rather than for the interests of the *people?* We will not, we cannot believe it. Our present advices are that the House bill will be reported by the Senate Committee, and this is a great step towards its passage. But the danger, even in that event, will not be over. We have individuals in the American Senate, representing almost purely agricultural States, excellently adapted to wool growing, who are violent against the bill, because wool growing is not *yet* extensively introduced into *their* States! What wise men! What profound legislators! They oppose the agricultural *development* of the States they represent. They would limit the industry of their constituents to their present channels, and permit no new ones to be opened. They would shut out a husbandry which the best farmers of the world have pronounced indispensable to the continuous success of that general system of convertible husbandry which contributes most to individual wealth, and to the aggregate wealth of an agricultural nation.

We advise our brother wool growers to do two things. First, that they *rain* petitions on the Senate from every school district in the country. The wool grower who will not try to help himself in this crisis is not deserving of legislative help. Second, that one and all make up their minds that they will have justice, and that if defeated now this shall be but the second campaign of a war which shall rage until that justice is secured. Let each constituent watch and *remember* the course taken on this question by his member of Congress, and by the Senators of his State.

[Since the above was placed in type, the new Tariff bill has been reported in the Senate, and a synopsis of the same will be found in our News Department.—M.]



MESSRS. ROGERS & SONS' INFANTADO AND PAULAR EWES.

MESSRS. ROGERS & SONS' SHEEP.—MESSRS. C. N. ROGERS & SON, Whallonsburgh, N. Y., writes us, Aug. 11, 1866:—"Our first purchase of the Atwood or Infantado sheep was of the late JACOB TOBIAS of Vergennes, Vt., in the year 1824, consisting of five ewes and one ram, and they were certified as being sheep bred by STEPHEN ATWOOD of Conn. We have bred the Atwood portion of our flock purely in that line, having only used rams of our own breeding from that stock, and rams from the flock of EDWIN HAMMOND and E. S. STOWELL of Addison Co., Vt. We have since purchased five ewes bred by said HAMMOND and of his purely Infantado stock. We also purchased four ewes of Col. STOWELL, bred from his Atwood stock.

"The foundation of our Paular stock of sheep is as follows:—We purchased four ewes of the Paular stock from the late A. E. WADHAMS of Westport, Essex Co., N. Y., in 1852, who purchased them or their ancestry from J. T. & V. RICH of Shoreham, Vt. We have since purchased thirteen ewes, of the same blood, of the Hon. M. W. C. WRIGHT, and three ewes of like strain of blood of GASCA RICH, Esq., of Shoreham We have also a flock of sheep equally pure bred, being a cross between the Paular and Infantado cabanas.

"Our ram 'Gen. Sheridan'* was ten months old when plate was taken, and weighed 80 lbs.; weight of fleece when shorn, at eleven months old, was 10¼ lbs. He was bred from a pure Atwood ewe and sired by ram named 'John,' which we purchased of Col. E. S. STOWELL of Cornwall, Vt., that was sired by his stock ram "Sweepstakes," the sire of his celebrated stock ram 'Golden Fleece'—thus showing our ram to be descended from the Infantado or Atwood stock.

"Our group of five yearling ewes, represented in the accompanying engraving, consists of three Infantados and two Paulars. No. 1 is of the same family on its dam's side as that of the above described ram, and was sired by Col. STOWELL'S ram 'Golden Fleece,' and sheared at one year old a fleece of 10 lbs. No. 6 is of the same blood as No. 1, and was sired by our ram 'John,' above named, and sheared 10¾ lbs. No. 7, same blood on dam side as No. 6, and sired by the same ram; weight of fleece, 11 lbs. No. 11 is of the stock denominated as Paular, its dam being bred by the Hon. M. W. C. WRIGHT of Shoreham, and sired by the celebrated Paular ram known as the 'Tottingham Ram,' and owned by B. B. TOTTINGHAM of Shoreham; weight of fleece 10¾ lbs., shorn at one year old. No. 13, same blood on side of both dam and sire as No. 11, being sired by the same ram and from one of said WRIGHT'S Paular ewes; weight of fleece 10¾ lbs. [N. B.—The number of each of said ewes corresponds with the number on the jewel in their ears.] We have about 200 old sheep and 20 lambs of full blood Merinos."

* The portrait of "Gen. Sheridan" will be given next week.—ED.

WOOL GROWERS' ACTION.

THREE of the Wool Growers' Committee appointed by the National Association, viz., Mr. MONTGOMERY of Ohio, Mr. POTTLE of New York, and Mr. GARLAND of Illinois, are now in Washington pressing the passage of the Wool and Woolen tariff bill of last winter. Gen. WHITE of Pennsylvania, has also been there, and we hope will be there again by the time this paper issues. We are in constant communication with these gentlemen, and can assure our readers that they are most energetically engaged in carrying out the objects of their appointment.

The Wool Manufacturers are represented in Washington by Mr. HAYES of Massachusetts, and Mr. KINGSLEY of Connecticut. They too are at work most efficiently, and in strict accord with the Wool Growers' Committee.

The Vermont State Association has passed strong resolutions, which will be found elsewhere in this paper. We hope to receive those of the Ohio and Illinois Associations before our next issue.

Petitions are beginning to go forward briskly. We entreat our friends in every section not to neglect this, for we are assured by leading members of Congress that it is highly important to our success. As we have stated elsewhere, it is now (Jan. 11,) understood that the Finance Committee of the Senate will report in favor of the Wool and Woolen tariff bill of last winter. This is excellent — but it is no reason whatever for slackening in our efforts.

VERMONT STATE AG'L SOCIETY AND WOOL GROWERS' ASSOCIATION.—The Vermont State Agricultural Society and Wool Growers' Association met at Rutland Jan. 2d.

Hon. J. W. COLBURN presented the following preamble and resolutions, which were unanimously adopted:

Whereas, The Vermont Wool Growers' Association, view with deep concern and extreme anxiety the present aspect of affairs with regard to a reasonable tariff protection to our wool growing interests; therefore,

Resolved, That we earnestly and sincerely call upon our National Congress to give us such protection as will save this important interest from total annihilation and ourselves from bankruptcy.

Resolved, That we have confidence in the tariff bill passed at the last session of Congress by its lower House, and pray the Senate to pass the same without amendment, so far as regards wool and woolens. That we deem it an oppressive feature in our tariff legislation, that the foreign wool grower who has none of our onerous burdens of taxation to bear, and who possesses the advantages of climate, cheap lands, and low price of labor, should have the monopoly of our markets, thus compelling us to hold our clips on hand or to sell at ruinous prices.

Resolved, That while we are clothing ourselves and families with fabrics made from foreign wool, our own wools are lying on our hands uncalled for at any price that would pay over half the cost of production, and we have thus far preferred to wait and hope for a favorable change in our tariff protection that would save us from so great a sacrifice.

Resolved, That we, the wool growers of Vermont, claim to have done our whole duty to our country, and to have been as loyal to our Government as any other portion of our country, and we ask in return an equal and just protection to our vital and cherished interests, which the sophistry and destructive opinions of free trade will never give us, but will reward us with a stone when we pray for bread.

Resolved, That we cannot see why the foreign and domestic importers of foreign goods, under a plea for commerce, should outweigh in our National annals all other industries, all domestic productions, and keep us dependent on other nations for the common necessaries of life; "hewers of wood and drawers of water" to all other people.

Resolved, That the Secretary furnish a copy of these resolutions immediately to each of our members of Congress, and that our Senators be especially requested to present them immediately to that branch of Congress.

The officers elected for the following year were: *President*—JOHN GREGORY, Northfield. *Vice-Presidents*—Henry Keyes, Newbury; Henry G. Root, Bennington; Henry S. Morse, Shelburne, Victor Wright, Middlebury. *Treasurer*—Joseph W. Colburn, Springfield. *Secretary*—Henry Clark, Rutland. *Board of Directors*—Edwin Hammond, Middlebury; Wm. R. Sanford, Orwell; Geo. Campbell, Westminster; Elijah Cleaveland, Coventry; Henry Hayward, Clarendon; Henry B. Kent, Dorset; Wm. Q. Brown, Fairhaven; N. B. Safford, White River Junction; Crosby Miller, Pomfret; Lawrence Brainard, Jr., St. Albans; Henry Chase, Lyndon; David Goodell, Brattleboro; Henry Boynton, Woodstock; Pitt W. Hyde, Hydeville; E. S. Stowell, Cornwall; James A. Shedd, Burlington.

On motion of VICTOR WRIGHT, Hon. EDWIN HAMMOND was elected a member of the Executive Committee of the National Wool Growers' Association.

Hon. J. W. COLBURN was appointed to deliver an address at the next annual exhibition.

Doings of Agricultural Societies.

BELOW we give the lists of officers, etc., of such Agricultural Societies as have recently held annual meetings, so far as we are advised, and will publish others as received:

Connecticut State Ag. Society.—The annual meeting of this Society was held at New Haven, Jan. 2d. The Treasurer's report showed receipts $5, expenditures $55.60, and a balance of $11.90 in the treasury!—not a very heavy business for the farmers of the Nutmeg State. The meeting was well attended and efforts made to restore the Society to its former condition. The following board of officers was elected: *President*—EPHRAIM H. HYDE, Tolland. *Vice Prests.*—Robbins Battell, Norfolk; H. L. Stewart, Middle Haddam. *Cor. Sec'y*—T. S. Gold, Cornwall. *Rec. Sec'y*—Burdett Loomis, Windsor Locks. *Treas.*—F. A. Brown, Hartford. *County Directors*—New Haven Co., Dr. Chas. B. Whittlesey; Hartford Co., C. M. Pond; New London Co., James A. Bill; Fairfield Co., Charles Hough; Windham Co., Benj. F. Sumner; Litchfield Co., Geo. C. Hitchcock; Middlesex Co., P. M. Angur; Tolland Co., S. F. West. *Chemist*—Prof. S. W. Johnson, Yale College. The Presidents of the several County Societies, and one director appointed by each County Society, are also officers of the State Society.

Vermont State Agricultural Society.—The annual meeting of this Society was held at Rutland, Jan. 2d, 1867—Hon. JOSEPH W. COLBURN, President, in the chair. The receipts for past year were $9,674.09; expenditures, $7,659.10; amount in the Treasury Jan. 1, 1867, $8.094.15. For resolutions adopted and list of officers, see article in Sheep Husbandry Department.

Monroe Co Ag. Society.—The annual meeting was held in this city, Jan. 9th, when the following officers were elected: *President*—B. M. BAKER, Rochester. *Vice Pres'ts*—H. A. Lyons, A. G. Whitcomb, William Brown. *Sec'y*—H. W. Otis. *Treas.*—L. D. Mitchell. *Directors* (now)—Jerome Keyes and R. P. Hubbard; holding over, Benj. Birdsall, D. D. T. Moore, Nathan Palmer, C. S. Wright.

Genesee Co. Ag. Society—Held its annual meeting on the 8th inst. The management of the Society is said to have been careful and judicious the past year. The total receipts for 1865 were $1,944.34, and the disbursements $1,440.54, leaving a balance in the treasury of $503.80. Officers Elected: *Pres't*—SANFORD WILBER. *Vice Pres't's*—Addison Foster, Isaac Todd. *Sec'y*—Hiram K. Buell. *Treas.*—Carlos A. Hull. *Directors*—E. Townsend and William I. Parish.

Wyoming Co. Ag. Society.—Annual meeting at Warsaw, Jan. 9th. Officers elected: *President*—T. J. PATTERSON, Warsaw. *Vice Prest.*—J. H. Vincent, Pike. *Sec'y*—H. A. Dudley, Warsaw. *Treas.*—H. B. Jenks, Warsaw. *Directors*—for three years: John B. Potter, Wethersfield; Stephen C. True, Castile; Carlos Stebbins, Pike; one year, Randall W. Brigham, Perry. The Treasurer reported a balance in the treasury. It was voted that the Silver Lake Wool Growers' Association be invited to hold their annual Sheep Shearing Festival on the grounds of the County Society, and that the officers of the Society be authorized to put up the tent and tables for a pic-nic dinner, and erect any temporary sheds that may be necessary for the shearing, if the invitation is accepted.

Oswego Co. Ag. Society.—At the late annual meeting held in Mexico, the following board of officers was elected: *Pres't*—BENJ. G. ROBBINS of Sandy Creek. *Vice Pres't*—Morgan L. Marshall, Oswego. *Sec'y*—H. L. Davis, Oswego. *Treas.*—L. H. Conklin, Mexico. *General Supt.*—Solomon Matthew, Mexico. A Board of Directors was also chosen.

Livingston Co. Ag. Society.—This Society elected the following board at its recent annual meeting: *President*—W. H. SPENCER. *Vice President*—A. Barber, Jr. *Secretary*—W. A. Brodie. *Treasurer*—K. M. Scott. *Directors*—A. B. Peck, G. W. Root, H. Allen.

Brockport Union Ag. Society.—This Society has elected the following officers for 1867: *President*—J. H. WARREN. *Vice Prest.*—H. W. Seymour. *Sec'y*—Geo. Burrows. *Treas.*—O. B. Avery. *Directors*—R. J. Cook, D. N. Hatch, J. P. Ross, F. W. Lay, and two others whose names we have not learned.

DEFERRED.—In order to make room for a portion of the proceedings of the annual meeting of the American Dairymens' Association, we are obliged to defer several valuable articles and omit our usual column of Rural Notes and Items. As the RURAL was the only Agricultural journal which had an Editor at the Dairymens' meeting, we shall endeavor to give, in this and future numbers, a full synopsis of the proceedings and discussions at that important assemblage of producers.

—We have a rod in pickle for the *Ishmael of the Agricultural Press*—him of the New York City fancy monthly that proposes to ruin all the rural journals in the country,—but we think it will keep a week or two longer, and besides (not believing in cruelty to animals,) we dislike to subject our fragile friend to uninterrupted spasms.

MASSACHUSETTS AGRICULTURAL COLLEGE.—The Board of Trustees of this College have adopted a plan for a dormitory building sufficient to accommodate about fifty students and furnish two good sized rooms for lectures and recitations, and also a Club House and Laboratory. The aggregate cost of these is $46,000—contracts being ready at that price. The sum of $10,000 has been appropriated for the erection of a barn, or barns, as shall be deemed most expedient. Two donations of $10,000 each have been made toward the expense of establishing a department of Botany and Horticulture. The college farm passes under the supervision of the Hon. LEVI S. STOCKBRIDGE on the first of April next.

SILVER PHEASANTS.—(W. C. E., Northwest, Pa.) The fowls you mention, the "Silver Pheasants," are described by MINER, in his book on poultry, as "a charming breed of little fowls—perfect beauties in every respect, and remarkable for great brilliancy of plumage and diversity of colors." Dr. BURNETT also speaks of them in the same way, but adds that they "are chiefly valuable as ornamental appendages to the poultry yard." We do not know of any one in this region who has this variety of fowls.

PIPE WELLS.—I would like to inquire through the RURAL the address of some manufacturer or dealer of the Pipe Well illustrated in a late number. Why don't they advertise?—W. A. WHIM, *Story City, Iowa.*

Dairy Department.

AMERICAN DAIRYMENS ASSOCIATION.

SECOND ANNUAL MEETING.

THIS Association of dairymen met in Convention at Utica, at 11 A. M. Wednesday, Jan. 9th. It may be proper to state, to avoid confusion, that, although it is the second annual meeting of the American Dairymens' Association, (this name having been adopted last year,) it is only a continuation of the annual conventions which the dairymen have held for some years past. The President, W. H. COMSTOCK, Esq. of Utica, called the Association to order and made some appropriate remarks. Several business committees were then appointed and an adjournment until two P. M. voted.

During the afternoon session the attendance was quite large. Probably six hundred dairymen were present at the Convention, including many from other States and Canada West. There was also a sprinkling of ladies in the audience. The committees appointed were called on to report, and that on the Order of Business announced the subjects for discussion. As the Report on sending an agent abroad did not properly belong to the Association—the enterprise being wholly a private one, and not at all conducted under its auspices—a motion was carried to lay it upon the table. The sending of Mr. WILLARD abroad, as Agent, to collect information in regard to the manufacture of cheese, and the condition and requirements of the foreign markets, shows that the American dairy interest is in the hands of a class whose capacity and energy are sufficient to advance it until its products shall have no rivals able to compete with them in any of the markets of the world. The private Reports sent back by Mr. WILLARD were of great value to the parties receiving them, but the information gained by him regarding the dairy business, to be hereafter disseminated, will be the best result of his mission.

On hearing the Report of the Committe on Nominations, the following gentlemen were elected officers of the Association for the ensuing year:

President—GEORGE WILLIAMS, Oneida.

Vice Presidents—Hon. B. N. Huntington of Oneida; Seth Miller of Lewis; M. H. Cochrane of Canada East; Bradford Stiles of Madison; Dwight J. Woodworth of Cattaraugus; A. D. Hall of Ohio; Alanson Slawter of Orange; A. A. Moore of Vermont; —— Kinney of Illinois; G. E. Chadwick of Canada West.

Sec'y and Treasurer—G. B. Weeks of Verona, N. Y.

So much time was consumed by business proceedings that but little was left for the discussion of practical subjects. Some questions were called up and two or three essays read, but there was very little discussion. The forenoon of the next day (Thursday) was also mostly frittered away in fruitless talk. The Convention did not get down to its work. It did better in the afternoon session, and some practical discussion then ensued. But it was short; at five o'clock P. M. an adjournment *sine die* took place.

We were disappointed with the results of this Convention, and we believe this is the sentiment of a large majority of those attending. Mere business proceedings, which might and should have been quickly disposed of, were dragged out to an interminable length, leaving too little time for the discussion of practical questions. And this latter object was the one which the body of intelligent, thoughtful, earnest workers there assembled had chiefly at heart.

The address of Mr. X. A. WILLARD, delivered on Wednesday evening to a very large and appreciative audience, was the most remunerative part of the Convention, to those who had come seeking for more knowledge of the dairy interest. We never listened to an address of that character with so much interest; it was very able—its matter practical and fresh. The speaker was frequently applauded. We can only give a brief synopsis of this address, as it would cover more than two pages of our paper, if printed entire:

MR. WILLARD'S ADDRESS.

Mr. Willard commenced his address by referring to the action of the convention last year in regard to sending an agent to Europe. He was not insensible to the honor of having been selected to go abroad upon this mission. It was one of great responsibility, and while the tour was one of pecuniary loss to himself, it did not lessen his deep obligations to those who were active in the movement, and reposed confidence in his ability to furnish the expected information.

Hundreds of thousands of dollars have been saved to the dairymen of America in this year's sales by having timely possession of facts relating to the production, demand and prices of cheese in Great Britain. The sales in the home markets are regulated by prices abroad. When the home markets were glutted in June, prices would have declined to from 12 to 15 cts. had not factories been put in possession of the true condition of things on the other side. This induced factories to be firm in keeping the price of cheese at remunerative rates.

An allusion was made to the establishment of butter and cheese factories combined. Some had been eminently successful and reaped large profits, others had failed. With the latter it was not the fault of the system, but rather of the persons who did not understand their management. It was thus in all kinds of business. Some would prosper while others would lose.

The dairy interest in Great Britain was large—there were no statistics in regard to the production of cheese in England, nor of the annual yield of other products. The assumed reason for this deficiency was that the English farmers were opposed to having statistics made in regard to their crops. He thought there was another reason of a commercial nature that had more weight. The English is a manufacturing nation. The country is densely populated and is unable to supply the necessary food for consumption. Would it be policy for her to lay bare her necessities so that other nations which have food to sell could take advantage of them? Her commercial men operate with more success by having these things covered up. All are interested in having food furnished at as cheap rates as possible. When food is dear the price of labor must advance, or starvation ensue to the laboring classes. It is an object to keep labor cheap, since England maintains her supremacy in the markets of the world by underselling.

Mr. Willard gave a description of the dairy districts of England—the appearance of the country, the character of soil, grasses and manner in which farms are generally conducted. The dairy farmers of America had much to learn in the management of farms; English farming was vastly superior to ours. It may be compared to our garden culture. Weeds are not permitted to get possession of the soil. The English farmer uses more capital in his business than we do. His rents and taxation are often more than the whole receipts of a farm of the same number of acres with us, and yet he pays these and makes a large profit.

The speaker described the stock kept upon the dairy farms and the way they were managed. The production of meat has become a science in Great Britain. Nowhere in the world will you find such excellent beef and mutton. The animals are bred with particular reference to this object.

The English Dairy farmers do not wear out their cows and then sell the carcass of skin and bones, as is customary here, but when the cow begins to show signs of failing in milk she is fattened and sold at a profit. Mr. Willard described his tour through the great Cheese District in the South of England, giving a particular account of the manner of making cheese in Wiltshire, Gloucestershire and Somersetshire. He did not think there was anything in the Wiltshire or Gloucester process that would be of any advantage to American dairymen. The cheese was generally inferior to our factory make. The quantity made annually per cow was less than in our best dairies, but the Cheddar dairymen did better. They often made as much as 600 pounds per cow, annually. The Cheddar cheese took its name from a small village in Somer-

setshire, situated at the foot of the Mendip hills. It is a thick cheese, 15½ inches in diameter, and from 12 to 14 inches high, and bears the highest quotation of any in the English markets. The shape was originated about one hundred years ago, the farmers of a neighborhood combining their milk, and making the cheese at each others houses in turn. It is a very high character of cheese, and its excellence has never been surpassed in American dairies. The distinctive features of excellence in Cheddar cheese are embraced in the following points:

1st. Mildness and purity of flavor; 2d. Quality, which consists of mellowness and richness under the tongue; 3d. Long keeping qualities; 4th. Solidity or freedom from eyes or holes; 5th. An economical shape as regards shrinkage, handling and cutting.

A minute description of the process of manufacture was given, as Mr. Willard saw it in the Somerset dairies. He was at some of the most noted dairies in the country. Was at Mr. Gibbons, who took the gold medal for the best cheese at the International Exhibition, at Paris. He was at Mr. Josiah Harding's of Marksbury, the great exponent of Cheddar cheese making in England, and with Mr. McAdam of Gorsty Hill, Cheshire, who has written an essay on cheese making, and was the means of introducing this process into Scotland and Cheshire. This process, Mr. Willard thought, was the only one from which suggestions of practical utility could be drawn, that would be of value for the cheese makers of America.

The leading features of the process consisted in an early expulsion of the whey, exposing the curd a long time to the air, and allowing it to come to maturity, heaped up in the tub or spread out in the sink. This, together with the grinding of the curd, salting and pressing, differed from the process usually adopted at our factories. He thought the early drawing of the whey an advantage, since the whey often contains taints of the worst character. The sooner it could be got rid of, consistent with the necessary operations, the better it would be. The curds should undergo the proper chemical changes after the whey was drawn. We cannot give in a brief abstract all the peculiar features of this process, or the many valuable and interesting suggestions offered by the speaker. To the cheese makers present, this part of the lecture must have proved of the greatest utility.

Mr. Willard gave high praise to the English dairymen for the perfect neatness and cleanliness of their dairies. Nothing in English cheese making struck him with so much force and admiration as the cleanliness in which everything is conducted. The milking is very carefully performed in the pails. The dairy is located out of the reach of bad odors, or anything likely to taint milk. The milk rooms have stone floors, the joints of the flagging cemented, so that no slops or decomposed milk can find an entrance. The utensils and everything about the dairy are kept as clean as the table and crockery of the most fastidious housewife. This feature of cleanliness, the speaker said, he found wherever he went, from the Royal Dairy, at Windsor, and radiating from thence all through England. He believed it was this cleanliness and the untainted condition of the milk, together with the even temperature of the curing rooms, that were the leading causes of the fine flavor which is characteristic of some of the English cheese.

The cheese makers of America have a hot, bad climate to contend with. Much of the milk in hot weather was spoiled before it reached the factory. The practice of putting warm milk in cans, and covering closely, and then taking it a long distance to the factory, was objectionable; the milk should be cooled and divested of its animal odor before leaving the farm. It was a well-known fact that milk right from the cow, shut up in a vessel, soon becomes putrid in hot weather. Many cheese manufacturers complain that milk, often, when it reaches the factory, has a fetid, sickening odor. Here is the commencement of bad flavor. When the weather was unfavorable, with such milk, manipulated as it often is among the bad odors about the factory, it was impossible to make a fine flavored cheese. It was this putrid condition of the milk that was a fruitful cause of the early decay of American cheese.

In testing cheese abroad he had been mortified to get the taste of tainted rennet and the drippings of the stable. It was unpleasant to speak of these things and doubtless unpleasant for dairymen to hear them, but the truth must be told. A reformation in this respect must be had, or we should never reach the standard at which we were aiming. In regard to appliances for making cheese, we were greatly in advance of the English. Our manufacture as a whole was better. Our cheese was richer in butter. English dealers spoke in high terms of the improvement that the factories had made in the texture and solidity of our cheese. The greatest fault complained of was bad flavor. The speaker gave several other causes of bad flavor, and spoke of the injury our cheese often received by being sent off in hot weather, and put into ships freighted with grain, oil cake, or other substances, from which taints were absorbed. The outward appearance of American cheese abroad was generally good. The nicer grades of cheese stood high in the English market. Some of our cheese was considered quite equal in flavor to the best and was richer than the Cheddar. There was prejudice against American cheese, but it was fast wearing away. As to the real merits of the cheese of the two nations, the Cheddar was the only style that could compete with us.

The speaker gave a description of the manner in which Cheshire cheese is manufactured. There was nothing in the process adapted to America. Our factories are in every respect greatly in advance of the Cheshire dairies.

The styles of cheese demanded for the trade was then discussed at length with reference to the various markets. The Cheddar shapes as a whole were most popular, though in some of the markets there was no objection to the flat cheese. The Derby shape, if of rich quality and good flavor, would command the highest prices in London.

In the matter of color, advice was given which the speaker said would save our dairymen thousands of dollars. He described the colors required in the different markets of England, and the methods employed by the English annotto manufactories for making their celebrated liquid annotto.

Mr. Willard gave a vivid picture of English farm life, the homes of the peasantry and of the wealthier classes. He took his hearers upon Mr. Harding's farm, introduced them to the proprietor, and told them how he managed a poor farm of 300 acres, paying in rents and taxation $3,500 in gold, and yet was able to keep up a good establishment, and make an annual profit of over $3,000 per year.

Mr. Willard said he had no fault to find with the English. He found them a generous and hospitable people. He received many acts of kindness from some of England's most distinguished men. He spoke of the friendly manner in which he was received by Dr. Voelcker of London, Professor Gilbert of Rothamsted, Mr. Frere of Cambridge, editor of the Journal of the Royal Agricultural Society, Professor Gamgee, the great Veterinarian, and many others. He was many times urged to write for the Journal of the Royal Agricultural Society, and had intended to do so, but the work of the Association and his letters home, left no time at his disposal in this way.

The lecture closed by reviewing the condition of the English markets; the effect of the cattle plague in Cheshire; the English as a cheese eating people, and other topics, in which was introduced much interesting and useful information, not hitherto presented by other writers and speakers. Mr. Willard traveled through England, Scotland, Ireland, France and Switzerland, but his lecture treated mostly of English agriculture and matters pertaining to the dairy husbandry of that country.

GNAWED TREES.—CURE.

The Maine Farmer supplies a plan for repairing the damage sometimes done to fruit trees by the gnawing of the bark by mice, rabbits and other animals. It is to cut a number of small twigs from the gnawed tree and insert them in the bark of the girdled boll, one end above and the other below the wound. These sprouts, properly fitted in, will serve as conductors of the sap of the tree. Over these bent sprouts or conductors bind a covering of elm bark or an old oil-cloth as a shade, and the marred portion will soon heal over and the growth continue without sensible interruption. Where young trees are mulched in the fall with straw, leaves or other material suitable for a mouse-nest, these pests are pretty sure to appropriate it for winter use, and, while harboring there, will gnaw the bark, sometimes completely girdling the trees, not unfrequently causing its destruction if a remedy is not timely applied.

HORTICULTURAL.

TREES ON THE PRAIRIES.

It seems that the people of the Prairie States, moved thereto by the frequent destructive blasts which sweep over that region of country, are agitating the question of tree planting, on an extensive scale, as a means of protection in winter and comfort in the summer. The plan is not only feasible but a good one, and, if acted on and carried out by patient, persistent and concentrated action, but a few years will have elapsed before the beneficial effects of the enterprise will be seen, felt and appreciated.

Waving fields of grain, stretching away in the distance to the verge of the horizon, impart a feeling of satisfaction to the owners, but how much more pleasant would these fields be were their monotony occasionally broken by the interposition of occasional trees and clustering groves? Springing up, here and there, over these illimitable savannahs, the solitary and clustering shades would impart a sense of comfort and repose which farm crops alone, however luxuriant, can never supply. It requires but system, concert of action, and a firm determination to succeed, to secure, within a few years, the change in prairie aspects here contemplated—a change important alike to the pecuniary interests and comfort of the people. By the interposition here proposed to the effects of the sweeping prairie gales, much of their power to harm will be destroyed, their winter rigor diminished, the value of the lands greatly augmented, while the comfort of the people and their farm stock will be much increased by the protecting and grateful shade supplied during the scorching days of the summer season.

ORCHARD GROUND.

"Old Firkin," in the North-Western Farmer, makes some good observations on the subject of orchard planting and the proper manner of cultivating the trees and ground. He says that many settlers in the West are from Pennsylvania, who follow out the practice of their fathers and build their dwellings near some spring or natural water course, and there also the orchard is planted, no matter how low or depressed the ground may be. The consequence is that the orchard is planted in soil too moist for the trees to grow and bear thriftily, with the superadded drawback of exposure to the early frosts of spring, by which the fruit is killed while in an embryo state. Elevated, rough or stony ground is much better for orchard planting than the richer loam of the more depressed sections of a farm. But, no matter where planted, the ground, around the bodies of the trees, should be kept open and free from sod, while that about the extremities of the roots should be properly mulched and manured to supply what the trees draw from the soil while growing and fruiting.

SHEEP GNAWING YOUNG TREES.

W. H. Norton, Springfield, N. Y., writes, "I set out over one hundred apple trees this fall on winter wheat stubble. Two years ago we plowed under a heavy crop of clover on this field. This last spring the clover came up very thick; now, wishing to pasture it, will you tell me how I can best protect these young trees from being gnawed by sheep? Will coal tar prevent it, and if so, is there anything in coal tar injurious to the growth or life of a tree?"

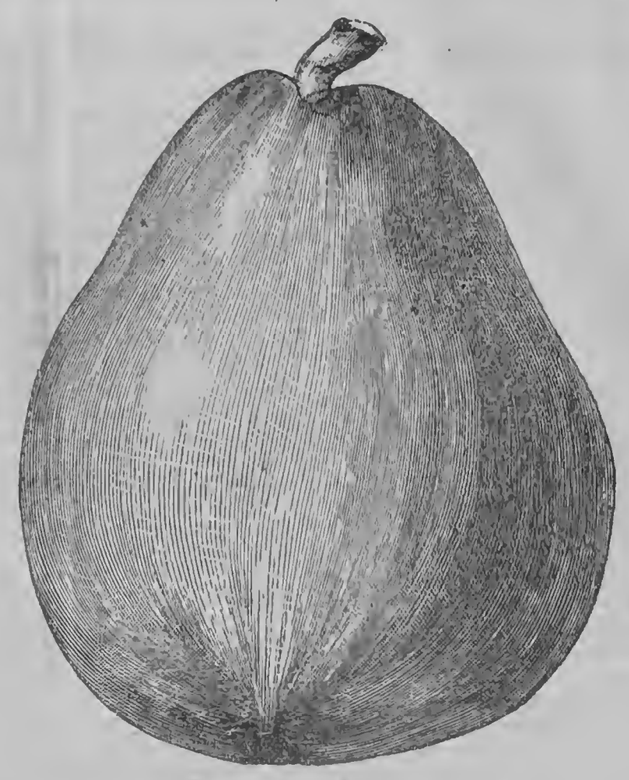
Coal tar has been recommended and used successfully for the purpose of preventing sheep from gnawing trees. We have also known cases in which hogs rooted up the ground and gnawed the roots of young apple trees; coal tar applied around the collar of the tree stopped their depredations. Care must be taken not to use it in excessive quantities; a slight application of it is sufficient. Young trees may, also, be encased in rolls of basswood bark. It would not be very costly to enclose each tree with a light paling, or box of wood.

TREES STARVED TO DEATH.

The N. E. Farmer relates a conversation which took place between two farmers on the subject of deterioration in the apple orchards. The conclusion arrived at was that orchards, as a general thing, were literally *starved* to death. This assumption may be rather sweeping, but it is certainly worthy of consideration. Orchards left year after year with the turf pressed compactly about the roots and lower section of the bodies of the trees, with no loosening of the soil, nor any application of manure, can hardly be expected to produce much fruit; nor do they. The soil needs stirring, wants the aid of invigorating fertilizers and such pruning care as shall divest the trees of superabundant wood. At all events orchardists should avoid the just censure of starving their trees to death, as it is asserted many of them have done and are doing year after year.

GRAFTING THE PEAR ON THE APPLE.

The Attica Atlas, alluding to this subject, says:—"About a year since, one of our dogmatic agricultural and horticultural editors—himself engaged in propagating fruit trees and vines—with assurance worthy of a professor in mathematics, answered a correspondent's inquiry thus: 'You cannot graft the pear on the apple and *produce fruit*.'" The editor of the Atlas continues:—"In 1866, on our grounds, some forty dwarf pear trees put out blossoms—and not one of the forty ripened a decent pear. We had four pear grafts growing on the apple, and they *all* produced perfect fruit and a liberal crop." The practice of grafting the pear on the apple for general culture is not recommended for the reason that the wood does not unite sufficiently well to withstand the pressure of the strong winds which frequently prevail.



BEURRE D'ANJOU PEAR.

This pear is of French origin, and is one of the most promising of the newer varieties. It succeeds well as a standard or dwarf, bears moderately,—rarely overloading itself,—and the fruit, though not very showy, is of very fine quality. At the meeting of the Western New York Fruit Growers' Association last winter, the Beurre d' Anjou received very high commendation. Mr. Wilder of Boston, declared if he could have only one variety that should be the one. Its period of ripening is about the middle of autumn, and it is properly an autumn pear; but it keeps readily far into the winter, and may be substituted for the strictly winter pears, which are much more difficult to grow and mature properly. The fruit is rather large, obovate, and well rounded. Skin greenish, slightly russeted, sometimes having a reddish-brown shade where exposed to the sun. The flesh is slightly granular, buttery and melting. We think well of this pear and believe cultivators will not regret planting it largely.

FROSTS ON GRAPE LANDS.—WATER.

In the Rural, dated Dec. 15th, an article appeared headed "Area of Grape Lands and Influence of Water," the professed object of the writer of which is to show the extent and location of lands best adapted to the culture of the vine in this country, and that those near to fresh, deep, cold water are the only ones exempt from untimely frosts, &c. The writer brings forth a theory to account for a few facts alleged to have been observed at Fredonia, Chatauqua Co., N. Y., some five miles from the southeast corner of Lake Erie, and discoveries made some time last fall in Pleasant Valley; and finally concludes that if this theory is correct, it must naturally follow that the *larger* and *deeper* the lake the more "*perfect* and *uniform*" must be its protecting influence, and while small lakes may answer for "common frosts," this *deep* one, Lake Erie, only is safe for security against "unusual freezes, as seen by the destruction of the grape crop along the shores of Crooked and Seneca Lakes." There are several statements in this article that are entirely true, as all will admit—namely, the influence of lakes in softening and tempering the atmosphere around them; the limited number of acres as compared with the whole area of our country where grape culture can be successful, &c. But in his apparent effort to establish his theory, he has been unfortunate in falling into errors that are too patent to pass unnoticed.

The *depth* of the water of Lake Erie has never before been put forward as a cause why grape culture should succeed along its borders, or furnish immunity from frosts. Great *depth* has never been awarded to it. It is known to freeze *early* in winter and to remain frozen until *late* in spring, in comparison with those of the chain to which it belongs. It never escapes the icy embrace of our mildest winters. While on the other hand, those small lakes, sufficient only to protect from "common frosts," but not from "unusual freezes," the vines upon their shores—Crooked and Seneca—have a widely different reputation. Crooked lake seldom freezes at its head in our coldest winters, and frequently remains open its entire length, and Seneca Lake never, in the memory of man, has been sufficiently obstructed by ice to interfere with steamboat navigation from head to foot. This is a distinguishing peculiarity of it. Now, if they seldom or never freeze, and Lake Erie is remarkable for its comparative *shallow* waters and uniform freezing in winter and remaining so, what does it argue? More uniform and perfect protection to vines upon the hills that surround it? But the *innocent* fault of his illustration lies in citing the *destruction* of the *grape crop* along these small lakes, on the nights of the 5th and 6th of October last, when the "*big frost*" occurred near Fredonia, which left "*nearly* unharmed" the vines there, except in the "lowest places near the lakes,"—while at the head of Crooked Lake, on the night of the 6th at 6 P. M. the thermometer showed 50° above zero, and at 6 the next morning 42°, and, of course, no frost. The nights of the 4th and 5th were the occasions when severe frosts did occur, but insufficient for the destruction of the grape crop. Far from it. Nor did it show a partiality for "low lands" near the shore. Some vineyards on high land were nearly unharmed, and many close down to the water's edge, on both shores, were *entirely* untouched. If any curiosity should arise, to give interest to inquiry, as to the truthfulness of these statements, it can be satisfied by calling upon Capt's Burns and Webster, Geo. W. McDowell, I. L. Gillet, A. Eggleston and others of Crooked Lake, and L. Larrowe, Mrs. Hildreth, H. Reynolds and others of Seneca Lake.

It is not denied that many crops of grapes were injured, reducing the price however only to the figure expected to be realized for grapes when their cultivation was first undertaken as a business. More than ten years successful cultivation of the Catawba and other varieties on the hills surrounding these lakes, without a frost to overtake, or rot or mildew to intercept their healthful maturity, has given sufficient confidence to grape growers in this region, and some others, to induce them to invest at least 300,000 dollars in the manufacture of brandy, and still and sparkling wines. And an advancement and success has been achieved in the business surpassed by few if any locations in the whole length and breadth of our widely extended country.

The partial failure of our crop will prove but slight discouragement. As an item of encouragement to all who may be interested in growing grapes, or making wine, an abstract of the Wine Chronicle of Germany, taken from the Records of the Agricultural Society in Wertemberg, is here added, which shows that for 432 years, from 1420 up to 1852, there were

Those eminently distinguished for good wine only.	11
Very good years for good wine	28
Pretty good ones	118
Middle quality wines	76
Inferior	199
Total	432

Concerning productiveness, there have been

Years of ample yield	114
" " Middling	18
" " Poorer	99
" " Failures, or yields not paying expenses	201
Total years	432

While Germany, as the record shows, has her vine crop killed or seriously injured, on an average, three years out of four, we have reason to congratulate ourselves on our success.

Urbana, N. Y., Jan'y, 1867. E. Van Keuren.

Horticultural Notes and Queries.

Grapes and Wine in New Mexico.—Maj. Emory, in his report to the Department at Washington, speaks in glowing terms of the wine producing capacity of the country in the neighborhood of El Paso, one of the garden spots of the western continent. He thinks the climate and soil the best adapted to the culture of the grape of any in the world—being less exposed to injury from mildew and frost than in any other section. It is essentially a pastoral region, but the grape is the leading product and of a quality and flavor surpassed by none. The soil, composed of the disintegrated matter of the older rocks and volcanic ashes, is light, porous and rich. The frosts, in winter, are just sufficiently severe to destroy the insects without injuring the plant, and the rain seldom falls in the season when the plant is flowering, or when the fruit is coming to maturity and liable to rot from exposure by humidity. As a consequence of this condition of things, the fruit, when ripe, has a thin skin, scarcely any pulp, and is devoid of the musky taste usual with American grapes.

The Scuppernong Grape.—A writer in the Southern Cultivator advises the farmers of the State of Georgia to cultivate largely the Scuppernong grape. He estimates that one hundred vines, planted on three acres, will yield 5,250 gallons of wine annually, at the end of ten years. At 40 cents per gallon, the crop would amount to $2,100.00—a greater profit, he argues, than has ever been made annually by cultivating 100 acres of cotton. A yield of 1,750 gallons of wine per acre! May the common sense of the farmers of Georgia, or any other State, deliver them from operations based on such wild-goose estimates.

Massachusetts Horticultural Society.—At a recent meeting of this Society the retiring President, C. M. Hovey, made a brief address, when his successor, J. F. C Hyde, delivered his inaugural. Both gentlemen recommended the policy of increasing the amount of premiums on Horticultural productions as a means of encouraging high cultivation. The income of the Society for last year was over $20,000, and its property is valued at over $125,000 above its indebtedness.

Wisconsin State Horticultural Society.—The third annual meeting of this Society will be held at Madison on Tuesday, Wednesday, and Thursday, the 22d, 23d, and 24th of January, 1867. An election of officers will take place, after which horticultural discussions will be in order. A winter exhibition of fruits will be made, and the aid of fruit growers, to make it attractive, is invited. Visitors from abroad will be cordially welcomed by the Society.

Covering Dwarf Pear Trees.—(W. W. S.) This correspondent proposes to cover, and thus protect, some small dwarf pear trees with old salt barrels, and he queries if there would be any danger of smothering them. Not in the least. The barrels may remain on until all danger from cold weather is past in the spring. This is a very good method of protecting *small* dwarf trees, but not practicable on an extended scale.

Angers Quince for Hedges.—The Horticulturist recommends the trial of the Angers Quince for hedges. It is vigorous in growth, has short, stout thorns, and the more it is clipped the more vigorous and beautiful it becomes. The fruit is similar to the orange quince, and the clipped plants bear abundantly. The experiment is worth trying in soil of a heavy clay nature.

Iowa Apples.—Mr. Burr Andrews showed the editor of the Davenport Democrat a basket containing 100 apples which weighed 125 pounds, or an average of 20 ounces to the apple. He offers to wager $100 that this cannot be beat by any orchard in the U. S.

Domestic Economy.

WASHING FLUID.

From boyhood I have sympathized with delicate women who weekly labor at the wash-tub, and have mourned that while genius has supplied men with the mower, reaper, thrasher and horse-rake, so little has been done to alleviate the most formidable toil of the household—albeit the wringer is a good thing. It is, therefore, with pleasure that I act as the amanuensis of an experienced, skillful and very reliable housekeeper, who has for years constantly used a washing fluid, which she avers has the following advantages:—It is not unhealthy to the operator; it does not injure the clothes, but on the contrary saves them from being rubbed to pieces; it saves much soap and much labor; less fuel and time are required in boiling; and the clothes when washed are of a snowy whiteness, whiter than by any ordinary process of washing.

The recipe and process are as follows:—Take of sal soda 1 lb.; unslaked lime ½ lb.; rain water 5 quarts. Boil a short time, stirring occasionally; then let it settle and pour off—by one or more decantations—the clear fluid into a stone jug and cork for use. Soak your white clothes over night in simple water; in the morning wring out and soap wristbands, collars and dirty and stained places; have your boiler half filled with water, and when at scalding heat put in one common teacup full of the fluid, stir, and put in your clothes without rubbing, and boil for half an hour; take them out and put them into warm water, then rub lightly through one suds only, rinsing well in clear rain-water, and again in blueing-water, as usual, and all is complete. For each additional boiler full of clothes add ½ a cup of the fluid only, boiling the whole washing in the same water. Replenish if necessary from the wash-tub. The boiling suds may be used to wash colored clothes, as the fluid will not injure their color—colored flannel and stockings the same—but not white flannel. Instead of soaking over night, the clothes may as well be soaked in warm suds while breakfast is getting ready, if more convenient to the operator.

Two things my informant suggests:—The rinsing water should be warm, so as not to chill the operator; and clothes rinsed in rain-water, on subsequent occasions wash easier than if they were rinsed in hard water; probably because a mineral deposit from the hard water dries in them.

My wife has tried the above receipe and process, for a few weeks, and highly approves of it.

Peter Hathaway.

Millan, Erie Co., Ohio, 1867.

Fine French Pudding.—Beat light the yolks of 4 eggs—then beat in 4 tablespoons sugar—then one tablespoon flour and a little salt. Pour on this one quart of boiling milk—flavor it and let it come to boiling heat, stirring briskly for a few minutes. Pour into a dish for the table. Whip the whites to a froth with 4 tablespoons powdered sugar and spread on the top. Set in the oven to brown.—M. R.

Inquiry.—Can any of your readers inform me, through your valuable paper, whether there is any preparation which can be applied to a white pine or spruce kitchen floor, which will penetrate the wood and color it, and not clean off or wear off as does paint on the surface? And could staining be followed by a coat of linseed oil to give hardness?—E. Rushmore, *North Hempstead, L. I.*

Recipe for Fried Cakes.—2 cups of sugar; 2 eggs,—2 cups of sour milk, cup of sour cream—flour and seasoning to taste.

Molasses Cake.—One cup of molasses, one cup of hot water, in which dissolve a teaspoonfull of soda; four tablespoons of melted butter and lard, stir them, with seasoning to taste.—Mrs. E. G. S., Jan., 1867.

Biscuit a Luxury for All.—The popular notion that people suffering from dyspepsia or predisposed to that disease, should not eat biscuit, has grown out of the fact that the common Saleratus has been used in the making of such biscuit. And it was right; the article is mischievous. But light and healthy biscuit, such as dyspeptic people may eat with impunity and with positive benefit, are made from D. B. De Land & Co.'s *Best Chemical Saleratus.* Physicians admit this.

Ladies' Department.

A WIFE WANTED.

I want a wife
To cheer my life;
I care not what she lacks of beauty,
So I but find
That she is kind,
And knows and *practices* her duty.

I want a wife
Averse to strife—
A gentle, unaffected creature;
One who can pass
A looking-glass,
Nor stop to glance at every feature.

I want a wife
With vigor rife,
Whose nerves are never in a flutter;
Who will not roam,
But stay at home,
And brew and bake, and make the butter.

I want a wife
Who through her life
Was never known to be a flirt;
Who'll bring to me
A recipe
To keep the buttons on a shirt.

If such a one
Dwells 'neath the sun,
And don't mind leaving friends behind her,
With the author of this
She'll find true bliss
By informing him where he may find her.

Written for Moore's Rural New-Yorker.

HOME — MOTHER — HEAVEN.

HOME.

THE three words, HOME, MOTHER, HEAVEN, are the sweetest in our language. The heart has memories that can never die. It makes no difference how we may be tossed about upon life's turbid and tempestuous stream, these memories still live with us. They are memories of home—early home! Dear, hallowed spot! What magic in the sound—*Home!* It has attractions for every true heart—is the center of every social tie! And as our mind wanders back far over the misty past, how many tender reminiscences of that early home come crowding upon us! There is the old tree, under which the light-hearted school-boy swung in many a summer day; there the home in which he knew a parent's love and a parent's protection; and hard by is the church, and even the old school-house, with its dark, old walls, which in former days impressed him with such awe—associated as they were with thoughts of ferule and tasks—comes back to bring pleasant remembrances of the "far long ago." Its dear old fields, its grand and majestic forests, its rivulets winding here and there, all possess a charm that will never decay.

Home! the dearest spot on earth, around which my young affections cling into the sweetest, holiest, tie of love—the place where are cradled the scenes of my childhood, my joys and sorrows, my hopes and fears. 'Tis the place where memory loves to dwell and linger upon its well-remembered scenes, its bright, gladsome days that have passed away forever. How soothing thy recollections; how sweet thy associations; how many pleasing as well as saddening memories rush before my vision! The favorite woods and fountains, the rocks and rivulets, the mossy dells and shady valleys,—Oh! how much like a dream they seem!

MOTHER.

A Mother's love!—How thrilling the sound! The angel spirit that watched over our infant years and cheered us with her smile—how faithfully does memory cling to the fast-fading mementoes of the sweet counsels of a mother's tongue. And oh, how instinctively do we hang over the scenes of our boyhood, brightened by the recollections of waking eyes that never closed while a single wave of misfortune or danger sighed around her child! The dearest, the truest and the best friend allotted us here below! Ah! who can write of a mother's love—ever true and constant, through change, sickness and death—ever watchful of thy interest, from the cradle to the grave? Ah! who can tell its worth? Poets have sung of its beauty ever since the morn of creation, and 'tis a theme that is still fresh—a subject that can never be exhausted. The rough winds of adversity may darken its pathway, yet through all changes, the light of love remains the same. Oh! none can rightly prize it. Thrice precious and holy is thy memory, Mother!—sacred name!—blessed be thy name forever.

HEAVEN.

"The great bourne whence no traveler has yet returned." And there is a second and final home; that home is heaven—the home above, where we expect to meet the whole family of man. But who shall paint its landscapes, describe its glories, picture its inhabitants, or point out the locality? Prophets, poets and evangelists have done much; but not enough to satisfy the cravings of curiosity. Like the holy of holies, into which none but the high priest entered, it is mostly veiled from the eyes of others. Change, sorrows and trials attend our earthly pilgrimage, yet through all this there is a *hope*, a beaming *light*, that when all is over and our forms are shrouded for the tomb, our spirits will rise on buoyant wings to the great throne where our Father reigns, and all is love, peace and joy, and anthems are swelling through the lofty domes, and gushing forth in glad, sweet echoes. "Eye hath not seen it; ear hath not heard its deep songs of joy." Let our Father's promise be a beacon through all thy trials, and, through chance and change, still hope for the perfect rest that is promised when thy work is done.

FOUND—TREASURES.

FOUND on the shore of Time a pebble rough and unshapely; but do not despise it for that. Diamonds are not brilliant when first found, and this may prove to be of more worth than you think. It may be some lone one wandering on those shores, that no hand but yours could arrest and cause them to come forth in their true light. Remember that

"Intelligence and courtesy not always are combined;
Often in a wooden house a golden room we find."

It is not strange that we forget this sometimes, surrounded by all the glitter of this life. Some are even so blinded by it that they cannot or will not see the wooden houses; they forget that even in them there may be golden rooms; that intelligence does not always choose the most attractive exterior; that GOD often selects the wooden houses to receive his choicest gifts. Nothing blinds His eyes to true merit. Within a rude casket often the brightest gems of truth are found; the strongest mind, from which is emitted the brightest example, the purest influence; teaching us that if we would know those with whom we associate, if we would learn to read and understand human nature, we must go within the wooden houses, and see if there are not golden rooms inside, if the outside is not deceptive, if it does not contain treasures we never thought of finding under such an exterior.

There are people, too, who may be well represented by stone houses, cold, dark, and gloomy to look upon; but even within these walls there may be treasures worth searching for, in some of the dark and hidden recesses. We often find in a casket through which time has played hide-and-seek so long that it is badly shattered, a mind only grown stronger by the time which has swept over it—a mind filled with precious truths, with holy aspirations for right, which it has been gathering all those years. As the body gradually goes down to the grave the soul gains the ascendancy, and shines forth in its own pure light, with something of the glory which will be attached to it when it escapes this mortal body and soars above on angel wings. Found by the river of life an angel of light, watching her realm with untiring zeal. Soon a tiny bark is seen in the distance, floating toward her. Eagerly she watches its approach, and the nearer it comes the more delighted does she seem; for in the inmate of that tiny messenger she recognizes one coming to join with her in praises forever. She welcomes her gladly, who is lost to us on this side the river, but on the shore clasps hands with the angel of light, herself transformed into a beautiful angel. Found by the beautiful angel a harp, and a crown, and a robe prepared for her by the King of that beautiful realm.

Thus our treasures are borne from us, one by one, over the dark river, never to return; for the bark which bears them away never returns them. It is borne back by an unknown hand, only to receive the waiting ones on this side the river. We are all of us among the waiting ones. We know not which one of us may first hear the words from the dark messenger, "I am come to bear thee over the river; tarry not." Then when we reach the further shore, Shall we find a harp, and a crown, and a robe prepared for us? Shall we be found, and crowned by the angel of light?

SARA MILLER.

Lima, N. Y.

DRESS OF THE EMPRESS OF THE FRENCH.

THE Empress continues to wear brocaded dresses, and consequently to patronize Lyons manufactures to the utmost of her power. The Princess Metternich follows the Imperial example in this respect. A few days ago the latter lady wore at dinner a white Pompadour dress, with variegated roses, and small blue leaves brocaded on it. The skirt opened at front breadth and displayed a striped blue and white satin petticoat. The trimmings consisted of white lace and rutchings of ribbon; and the small square Louis XV bodice was decorated with tiny bouquets of roses. The head dress consisted of a rose and some genuine Louis XV jewels. The Duchess D'Elchingen wore, at the same dinner, a turquoise blue silk dress, ornamented with cross-cut bands of blue satin, which were arranged as a ladder at the side of the skirt, and were covered with a most brilliant gimp, made of white satin bugles. The lowest cross-band was fastened to a flounce of *point d'Angleterre*, sown on without fullness. The bodice was trimmed with similar lace, and had a blue satin bow with bars of white bugles on the left shoulder. The young Duchess wore for head dress a wreath of olive leaves in blue velvet, the front being represented with pearls. The Empress wore the following evening a brocaded mauve and white dress, the skirt of which was trimmed above the hem with a cross-cut band of mauve satin, edged with white fringe. The Empress has perfect taste in all matters relating to her toilet, and very rarely wears a dress exactly as it is sent home. Her maid has frequently to unpick all the trimmings and to re-arrange them under the direction of her Imperial mistress, who certainly does not under-rate the importance of well got up trimmings.—*Paris Correspondent of the Queen.*

BEAUTIFUL SENTIMENT.—When the Hindoo priest is about to baptize an infant, he utters the following beautiful sentiment:—"Little babe, thou enterest the world weeping, while all around smile; contrive so to live, that you may depart in smiles while all around you weep."

PRIDE is an ingredient that is never found in exalted human nature. It is mixed in the composition of the weak-minded. Those who have a mind to employ, and a heart to improve, have no inclination to be proud.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

"BEAUTIFUL SNOW."

BEAUTIFUL snow-flakes, sifting down softly,
Leaving their home in the storm-driven cloud,—
Drifting along into glittering wavelets,
Clothing the earth in a pure folded shroud.

Down deep is buried, beneath its cold bosom,
All the green leaves and the sweet-scented flowers;
Gone is wild-bird—hushed is the singing—
Silent the musical chime of the showers.

Patient, O, Earth, for the sun is returning,
Calling thee forth, thou shalt lay off thy shroud,
Then, wreathing thy head with the spring flowers of beauty,
With the songs of the birds thou shalt praise GOD aloud.

Brooks' Grove, N. Y.

ANOTHER YEAR.

ANOTHER year, another year,
Oh, who shall see another year?
Shalt thou, old man of hoary head,
Of eyesight dim, and feeble tread?
Expect it not! time, pain and grief,
Have made thee like the autumn leaf,
Ready, by blast or self-decay,
From its slight hold to drop away—
And some sad morn may gild thy bier
Long, *long before* another year!

Another year, another year,
Oh, who shall see another year?
—Shall you, the young? or you, the fair?
Ah! the presumptuous thought forbear!
Within this churchyard's peaceful bounds,
Come, pause and ponder o'er the mounds!
Here beauty sleeps—that verdant length
Of grave contains what once was strength;
The child—the boy—the man are here;
You may not see another year!

Another year, another year,
Oh, who shall see another year?
—Shall I, whose burning thirst of fame
No earthly power can quench or tame?
Alas! that burning thirst may soon
Be o'er, and all beneath the moon—
All my fine visions, fancy-wrought,
And all this vortex whirl of thought,
Forever cease and disappear,
Ere dawns on earth another year!

Written for Moore's Rural New-Yorker.

WE LIVE NOT IN THE PRESENT ONLY.

THE little child when reason first dawns upon his mind, the youth, the man of middle life, and the old man whose head is whitened with age—are all dreamers. Whatever may be the occupation—whether it develops sinews of iron, or power of mind,—there are times when we are glad to forget present cares and duties in the contemplation of vivid pictures that imagination paints of other scenes. We think of the past and dream of the future. We are influenced by memories of the one, and anticipations of the other.

Our own actions, both as individuals and as nations, are greatly modified by what has been developed in preceding ages. We derive instructions from their teachings, and are reaping practical benefits from their scientific discoveries. Their principles of morality and their immoralities have an influence, to a certain extent, in forming our own characters. Their orators, though mute, still impress us with their eloquence; we are inspired with delightful emotions by the imaginations of their poets; we gather wisdom from the philosophical teachings of their wise men; we are instructed by their example, and profited by their investigations. They have passed away, but their works remain; the truths developed by them can never die. A thinking mind will never cease to exert its influence, though the lapse of years may destroy its material tenement. The good and truly great rise up before us, and we delight to cherish their memories. Perhaps our thoughts may rest on one whose name we cannot honor; we reflect, for a moment, on his unhappy career, drop a tear over his memory, and hasten on to other scenes.

The histories of nations are revealed to us. We behold their rise, progress and fall, and speculate on the causes of their ruin. We trace out the systems of government of former nations, and compare them with our own. Well might ours be the best, if we have profited by the examples of the past; for we have seen the practical application of other systems, and wherein they have been successful, and traced the causes of their failure.

Scene after scene of the past is presented to view, until we are satiated with their contemplation, and the imagination, longing for a wider field, turns toward the future. And the future is with us in the present. It may differ widely from what the real future shall be; we may build air castles without foundation; we may anticipate and never realize; yet, this hope of what the future may be, inspires us with courage to make greater effort for its attainment.

Greene, N. Y., 1867. L. D. B.

BENEVOLENCE.—The benevolent have the advantage of the Envious, even in this present life; for the Envious is tormented not only by all the ill that befalls himself, but by all the good that happens to another; whereas, the benevolent man is the better prepared to bear his own calamities unruffled, from the complacency and serenity he has secured, from contemplating the prosperity of all around him.—*Colton.*

ENVY.—If Envy, like Anger, did not burn itself in its own fire, and consume and destroy those persons it possesses, before it can destroy those it wishes worst to, it would set the whole world on fire, and leave the most excellent persons the most miserable.—*Lord Clarendon.*

HUMORS OF THE SCOTCH DIALECT.

THE Scottish dialect, as we have become acquainted with it from song, poetry and narrative, is not only coarse and ridiculous, but possesses, I think, more beauty than the correctest English. This is not only because of its novelty to us, but because it is softened and toned down so that even in its sound it is pastoral, endearing and home-like. The consonats are left off wherever it is possible, and the soft vowels are left to fill the measure of the word. It is thus rendered peculiarly a language of love and endearment. What may a handsome girl, or a beautiful maiden, or a lovely female (though it must be admitted that this last miserable coinage has no right in the language,) be, compared with a "bonnie lassie?" There is nothing in any tongue simpler and sweeter than these two words. The termination "ie" has come to be the distinguishing mark of all names of endearment, and the Scottish dialect is full of it. The poet is a "bardie," a clever fellow is a "birkie," a child is a "bairnie," a brother is a "billie," a bird is a "birdie," and a dog is a "collie." "Cannie" is the word for gentle, "gentie" for elegantly formed, "sonsie" for sweet and engaging, "walie" for simple or jolly, and "cantie" for cheerful, as when the song mentions as the dearest object of a man's aspirations—

"A cosie hoose and a cantie wife."

Even the terms of reproach are pitiful rather than harsh; for a shriveled dwarf is a "clætie," a sniveler is a "bluatie," a strapping young fellow or girl is a "swankie," a thoughtless fellow is a "taupie," the mischievous spirits that haunt the fords and ferries are "kelpies," and Old Nick himself is only "Clootie." By the softening down of words, we have "a" for all, "æ" for one, "awa" for away, "airn" for iron, "amaist" for almost, "braw" for fine, "ba" for ball, "ca" for call, "e'e" for eye, "fa" for fall, "fae" for foe, "frae" for from, "fou" for full or drunk, "mae" for more, "mon" for mouth, "onie" for shivering, "eerie" for frightened, "i" for in, "pou" for pull, "pow" for head, "o'" for of, "wonner" for wonder, etc. The following dialogue, supposed to take place between a customer and a shopman, in reference to a plaid hanging at the shop door, is quite amusing:

Customer (inquiring the material,) Oo? (wool.)
Shopman—Ay, oo. (Yes, of wool.)
Customer—A' oo? (All wool?)
Shopman—Ay, a' oo. (Yes, all wool.)
Customer—A' ae oo? (All same wool?)
Shopman—Ay, a' ae oo. (Yes, all same wool.)

HONORABLE.

WHEN Mr. Emerson met Walter Savage Landor at Florence, in 1833, the Englishman designated as three of the greatest men, Washington, Phocion and Timoleon, "and did even omit to remark," says Emerson, "the similar termination of their names." The greatest *on* we can think of just now is the Greenville sator, Johnson. But Jefferson, Madison, Jackson and Harrison are *on* the queer Presidential list. Bonaparte and Wellesley had to get *on* it by adopting Napoleon and Wellington. Lincoln came within an "l" of it, which is as good as an inch. Alexander Hamilton and DeWitt Clinton were undoubtedly great men for this reason. Robert Fulton, Thos. H. Benton, the Masons, Camerons, Livingstons, Middletons, Thompsons and other sons were early started *on* the road to renown. We close our *on dit* by stating that Emmerson wrote the following immediately after parting company with Landor:

Earth proudly wears the Partheon
As the best gem upon her zone.

GETTING UP AN AUDIENCE.—The modern custom of high-sounding announcements of distinguished ministers, is well taken off by a letter purporting to have been discovered by a Syrian scholar, and bearing date A. D., 59. It is translated as follows:—"The news of the arrival of Paul, as you may suppose, spread rapidly among the brethren. Indeed, a tablet was hastily prepared, and privately circulated, for fear of our enemies, containing the following brief announcement:—'Paul, the great preacher, has landed at Miletus. He will preach by the seaside on the first day of the week. His subject is not announced; but from his well-known talents a rare intellectual repast may be expected. Let the brethren rally, that he may have an audience worthy of his distinguished reputation.'"

WATCH AND WAIT.—We have just stepped upon the threshold of another year. Eighteen hundred and sixty-six, with all its joys and sorrows, with all its light and shade, has passed away, and 1867, with we know not what, whether joy or grief, has entered. Time can only tell what is in store for us. We cannot look into the mystic future and read our destinies, but have only to watch and wait,—to think of the past, live in the present, and hope for a joyous future.

GENIUS AND CLEVERNESS.—Whatever people may say, genius is gentle and full of tenderness. It is cleverness which belongs, perhaps, to the children of this world. Some very dull and sad people have genius, though the world may not count it as such: a genius for love, or for patience, or for prayer, may be. We know the divine spark is here and there in this world: who shall say under what manifestation or humble disguise?—*Cornhill Magazine for November.*

HOW TO CHOOSE A WIFE.—Dr. Franklin recommends a young man in the choice of a wife, to select her from a bunch, giving as his reason that, when there are many daughters they improve each other, and from emulation acquire more accomplishments and know more, and do more than a single child spoiled by paternal fondness. This is a comfort to people blessed with large families.

Sabbath Reading.

CHANGE.

WE miss the dear familiar faces
That smiled on ours,
And yearningly we seek for traces
Of things, that memory interlaces
With happy hours.

Change, change, with a swift pen is writing
For all below
A testament of good, or blighting
The happiness we are inditing,
With some deep woe.

How many hearts once overflowing
With guileless joy,
With sordid hope of gain are growing
Old, and cold, for love, bestowing
But base alloy.

To-day for one is rapturous pealing
A marriage chime,
To-morrow round his couch are kneeling
Sorrowing ones, for death is sealing
His gift of time.

Capricious master, touch us kindly
While here we stay,
Though walk we wise or walk we blindly,
Thy rule we know howe'er unkindly
Must we obey.

There is a land to which we're tending
If faithful here,
Where glories never, never ending,
With peace, and love, and joy are blending
The saint to cheer.

Holland Patent, N. Y., 1867.

Written for Moore's Rural New-Yorker.

OUR DEPARTED ONES.

'TWAS night, and as I gazed upon the starry spheres seen through my open casement, methought my soul could almost discern the music of their long, triumphal march:—so I watched them as they passed slowly out of my sight, and it seemed to me that this great array of brightness was only a symbol of ourselves as we all press onward slowly, but surely, drawing nearer and nearer to the horizon of life. Some great minds, like the more distant of these gleaming worlds, give forth less brilliant rays than others, but all are on their way to that goal which lies beyond the dark river whose flashing waves roll sullenly onward to the unknown sea.

O, ye who mourn over the remains of some loved one, weep no longer; for, even as the stars go down but to rise upon another shore, so the spirits of our departed ones will live again. Although we may not see them until the morning dawns, they are there, chanting their allelujahs before the great white throne. Grieve not, for we shall again take them to our hearts and feel that we no more shall part, but, go, clasped hand-in-hand, where love shall be unending. Let us turn our thoughts heavenward and thank GOD that there is a future, and that in that "City of Light" sorrow can never enter. Let our lives and actions so be that when weighed in the balance we may not be found wanting, and when the present shall have passed away, and the great hereafter shall have begun, we may join those dear ones above. Each earthly link that is severed by the hand of Death is but another tie that binds us to them.

"A few more suns shall thy life-barque
Stem bravely the wind and the tide;
Then thy spirit shall join the loved ones
Which wait on the other side."

C. E. M.

WOMAN IN THE BIBLE.

THE Bible is the book of women. It is the only book which has come down from the misty ages of antiquity that presents us with woman as the equal and meet for man. From Eve, the mother of all living, to Mary, the mother of Jesus, woman always occupies a conspicuous place in the grand drama of the world's history. Here she is seen as wife and mother, filling her mission with shrinking modesty and gentle firmness. Miriam and Deborah, Rebecca and Ruth, Sarah and Esther, shine forth in characters at once original, unique, consistent and feminine. On a still brighter canvas are drawn the characters of the Marthas, Marys and Lydias of the New Testament. Here they are, as they ought to be, and here they will remain forever. Not forward, not departing from their sphere, not immodest, not masculine. They shine, not like the sun, but with a radiance as mild and gentle as the light of the evening star.

LOVE OF BEAUTY.—One element of religion is a love of beauty. Religion is something more than taste, refinement, or any polished propriety of a cultured class; but is inseparably connected with taste, propriety and refinement. The religious act is the beautiful act, the religious spirit is the beautiful spirit, the religious life is the beautiful life, and the religious character is the beautiful character; and God, with whom all religion begins and ends, is the Infinitely Beautiful One, and we do not know him as he is, and love him as we ought, until we see him as the perfection of beauty—the One altogether lovely.

CONFLICT OF FAITH.—"If Satan and I ever did strive for any word of God in all my life, it was for this good word of Christ:—'Him that cometh unto me I will in no wise cast out'; he at one end and I at the other. O what work we made. It was for this that we did so tug and strive; he pulled and pulled; but, God be praised, I overcame him and got sweetness from it."—*Bunyan.*

THE irresolute seize with eagerness all overtures which show them two roads, and which, in consequence, do not press them to choose.

The Reviewer.

THE HISTORY OF A MOUTHFUL OF BREAD: And its Effect on the Organization of Men and Animals. By JEAN MACE. Translated from the French, by Mrs. ALFRED GUTTY. [8vo.—pp. 399.] New York: American News Company.

"THE HISTORY of a Mouthful of Bread," was designed, by the author, for the especial instruction of the young in the science of animal physiology—a theme which has been generally supposed to be incapable of comprehension, except by adults, and even by these only to a very limited extent. But this conclusion is shown to be unfounded by the clearness and simplicity with which it is here presented, and the charming manner in which information on the structure and growth of animal bodies, is presented. The function of each portion of the body is made apparent, commencing with the hand and ending with the composition of the blood. In this relation "a mouthful of bread" will be found to have performed a vital part, fully justifying its use as a title to the volume itself. For sale by DEWEY.

MADONA MARY. A Novel. By Mrs. OLIPHANT. New York; Harper & Brothers.

AN unambitious, plain and well-told story. The leading character approaches as near the perfection of womanhood as could be expected of one of a lapsed race. Married young, without the usual formality of preliminary publication of a matrimonial purpose, she departed with her husband for India, where, after children were born, he took the notion to be married over again to make all sure in case of his sudden demise. He went forth to battle, and his body came back in a shroud. His second marriage gave rise to scandal and much annyance to Madona Mary, but she met all bravely, and by the fortunate discovery of a witness of the first marriage saved a fine property to her eldest son, whose right of inheritance was contested by a younger one on the grounds of illegitimacy implied in the second marriage. Sold by STEELE & AVERY.

THE MERCHANT OF BERLIN. An Historical Novel. By L. MULBACH. [12mo.—pp. 394.] New York: D. Appleton & Co.—1867.

THIS author has furnished the reading public, thro' the medium of what are presumed to be competent translations, several interesting volumes kindred in character to the present one. It relates to Prussian affairs during the period of the seven years' war, and portrays, in pleasing style, the sayings and doings of an eminent merchant of that period. It serves to show how great some can be when overwhelmed by adversity, and how little the reputedly great sometimes are when saved from danger and loss by the efforts and sacrifices of others upon whom no claims rested other than those imposed by a common brotherhood. The volume may be read with profit by all. For sale by ADAMS & ELLIS.

THE CHILDREN'S ALBUM OF PICTURES AND STORIES. Written and compiled by ASA BULLARD. Springfield, and Rochester, N. Y.: W. J. Holland & Co.—1867.

IN a modest preface the author and compiler of this volume says:—"There is scarcely an object more acceptable to children than an illustrated story-book. Even the 'little ones,' before they know a letter, can *read* the pictures; and they will be entertained, or entertain themselves, for hours at as time, with such a book. Neither the pictures nor the stories ever weary. Such a book becomes the children's daily companion, till it is literally *worn out* with use." The volume is made up with taste; has a sound, moral tone, and is profusely and richly illustrated. For sale by W. J. HOLLAND & Co., 87 Main St.

LIZZIE LORTON OF GREYBURN. A Novel. By E. LYNN LINTON. New York: Harper & Brothers.

THE business of novel writing has become one of the institutions of the age. In old times but few pens were employed in the production of this species of literature, now they are numbered by hundreds. The field of fiction has been so well worked that a really new thing is hard to produce from it. In this case an attempt at novelty is made, and if the limning of a wholly unamiable heroine is a success, then one has been attained in the production of "Lizzie Lorton." The subordinate characters, with an exception or two, match well with the principal. For sale by STEELE & AVERY.

THE RACE FOR WEALTH. A Novel. By Mrs. J. H. RIDDELL. New York: Harper & Brothers.—1866.

A VERY well told story of two young men from the country who went up to London to seek or make their fortunes. The race was quite exciting and well sustained on both sides, but the conclusion of it not what would have been expected from the characters of the competitors. Two women figure prominently in the contest; the one a mild type of a beautiful saint; the other an angel in beauty, but a fallen one in disposition and action. The first finds much trouble, for many years, but finally peace; the last is prosperous and devilish for an equal period, but is properly punished in the end. STEELE & AVERY.

A FRENCH-AMERICAN FAIRY BOOK. By EDWARD LABOULAYE. [Pp. 363.] New York: Harper & Bro's.

ALL classes of people, learned and unlearned, old and young, take delight in the perusal of "Fairy Tales," especially if a fair share of ingenuity is displayed in their construction and the style of narration is lively and flowing. The old, especially, are aware that there is really nothing but fiction in the narrative, still they read it with pleasure, while the young dwell upon the stories with equal delight, giving them nearly full, if not entire credence. The "Fairy Tales," in this volume, are of a superior character, and fully up to the promise made by those of an earlier date by the same author. Sold by STEELE & AVERY.

MORNING BY MORNING; Or, Daily Readings for the Family or the Closet. By C. H. SPURGEON. [8vo. —pp. 408.] New York: Sheldon & Co.—1866.

IN this volume the reader will find numerous examples of that terse epigrammatic style of treating subjects which has given to the author so wide-spread a popularity in both hemispheres. These readings are, so to speak, full of Beecherisms, and hence likely to secure many readers aside from the intrinsic value of the sentiments uttered and the morals inculcated. The volume is neatly got up. For sale by DEWEY.

NOTES ON EPIDEMICS; For the use of the Public. By FRANCIS EDMUND AUSTIE, M. D., Westminster Hospital. Philadelphia: J. B. Lippincott & Co.

THE main object of the author, in presenting this small volume to the public, is to enable the mass of people to detect epidemic diseases, in their earliest stages, and to point out the steps necessary to be taken to weaken their force and prevent their extension. This is succinctly done in this small treatise, which will be found valuable to every family. Sold by STEELE & AVERY.

THE MOUNT OF OLIVES.

STANDING on the north-east corner of the modern wall of Jerusalem, with our faces to the east, we have before us, as seen in the above engraving, the Mount of Olives. It extends along the east side of Jerusalem, the deep valley of Jehosaphat separating it from the city. Its summit is a hundred and eighty feet above that of Mount Moriah, on which the Temple of Solomon stood; consequently, from the top and sides of this mountain, the whole city lay in full view. In the early Jewish Scriptures, it is spoken of as "the mountain," or "the mountain before the city;" expressions which indicate its nearness. Its name is derived from the olive groves and orchards which clothed its sides. Olive trees are still found there, though not so numerous as in former times. It was the open ground—the park of Jerusalem—to which its inhabitants resorted for fresh air, for recreation, for pleasure, for meditation and devotion. A recent writer, in speaking of the connection this mountain had with the Old Testament history, says:—"The sacrifice of the 'red heifer,' the only sacrifice which was to be performed outside the camp in the wilderness, being by analogy excluded from the Temple courts, was celebrated as near as possible to them, and, therefore, on the slopes of Olivet. DAVID, before the Temple was built, and while 'high places' were the recognized scenes of religious services, was wont to 'worship GOD at the top of the mount.' SOLOMON, when he tolerated or adopted the idolatrous rites of his foreign wives, made 'high places' of the three summits 'on the right hand (on the south side) of the Mount of Corruption.'"

With the exception of these general allusions there is but one event in the Old Testament which lends any interest to this height. It was by the ascent of Mount Olivet that DAVID went up on his flight from Jerusalem to Mahanaim, at the news of ABSALOM'S revolt. It was at the top of the mount that he met HUSHAI and had his last view of the rebellious city. It was a little way past the top that he encountered ZIBA and the asses, laden with provisions. It was as he descended the rough road on the other side, that "SHIMEI went along on the side of the mountain over against him, and threw stones at him, and cast dust." This mournful procession, affecting as it is, and linked with every stage of the ascent and descent, stands alone in the earlier history of the mount.

Its lasting glory, however, belongs not to the Old Dispensation, but to the New. This mountain is made memorable and sacred to the Christian by its connection with the history of our Saviour. After his public ministry through the day, and his disputations with the Jews, this was the place to which he loved to retire in the evening for prayer and private intercourse with his disciples. Here were uttered many of those parables and sayings which, transcribed by his apostles, have instructed and comforted his followers in all ages. Over this mountain lay his morning and evening walk to and from Bethany, the town of MARY, and MARTHA, and LAZARUS, which was a little beyond its summit. Here withered the fig tree cursed by him. It was over the summit of this mountain, or around its southern slope, that he rode triumphantly to Jerusalem, while the multitude shouted his praise, and cast their garments and the branches of trees in his way. It was here, as the city burst upon his view, that he wept over it, as given to unbelief, and devoted to destruction. On another occasion, as he sat on the Mount of Olives, over against the Temple, he beheld those great buildings which were the wonder and the pride of the Jewish heart, and declared that the time should come when not one stone should be left on another. It was to the Mount of Olives that he went out with his disciples, after they had sung a hymn at the close of the Last Supper. Here was the Garden of Gethsemane, where he endured his agony, where his soul was exceeding sorrowful unto death; here he sweat, as it were, great drops of blood falling to the ground. This was the scene of his betrayal, and from this place he was led first to the palace of the High Priest, and then to the judgment. It was to this mountain that he, after his resurrection, led forth his followers, and either from its summit, or a little beyond it, while he talked with them, a cloud received him out of their sight, and they were left standing and gazing up into heaven. Such are some of the occurrences of our Lord's life, which have rendered the Mount of Olives one of the most (if not the most) sacred spots on the face of the earth.

Various Topics.

NEW ENGLAND DYING OUT.

ABOUT three-fourths of all the children born in Boston during 1865 were of parents born in a foreign land; therefore, argues one of the papers, "the Yankee stock will in time die out in New England." We think by that time, Yankee stock will have peopled, will be the predominant stock of this continent, from the St. Lawrence to the Gulf, and from the Atlantic to the Pacific shore. Because Yankee intelligence knows how to rear children to maturity, while foreign ignorance and filth kills, almost as soon as born; for out of every hundred children dying, eighty-eight are of foreign parentage, and this has been the rate for the last five years in New York city, where the native population is 49 per cent. and the foreign, 51, or nearly equal, and it is presumed that the same proportions hold good in all our large cities. Hence if 62 per cent. of all the children born in Boston are of foreign parents, and 88 per cent. die, it is very easy to see they might as well not have been born at all, and a great deal "mightier" as far as the question of the foreign outstripping the Yankee stock is concerned. The fact is, neither Yankee men, nor Yankee principles, nor Yankee thrift, will ever die out, while this planet is inhabited; and if it ever is depopulated by a conflagration, the last survivor of a smouldering world will be Jonathan, at the death, singly and alone, resolutely trying to put out the fire; if by famine, the last loaf of bread will be owned by a Yankee.—*Hall's Journal of Health.*

CARE FOR THE FEET.

MANY are careless in the care of the feet. If they wash them once a month they think they are doing well. They do not consider that the largest pores of the system are located in the bottom of the foot, and that the most offensive matter is discharged through the pores. They wear stockings from the beginning to the end of the week without change. The stockings become completely saturated with offensive matter. It is sickening to be in the presence of such persons. Ill-health is generated by such treatment of the feet. The pores are not only repellants, but absorbents, and this fetid matter, to a greater or less extent, is taken back into the system. The feet should be washed daily as well as the arm pits, from which an offensive odor is also emitted, unless daily ablution is practiced. Stockings should not be worn more than a day or two at time. They may be worn for one day, and then aired and sunned and worn another day; but to wear the same stockings for a whole week is not doing justice to your feet, nor your health, nor your conscience; for who can have a clear conscience in a foul body.

CURIOUS RELICS.

A CORRESPONDENT of the Boston Traveler has discovered near the village of Winham, Mass., a curious relic of past generations. It is an ancient milestone, placed in front of the village burial-ground, the characters upon which were so worn and defaced that it was with the greatest difficulty he was enabled to decipher them. This is the inscription:

I	B
7	20

JOB, 30; 23.
I know that thou wilt bring me to death, and to the house appointed for all living.
1710.

The directions on the top of the stone are: *Ipswich*, 7 miles; *Boston*, 20 miles—the initial letters of the places only being given. The text of Scripture shows that the good people of Winham in the past century were as solicitous for the spiritual as for the temporal welfare of their wayfarer; as desirous that he should learn his "bearings" on the road to heaven as on the road to *Ipswich* or even *Boston*.

TERRORS OF AN ERUPTION.

AN anecdote current respecting a German who ascended the mountain and looked into the interior through one of the openings, will assist in conveying the impression it produces on those who follow his example. He was seen ascending the mountain alone, and after an absence of several hours returned; yet not a word would he utter in reply to the questions addressed to him. The next day he was found drowned on the edge of the sea. According to the statement of a friend of his, he had long meditated suicide, and it is supposed that he had ascended the mountain with the intention of throwing himself into the molten lava, after the fashion of the well-remembered man of old, whose suicide was discovered by the mountain throwing out his sandal, but that the German's mind was so overpowered by the horrors of the scene he witnessed, that he could not carry out his intention, and descended to find a grave in a cooler and more tranquil fluid.—*Etna Awake.*

THE SHAKERS.

A CORRESPONDENT of the Lewiston (Me.) Journal recently paid a visit to the Shaker settlement at New Gloucester, in Maine. He describes it as composed of two "families," the "Upper" and the "Lower," and they have fifteen hundred acres of land, reasonably divided for farming purposes. Their gardens are models of neatness, like everything else about them. A large dwelling house, divided through the center by wide halls, is erected for each family, the males occupying one end, and the females the other. They have one excellent notion—that idleness is a sin. In their extensive gardens they raise nearly all kinds of seeds used in this latitude, flowers, herbs, fruits, extracts and condiments. This society manufactures a great deal of catsup, and their apple sauce is one of their most famous productions. They also have a grist and sawmill, and manufacture many useful articles, including brooms and mowing machines. The latter are a Shaker invention, and are very popular among the farmers in this State. Their land is always in excellent condition, and neatness is the rule everywhere. They have several storehouses and outbuildings and good stables, and a school house for the children they adopt.

This is one of eighteen settlements of this singular people in the United States. Their total membership is stated at five thousand.

INFLUENCE OF THE MOON ON THE WEATHER.—The few scientific observations of the weather that extend over any considerable period fail to confirm the popular impression relative to lunar influence in determining the character of the weather. Dr. Marcet examined a register of the weather kept at Geneva for thirty-five years, to test this idea. The results which he obtained seemed upon the whole to lend some support to the popular notion of the influence of the new and full moon, but none whatever to any special influence of the first and third quarters. Against this slight confirmation are set the results of observations made at the Greenwich Observatory since 1840, from which it seems that changes of weather have been found to be as frequent at every age of the moon as when she is seven, fourteen, twenty-one or twenty-eight days old.

A WISE EXCUSE.—On one occasion at a dinner at the Bishop of Chester's, Hannah More urged Dr. Johnson to take a little wine. He replied, "I can not drink a little, child, and therefore I never touch it. Abstinence is as easy to me as temperance would be difficult." Many have the same infirmity, but are destitute of the same courage, and therefore they are ruined.

Reading for the Young.

Written for Moore's Rural New-Yorker.

CHRISTMAS EVE.

BY S. N. HOLMES.

'Twas Christmas Eve in sixty-six,
So many lived to see,—
But still they slept while old St. Nick
Arranged the Christmas Tree.

On Christmas Eve methinks he came,
With such a load of cheer,
Besides, he brought such lots of game
And drove his swift Reindeer.

With such a load, inside and out,
To meet the case in hand,
He must be sober, as well as stout,
To do it up so grand.

His age appeared of ancient date,
His beard was silver gray,
His coat was large, with pockets straight,
To store his traps away.

His roguish eye and jolly face
Bespoke his love of fun,
And so, with free and agile grace
He lets his corners run.

How he could load upon his sled
Such hosts of toys so fine,
And get inside when we're abed,
I cannot yet divine.

It's said he scales the topmost walls
And down the chimney goes,—
Nor can I learn he ever falls,
Nor where he puts his toes.

He must have hooks in every spot
To scale their sides of brick,
And then you see, what you do not,
He comes and goes so quick.

The secret is, beyond a doubt,
He keeps his rig in trim,
And taking Oildom in his route
Imbibes *the oiler's vim.*

Syracuse, N. Y., Dec. 26, 1866.

THE GERMAN DWARF.

THIS is a most comical entertainment, and one which, if well managed, will deceive the sharpest eyes. Two persons are required to enact the character of dwarf, and they do so after the following manner:—A good, deep window is chosen, where the curtains are full and voluminous, and where there is plenty of space for movement. A table is drawn to the window, and the curtains disposed so as to fall over the table, and to conceal the persons behind it. The speaking player, whom we will call, for shortness, the speaker, then proceeds to array himself in as gorgeous a manner as possible, taking care to put on a rather voluminous jacket, with large sleeves. The ladies are capital hands at improvising such costumes. The arms must be dressed to represent legs, and the hands thrust into shoes or boots, the latter being preferable. Of course, the real origin of the pretended legs is concealed by the jacket.

The second player, whom we will call the actor, takes his place behind the speaker, pushes his arms under the sham legs of the speaker, and fits them carefully into the sleeves of the jacket. The speaker puts his hands on the table, and the curtain is then carefully drawn and pinned up, so as to prevent any one from seeing the performers. This part of the business is performed by some one who has been let into the secret.

The doors of the room are then opened, and the spectators admitted.

The dwarf, who is not restricted to Germany, but may assume any other nationality at pleasure, then begins an harangue, interlarding it copiously with foreign words and expressions. While he speaks, the actor performs the gestures, and here lies the fun of the whole thing. (*See illustration.*) The actor always tries to make his gestures wholly inappropriate to the language of the speaker, and indulges in all kinds of practical jokes.

It is a good thing to introduce the national dance. Of course, anything will do for a dance, and a lady can always be persuaded to play some brisk tune. If well arranged, this is very effective, for the legs have no weight to support, and can be as lively as you please. Here, also, the hands of the actor come in well, and the combined effect is inexpressibly ludicrous.

READING FOR FARMERS' BOYS.—"But for the co-operation of my boys," said a farmer, "I should have failed, I fear. I worked hard and so did they. The eldest is near twenty-one, and, while other boys in the neighborhood, younger, have left their parents, mine have stuck by me and been faithful to me when I most needed their services. And I attribute this result to the fact that I have furnished them with attractive reading; and when night comes and the day's labor is ended, instead of running with other boys to the railway station and adjoining towns, they gather around the great lamp, and become absorbed in their books and papers."

The Publisher to the Public.

Patience, Agent-Friends!—We had hoped to be able to enter names of new subscribers and send all premiums therefor, without delay, but the unexpectedly large number of club remittances received during the past two weeks—a third greater than ever before at this season—has overwhelmed us, and we must ask the indulgence of agents who do not receive their premiums promptly. It is impossible to enter names, mail papers, and also compare lists (to ascertain as to new subscribers) and send premiums at once—so we send papers, and defer comparing and sending prizes for a few days. Are doing the best we can, and trust friends will excuse temporary and unavoidable delay—not forgetting to keep on recruiting!

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly. Any one using deception will forfeit premium,—but of course no honorable man or woman (and all our recruiting friends are supposed to be such) will attempt any dodge or deception in the matter.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 19, 1867.

NEWS OF THE WEEK.

From the National Capital.

THE Judiciary Committee has not yet reported on the impeachment case. The proceedings of the Committee have been kept a secret.

The District of Columbia Suffrage Bill, which was vetoed last week, has been passed "over the President's head"—in the Senate, 29 to 10; in the House, 113 to 38—over two-thirds.

The Supreme Court of the United States has affirmed the judgment of the court below in regard to the New York bank tax cases.

Two bills to admit Nebraska and Colorado as States into the Union, passed the Senate on the 9th inst.,—the former by a vote of 24 to 15, and the latter by 23 to 11. The bills provide that there shall be no abridgment in the exercise of the elective franchise, or of any other civil or political rights, by reason of race or color, except in the case of Indians not taxed.

The bill which passed the House some time since, providing for the assembling of the Fortieth Congress on the 4th of March next, was concurred in by the Senate on the 10th inst. by a vote of 27 to 7. It now goes to the President for his approval or disapproval.

It is proposed in Congress to increase the pension of Samuel Downing of Saratoga Co., N. Y., to $1,000 a year. Mr. D. is the only surviving pensioner of the American Revolution.

The statement of the Public Debt of the United States on the 31st day of December, 1866, shows it was $2,675,062,565, and the amount in the Treasury $131,737,332. This shows a decrease in the debt during that month of nearly $10,000,000.

Mr. Ingersoll's "Gold Bill" authorizes the Secretary of the Treasury to sell all gold in excess of $50,000,000 at his own discretion, but requires thirty days' public notice.

A joint-resolution has passed the House to increase the pay of Government employes in Washington twenty per cent.

It is expected that a bill will soon be reported in the House by the Reconstruction Committee to form new governments for the late rebel States.

The New Senate Tariff Bill.

MR. FESSENDEN, of the Finance Committee, reported the new Tariff bill in the Senate on Friday last. It is based on Mr. WELLS' bill, but makes some important changes from his figures. In wool and woolens it follows pretty closely the bill passed by the House last session. On wools of the first class, unwashed, valued at 24 cents or less per pound, it fixes the duty at 10 cents, with 10 per cent. *ad valorem*. Mr. WELLS proposed to retain the present rate—6 cents. Sheep-skins and Angora goat-skins are taxed 30 per cent.—present rate 20. This difference is made on all the grades of raw wool. On manufactured woolen goods, broadcloths, cassimeres, &c., the new bill imposes 45 cents, with 35 per cent. *ad valorem*. A proportionate increase is made on blankets and yarns, the Committee proposing 20 cents for qualities of less value than 40 cents per pound. On better qualities the same rates are fixed, those valued above 80 cents paying 60 cents, with 35 per cent. *ad valorem*. Woolen hosiery is taxed 40 cents instead of 20, and hats and caps 50 instead of 25. The duties on webbings, fringes, &c., is increased in the same proportion. There is a general increase in the duties on silk goods; and our cotton manufacturers also are well protected. The classifications of iron made by the House bill are retained, but the rates are slightly increased. The Committee have adopted the section of the House bill which allows a drawback on imported materials used in the manufacture of farming machines and other tools. Indian corn is taxed 10 cents per bushel; corn meal 10 per cent. *ad valorem*; hay 20 per cent.; horses, mares, colts, asses and mules, 20 per cent.; neat cattle, 25 per cent.; sheep, goats, calves and swine, 20 per cent.; all other animals, 20 per cent. On apples, garden fruit, edible vegetables and roots in a green and fresh state, not otherwise provided for, a duty of 10 per cent. *ad valorem* is proposed; wheat, 20 cents per bushel; plaster of Paris, or ground gypsum or sulphate of lime, 40 per cent. *ad valorem*.

From Mexico.

THE guerrillas have been making very great efforts to capture the Emperor.

The city of Perote has recently been bombarded by the Imperial troops.

Gen. Mejia had ordered another forced loan at San Luis Potosi, and was compelling payment of every one, whether native or foreign.

Several prominent Liberal Chiefs have lately declared for Ortega.

Trevino with 6,000 Liberals, have scattered over the country, without ammunition, and are engaged in pillaging.

Bazaine has ordered all the French soldiers to be embarked by the 3d of March.

Mexican guerrillas threw a railroad train from the track on the 3d inst., near Vera Cruz; they sacked the train and "cut up" a party of French who were in the cars.

Maximilian has called a Congress, and all parties are invited to attend. Passports will be given for that purpose. The Congress is to decide whether the Empire is to continue.

Mejia, the Imperial commander, is sick and disheartened, and his army much demoralized.

The Liberals on the borders are jubilant, and the adherents of Maximilian correspondingly melancholy.

The Liberal forces of Coahuila entered Matamoras on the 27th ult. with 70 wagons and 18 pieces of artillery. They will proceed to the interior. The necessary wagons and transportation for 10,000 men have been pressed into the Liberal service.

Ortega is at Zacatecas, his home, at the head of a strong party. He has published an address to the people of Mexico. Cortines has been appointed Governor of Tamaulipas.

The N. Y. Tribune of the 14th, has a dispatch from Washington which says:—The Government is in receipt of information from Vera Cruz that several transports have already arrived there, and that the French troops have commenced to embark. There are twenty-four large transports in all, which will be amply sufficient to remove all the troops. The last ten transports left Brest some days since. It is expected therefore that by the 1st of March the last installment will have embarked.

The Imperials have been totally defeated by the Liberals near the city of Guadalajara.

From South and Central America.

LATE advices from Bogota state that Gen. Mosquera had handed in his resignation to the Supreme Court as President of the Republic, on the ground that the people were unworthy of him, owing to their immorality and rascality. The Court refused to accept his resignation, and the affair is regarded as a ruse to gain sympathy.

Five hundred sick and disabled French soldiers from Mexico have recently passed through Panama for France.

The latest reports from Chili state that the Chilians have refused the proposed mediation of England and France.

Ex-President Pezet of Peru, and Cabinet, have been banished for fifteen years as traitors, and fined 50 per cent. of the three millions of dollars paid to the Spanish Minister in 1865.

Business was very brisk at Valparaiso.

The cholera has broken out among the U. S. troops detained at Nicaragua, on their way to California. Forty had died at last accounts.

The Nicaragua cotton crop is severely injured by the worm. The Central American coffee crop promises well.

The Republics of Central America are tranquil.

WAR MATERIAL.—From the report of Gen. Dyer, Chief of Ordnance, it appears that during the period from Jan. 1, 1861, to June 30, 1866, there were provided for the military service of the United States 7,892 cannon, 11,787 artillery carriages, 6,333,295 artillery projectiles, shot and shell; 6,539,999 rounds of grape and canister shot; 2,862,177 rounds of fixed ammunition; 3,477,655 small arms—muskets, rifles, carbines and pistols; 544,475 swords, sabers and lances; 146,175 complete sets of artillery accoutrements; 216,371 complete sets of cavalry accoutrements; 530,544 complete sets of horse equipments; 28,164 sets of two-horse artillery harness; 732,526 horse blankets; 1,022,176,474 cartridges for small arms; 1,220,555,435 percussion caps for small arms; 10,281,305 cannon primers; 4,226,377 fuses for shell; 26,440,054 pounds of gunpowder; 6,395,152 pounds of niter, and 90,416,295 pounds of lead in pigs and bullets, besides immense quantities of parts for repairing and making good the complete articles which were damaged, lost, or destroyed in service.

THE CONSTITUTIONAL AMENDMENT.—During the past few days the Legislatures of the States of New York, Ohio and Kansas have ratified the U. S. Constitutional Amendment. The Kansas Senate voted unanimously in the affirmative. The States of South Carolina, Arkansas, Kentucky and Virginia, last week, rejected the Amendment. The Virginia Senate voted unanimously against it; the votes in the House were all in the negative except one. The Amendment has been ratified by the Maine House of Representatives by a vote of 126 to 12; also, by the lower House of the Nevada Legislature, 34 to 4.

REPUBLICAN SENATORIAL CAUCUSES.—On the 10th inst. the Republican members of the New York Legislature met in Caucus at Albany and nominated ROSCOE CONKLING of Oneida county, for United States Senator from the fourth of March next, to fill the vacancy which will be made by the expiration of the six-years' term of IRA HARRIS. SIMON CAMERON has been nominated by the Pennsylvania Legislative Caucus for U. S. Senator from that State, to succeed Senator COWAN; at Jefferson City, the Missouri Caucus has nominated CHARLES D. DRAKE of St. Louis, to succeed Senator BROWN, and the Indiana Caucus has nominated GOV. MORTON for U. S. Senator to succeed Senator LANE. The Legislatures of the four States named, elect U. S. Senators the present week.

INDIAN FIGHT.—A recent dispatch from Idaho says Gen. Crook, the gallant Indian fighter, who recently assumed command of the District of the Boise, had a fight with Indians on the Owyhoe, killing 30 and capturing the same number of horses. The Big Foot Chief escaped; but the Little Foot Chief was captured. Gen. Crook is still out, and has sent for re-inforcements and supplies, and has given orders to all the posts under his command to take active steps to suppress Indian hostilities.

LOCATION OF THE NEW LUNATIC ASYLUM.—The N. Y. State Commissioners to locate the new State Lunatic Asylum have completed their labor after a thorough and impartial examination, and have finally decided that the advantages offered by Dutchess county are the most acceptable. The site designated for the Asylum is the Roosevelt Place, about two miles north of Poughkeepsie. Dutchess county gives a bonus of $85,500—$34,000 of it to be borne by the county, and the remainder by Poughkeepsie.

THE ASSASSINATION CONSPIRATORS.—It is thought that the assassination conspirators, Dr. Mudd, Spangler, Arnold and O'Laughlin, will soon be taken from the prison at the Dry Tortugas, Florida, and carried to Washington and delivered to a civil tribunal to be dealt with in the manner prescribed by the civil law. The reason for this supposition is based on a recent decision of the Supreme Court of the United States against trials by military commissions.

NEWS PARAGRAPHS.

IT is published that five thousand men will be thrown out of employment in Pittsburg, Pa., on the 15th of this month by the stoppage of the iron mills.

IT is stated that the fare for the round trip to Paris and back, on the steamship Great Eastern, during the Exposition next spring, will be about $150 in gold.

THE Boston Transcript states that a banking firm in that city presented as a Christmas present to each of their ten clerks the sum of one thousand dollars.

BISHOP WHITEHOUSE of Illinois, (Episcopal,) is the first Bishop in the United States to have the honorary degree of D. D. from Oxford University, England.

A PASTOR of one of the Methodist Churches in Brooklyn, N. Y., was presented on Christmas day with a baked potato, in which was inclosed a $500 greenback.

THE New York Evening Gazette says that an organization is about to be set on foot in that city by the resident Spaniards, to revolutionize the Island of Cuba.

THERE is a salt well in Tuscarawas county, Ohio, which yields six hundred barrels of water in twenty-four hours, thirty-five gallons of water making a bushel of salt.

THE Bostonians are determined to establish an English line of steamers. Their purpose is to purchase the eleven vessels built for the New York and San Francisco trade.

THE Board of Trade of Cleveland has passed a resolution recommending that the "Cental System" of measure be adopted throughout the country on the first day of March next.

THE Tribune's Chicago special says it is definitely asserted that a company of English capitalists have undertaken the immediate building of the railway from St. Paul to Lake Superior.

SEVEN more transports have sailed from France to Mexico. It is believed that most if not all of the French troops in Mexico will be ready for embarkation the last of the month.

Among the ghastly statistics of the year 1866 are those furnished by the Coroners of New York city, who inform us that there have been sixty-one suicides since January, 1865, and thirty-six infanticides.

A DISPATCH from San Francisco of Jan. 12, says twenty vessels are now being loaded with wheat. Their destinations are as follows:—Liverpool, ten; Cork, five; New York, three; Philadelphia, one; Hong Kong, one.

OLIVER AMES of Easton, Mass., has been elected President of the Pacific Railroad, to hold the office while Gen. John A. Dix (former President) is absent as Minister to France. The salary of the position is $15,000 per year.

THE annual report of the New York and Erie Railroad shows that the earnings for the year 1866 amounted to $15,372,809—an increase over 1865 of $72,000. Nearly $12,000,000 was from freight. The expenditures were $15,049,450—leaving a surplus of $323,359.

THE receipts of canal tolls on the N. Y. State canals in 1866, were $4,437,099. This shows a gain of $503,118 over the receipts of 1864, and a gain of $508,145 over those of 1865. The receipts of 1866 are the largest of any year except those of 1862 and 1863, since the canals were first opened in 1826.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Jan. 15, 1867.

MONEY has been close for a week past in this locality, and our banks have been unable to discount all the good paper offered. The call in consequence of the first of January settlements was large, and the disturbed condition of financial affairs in New York had its effect everywhere in the interior. There was no cause in the regular course of business, for a pressure in New York, but speculators in gold, stocks, &c., took advantage of the condition of things and for a day or two were enabled to create quite a panic. By the concerted arrangement of a few wealthy operators several millions of capital were suddenly withdrawn from the market. Stocks fell from two to three per cent., and borrowers found much difficulty on Thursday and Friday in supplying their wants. The scheme was soon discovered and denounced by the banks and all honorable lenders, but not in season to prevent creating considerable disturbance. We think the usual ease may be anticipated in a few days in this locality. At Chicago and Cincinnati money continues very close, and high rates of interest are paid outside the banks.

The panic last week and a similar disturbance in December show the power for evil sometimes exercised by heavy stock gamblers. The "bears"—that is, those who for the time are interested in putting down the price of stocks—use all their power for that purpose, as against the "bulls," whose interest it is to put up prices. A stock operator may be a bull one week, and a determined "bear" the next, as his interest dictates.

The bill authorizing the public sale of gold it is thought will not come up for discussion under a week at least. The new Tariff bill was reported to the Senate last Friday. There are some changes from the bill submitted by Commissioner WELLS. The duty on wools is changed by the Senate bill. As reported, wools of the first class imported unwashed, valued at place from whence exported, including charges, at 32c. or less per lb., duty 10c. per lb., with 10 per centum *ad valorem*. Upon wools that shall exceed in price 32 cts. per lb., the duty shall be 12 cts. per lb., and 10 per ct. *ad valorem*. Upon wools of the third class the value whereof shall be 12 cts. or less, excluding charges, the duty shall be 3 cts. per lb. If exceeding 12 cts. per lb., the duty shall be 6 cts. On woolen cloths and all manufactures of wool of every description 45 cts. per lb., and 35 per cent. *ad valorem*.

The whole amount of foreign wool received at New York for the year 1866 was 36,167,993 pounds. Its entered value was $5,219,075. The quantity of domestic wool purchased the last year in the Boston market by manufacturers is about 30,000,000 lbs. There are over 6,000,000 lbs. now in store in Boston.

The Supreme Court at Washington has recently decided that National Banks are not exempt from paying taxes toward the police and other municipal and State expenditures. Under this decision Banks at the East are paying over taxes which they have hitherto withheld.

The product of American gold for the year 1866 is estimated at $37,239,541. Of this sum over $20,000,000 came from the Pacific and Rocky Mountain States. The gold product of 1865 was about $70,000,000 in all the States.

The price of Petroleum is very low, and dealers and producers have talked of holding a convention to see if some method could be devised to limit the amount produced. Conventions won't control the flow of oil, or put money in the pockets of unlucky operators. Though the trade is somewhat depressed, we doubt not the demand will soon be equal to the production. The quantity of Petroleum exported from Philadelphia in 1863 was 4,950,708 gallons. In 1866 the number of gallons exported from the same city was 26,326,088, valued at $11,274,597. From New York 14,230,586 gallons were shipped in 1865, and in 1866 the amount was 33,992,394 gallons. It is presumed there was a corresponding increase from Boston, and probably from some other ports.

WOOL.—There is no movement in Wool, of any amount, at the West or in this locality. Prices are therefore nominal. The New England Dry Goods Reporter of last week says:

The Wool trade is now recovering from the depression of the past few months. Since the first of December last manufacturers have purchased upwards of 3,000,000 lbs., and prices have now touched so low a point that holders are very indifferent about selling. The attention of manufacturers is now turned almost exclusively to the Wool for the production of spring goods, and there is a prospect of an active trade and a firm market for some months to come. The transactions include some choice lots of picklock Pennsylvania, Ohio and Western Virginia at 70@75c. The principal transactions in Michigan Wool have been at 50@55c., down to 45@50c. for the low and medium grades; Vermont and New Hampshire Wool has been selling at 60@67c.; New York from 45 for common to 55c. for good lots; Wisconsin from 45@55c.; and Illinois, Iowa and Indiana from 40@53c. per lb., as to quality.

The prospect of a change in the tariff has had very little effect on prices this winter, thus far.

DRESSED HOGS.—The supply of hogs in market last week was fair. Shippers paid yesterday $7@7,50. Buyers for home consumption pay a trifle higher. The last Chicago Republican says dressed hogs were moderately active, with a good demand from packers and shippers. At the opening of the market buyers paid $5,60@6,90, but the market closed weaker at $6,55@6,75 for lots dividing on 200 lbs.

The Detroit Post of the 11th says the receipts by rail have fallen off, but the market is liberally supplied by teams. The highest offers for good lots were $7@7,12½.

Special Notices.

Our Young Folks

FOR 1867, will have a capital story of American boys and girls a century ago, called *Good Old Times; or, Grandfather's Struggle for a Homestead;* also, some very interesting stories and sketches of European Life by BAYARD TAYLOR. These, and the other excellent things with which OUR YOUNG FOLKS will be regularly filled, will have numerous illustrations. TERMS: Two Dollars a year; Single or Specimen Number, 20 cents.

Every Saturday

"Is a short cut to all the choicest English and French periodicals, whose number and cost place them beyond the reach of most individuals. The arrangements of the conductors with foreign writers and publishers are such as enable *Every Saturday* to reproduce much of its matter from advance sheets, placing it before the American reader almost simultaneously with its publication abroad."—*Examiner and Chronicle.*

TERMS: Single Number, 10 cents; $5.00 a year.
TICKNOR & FIELDS, Publishers, Boston.

SPECIAL NOTICE.

THE attention of Printers, Manufacturers, Farmers or others needing Power, is called to the Advertisement of A. N. WOOD & Co. of Eaton, Madison county, N. Y., Manufacturers of Portable Steam Engines. We copy from the Poughkeepsie (N. Y.) Daily Press of Nov. 26, 1866:

NEW ENGINE.—A portable four-horse power engine from the establishment of A. N. Wood & Co., Eaton, Madison county, New York, set up in this establishment, gives perfect satisfaction. Being substantially built and well finished, it runs smoothly and does its work easily, running a Hoe and a Taylor press at the rate of 1,200 impressions per hour, with a pressure of 15 pounds steam, and with a fair draught we are able to run it with pea coal, with the furnace door partially open, burning less fuel than we formerly used to drive our old two-and-half horse power.

There has been no foaming or priming of the boiler from the first, indicating a proper proportion of fire-surface, water capacity and steam space. These points are of the first importance, and allow a rapid firing with safety, and without waste or trouble. The pattern is of the locomotive order, of handsome proportions, and the machine, besides being useful, is in no small degree ornamental. With a simple attachment to the governor stem, by which the speed of the engine can be changed in a moment from 50 to 120 revolutions per minute, we are able to run our presses at any speed from 400 to 2,000 per hour, and we thus have in this machine just what we have needed for a long time.

Messrs. A. N. WOOD & Co., manufacture these engines of all sizes, from three to thirty-five horse power.

Our engine may be seen in operation every day, and those interested are invited to examine it.

The Atlantic Cable was considered a mammoth enterprise, but never has or will elicit the commendation that has attended the success of COE'S DYSPEPSIA CURE. It is getting a world-wide fame, simply from the fact that it cures. One bottle often does the work effectually; at the same time it will not injure the most delicate constitution.

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 855-42t

FOREIGN NEWS—BY TELEGRAPH.

CONSTANTINOPLE, Jan. 10.—The indications of serious troubles between Turkey and Greece are increasing, and the Porte continues to send troops to the Greek frontier.

MADRID, Jan. 12.—The proffered mediation of the United States in the differences between Spain and Chili is regarded almost certain as the forerunner of an honorable and permanent peace.

VIENNA, Jan. 12.—The morning journals of this city to-day contain official announcements that the Sublime Porte has called 150,000 men into service to quell the Greek insurrection on the Mediterranean.

ROME, Jan. 11.—An interdict has been laid upon the continuance of religious services in the Scotch Protestant Church in this city, by the Papal authorities; and it is said that they also threaten to put a stop to the services held in the American chapel.

PARIS, Jan. 12.—The Japanese Embassy has arrived; will soon leave for America. The Council oppose the bill to re-organize the army. The health of the Empress Carlotta of Mexico, is improving. She also improves mentally.

LONDON, Jan. 9.—Rumors are in circulation of changes in the British Cabinet. The Times says it rests with the United States to accept of a settlement of affairs between that Government and England.

MUNICH, Jan. 9.—The Bavarian Chambers have taken steps to re-organize the army.

PARIS, Jan. 13.—A ministerial crisis has taken place at Constantinople. A large re-inforcement for the Greek insurgents in Candia have been landed from Greek ships, and the Cretans are receiving a fresh supply of arms.

LONDON, Jan. 13.—The London Globe says the Eastern Question has become so pressing that it demands the immediate attention of the European powers. The Globe thinks a general conference of the leading powers will be held. The threatened impeachment of President Johnson excites the interest of the Press everywhere. The Times says the scheme looks like a fatal blow to the Constitution. The Paris journals warn the Americans of the seriousness of the step about to be taken.

THE GREAT AMERICAN TEA COMPANY

ALWAYS A

Wholesale Establishment.

WE have many inquiries (10 to 20 letters a day) asking what discount we make to the Trade from our prices as published in THE ADVOCATE. These are our *lowest wholesale prices.* We consider ourselves only a Wholesale Corporation, and we have but *one price.*

The way which we came to break packages at all, was that during the high prices of Teas we furnished parties with packages as small as five pounds. Our fame spread far and wide; and parties with small means thought it very hard to be compelled to pay, elsewhere, about a *Dollar* per pound more than we were selling the same goods for, simply because they could not afford to buy five pounds of us at one time. Therefore, in order to lighten these burdens, we consented to supply their wants in quantities as small as one pound at the wholesale prices.

Parties of small means wishing for goods to sell, can have their orders put up in small packages to suit their trade, but we cannot make any reduction in price, as our profits for the last six years have not averaged more than *two cents per pound.*

The proprietors became fully convinced, several years ago, the consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized the GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with those necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea trade, we will start with the American houses, leaving out of the account entirely the profits of the Chinese factors.

1st. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their houses in China.

2d. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

3d. The Importer makes a profit of 30 to 50 per cent. in many cases.

4th. On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

5th. The Speculator sells it to the Wholesale Tea Dealer in lines at a profit of 10 to 15 per cent.

6th. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

7th. The Wholesale Grocer sells it to the Retail Dealer at a profit of 15 to 25 per cent.

8th. The Retailer sells it to the Consumer for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our warehouses.

PRICE LIST.

YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
GREEN TEAS, 80c., 90c., $1, $1,10, best $1,25 ℔ lb.

IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ℔ lb.
GUNPOWDER (Green,) $1,25; best, $1,50 ℔ lb.

NOTICES OF THE PRESS.

From the Methodist, N. Y. City.

We call attention to THE GREAT AMERICAN TEA COMPANY. They offer extraordinary inducements to the consumers of the beverage which "cheers but not inebriates." We have tested the quality of their Teas, and so far as our experience goes, we are prepared to say that they are all that is claimed for them.

From the Evangelist, N. Y. City.

The attention of persons is directed to THE GREAT AMERICAN TEA COMPANY, Nos. 31 and 33 Vesey street. This Company have made arrangements to supply families with the choicest new crop of Black, Green, and Japan Teas at wholesale prices. The Company guarantee all the goods they sell to give entire satisfaction.

From the Christian Intelligencer, N. Y. City.

THE GREAT AMERICAN TEA COMPANY.—This Company are doing an immense wholesale and retail business, and are thus enabled to offer their Teas and Coffees at very low prices, and of a quality which cannot fail to give entire satisfaction.

From the American Agriculturist.

THE GREAT AMERICAN TEA CO.—*To Querist.*—Before admitting the advertisement, we learned that a large number of our clerks and others had for several months been buying their Tea and Coffee from this Company, without its being known who they were, and that they had been highly pleased with their purchases, both as to quality and price, and were all recommending their friends to the same course. As we have received no complaints, we conclude "there is no humbug about the establishment."

From the N. Y. Day Book.

THE GREAT AMERICAN TEA COMPANY.—A suggestion in relation to getting Tea at cheap rates. We know the articles it sells are of superior quality. The clubs are now all the rage, as they get Tea into the consumer's hands for about one-third off the usual price.

P. S.—All towns, villages, or manufactories, where a large number of men are engaged, by CLUBBING together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY.
Nos. 31 and 33 VESEY-ST., corner of CHURCH.
Post-Office Box No. 5,643 New York City.

☞ We call special notice to the fact that *our* Vesey Street Store is at Nos. 31 and 33 Vesey street, corner of Church street—*large double store.*

Parties looking for our store will please bear in mind that ours is a *large double store, Nos. 31 and 33 Vesey-st., corner of Church-st.* This is an important fact to be remembered, as there are many other Tea Stores in Vesey Street.

FLAX.

MALLORY & SANFORD'S
IMPROVED
FLAX and HEMP BRAKES,

As now made, are the strongest and best ever used. They occupy about 5 feet square, weigh about 1,000 lbs., require one man and a boy, and one to two horse-power to work them; breaks from 2,000 to 3,000 lbs. Flax straw in 10 hours, taking out 65 to 75 per cent. of the woody matter. This machine will save 120 lbs. to the ton more than any other machine in the world. It will break tangled straw as well as straight. We have also an entirely *new tow shaker and picker,* works perfectly and does its work quicker and better than any other machine, and prepares the stock for rope. Also a *new tow comber,* which cleans and straightens the tow, free from shrive, rapidly making it fine and straight. Send for circular or see machines in operation at 98 William St., New York.
Address JOHN W. QUINCY, Treasurer,
No. 98 William St., New York.

TO THE LADIES.—MISS GUILD OF-fers to the public her superior Crystal Palace Chart for CUTTING DRESSES, which is conceded by competent judges to surpass any invention of the kind ever offered to the American public. She feels fully warranted in saying that it is as perfect a fit as human ingenuity can render it, and should be in the possession of every lady. It is simple, easy, and graceful, adapted to fit every form and size, from little girls of seven years to the largest adults. Directions printed in full on every Chart. None genuine unless the Crystal Palace is engraved upon it, and the address of the inventress printed. Copyright secured, and no infringement allowed. Agents are wanted in every part of the country. This Chart will be sent to any person on receipt of $2 addressed to
Miss LUCY GUILD, Rupert, Vt.
☞ Ladies wishing a tape measure must inclose 15 cents extra. 873-13teo

BALTIMORE, MD.

GEMS OF VERSE.

SONG.

STILL to be neat, still to be drest.
As you were going to a feast;
Still to be powdered, still perfumed,
Lady, it is to be presumed,
Though art's hid causes are not to be found,
All is not sweet, all is not sound.

Give me a look, give me a face,
That makes simplicity a grace;
Robes loosely flowing, hair as free;
Such sweet neglect more takelh me
Than all the adulteries of art;
They strike mine eyes, but not my heart.

THE LOVER.

I prized every hour that went by,
Beyond all that had passed me before;
But now they are passed, and I sigh,
And I grieve that I prized them no more.

When forced the fair nymph to forgo,
What anguish I felt in my heart!
Yet I thought (but it might not be so),
'Twas with pain she saw me depart.

She gazed as I slowly withdrew,
My path I could hardly discern;
So sweetly she bade me adieu,
I thought she bade me return.

AN ANGEL ON EARTH.

Die when you may, you will not wear
At Heaven's court a form more fair,
Than beauty at your birth was given;
Keep but the lips, the eyes we see,
The voice we hear, and you will be
An angel ready made for Heaven.

LOSS OF FRIENDS.

What is the worst of woes that wait an age?
What stamps the wrinkle deeper in the brow?
To view each loved one blotted from life's page?
And be alone on earth as I am now.
Before the chastener humbly lets me bow
O'er hearts divided and o'er hopes destroyed.

A THOUGHT.

Though ruthless Time may have scatter'd memory's dream,
Some scenes can ne'er decay,
But rest where all is change like islands on a stream.

The Story Teller.

Written for Moore's Rural New-Yorker.

WHO CONQUERED?

BY HARRIET HOLMES.

"*I* WOULD like to see a woman try to rule *me*," and MORRIS WELLS drew up his proud form and looked down upon his friend almost scornfully.

"You don't know what you would do, MORRIS. Sometimes I think I ought not to leave MATTIE alone so much evenings," replied WALTER MORTON, irresolutely.

"Yes, I have no doubt you think so. I once supposed you had *some* spirit, but you are not the same man you was two years ago."

"But MATTIE isn't cross nor a scold; it is very seldom that she finds fault with me."

"Yes, very seldom now, because she isn't quite sure of her empire—but wait awhile. In another year she will rule you completely and do it so adroitly that you won't know it too. Oh, you can't tell me anything about women, WALT; I have watched and studied them too closely. 'Give them an inch and they'll take an ell,' all of them.'" WALTER MORTON was silent, and his bachelor friend continued:—"MATTIE ELLIS was a nice little girl. With a husband who would teach her to keep her place, I have no doubt she would do well enough, but you let her have her own way too much. She is growing fretful already, I perceive."

"She was tired to-night, and the baby—"

"Oh, yes, *the baby* is a woman's excuse for everything. You needn't talk to me, WALT. I can see for myself how things are going. If you are to be scolded and cried after, because of *one* baby, you'll have a glorious life when you get half a dozen. But go on this way if you like—it's nothing to me, only I hate to see you make such a fool of yourself."

Mr. MORTON made no reply, but MORRIS WELLS' words had taken effect. He began to think he had been too indulgent and yielding, and to meditate asserting his authority. When he returned from the political meeting, whither he had accompanied his friend, he found his wife patiently rocking the still wakeful baby. She looked pale and wearied, but he put down every impulse of pity, and took up a newspaper and commenced reading. It was useless to try to read, however, and he threw it down impatiently.

"Has that young one squalled all the while I have been gone?" he asked.

His tones were hard and cold, and his face unrelenting. It was more than the overtaxed feelings of his wife could bear, and he was answered only by hysterical sobs.

Now, when a man has determined to do wrong, and is trying to reason his conscience into the belief that he is right, every unheeded impulse to pursue a different course only serves to anger him, and WALTER MORTON was no exception to the rule. For the time every emotion of affection for his wife and child were held in abeyance by his resolve to assert his independence; so he arose and went off to bed, leaving his wife to quiet both her own feelings and the worrisome child as best she could. He had never spoken so unkindly to her before, though he had been many times neglectful, and now it was little wonder that in the bitterness of her grief and resentment she prayed that she and her child might die.

The next morning her lord was most cheerful and condescending. His independence once established he did not want to be unkind, and made a pretence of ignoring anything unusual in his wife's manner, and even kissed her as usual before going to his business. But she shrank away from his caress; it could not atone for the hours of loneliness—for the cruel words he had given her—so he went away indifferently.

It was near the Presidential election, and WALTER MORTON was deeply interested in the political questions involved. Ardent and impetuous by nature, he was recognized as an efficient worker in the cause he had espoused, and to MORRIS WELLS, who was a candidate for some minor office, his services were especially valuable, and to-night he called for him again. Mrs. MORTON offered no remonstrance, either when he went away or returned. Her husband began to think his plan was working admirably, and for a week or two hardly spent an evening at home. If he wondered at her silence he made no remark; if he noticed how pale and worn she looked he gave no sign of pity.

"Here is a letter for you, KATE." KATE ORWELL, a tall, handsome brunette, went eagerly forward and took the letter from her father, exclaiming, "It is from MATTIE MORTON." She resumed her seat by the window and read the missive; then, allowing it to fall into her lap, she fell into a fit of musing.

"Well, KATE!" She started and looked up. "What does little cousin MATTIE say?"

"Father, I must visit her immediately."

"But why?—what is the matter?—what does she say?"

"Listen."

Dear Kate:—Can you spend a short time with me soon? I am weary, lonely and discouraged. I do not know why, but somehow I feel that I no longer occupy the place I once did in my husband' affection. Do not think unkindly of him, dear KATE; the fault may be all mine, and yet I have striven faithfully to perform the duties of wife and mother. You know how happy we were at first—how I counted my household cares but joy, mingling with them always some plan for his happiness. Then there were long evenings when we visited together, or he read aloud to me while I sewed,—but now all is changed. Since our baby WILLIE came there has been more work, and this, with the cares of maternity are almost too much for my strength. I do not wish to keep a servant—I do not yet think we can afford it—and could get along very well if WALTER would but spend his evenings at home, as he used to, and take care of baby a little when I am so tired. But of late he has become very much interested in politics, and has grown by degrees neglectful, until now baby and I are left to ourselves evening after evening for weeks together. For this I do not altogether blame WALTER, however. You will remember having heard him speak of his friend and college chum, MORRIS WELLS. He has always exercised a strong influence over WALTER, and to him I ascribe much of the change in my husband's manner of treating me.

Now, KATE, I have laid my case before you, leaving to your strong good sense to contrive some plan to help me. I know you can do so; you know I have implicit faith in your power to accomplish whatever you will. Do not judge my husband harshly; doubtless I am much to blame, but I want you to tell me in what respect and help me to do right.

Once more let me entreat you to delay no longer your long-promised visit, but come and make happy again the home of your

LITTLE COUSIN MATTIE.

"Well, KIT, can you help her?"

"I think so, father. Shall I go?"

"Certainly, Pet. I will try to get along without you awhile, but be sure you don't make matters worse. Poor little MATTIE! I feared her sunshine was too bright to last."

"Yes, poor little cousin; hers is one of the hearts that men always tyrranize over, because always too sure of their power;—isn't it so, father?"

Mr. ORWELL smiled. "Save your lecture for WALTER, KIT. I have not time to listen now;" and he left her to her musings.

Three days later KATE ORWELL was being kissed, caressed and cried over by way of welcome to MATTIE MORTON'S home, and after the manner peculiar to such natures as that of its mistress. It was late in the afternoon when she arrived, and hardly was she comfortably seated in the cosy sitting-room when Mr. MORTON came home. To him this visit from his wife's cousin was a surprise, but a most agreeable one, nevertheless, for he esteemed her highly, and his greeting was hardly less warm than that of his wife. Intelligent, pleasant and gentlemanly he could make himself most agreeable when he chose, and KATE ORWELL, always a sprightly conversationalist, had now a motive for exercising her power to the utmost.

After tea baby awoke and came in for the usual share of comments and admiration, in the very midst of which Mr. MORRIS WELLS called for his friend. But KATE, only just introduced, protested that he could not go. "Your candidates have no claims upon my cousin that can compare with mine. I cannot let you have him to-night."

Mr. WELLS gravely replied that it was principles, not *men*, that claimed Mr. MORTON'S attention.

"Oh, I know all you would say. I believe I understand the respective political platforms pretty well, and my sympathies are all on your side; but don't try to flatter cousin WALTER into the belief that their success depends upon him. Speak ten minutes longer than usual yourself, and I am sure it will answer every purpose."

There was a look of mischievous defiance in KATE ORWELL'S black eyes that was highly exasperating to MORRIS WELLS. He replied in a tone of haughty sarcasm.

"We will dispense with the presence of my friend only on condition that his place is supplied by Miss ORWELL."

She replied in the same tone:—"When the time shall came, as it soon will, that women are allowed the right of suffrage, *then* Miss ORWELL will become a political speaker; *now* her arguments could not be appreciated, and she does not choose to waste them."

Thoroughly disgusted, yet too polite to *reply* as he *thought*, Mr. WELLS turned to his friend. "Will you go? WALTER."

"Not to-night, MORRIS. You must excuse me this time. I have served my party pretty faithfully of late.

And so Mr. MORRIS left, mentally execrating the saucy, bewitching girl who had so coolly defied him. What he thought was, however, of little consequence to KATE ORWELL, who, now that he was gone, made the object of his call a subject for a half-hour's lecture.

"Why, cousin MATTIE, the impudence of that man is perfectly astonishing, taking your husband off to serve his purposes, when he knows full well you must be left alone for whole evenings. Why, I would treat the wretch to a shower-bath of boiling water."

But WALTER MORTON did not take offence; witty, willful, imperious, beautiful KATE ORWELL was used to having things her own way, and the present case was no exception. Not only did she bring WALTER MORTON to view his neglect of home and family in its true light, but by numerous spirited but probably only half-earnest assertions of what she would do under similar circumstances, led him to the belief that his wife was a miracle of patience—indeed little less than a saint—that she had borne all so unmurmuringly. Thus it always is that there are people who are intellectual, appear well in society, are good conversationalists, yet who never see anything except through some one else's eyes.

WALTER MORTON, having once been brought to see that to her whom he had sworn to love, protect and cherish, was due his first allegiance, was thenceforth a most irreproachable husband, and in the eyes of his gentle MATTIE a perfect model of excellence. But to KATE ORWELL there had come dreams of a stronger type of manhood than that of her cousin's husband. *She* would acknowledge no lord, but her heart should be given in fair exchange to one who could enter into the intellectual sphere in which she dwelt,—who could give back thought for thought, and who should be to her, as she to him, an inexhaustible volume whose study should never grow wearisome.

Such a man, before only visionary, she found, strangely enough, in MORRIS WELLS. Defeated at the election in his political aims, he thenceforth found more time for the cultivation of social habits, and soon formed a habit of spending his unoccupied evenings with the MORTONS. And of many a sharp war of words was the cozy parlor the scene. KATE ORWELL was unyielding: so was MORRIS WELLS. He would go away declaring that of all created things strong-minded women were his greatest abomination; she would vow that of all supercilious, self-satisfied men, MORRIS WELLS was most detestable—and the upshot of it all was the appearance upon the fourth finger of KATE ORWELL'S left hand of a magnificent diamond ring—for MORRIS was the only son of one of the most wealthy citizens of Lawton.

When or how the compromise was effected no one knew, but a year later WALTER MORTON and his now bright little wife received a most *peremptory* invitation to the ORWELL mansion, and then and there, in the presence of a few valued friends, KATE ORWELL and MORRIS WELLS took upon themselves the relation of husband and wife. The home of Mr. ORWELL is also theirs, for he could not part with his only child, and no happier family can be found than is now gathered beneath the old roof-tree—but I am unable to determine WHO RULES, for husband and wife are alike careful of each other's happiness.

Wit and Humor.

JOSH BILLINGS ON ROBIN REDBREAST.

THE red brestid robbing is a burd muchly doted onto by seminary girls and poits.

Gentlemen farmers also encurridge the robbing becoz he swallereth insex when he can't get sno or anything else to eat.

But practikle farmers and fruit growist begin to don't see it.

I was onest a gentleman farmist.

I am not so gentle as I was.

I go for real farming, making my pile of manoor and raisin things to eat.

I used to listen for the robbing's matting lay and his evening carol, but I found out that he singed only to seduce female robbings, and that where he et five insex he et quarts of cherries, strawberries, currants, raspberries and cetrer, and then pitcht into the mellerest Bartlett pairs.

I found that my fruit crop agreed too well with Mr. robbinges crop.

His warbling to his female friends at evening didn't pay for his gobbling choice fruit all day.

And so, my friends, when the swete red brest gets fat on the eggspensive producks of northern gardins and flocks southward to fill unsentimental pot pies, I bid him adoe without regret.

A CHAP inquired at the post-office in Erie, the other day, for a letter for "Enry Hogden." He was told there was none. "Look ere," he replied, a little angrily, "you've hexamined a hodd letter for my name. It don't commence with a haitch! It begins with a ho! Look in the ole that's got the ho's!"

AN Irishman once saved a miser from drowning, and was handed a sixpence. "What," said he, "is this all you give a man for saving your life?" Then, taking a second look, he said, "Well, faith, and I guess it is all that it is worth."

A QUEER PARCEL.—The following somewhat remarkable advertisement appeared in the columns of a recent number of a newspaper:—"Lost, by a poor lad tied up in a brown paper, with a white string, a German flute in an overcoat, and several other articles of wearing apparel."

Why is a washerwoman the most cruel person in the world? Because she daily wrings men's bosoms.

"I DO not say that man will steal," said a witness on trial, "but if I was a chicken I'd roost high when he was around."

Corner for the Young.

For Moore's Rural New-Yorker.

GEOGRAPHICAL ENIGMA.

I AM composed of 62 letters.
My 6, 8, 44, 50, 37, 52, 30, 28, 42, 18, 49 is a city in Massachusetts.
My 12, 27, 17, 23, 34, 25, 55, 61, 41 is a town in Georgia.
My 57, 54, 10, 44, 23, 48 is a county in North Carolina.
My 42, 47, 44, 58, 29, 51 is the name of an Isthmus.
My 26, 32, 31, 33 is one of the West India Islands.
My 1, 26, 43, 18, 14, 37, 60 is an Island in the Atlantic.
My 26, 13, 44, 7, 24, 26, 5 is an Island in the Mediterranean Sea.
My 53, 3, 62, 23, 17, 18, 29, 56 is a chain of mountains in Asia.
My 4, 40, 35, 36, 2, 10, 31 is an Island in the Pacific.
My 8, 16, 41, 19, 22, 11, 13, 26 is a county in Miss.
My 21, 23, 45, 20, 46, 9 is a county in Mississippi.
My 31 40, 39, 15, 54, 18, 20 is a city in Western N. Y.
My 59, 54, 18, 33, 5 is a city in Central So. America.
My whole is one of the Proverbs of Solomon.

ANSWERS TO ENIGMAS, &c., IN No. 885.

Answer to Geographical Enigma:—Spend one penny a day less than thy clear gain.

Answer to Miscellaneous Enigma:—Be sure you are right, then go ahead.

Answer to Anagram:

Years have passed o'er me like a dream
That leaves no trace on memory's page,
I look around me, and I seem
Some relic of a former age,
Alone, as in a stranger clime,
Where stranger voices mock my ear,
I mark the lagging course of time
Without a wish, a hope, a fear.

Answer to Arithmetical Problem:—Found 103 lbs.; A's, 154lbs.; B's, 32 lbs.; C's, 56 lbs.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

THE CHARTER OAK LIFE INSURANCE COMPANY
OF HARTFORD, CONN.

J. C. WALKLEY, President.
N. S. PALMER, Vice President.
S. H. WHITE, Secretary

ASSETS JULY 1st., 1866, OVER $2,000,000!
ANNUAL INCOME OVER $1,500,000!

ASSETS, OCTBER 1st., OVER - - - $2,250,000,
AND VERY RAPIDLY ENLARGING.

ANNUAL INCOME OVER $1,500,000,
AND CONSTANTLY INCREASING.

The Great Popular Feature of Life Insurance, viz.:

ANNUAL DIVIDENDS,

Originated with this Company in the year 1863, and two complete Dividends upon that plan have been paid, viz.: those declared April 1st, 1865. No other Company has yet paid a single year's Dividend on this plan. In connection with this system, this Company has combined the Triennial Dividend plan by which, every three years, the accumulated surplus is distributed to the insured. At the time of the declaration of the Triennial Dividend, a much larger distribution of surplus is made than could be prudently given annually. **Those who insure at any time before the 31st of March, 1867, will participate in the Triennial Dividend of April 1st, 1867,** AND AT THE SECOND PAYMENT OF PREMIUM, WILL RECEIVE THE LARGEST DIVIDEND EVER YET PAID BY ANY LIFE INSURANCE COMPANY, TO THOSE INSURED FOR A SINGLE YEAR.

By the Report of the Insurance Commissioner of New York, for January 1st, 1866, this Company had Assets of $153, for each $100 required for Reinsurance. By the Report of the Massachusetts Insurance Commissioner, Nov. 1st, 18 5, this Company with fifteen hundred years of life exposed upon policies issued subsequent to November 1st, 1861, met with NO LOSSES. This Company's Income for the year ending January 1st, 1866, was nearly double that of the preceding year, being an INCREASE OF NINTY-FIVE PER CENT. It returned in Dividends to the insured in 1865, over $113,000. The particular attention of those desiring insurance on their lives, is directed to the Insurance Reports of Massachusetts and New York.

By reference to the list of General Agents, it will be seen that this Company confines its business within the HEALTHY limits of the United States, and so is not liable to the excessive mortality to which those Companies may be subjected, which in their eagerness to obtain business, establish agencies in unsettled and unhealthy localities. This Company's risks are so distributed, that any severe epidemic will increase it only a very slight degree, (if at all,) the low rate of mortality which the Company's Reports have hitherto shown to be its experience.

THE CHARTER OAK COMPANY GUARANTEES ANNUAL DIVIDENDS.

This Company has issued about 20,000 Policies since October, 1850, covering insurances of over $40,000,000. It has paid losses to the families of about 500 of its Policy-holders, and in the amount of $1,000,000. AND IN NO INSTANCE HAS A CLAIM BEEN LITIGATED.

☞ LIFE INSURANCE IS AN INVESTMENT OF THE SAFEST DESCRIPTION. The man who holds a Life Insurance Policy for $10,000, has just as good property to leave to his family as he who owns stocks or lands of equal amount.

☞ LIFE INSURANCE IS A PROFITABLE INVESTMENT, for it is certain to return the amount of the premiums paid, with a good rate of interest, even to those who live to a good old age, while to those who fall short of "the term of expectation," there is a very large gain above premiums, and interest thereon. The time is rapidly approaching when neglect to insure one's life will be deemed ample proof of the lack of ordinary business prudence.

AGENCIES will be given to men of good character and address by the following General Agents of the Company, to whom also application for information concerning the Company may be addressed.

A. M. WARD, General Agent for State of New York. Utica, N. Y.
N. B. STEVENS, General Agent for Connecticut, Rhode Island, and Western Massachusetts. Hartford, Conn.
J. W. GODFREY & BRO., General Agents for Missouri. St. Louis, Mo.
WM. H. WELLS, General Agent for Illinois. Chicago, Ill.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL, D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

MAKING AND SAVING MANURE.

THE term manure means, to the majority of farmers, the enriching substances which collect in their yards and stables during the season of foddering. It is the solid excrements of their animals, mixed with the substances which form their feed and bedding. But little care is taken to save it, improve its quality or add to its bulk. This is one of the worst faults of our American system of farming; the best farmers are reforming—all must, at last, or give place to those who are more progressive.

As in the older settled States the virgin richness of the soil is exhausted, the profitable and permanent yield of crops depends on the extent to which we apply fertilizers, it has become a matter of the most vital importance to success in farming to increase the amount and richness of manures. How shall this be done? First, by making all you can; second, by saving it. To make it, the first great requisite is to feed stock. Sell as little of the direct produce of the land as is consistent with profit, and in this consideration of profit the manure lost by direct sale of grain should be taken into account. Hay, straw, cornstalks, and the coarse grains, should be turned into animal products. These make manure. Many times the farmer is so situated that he can profitably purchase food and thereby increase his manure pile, although this course obviously adds nothing to the aggregate fertility of the whole country, for what is thus added to one farm is abstracted from another. But the wise farmer has the gain, and the foolish one bears the loss.

When made the farmer must be careful to save the manure. Much is wasted by exposure to the elements, by fire-fanging, and by the liquid portions flowing off. Perhaps no better method of saving manure in the foddering season can be devised than to compost it properly. The heap should be made in a basin whence the soakage cannot escape. Plenty of muck, or rotted sods should be at hand, and it would be better if coarse fodder, as cornstalks and straw, were cut fine. What can be gathered daily place on the compost heap. Plenty of muck or rotted sods, will, if mixed in, prevent fire-fanging. In this way form the compost in the severe cold weather; in the spring add all other materials which may be gathered—the litter from the yards, from the hog pens, the hen house, contents of the sinks and privies, and more muck or sods. It will astonish the beginner to see the amount of manure thus collected. Plaster and ashes are good ingredients to add. Shovel the pile over once or twice and apply it to the land only when fine and well rotted.

We believe top-dressing the only true way to apply such manure. It will make rank corn and dark-colored blades of wheat. The ears of corn will bend to the earth at harvest time and the meadows will be full with grass. By top-dressing the farmer gets the quickest returns from the investment of capital. In the crop to which the fertilizer is applied he sees immediate effect, and this gives encouragement to continue.

TURKEYS—CHICKEN HATCHING.

IT is said that in France, and other Continental states, a practice prevails in the business of chicken hatching which we believe has not yet been imitated here to any great extent, if at all. The process is to transfer the work of incubation to turkeys which are trained to or broke into the business. They are, at first, confined in boxes, with wire screens over them, in a dark room, till they become accustomed to the seclusion, when the screen is removed and freedom of locomotion accorded. When thus drilled, hens' eggs are placed in the box-nests and the process of incubation commences. As fast as the chicks come out they are removed and fresh eggs supplied, and thus the hatching process is kept up for months without intermission. A traveler mentions a case where a turkey had been setting and hatching far more than six months. Remarking that the process seemed a cruel one, the owner replied that it was not so; that the turkeys came to like the business in time, and to prove it turned a turkey out and removed the eggs to one side of the nest. In a short time the turkey returned, calling plaintively for the eggs she had left, and on finding them seemed highly pleased with the discovery. Working them back into the nest, the business of incubation was resumed with evident marks of satisfaction.

SLAUGHTERING ANIMALS.

THE old-fasioned method of killing beeves by knocking them on the head is objected to by butchers for the reason that it renders the body of the animal rigid and prevents an easy and quick flow of the blood, which is essential to the production of good beef. The more modern and approved mode of killing consists in driving a narrow knife blade, by a quick motion, in between the head and first vertebra, piercing the spinal marrow, destroying the sense and paralyzing all the muscles of the body, leaving them soft and flexible. The animal is then slung up by the hind legs and quickly bled, as the flow will then be rapid, perfectly exhausting the reservoirs of the fluid contained in the body.

Animals should never be slaughtered when in an excited or feverish state, whether caused by excessive bodily exertion or the phrensy of fear. Under such circumstances the bleeding will be imperfect and fitful, leaving the meat bloody and subject to speedy tainting and decay. Almost any one can slaughter an animal, but it requires judgment and some practice to butcher one properly, leaving the meat clean, tender and fit to eat.

CULTURE OF PEPPERMINT FOR OIL.

NUMBER ONE.

[TOWARDS the close of the last volume of the RURAL we received several inquiries regarding the culture of peppermint for oil. In response to some of these then published, Mr. J. B. TIBBITS, Newark, Wayne Co., N. Y., sent us the following very practical communication. As the matter would not spoil by keeping, we have delayed the publication of it a little while in order to procure proper illustrations of the subject:]

Any soil that is adapted to the cultivation of corn is also adapted to the cultivation of peppermint. The land should, of course, be free from stone, or any other obstructions that would be in the way of mowing. In some cases bottom land might be preferred, as it is less exposed to the severe winds of winter, but taking the seasons one with another there is but little if any choice. I would advise planting after some hoed crop that has been well tended the previous season, yet stubble ground will answer if it is free from grass. As peppermint is planted with reference to three crops, great care should be taken to have the land clean, and the first crop well tended.

The planting should be done as early in the spring as practicable. At any rate it should be finished, if possible, before the first of May. Plow the ground well and harrow it down smoothly. Take a small shovel-plow and make the furrows not more than eighteen inches apart, as the closer the furrows are together the sooner the crop will cover the ground.

It is better not to furrow the ground much faster than it is planted, so as to cover the roots with fresh earth. The roots are dug or pulled with a common potato hook. Pull them up and shake the dirt from them with a fork, and if not

THE PEPPERMINT PLANT.

wanted for immediate use throw them into small heaps and put a slight covering of earth on them to prevent the sun and wind from drying them out.

When your ground is ready for planting, distribute the roots in small heaps at convenient distances along the edge of the furrowed ground. Separate the roots by pulling them apart until you get what you can conveniently carry with one arm. Then commence planting by dropping three or four roots in the furrow and covering them by drawing the earth over them with your feet. This constitutes the whole of planting peppermint. The roots should form a continuous line in the furrow, or in other words, there should be no spaces between each handful of roots dropped. Like everything else, the more pains taken in planting, the better the crop will be. The roots should *all be covered*, and if alive when planted they will be sure to grow unless planted too deep, which is not likely to be the case. From one to two inches is deep enough to cover them. It will take, as a general thing, about eight square rods of roots to plant an acre, and the roots *should always be dug from the last year's planting.*

As soon as the plants are up so that you can follow the rows, the ground should be hoed between the rows, taking care not to hoe around the plants, as you would be likely to cut off those not already above the surface. About the first of July the plants begin to throw out "runners," and by this time the hoeing should be finished. The ground should be kept entirely free from weeds and grass, not so much with reference to the present, as the future crop. The second and third years the crop needs no cultivation, the only labor required being that of cutting and distilling. Sometimes a small drag with fine teeth is passed between the rows to facilitate the hoeing, but this is apt to cover up the grass which should be pulled out, besides leaving the rows on a slight ridge, rendering them more exposed to the severity of winter.

The crop should be cut when it is in full bloom. The mowing of "new mint" (which is the first year's crop) should be done with a scythe. The second and third year it can be mowed with a machine, although this is objected to by some (fogies) on the ground that every leaf stepped on by the horses is destroyed. This in theory may be true, but the *practical* point when taken in comparison with the saving of labor, is too minute to be perceived. In mowing "new mint" we generally commence on one side and "carry the swaths." In other words, mow across and walk back in the swath, clipping off what the scythe may have slipped over. Never mow peppermint when it is wet, or when there is an appearance of much rain, as that causes the leaves to fall off, thereby materially injuring the value of the crop. After mowing, let it lie in the swath until it is wilted or cured about as much as you would clover hay. Then with a hand-rake, draw five swaths into a winrow and put it into small cocks as you would clover. Care should be taken not to put it up too green, as the least degree of fermentation injures it; neither must it get too dry, as the leaves will crumble and a consequent loss be the result. A little experience will regulate this matter.

[Above we give a representation of the peppermint plant in blossom, and in our next will illustrate the apparatus used in distilling the oil of peppermint.]

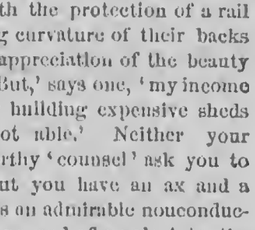
RURAL FARMERS' CLUB.

Hops—Poling vs. Horizontal Training.

A CORRESPONDENT writing from Lewis Co., this State, requests our opinion on the relative advantages of training hops to long poles and to horizontal strings or trellises, known as the COLLINS patent. Aside from the patent fee the horizontal method is undoubtedly cheaper, and affords also greater facilities for harvesting the crop. But the main question is, which grows uniformly the largest crop and gives the best quality? The consideration of maintaining the vines in a healthy state is also an important one. If we were going to invest largely in stocking a hop yard, we should not be satisfied without visiting the hop growing regions where both systems are in operation, and there gather information and form conclusions. We think it is safe to assume the pole system to be the best one. It has the merit of age, and *has been* successful. If there is a better one, the burden of proof certainly rests with the comparatively untried method. It is said to be difficult to make the hops run horizontally, and it is also asserted that the pole system gives them more air and sunshine. We doubt not that many of our readers are ready to assert the superiority of the horizontal system,—many, probably, to deny it. Our duty, as journalists, is to advise the use of caution and thorough investigation before a costly innovation be adopted on a time-honored and tolerably satisfactory system.

Wrought Iron vs. Thimble Axle.

THERE has been some discussion in our columns respecting the relative lightness of draft of the wrought iron and the thimble (cast iron) wagon axles. W. S. DURBEN, N. Y., writes us on this subject thus:—"My opinion, founded on experience and observation is, that on a smooth, level road with a ton or more load, the wrought iron will draw decidedly the easiest, but they are not adapted to a hilly or rough road." So we think. In practice the thimble axle is the best; but it can be mathematically demonstrated that the smaller the axle of a wagon wheel, other things being equal, the easier the wheel runs. In practice these "other things" are of far more importance than the mere friction at the point of bearing of the axle; hence the superiority of the thimble axle. Here is the demonstration:



"Let C be the center of a wheel, of which C D is the radius, and C A that of the axle passing through the wheel, and which being fixed to the load does not revolve with the wheel.

"If a force C B be applied to the center of the wheel, tending to advance it in the direction B, the point D being in contact with the ground, the wheel is compelled to turn or roll, and the force C B in turning the wheel acts with a leverage equal to C D, but the friction between the axle and the wheel is at the point A, and in preventing the turning of the wheel it acts only at the extremity of the lever C A; consequently if C D be ten times as great as C A, the force C B need only be equal to one-tenth of the amount of the friction, and, as a general rule, the radius of the axle and the friction remaining the same, the force necessary to overcome the resistance arising from this friction will be *inversely as the radius or the diameter of the wheel*, or, in other words, the draft will, in this case, diminish exactly in proportion as the diameter of the wheel is increased."

Cheap Shelter for Stock.

J. F. S., Oakland, Wis., furnishes our Club the following hints about cheap shelter:—"It is a deplorable fact that many farmers show a reprehensible carelessness in regard to the comfort of their domestic animals. Judging from their actions one might reasonably infer that they supposed the blood of sheep and cattle to be of the same temperature as that which gives life to the fish, and although the mercury lingers lovingly near the zero mark, and the bitter northwest wind blows fiercely over the fields, still they try to convince themselves that their milch cows are perfectly satisfied with the protection of a rail fence, and the striking curvature of their backs merely indicates an appreciation of the beauty of the curved line. 'But,' says one, 'my income will not admit of my building expensive sheds and stables; I'm not able.' Neither your stock nor their unworthy 'counsel' ask you to do impossibilities, but you have an ax and a straw-stack—straw is an admirable nonconductor of heat—insert one end of a pole into the south side of the stack, rest the other in a crotch, lean rails against the pole, cover them with straw, and my word for it as you enter your comfortable kitchen that evening, not only will your heart be happier, but your milk-pail will be heavier than usual, and you will retire with a pleasing consciousness of having 'done what you could' to enhance the comfort of your stock."

Permanent Pasture.

"WILL it pay, on a large farm, to reserve a part for permanent pasture, if the land is all tillable?" Thus queries a correspondent. If the main purpose is to raise grain and stock for market, and all parts of the farm are nearly equal in capacity for this purpose, it would be the preferable course to adopt a rotation and apply it to all portions of the farm alike. If a field has been well tilled and manured, for instance, the first three crops of grass taken from it when seeded, will be much larger than the next three. It is then in good condition to re-plow and cultivate again. If the production of butter and cheese is the main object in view, it is doubtless best to let the grass lands remain unplowed as long as consistent with their prosperity. Old pastures and meadows, we think, produce the best quality of dairy products. Good, permanent pasture on lands not strictly adapted to grass, is more desirable, perhaps, than attainable.

Save the Grass Seed.

LATE cut timothy hay furnishes an abundance of seed for the farmer's use, if he can manage to save it. By giving some attention to cleaning the mangers a quantity may be gathered. A little labor bestowed in shaking the hay on a clean barn floor, or thrashing it somewhat with the flail, will be paid in the seed gathered. It is a timely subject, and attention to it will save paying a nice little bill for the necessary grass seed next spring.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

EXECUTIVE COMMITTEE MEETING.—The Executive Committee of the New York State Sheep Breeders' and Wool Growers' Association will meet at the American Hotel, in Auburn, on Wednesday, February 20th, at 10 o'clock A. M., to make arrangements for the next State Sheep Fair. HENRY S. RANDALL, *President.*
H. D. L. SWEET, *Secretary.*

LIVER ROT.—IDENTIFICATION OF DISEASES.

HENRY WILSON, Hustisford, Dodge Co., Wis., states that in January, 1865, a favorite ewe, to all appearance in good health, suddenly exhibited a strong and persistent tendency to bite out and *eat* wool from the flanks and rumps of his other sheep. She was separated from the flock, wintered well, and raised a good lamb. After being turned to grass in the spring no further inclination to eat wool was observed in her, and she continued healthy until some time after weaning her lamb. She then appeared to be ailing during four days, but "ate some and chewed her cud." On the fifth day, says Mr. W., "I found her alone, looking sick, her ears down, her eyes having a strange look. She laid down occasionally, but most of the time remained standing. In two hours she died." By the advice of "old sheep keepers" she had been "doctored partly for grub in the head," though her owner did not believe this was her malady. "At the commencement of her last sickness, he gave her two or three cathartic doses, but with no good effect." He made a *post mortem* examination, of which he says:

"*I* found the head free from grubs, and apparently perfectly healthy. The lungs were slightly hepatized, but not more so than they would be in any creature that died with its blood in it, or that was not well bled at killing. I found the liver very much diseased, the gall very full and of nearly the consistence of molasses. Upon attempting to take out the liver it would break with its own weight. It smelt and looked very differently from a good liver. It broke very easily, and in squeezing it in the hand it would crumble to pieces. In fact it was *rotten*. Other parts of the sheep were healthy in appearance. I then and still think it a clear case of Liver Rot. Pray, sir, what do you think?"

Judging from the symptoms, as given by our correspondent, we cannot see that his facts justify his conclusion. The rot is a common malady in Europe, and has been minutely described by its best veterinarians. At its commencement the sheep usually rather improves in condition. After a few weeks it begins "to shrink and become flaccid about the loins," and a crackling sound is heard on their being pressed. The skin becomes pale, and, as the malady progresses, yellow or black spots appear on it. Dullness and loss of condition ensue. The eyelids become white and subsequently yellow, and the yellowness extends over the body. A watery fluid appears under the skin, and a swelling containing it occasionally appears under the jaws. The skin becomes loose and flabby and the wool comes off easily. The animal sometimes dies speedily, but more commonly lives from three to six months, gradually pining away, especially if continuous purging ensues.

On *post mortem* examination, extensive indications of the malady are visible. To use Mr. YOUATT'S words, "the whole cellular tissue is found to be infiltrated and a yellow serous fluid everywhere follows the knife. The muscles are soft and flabby; they have the appearance of being macerated [steeped in some fluid.] The kidneys are pale, flaccid and infiltrated. The mesenteric glands enlarged, and engorged with yellow serous fluid. The belly is frequently filled with water or purulent matter; the peritoneum is everywhere thickened, and the bowels adhere together by means of an unnatural growth. The heart is enlarged and softened and the lungs are filled with tubercles." But the most characteristic changes are found in the liver. "It is pale, livid, and is broken down with the slightest pressure, and, on being boiled, will almost dissolve away." When not pale "it is often curiously spotted." Some parts of it "are hard and schirrous; others are ulcerated, and *the biliary ducts filled with flukes.*" These parasites are "*from three-quarters of an inch to an inch and a quarter in length, and from one-third to half an inch in greatest breadth.*"

Such are the *pre-mortem* and *post mortem* appearances of this great scourge of European sheep, as described by the best authorities. They are given more fully in the Practical Shepherd, to which Mr. WILSON refers; but we have thought it best again to publish the most important of them, to keep attention directed to the detection and identification of the malady should it actually make its appearance in our country. We have another object in discussing this particular case, though in itself of little consequence, because it involved only the loss of a single sheep. We would impress on our flockmasters the importance of a very careful investigation of facts and comparison of authorities in respect to ovine diseases, with which they have had no previous experience, before deciding what they are, and how they shall be treated. If the malady is misunderstood, improper remedies will of course be administered, and *they* often prove fatal when nature, if let alone, would have wrought the cure. It is our deliberate belief that in all serious maladies which affect the vital functions, ten sheep, cattle, horses, etc., are killed where one is cured by the medicine administered by the blundering zeal of inexperienced persons. An animal is ailing. The owner either guesses at the disease, or goes for advice to a neighbor as ignorant, but possessing more confidence than himself. Or perhaps he consults a learned work on the subject. One or two important or unimportant symptoms are found to coincide with those described as peculiar to a certain disease. This is enough. The conclusion is jumped at that the malady is identified, and the remedies appropriate to *that* malady are given. Now, the same symptoms may be characteristic of other and widely different diseases, and the medicine administered may be but the addition of fuel to the fire. A still less rational course is often pursued. Medicines are poured down almost without any attempt to investigate symptoms—and different ones, of an opposite nature, perhaps, are poured down on top of each other, without waiting for any to produce their legitimate effects, and just as fast as different neighbors come in and advise their use. It may be asked what the inexperienced owner is to do, when valuable animals are attacked by dangerous maladies? Let him consult skillful men (whether they are learned or not,) or let him consult nobody. Let him consult books, but let him do this with great deliberation and circumspection, weighing all the facts and carefully comparing the observed with the described symptoms. If with these aids he can arrive at a tolerably certain conclusion, let him act on it. If not, by all means, *let him do nothing and allow nature to take its course.* This is infinitely safer than "doctoring" at random.

These remarks are not intended to apply particularly to the communication of Mr. WILSON, which evinces intelligence and attentive observation. We simply take it as the text of a homily of general application, which we have preached before, and which should be preached once a year for the benefit of new beginners.

Now to the case in hand. The wool eating, the details of which we have greatly abridged, is not among the recognized symptoms of rot. It doubtless proves that the stomach was not then in a perfectly normal state, and we will not say that had the sheep been permitted to consume an excessive quantity of wool, (which does not appear to have been the fact,) it would not have produced a more seriously diseased condition. But we have no right to infer that months after the unnatural appetite ceased, and after months of good health had intervened, that it caused or was in any way connected with the final disease which proved mortal. That mortal disease was accompanied by only one characteristic of rot—the disorganized condition of the liver;—and that might be the result of some other malady. But where were the yellowness of the integuments, the serous depositions, the flukes, etc., which also specially characterize rot, and which would be visible to every eye? All were wanting. Again: when a whole flock is exposed equally to the local causes—the miasma—which produces this disease, we suppose that it would be unprecedented that one sheep alone should be attacked, and that all the rest should remain healthy.

INFANTADO RAM "GEN. SHERIDAN."
OWNED BY MESSRS. C. N. ROGERS & SON OF WHALLONSBURGH, ESSEX CO., N. Y.

OHIO WOOL GROWERS' ASSOCIATION.—The annual meeting of this Association was held at Columbus, on the 8th inst. In the absence of President MONTGOMERY, (who was detained by his duties at Washington,) T. S. HEMBRICKHORSE of Coshocton, was called to preside.

The Committe to prepare resolutions and business (consisting of S. D. HARRIS of Cleveland, J. P. ALEXANDER of Akron, and S. H. SHERWOOD of Mt. Vernon,) reported the following preamble and resolutions, which were adopted:

Whereas, The business of wool growing in these United States must receive protection, as against the importation and sale of foreign wool in our markets, or this branch of our domestic production must be abandoned as a remunerative occupation; and

Whereas, The necessities of this Government require a tariff for revenue on foreign importations, which, by a proper discrimination, may afford such protection as we desire; therefore,

1. *Resolved*, That we believe the general tariff bill which passed the House of Representatives in Congress, at its last session, and is now pending in the Senate, is so arranged, in regard to duties on wool and woolens, as to accomplish the above related objects.

2. *Resolved*, That our Senators and Representatives in Congress are urgently requested to exert their influence, by voice and vote, to secure the passage of a law which shall embrace the provisions of the bill aforesaid, in regard to wool and woolens, and we shall hold them responsible, to the full extent of their ability, for the accomplishment of the same.

3. *Resolved*, That we remember with gratitude those members of Congress who have proved themselves our friends in this measure, and hereby pledge our opposition to such members of Congress as shall prove recreant to the interests of the people as herein expressed.

Various other resolutions were adopted, including the following:

Resolved, That in the event of delay in the passage of the general tariff bill, we earnestly request our Senators in Congress to make the woolen interest the subject of special legislation.

Resolved, That, in so far as we understand the policy and minimus of the tariff bill reported by Commissioner Wells, it meets with our utter condemnation, as inimical to the interests of the wool growers of the United States.

Resolved, That we, as an Association and co-workers with our late President, the Hon. R. M. Montgomery, do hereby extend to him our heartfelt thanks for his untiring labors in behalf of wool growers, and that we shall ever treasure our associations with him as the most pleasant part of our long effort to obtain a protective tariff.

The Association elected the following board of officers for the ensuing year: *President*—Hon. COLUMBUS DELANO of Knox Co. *Vice President*—Dr. H. S. Conklin of Shelby. *Sec'y and Treasurer*—S. D. Harris of Cleveland. *Directors*—J. C. Stevens of Hardin, J. B. Jamison of Harrison, and N. S. Townshend of Lorain. Hon. R. M. MONTGOMERY was chosen representative in the Ex. Com. of the National Wool Growers' Association.

ILLINOIS WOOL GROWERS' CONVENTION.—The Illinois Wool Growers' Association met on the 8th inst. at Springfield. As the report intended for the RURAL is probably delayed by the snow blockade, we will not attempt to give the proceedings this week. The interesting facts were stated that there are in that State 2,000,000 sheep, worth $8,000,000, yielding annually $3,000,000. It was resolved that we should cease to import wool, a great part of which is shoddy, making this country the rag-bag of the world; that Illinois protests against being taxed to support the Government while being put in competition with those who contribute nothing; that the dissolution of the wool business by any improvidence in the tariff must effect financial disaster and impair manufactures. For these reasons the House Tariff bill is urgently recommended. Governor Yates wrote a letter to the Convention, stating his belief that ten cents per pound on imported wool is little enough, and declaring that he should advocate its incorporation into the Tariff bill.

Dairy Department.

LOOK TO THE COWS.

OWING to the steady cold weather for several weeks past, farm stock of all kinds, especially that pertaining to the dairy department, has been subjected to a pretty severe trial. If, during this period, proper attention has not been bestowed upon the cows, in the way of suitable shelter and food, they will require extra care as the period of maternity approaches, else they will come in weak and be ill prepared to supply their young with the milk essential to their growth and well-doing, or the dairy with the supplies expected as a recompense for their tendance and keeping. If kept in the open air night and day; if restricted in the measure of their food, and this of poor quality,—if no efforts are made to brace them up with something besides dry hay, it is pretty safe to assume that the spring will find them in a condition anything but flattering to the humanity of their owner or to his prospects of profit from them. Cows should be well supplied with mixed food, shielded from the rigors of the winter, so that when spring comes they can get up without being lifted, as it is sometimes necessary to do with them, because of neglect in their keep and management.

ABORTION IN COWS.

"A DAIRYMAN" gives it as his opinion, through the columns of the Utica Herald, that the cause of abortion in cows is to be found in the use of ergotized or smutty fodder supplied to them during the winter. That paper excepts to this solution of the difficulty, and cites, as proof of its incorrectness, cases where cows had partaken of ergot to such an extent as to cause the loss of their feet from hoof-ail, yet abortion did not ensue. Besides, it is known that numbers of cows abort in autumn, while feeding upon grass,—when they would not be likely to partake of anything affected by ergot. The evil has become one of such magnitude, in the dairy districts along the Mohawk, as to induce its reference to the State Agricultural Society, whose members are making efforts to detect the cause and, if possible, supply a remedy.

BUTTER AND CHEESE—SHIPMENTS.—The Utica Herald furnishes, from reports made by the freight agents of the railroad, the amounts of butter and cheese exported from Herkimer Co. during the three years last past. The aggregate of cheese shipments was 51,744,259 pounds. Those of butter 1,089,369 pounds. During this period there was a steady increase in the cheese product, but a very great diminution in that of butter. The shipments of this article in 1866 were less than those of 1864 by 200,000 pounds, while there was an increase in cheese, for the same period, of about 1,400,000 pounds.

DAIRY PROFITS.—Mr. GEORGE MCDONALD of Smith's Falls, C. W., states that he made, from a single cow, during a period of 216 days, commencing May 5th, 300 pounds and 8 ounces of butter. The cow had nothing but grass during the summer months. Assuming the butter to have been worth 25 cents per pound, we have as a result, $75.12½. This is certainly a gratifying return for the capital employed.

DEFERRED.—Some two columns of proceedings of the recent annual meeting of the American Dairymen's Association, (commenced in our last number,) in type for this paper, are necessarily deferred.

Rural Spirit of the Press.

Indian Corn.

THE Canada Farmer has an article commendatory of Indian corn as a farm crop, both as food for the family and for stock. The English farmers who settle in Canada have generally a strong prejudice against this grain, for the sole reason that it was not a general farm product of the country whence they came. This aversion to corn the Canada Farmer deems absurd, and presents some good suggestions as to its usefulness, as a farm crop, in many portions of Canada, and the best methods for cultivating it. Neither in Canada nor in the Northern States is corn likely to supplant wheat, as a material for bread, though it is pretty safe to assume that a more general and free use of the former for this purpose would lessen materially the expense of supporting a family, while promoting the health of its members. The disinclination to use corn meal for bread is owing less to the lack of merit in the article itself than to a want of skill in preparing it for table use. The people of the Middle and Southern States are, as a general thing, much in advance of those at the North in making Indian bread. A Maryland "Pone" is not bad under any circumstances, but partaken of warm, with *good* milk, it is good enough for anybody. Moreover, bread made of superfine flour, at present prices, is doubly "costive."

Commercial Manures.

IN a recent number of the Southern Cultivator was a communication from DAVID DICKSON on the commercial manures best adapted to the cotton and corn grounds of the South. He says:—"You will see some guanos advertised as *permanent manures.* I WANT TO AVOID that kind, for I think that it is true of some of them, at least, that when I use them my crops do not remove them. *I prefer the kind that will come to me* the first year, and bring a large interest in the form of cotton, corn, wheat, &c. The true system in manuring is to get the manure back the first year, with a living profit and rapidly to improve the soil up to its original capacity." The manure he uses is a compost per acre of Peruvian guano 100 pounds, dissolved bones 100 do., salt 100 and plaster 50 pounds. This is well mixed and deposited in the cotton drills. For corn a kindred process is pursued, with excellent results in both cases.

Cause of the Potato Rot.

JOHN H. KLIPPART, Columbus, (O.) gives his views on the causes of the potato rot in the National Agriculturist published at Pittsburg, Pa. He traces the disease to excessive cultivation and to hybridization as one of the natural consequences of it. In his opinion potatoes so crossed as to have a flesh of more than one color will be found subject to the rot, while those of but one will be found free from this tendency. Assuming this to be correct, his remedy is to plant none but the smaller potatoes, and those of a variety without a cross. Where large potatoes are selected for seed the rot is most certain to follow, while the reverse is true with respect to small ones. In conclusion he says:—"The rot in potatoes is a disease *not* caused by a fungus, but the fungus ensues as a *consequence* of the disease, the same as *smut* or *brand* in our Indian corn is not the *cause* but the consequence of abnormal conditions."

Selecting Seed.

THE Lower Canada Agriculturist discourses very sensibly on the importance of sowing and planting good seed as a preliminary to a good and prolific harvest. It says:—"All grain seeds are furnished with oil and starch, which are designed to furnish nutriment to the germ when it first starts, before becoming capable of extracting it from the soil. Now, if anything affects these, such as mold, etc., the plant that should happen to grow from such seed would be influenced by the imperfection of the seed whence it sprung." There is more in this than is usually conceded by practice, and farmers would derive benefit from greater care and discrimination in the seed they plant and sow.

Swiss Architecture.

"CARLTON," in his letters to the Boston Journal, ridicules the affectation of what is called Swiss architecture in the United States. He says:—"A Swiss chalet is very romantic in America, but exceedingly prosaic among the Alps. American architects and American citizens who desire neat, comfortable, serviceable houses will do much better by using common sense in devising residences suited to the climate and the wants of a family, rather than attempting any imitation of these mountain stables for the cattle of Switzerland."

The Mexican Improved Corn.

THE Massachusetts Ploughman speaks of this corn as the result of sundry crossings, carried on since 1842, for the purpose of producing a variety which should be of the best quality and of the highest productiveness. The result is announced to be "an improved early variety," which yields about fifteen bushels per acre more than the Brown, Parker, Dutton or Phinney corn, or any other which he has tested. Planted the last of May, it gets fully ripe by the first of October.

Protecting Soils in Winter.

UNDER this heading the "Cultivator and Country Gentleman" gives some hints to cultivators of semi-hardy plants and shrubs. It says: "The advantage of mellow surface, acting as a non-conductor of frost, is shown by the lessened depth in freezing, good drainage being necessary for such pulverization. When this is very perfect the frost scarcely causes adhesion among the particles, and it is therefore nearly impossible for it to heave or throw out the roots."

Rural Notes and Items.

THE SEASON—WINTRY WEATHER.—January has thus far been somewhat remarkable for uniformity of temperature. Though there have been but few really severe days, the temperature has been generally quite low and properly denominated cold during the past three weeks. The quantity of snow has not been excessive, but ample for sleighing had the wind permitted it to lie still. During the night and morning of the 20th and 21st, the most profuse fall of snow of the season (some 10 or 12 inches,) took place, and was badly drifted in many localities. A considerable amelioration of temperature has succeeded the storm, and it is possible that the customary "January thaw" may yet occur. In any event, the winter of 1866-7 will be noteworthy for its rigidity, especially in the Lake region. Owners of peach orchards are brooding over blasted prospects, while farmers generally are scanning closely their hay-mows and stacks, computing the possible consumption of food by their flocks and herds during the balance of the winter term. It will be a "close shave" with many unless February shall prove more kindly than its predecessor.

—Severe snow storms have occurred during the past week (since the 16th,) in the East, West, and elsewhere. The mail and other roads have been blockaded in various sections, but the storm seems to have been most severe on the Atlantic coast—Boston, New York, &c., having suffered severely. A letter from Boston, 17th, says:—"We are in the midst of the greatest snow storm ever known in Boston. It is fearful." Similar reports reach us from New York and other points, and hence we conclude that Western New York is still a comparative paradise.

IOWA AGRICULLTURAL MATTERS.—The Secretary of the Iowa Board of Agriculture has recently made his annual report, which contains many interesting facts. The reports from the various County Societies in regard to wheat show that last year's crop was a very good one. Very few officers of county societies give any intimation of failure of this crop. In fact, all speak encouragingly of the yield, and it may be said in general terms to exceed that of 1865, both in quantity and quality. The Secretary is of opinion that full one-third of the receipts of wheat at Chicago for 1866 were from Iowa. The report in reference to last year's corn crop is unfavorable. Forty officers of as many different county organizations report disparagingly of it. The increase of sheep in Iowa in the last three years has been large. A decided improvement is being made in cattle. The ordinary "Scrubs" are disappearing and Short-Horns and Devons are taking their place. The number of hogs in Iowa in 1865 was 1,037,117.

WORMS IN HORSES.—(J. C., S., Orange Co., N. Y.) There are several varieties of worms which inhabit the body of a horse, and it should be remembered that it is neither desirable nor possible to expel them wholly. Unless they accumulate in too large quantities they are not apt to produce mischief: a debilitated condition of the animal, arising from any source, induces them to act unfavorably. The first effort in treating a horse for worms should be to restore or improve the vigor of the system by nutritious food; give also a bran mash twice a week. Of pure medicine administer a pint and a half of linseed oil, and repeat the dose every ten days for three times. Give also, a drachm of powdered sulphate of iron every night for a fortnight.

FILL THE WOOD-HOUSE.—Those who have timbered land and use wood for fuel should improve the present time to replenish their wood-sheds for the coming season. Chopping is not quite so easily performed during frosty weather as at a milder period, still it can be done when other farm work cannot be accomplished. It is the general impression, too, that wood cut before the sap commences to flow freely, will do greater service than that prepared later in the season. If the house is not too distant from the wood lot, chop a tree down, cut off the limbs, and "snake" it bodily to the door yard. A yoke of oxen will step off with a good-sized tree, over frozen ground, oiled with such a coating of snow as it now has.

REPORT OF THE MASS. CATTLE COMMISSIONERS.—In April, 1860, the Legislature of Massachusetts passed a law appointing Commissioners to attend to the extirpation of a disease among the cattle of several sections of the State, denominated pleuro pneumonia, for which purpose the sum of $10,000 was appropriated. This was soon exhausted and another appropriation made. The number of cattle killed by order of the committee, up to the date of the report, was about 1,100, and the expense incurred in doing it was $67,511.08. The disease is said to be entirely eradicated from among the herds of that State.

RURAL ART.—It is stated that DONALD G. MITCHELL, Esq., author of "My Farm of Edgewood," &c., has in preparation a volume on landscape gardening and rural embellishment. It is also authoritatively announced that Mr. M. proposes to offer his services to those wanting special suggestions and plans for the selection and development of private home grounds, and the management and improvement of country places.

MAPLE SUGAR MAKING.—Unless the snow goes off at a dash, the present season will prove quite favorable to the production of maple sugar. It is important for those having sugar orchards to have everything in readiness for the business of sugar making, in order that the first flow of sap may be made available. The loss of a single day during some seasons, is of marked consequence to the maker of maple sugar.

FOREIGN SEED WHEAT, &c.—It is gravely announced that the Commissioner of Agriculture is in receipt of a large quantity of Spring Wheat from Odessa, Russia, which is designed for distribution among agriculturists. He has also received numerous varieties of apple and pear trees from the same place, to be used in the experimental garden of the Department.

BOOT SOLES—HOW TO MAKE MORE DURABLE.—C. V. R., Rockford, Ill., recommends getting the boots two or three weeks before wearing them, and apply a coat of tar every day for five days, letting them hang meantime behind the stove and dry. The tar makes the sole as hard as a board and it will wear as long (it makes them very slippery also.) If the tar gets on the uppers it causes them to crack.

STRAW PRESERVING THRASHER.—(H. D. C., Wash. Co., N. Y.) PALMER'S Straw-preserving Thrasher has received high commendation; it was in successful operation on the State Fair grounds at Saratoga last fall. Two horses furnished the power; the straw is fed to the cylinder sideways, and comes out free of grain and in good shape for binding. For further information address ISAAC N. COLLIER, Hudson, N. Y.

Doings of Agricultural Societies.

Ohio Agricultural Convention.—The regular annual meeting of delegates from the several County Agricultural Societies, with the Ohio State Board of Agriculture, was held at Columbus on the 8th of January, inst. Fifty-three counties were represented. A business committee was appointed when a series of resolutions was offered denouncing combinations for the purpose of affecting the price of labor or commodities of any kind. Combinations, with respect to labor, were regarded as especially oppressive to the farmer, and ought to be resisted. On this point a spirited discussion ensued, when it was decided in the affirmative by a vote of 31 to 21. The outgoing members of the old State Board were re-elected with one exception. At a meeting of the Board, as re-organized, DANIEL MCMILLAN of Green Co. was elected President, JAMES BUCKINGHAM, Treasurer, JOHN H. KLIPPART, Corresponding Secretary.

The subject of the establishment of an Agricultural College engaged a large share of the attention of the Convention. The land donated by Congress for this object has all been sold at an average of 53 cents per acre. Some members wanted but one college; others two or more, while a third section wanted the funds to go to institutions already established, thereby saving the expense of new and separate buildings. Nothing definite seems to have been decided upon. Mr. HARRIS of the Ohio Farmer, remarking on the subject says, "we are at sea again with the whole matter." Several existing Colleges in Ohio have made propositions to take the funds and append to their several institutions an Agricultural Department. The matter has been before the Ohio Legislature, but no conclusion upon it has yet been reached.

Iowa State Ag. Society.—The recent annual meeting of the Iowa State Board of Ag're was well attended and interesting. PETER MELENDY was re-elected President, James D. Wright, V. P., and J. M. Shaffer, Secretary; Dr. Geo. Sprague of Butler Co., for many years Cor. Sec. Ohio State Board of Agriculture, was elected Treasurer. The State Fair of 1867 will be held at Clinton.

Steuben Co. Ag. Society.—The annual meeting of this Society was held at Bath, Jan. 9th. The number in attendance was large, and an excellent spirit was manifested. Improvements in the buildings and grounds of the Society were resolved upon. The following officers were elected for 1867: *President*—R. B. WILKES. *Vice Pres'ts*—A. Y. Baker, J. W. Whiting, Alex. Arnold, F. J. Marshall, C. P. Hubbard, W. S. Hodgman. *Treas.*—Geo. W. Hallock. *Sec'y*—Reuben E. Robie.

Stephenson Co (Ill.) Ag. Society.—The following board of officers was elected at the late annual meeting, held at Freeport: *President*—CONRAD J. FRY of Freeport. *Vice Pres'ts*—Harrison Diemer, John Barfoot, Fred Watson. *Rec Sec'y*—Geo. Wolf. *Cor. Sec.*—Samuel J. Davis. *Treas.*—L. W. Guiteau, and a General Committee of one for each township. The treasurer's report shows the Society to be in a healthy financial condition.

The Skaneateles Farmers' Club has elected the following board for 1867: *President*—EDWARD SHEPARD. *Vice Pres'ts*—Wills Clift, C. C. Wyckoff. *Rec. Sec'y*—Chauncey B. Thorne. *Cor. Sec'y*—Jedediah Irish. *Treas.*—Wm. J. Townsend. *Directors*—Alfred Lamb, George H. Knapp, Dor Austin, J. H. Allen, J. Irish, Moses Parsons.

Dacota Co. (Minn.) Ag. Society—At its recent annual meeting this Society elected officers for 1867 as follows: *Pres't*—W. K. ROGERS. *Vice Pres'ts*—R. Cecil W. S. Hardick, F. C. Carpenter, S. L. Bean, John Simpson. *Sec'y*—Irving Todd. *Treas.*—Porter Martin. *Directors*—James Archer, W. G. LeDuc, William Jones, D. B. Trnax, Titus Day.

Lobo (C. W.) Ag. Society.—This Society, which is in a very flourishing condition, elected the following officers on the 12th inst.: *Pres't*—ROGER HEDLEY. *Vice Pres't, Clerk and Treas.*—Henry Edwards. *Directors*—J. Irvine, J. B. Campbell, A. McKellar, M. Campbell, W. Lynch, R. Hunter, J. Henderson, T. Douglass and T. Caverhill.

East Middlesex (C. W.) Ag. Society.—At the annual meeting of this Society held in London on Tuesday last, Mr. MAGEE was elected President, Mr. Wheaton 1st Vice Pres't, and Mr. Rowatt 2d do.: Mr. Kerr Treasurer, and Mr. Henry Anderson, London Township, Secretary.

Stoanburg Farmers' Club.—The farmers of district No. 8, Sheridan, Chatauqua county, met on the 15th ult., and elected their officers for the present year. *Pres't*—EZRA CARPENTER. *Vice Pres't*—John Gilson. *Sec'y and Treas.*—E. Baker. The Executive Committee are I. Horton, R Carpenter and J. Button.

The Housatonic (Mass.) Ag. Society has elected the following officers for 1867: *President*—E. P. WOODWORTH of Great Barrington. *Vice Pres't's*—M. S. Bidwell of Monterey and M. P. Lanckton of Egremont. *Treas.*—Justin Dewey, Jr. *Sec'y*—Henry T. Robbins of Great Barrington.

Chickasaw (Iowa) Ag. Society.—This Society held its annual meeting Jan. 8th. The President, H. M. MIXER, announces that the Society has its grounds paid for, is out of debt, and is now ready to enter upon the performance of its mission.

Schuyler Co. Ag. Society.—At the annual meeting of this Society, held at Watkins Jan. 12th, Col. E. C. FROST was elected President, S. W. SACKET, Secretary, and Dr. N. THOMPSON, Treasurer.

WASHINGTON CO. (N. Y.,) SHEEP BREEDERS' AND WOOL GROWERS' ASSOCIATION.—An account of a special shearing and scouring test under the auspices of this Association was received during our illness and has been overlooked until now. ORANGE COLLINS of Whitehall, won the Buell prize "for the heaviest fleeces from three yearling ewes, (to be entered together in one pen,) without regard to gross weight." The fleeces weighed 36 lbs. 7 ozs. Three fleeces from yearlings shown by BAKER & HARRIGAN weighed 35 lbs. 10 ozs. Both lots were subsequently scoured, after which Mr. C's weighed 14 lbs. 2 ozs., and Messrs. B. & H.'s 12 lbs. Weight, precise age, and comparative condition of the sheep, not given.

SARATOGA CO. (N. Y.,) SHEEP BREEDERS' AND WOOL GROWERS' ASSOCIATION.—An Association under the above designation has been formed—Hon. HENRY HOLMES of Coveville, President, and F. D. CURTIS of Charlton, Secretary. Its officers tender a vigorous co-operation to the State Association, and they have issued circulars calling on the wool growers of the county to petition Congress to pass the wool tariff bill of last winter.

HORTICULTURAL.

WHAT IS GOOD CARE OF AN ORCHARD?

WE think this a pertinent question for the consideration of fruit growers; and much good might result from discussing it at their meetings. We should bound the period through which the care of the orchard ought to extend with the preparation of the soil to receive the trees as the beginning, and the death of the trees themselves as the end.

What, then, should we do to the soil destined to grow our trees and fruit? Everything, in the compass of our ability, which we know will promote the thrift of the orchard. Water should not stagnate about the roots of the trees, therefore we should drain; the soil should be pulverized—mixed together—so the fibrous roots can draw food from every portion, therefore we should plow and replow both the top and the subsoil. The trees must have ample supplies of food, and this should be *in* the soil. It should be put there, to a great extent, before planting out the trees, as afterward it is impossible to do the work as well. Next, the trees are to be planted, and this work should be done in the most skillful manner, if for no other reason, for the sake of the time thereby gained in the growth of the orchard. It is easy to gain or lose a year or two by skillful or careless planting. Some plant badly through ignorance. We remember seeing a farmer setting some peach trees; he was sanguine of eating the luscious fruit in three or four years—the nurseryman had assured him that four years would bring the trees to a bearing state, if he took good care of them. The farmer began his care in this way:—Very rich and rather heavy soil was chosen that had been under sod for some years. Holes about one foot square and eight or ten inches deep were made with the spade. Into each of these a large shovelful of hen manure was thrown, the trees then crammed in, with their roots all in a heap, and the holes filled with earth. We passed that way a year or two afterward, and it occured to us to look for the peach orchard. It was not visible. Only now and then, where a tree should have stood, there stuck out of the earth a straight, dry stick, like a whip-stock, devoid of branches or leaves. Yet we have no doubt that the farmer imagined he took good care of his trees, and perhaps he attributed their death to a feeble constitution, and lost his faith in nurserymen and their practices. Good care requires the planting to be done properly; the roots of the trees should never become dry, the fine fibers should be preserved, and, briefly, the roots should be placed in the soil in the same condition, as nearly as possible, as they were taken from it. To do this, time, labor and skill are essential.

Good care requires that everything be done within the knowledge of the cultivator which will increase the thrift of the orchard until it reaches maturity. The soil must be mellowed, mulched, and manured. Each individual tree must be watched and trained to assume proper shape. All enemies must be guarded against, and steady, healthful progress made. When the bearing state arrives, good care is doubly essential. Then the cultivator looks for the reward of his labor and faith. Strong, vigorous and healthy, the trees are liable to overbear. Good care alone will guard against this disaster. At this period insects, mildew, rot—many and various enemies—threaten the fruit. There is but one successful way: they must be fought.

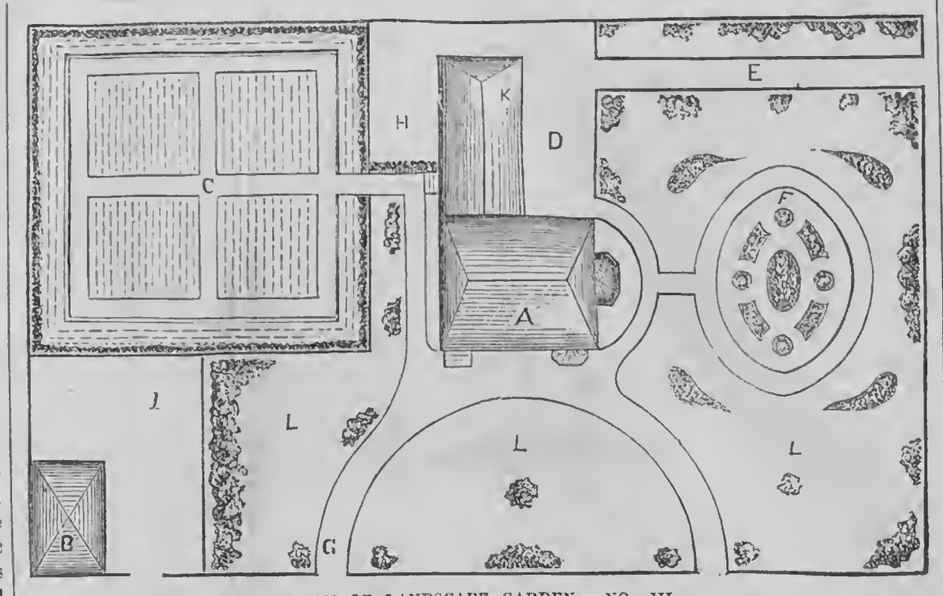
We believe that orchardists do not fight insect depredators, especially, half as hard as their interest demands. Suppose you have five hundred trees, will it not pay to use the services of one intelligent man constantly in the care of them? Each tree would then have its wants supplied. Insects, the great bane of our orchards, would be kept in check, and the increased product of an orchard thus cared for would amply repay the cost of the work.

PLANTING TOO MANY VARIETIES.

ONE very serious mistake which fruit growers are liable to make—especially young and enthusiastic ones—is that of planting too great a variety. With the majority the chief object is to make money, not to test comparatively unknown sorts of fruit, or to introduce new ones. These should remember that the reliable, and, therefore, really profitable, varieties of any one fruit are limited to few in number; that it requires considerable time to test a variety sufficiently to determine correctly whether it is a desirable one or not. It should be remembered, too, that but few varieties of fruit are extensively known in the market, and the demand for those unknown must be created; hence it is difficult to realize a remunerative price for the latter, be they never so fine.

But an enthusiastic fruit grower is not satisfied with a few sorts; he may make money with them, but not progress in Horticulture. But the safe way is to devote a small portion of the grounds exclusively to these experimental operations. An acre or two will afford space for many varieties, and being in small compass they may be watched with more satisfaction, and without the fear of great loss in case of complete failure. One advantage of having such grounds for testing fruit would be the constant and varied supply gained for family use. No part of the year would come without an abundant supply of appropriate fruit being at hand.

PROFITS OF A GARDEN.—A correspondent of the Northern Farmer says that having been frequently told by farmers that much gardening would not pay, he thought he would test the matter with a certain piece of ground. The expense of soil, labor and manure was $24.55. The return in various products was $58.78,—equaling, as he thinks, a clear profit of $24.77. The products of even a small garden, well tilled and properly diversified as to kinds of articles to be grown, are not only a source of comfort, but of profit also.



PLAN OF LANDSCAPE GARDEN.—NO. III.

LANDSCAPE GARDENING.—No. III.

BY WILLIAM WEBSTER.

IN the combination and arrangement of all objects in landscape gardening, too much care cannot be taken to preserve a proper balance of parts. Thus, in the formation of any new place, if we desire to succeed in adorning and beautifying it to our own satisfaction and that of others, it becomes us to study well the genius of the place, so that when completed it shall exhibit all the characteristics of unity and harmony.

REFERENCE TO PLAN.—A, Dwelling; B. Stables; C, Kitchen Garden; D, House Yard; E, Road to Kitchen; F, Flower Garden; G, Approach to Dwelling; H, Laundry Ground; I, Stable Yard; K, Kitchen and Offices; L, L, L, Sections of Lawn.

Most persons are aware that the subject of landscape gardening is at present but imperfectly understood among us; and anything which will throw light on it is eagerly sought after by those who wish to improve their places. Writers we have, and plenty of them, too, who profess a great knowledge of this art. One says that every operation in landscape gardening can be measured, and the cost calculated with as much precision as any job in civil engineering. This might be so, providing it embraced only road making and grading,—but to prove the value of such estimates I have before me one of the cost of construction for the Central Park, which is something less than two million, while the actual cost is about five million. Another, in speaking of planting, recommends the amateur to take a peck of potatoes and toss them up at random over the surface of his ground, and where each one falls there to plant a tree, so that when growing they may appear to have come up naturally! Others, again, recommend the leaving of all trees indiscriminately which may have been spared from the original forest. "Woodman spare that tree!" is a beautiful song, and one which appeals largely to our sympathies. We confess to a very great liking for a fine old tree, or one to which are attached any historical associations, and where there are any such we say spare them by all means. These, however, are the exceptions; and, therefore, we say, Gentlemen, your philosophy is *all* at fault, for it is not landscape gardening that you advocate, nor anything like; it is simply *empiricism*.

The idea which I desire to inculcate when I say study well *the genius of the place*, is this: Taste may dictate the removal of some object which convenience would suggest should remain. Now, how are you to decide? Why, by weighing well in your own mind which will harmonize best with the surroundings; and after you have so decided, act accordingly. Better suffer a trifle of inconvenience than mar the whole contour of your place. If the objectionable feature be a tree that is not in full health and vigor, we say remove it without any hesitation whatever; for true taste will not tolerate anything that is discordant with the surroundings. My maxim is that one finely developed and well shaped tree is worth fifty ordinary ones in adorning a place.

The accompanying plan represents an acre of ground drawn to a scale of 60 feet to an inch, being a corner lot, and having *the advantage of two fronts with an entrance from each.*

SPARE THE FORESTS.

THE continual and increasing want of fuel among all classes, as population rapidly multiplies over the land, is becoming a subject of grave importance. The wholesale destruction of vast timbered tracts in remaining wooded sections is rapidly assuming a phase of dire and outrageous calamities to the public, scarcely secondary to some of the most pestilential scourges that have afflicted and swept away so many thousands of our race. I believe that no people are so utterly reckless in the destruction of timber treasures as we are. The indomitable "Yankee," when he makes a "strike," goes in on the high pressure principle, and is very apt to get "ahead of time." He cuts and slashes, and saws and burns up hundreds and thousands of acres of the choicest forests, as if intent upon annihilating every tree in the land in the shortest possible time. In earlier periods, when the country was all one dense wilderness, there was need to burn many tracts of timber to make room for the process and progress of civilization. True, men might have lived and saved nearly all by living as some extremists believe they should—upon the food which Nature provides ready-handed to us with little or no voluntary action on our part. But this would not do for the Caucasian race, which is the highest type of human advancement and intelligence,—neither could their exalted and expansive intellects be chained down to this level. The gradual succession of organized beings on the earth gives predominance to the highest and best. The lower, through the course of time, become parts of higher forms, and the whole are perpetually going out into those still higher and higher, till the ripe or perfect period is attained.

The ancient Britons lived almost exclusively upon the crude supplies furnished them by the hand of Nature; but as the Caucasian advanced and spread over Europe, the forests were laid low, and England to-day furnishes a melancholy example of the reckless waste and the perverseness of boasted civilization in those early days. Her best timber lands were laid in ashes, regardless of future needs, till now wood for fuel has become a thing almost entirely of the past. And it is only by the enactment of severe penal laws that some of the few remaining valuable trees are saved. But the English are generally provident, and are beginning to plant forest trees that will, in a measure, meet their urgent need when grown.

It will be far worse with America than England, (for we live faster,) if some effectual method is not introduced within a few years and put into operation to save the forests and grow new ones, especially upon the immense prairies of the West, where timber and fuel are so greatly wanting. There is no manner of excuse sufficient for the heedless slashing and burning of our best and most valuable forests. If this process is to go on at the present rate a few years longer, we are rapidly approaching the period when a wood fire and the sturdy oak to erect our mansions and ships, will be sung among the songs of the past that enliven the imagination with pictures of substantial luxuries, such as our grandfathers enjoyed by the huge winter fire around the good old-fashioned fire-place. We may *now*, if we will, prevent the calamity of a treeless country for all future time. Most of our forest trees can be propagated from seeds or small stems with less care than we can grow fruit trees. In some localities, where wood for fuel and mechanical purposes is the greatest want, especial attention should be given to the hardy sorts for the latter, as oak, maple, hickory, walnut, ash, etc., etc., and for the former those of quick growth, as poplar, chestnut, willow, etc., etc., and in every event the most useful hardy sorts should be started *at once*. The seeds of maple, elm, etc., ripen in early summer, and should be planted as soon as possible after, to give them a start before winter. Those ripening later should be planted just as soon as possible after they are ripe,—for if left till the seeds become dried they are always uncertain and very slow to germinate. Plant trees by all means, even if for nothing else than shade and ornament, and if you do not live to reap the benefits resulting from their growth, posterity will praise and bless the hand that planted them.

There are other important considerations, aside from those of urgent, practical need, that call for a growth and supply of forests. With sufficient shade and forest trees, the earth parts with its moisture more slowly, consequently suffering much less from drouths, and evaporation becomes more equalized, thus keeping the surrounding atmosphere of a uniform temperature, and preventing those sudden extremes of heat and cold that operate to such an alarming extent against the health of our people in the matter of climate. Nature is robbed of its grandest and most beautiful spectacle in the outstretched landscape, leaving a weary monotony of arid plains, hills, mountains and valleys that are dreary in the extreme. Besides, people could not *live* without a supply of trees upon the earth, and the more there is, and leave sufficient room for the development of human purposes, the better it will be. MILES A. DAVIS.

Olean, N. Y., Jan. 12, 1867.

PLEASURE GROUNDS.

IT would be well, at this season of leisure, to examine and decide on the course of improvements for the ensuing year.

"Night brings out stars, as sorrow shows us truths," and winter reveals to us defects in gardening taste and arrangements we should else have had no conception of. Let us note well every point capable of improvement, every alteration that can be made without prejudice to the original design, every novelty that can consistently and with propriety be introduced, and every change that would commend itself to our notions of good taste and elegance; so that when Flora shall return to roll away the stone from the sepulchral heart of winter, we shall be ready to go earnestly to work to prepare a place where she may feel proud to "sit therein an angel," and guide us to the enjoyment of one of the purest pleasures earth can bestow—a beautiful and well-conducted garden.

It does not, in very many cases, require much time or money so to alter the appearance of a place as to make it bear a very different look to what it did in the past year. A new clump of cheap shrubbery may be planted, or an old one taken away to admit a new view that may have grown up since the original planting. A strip of grass may be laid down on what was once bare gravel. Here a small rockery may be put together, there a nest of roots thrown up, and ferns and trailing plants freely interspersed between them. In this corner you may place a stump, and entice Ivy or some climbing vines to grow over it—a rustic arbor may be formed in some inviting nook, and in another shade-enticing spot, a rustic chair or bench be fixed. Even the outline of the flower-beds may be changed, or of the walks themselves, or even the contour of the surface in some instances, and all, in many cases, at the expense of a very small expenditure of time and money.—*Gard. Monthly.*

Horticultural Notes and Queries.

INDIANA HORTICULTURAL SOCIETY.—The annual meeting of this Society was held at Indianapolis, Jan. 8th, 1867. The attendance was quite large, and the proceedings spirited and harmonious. Hon. I. D. G. NELSON was re-elected President; ALLEN FURNASS, CALVIN FLETCHER, J. C. SHOEMAKER and E. C. SILER, Vice-Presidents; S. W. PEARSON, Secretary; JOSEPH GILBERT, Corresponding Secretary, and J. S. DUNLOP, Treasurer. Interesting reports on fruit subjects were presented, followed by a general discussion as to the merits of different varieties and the proper treatment of them. Mulching small fruits was decided to be admirable, but the use of sawdust and tanbark was regarded as injurious. Various varieties of small fruits were considered, and a list for recommendation made out, but the report from which we condense gives no names but one of strawberries and that Wilson's Albany. The meeting was regarded as a highly satisfactory one.

ABOUT GRAPES.—GEORGE HUSSMAN of Hermann, Mo., presents his views on the several varieties of grapes which find most favor with the public. With him Norton's Virginia holds the first place as to quality, and second to none in productiveness in Missouri, whatever may be the case elsewhere. The *Cleveland* is mentioned with commendation, but the *Cynthiana*, or *Red River*, is regarded as the most imposing rival the other approved or established varieties had to contend with. It is said to make a dark colored wine of most delicious flavor. The *Arkansas* is another variety, having a strong family resemblance to the preceding, but is not easily propagated. On the whole, M. H. thinks there is no variety which can, all things considered, take the place of the Norton.

PEACH PROSPECTS IN OHIO.—The Ohio Farmer of the 19th inst., states that fruit buds in that region have, so far, received no damage from the severity of the weather, and thinks they have successfully doubled the winter cape. Perhaps the weather for the last few days has changed the aspect of things there, though we hope not. With us the peach crop is regarded as having suspended for a year at least.

GROWING CRANBERRIES EXTENSIVELY.—A Michigan journal states that a gentleman from Philadelphia has commenced operations on a farm of thirteen hundred acres in Barry county, which he designs to devote entirely to the growing of cranberries.

Domestic Economy.

TO PRESERVE PUMPKIN.—Cut as for present use. Stew soft; take it up and sift it; put it in a cloth and press the juice out; return the juice to the kettle; when boiled down sufficient to form a sirup, when the sugar is dissolved, add as many pounds of sugar as you have of the pumpkin after the juice is pressed out. When dissolved, mix the pumpkin thoroughly with it. Add salt, and any kind of spice you choose. Put it in a jar and cover with molasses. When wanted for use, add a little more milk than freshly stewed pumpkin. Eggs, the same. It will keep a year.

MRS. GROW'S INDIAN LOAF.—One quart Indian meal, one quart wheat flour, one quart rich buttermilk, one-half cup molasses, one tablespoon soda, one tablespoon salt. Try it.—*Le Roy, Dec.* 17, 1866.

TO MAKE SAUSAGE.—As we get very many good thing from the Domestic column, I will give you one for sausage that the weakest stomach can bear without fear of its rising in the stomach after eating. To 10 lbs of meat add 3 ozs. salt, 3 doz. cloves, one oz. black pepper, ½ oz. saltpetre, ½ oz. glauber salts, sage to taste, 2 ozs. sugar, brown for browning. If you do not find them good send the bills to me.—J. W. N.

MRS. GROW'S INDIAN LOAF.—One quart Indian meal; one quart wheat flour; one quart rich buttermilk; one-half cup molasses; one tablespoon soda; one tablespoon salt. Try it—*Leroy, Dec.*, 1866.

CURRANT GROUT.—To one teacup of rice, well cooked and dried, add one teacup of currant juice; sweeten the whole to your taste; put it over the fire and let it cook ten minutes. Then put in a mold to cool. Eat it with cream and nutmeg.—*Germantown Telegraph.*

MOLASSES PIE.—One cup and a half of molasses, half cup of good vinegar, one egg, two tablespoonfuls of flour; season with lemon or nutmeg. Bake in pie-plates—two crusts. The above makes two pies.

CARROT PUDDING, NO. 2.—To one pound of grated carrots add a pound of flour, a quarter of a pound of suet and two ounces of currants; mix, and boil like plum pudding. With a little sauce this makes a cheap and palatable pudding.

LADIES—When you buy Saleratus please notice how much larger the *Best Chemical Saleratus* papers are than others. They weigh more.

Ladies' Department.

SLACK A LITTLE.

Slack a little! Slack a little,
Darling wife;
Why such breathless haste and hurry
All thy life?
Slack the vigor of thy striving,
Ere too late.
Tell those monsters, Care and Labor,
Just to wait.

Slack a little! Slack a little,
Busy hand;
Slack thy rubbing and thy scrubbing,
Drop the sand;
Minister thy blessings slowly,
And the longer;
Bind love's thousand precious tendrils
All the stronger!

Slack a little! Slack a little
Weary feet!
'Tis a thorny road you're treading,
Death to greet.
Slack your quick and fearless stepping,
Spare your strength;
Ye the golden streets of Heaven
Shall tread at length;

Slack a little! Slack a little,
Precious heart;
Slack the fervor of thy throbbing
Ere we part.
Thrill not thus with every sorrow,
Anxious ever;
Trembling like an Angel Lyre
Forever
Strung for high and holy themes.
Slack thy sorrow;
Heaven those rapturous themes may wake
Perhaps to-morrow!

Slack a little! Time, how fleeting,
Slack thy wing!
To my heart's long cherished treasure
Let me cling!
Go to Mirth, and from his chalice
Take the pleasure;
Pilfer Wealth, and from his palace,
Take his treasure.
Why such haste my night to bring?
Slack, O Time, thy scythe and wing!

Slack a little! Slack a little,
Death, O Death!
Vain thy strife and panting haste,
All out of breath!
See! she fears not thy approaching—
Thou hast no sting;
Clasp her in thy cold embracing
She will sing!
Slack, O Death! how sure thy loss,
Thou wast conquered on the Cross!

[*Harper's Monthly for January.*

WOMAN'S RIGHTS.

The recent discussion of this subject, old as it is, in the Rural has aroused a good many correspondents, who have a word or two to say on the one topic that seems never to lose its interest, and probably never will until the experiment of female suffrage has been actually tried on a large scale. The publication of all the favors we have received would be useless as well as burdensome. We therefore select the two following, which it will be observed take very distinct grounds, and which we believe cover the arguments of all the others:

Mr. Editor:—In perusing the columns of the Rural of December 22d, my attention was particularly arrested by an article on "Woman's Rights," by a gentleman from the Buckeye State, and a strong impulse impels me to write a few words concerning it.

He states that "*all* of the female world are crying aloud for their place at the ballot-box." I would humbly beg leave to differ with him concerning the number that are raising that peculiar cry; for, as regards myself, I can state positively that I do not belong to that peculiar class; and I am happy to know that all of the male portion of the world do not adopt his lofty view concerning woman's sphere; and there are those who are not fearful lest woman, if she be permitted to enjoy the same advantages and privileges as themselves, will eclipse them in point of intelligence. But I would ask, in the name of all that is sensible, if woman was created free and equal with the "lords of creation," why she must be governed by laws which she has no voice in making? For one reason why she should not vote, he states that "wives would vote as do their husbands, and children as their fathers," thereby increasing the labor at the polls. What a labor-saving machine he must be! If such is the case, then why have the sons vote as long as the fathers are living to represent them? Why not save a still greater amount of time and labor? But "mighty man," as he is (and I would beg pardon for the audacity of the remark,) he has committed an absurdity by going to extremes. Immediately she must don the never failing "trousers," and wield the maul, ax &c., as a recompense for the right of "equal suffrage," while the most pusillanimous, insignificant dandy has an unquestioned right to cast his vote, an article which perhaps a glass of whisky would purchase. It matters not to this mighty man that woman has not by nature been endowed with sufficient strength for such toil. If she will be so presuming and absurd as to wish to have a voice in the laws by which she is governed, she must pay the penalty, and then he will not complain. *Considerate man!* Then will he be content to enter the nursery, wash the dishes and household linen, &c., &c. Would this "lord of creation" condescend to such menial toil with his massive intellect? Never! Begging pardon for thus presuming to question the views of so important a personage, I am, with profound respect, Minnie W. Edgerton.

Watson, Allegan Co., Mich., 1867.

Mr. Editor:—Some who have a strong propensity for scribbling, and an earnest desire to make some kind of a show in the world, and give their names a conspicuous place in the public journals of the day, will write without any fixed purpose, or any subject which they understand. I am of the opinion that this must be the case with your correspondent, C. T. Leonard, in the Rural of December 22d, when he says that "all the female world are crying aloud for their place at the ballot-box." No one who is in possession of any very extended information of the "female world," or is a candid and sensible man, could make any such expression, unless he was a crusty old bachelor, whose vanity led him in that direction, thinking that perhaps he might win some good graces from what is called the fairer sex. If this be the object of your correspondent he has missed his point, at least in this locality.

The "female world" are satisfied and contented with their sphere of action and the influence they wield in all domestic as well as political affairs. What lady ever asked for the privelege of standing upon the rostrum to attract the crowd and meet the novelty of the scene, or to crowd into places not her own, except Lucy Stone and a few of her stripe, who are abhorred and detested by the "female world?" We had supposed the male world had more discretion than to follow the lead of those few fanatics who have kept the world astir for a time past. The right to the ballot-box was never asked for by any sensible lady; and the only great, decisive act to settle the question finally and forever is for the male world to let it alone and no longer follow the lead of certain women. The picture drawn by your correspondent is all a fiction, without even the semblance of reality. Now, permit me to say to your correspondent that if the "female world" ever do go to the ballot-box they will go free and independent, and will be governed by higher and more noble motives than those which at times control the male world. S. Calista Lord.

Pavilion, Dec., 1866.

THE QUESTION OF SPHERE.

There was a great cackling among British biddies when Florence Nightingale proposed to go to the Crimea to nurse wounded soldiers. "What an unfeminine proceeding!" they exclaimed, "to go among an army of men! Of course, she will meet with all manner of insults, and see all manner of improper sights." But Miss Nightingale went in the panoply of her modesty and conscientious kindness, and the poor soldiers looked upon her as an angel sent from heaven, and reverently blessed her passing shadow as it fell on their miserable pallets. When her mission of mercy was finished she retired to the seclusion of her own home none the less a gentlewoman for all that hard and painful experience. Her example had such an ennobling effect upon American women that they rose up by hundreds as missionaries of mercy during our civil war, and manifested a degree of business talent in the management of sanitary commissions that would have made merchant princesses of some of them if it had been carried into the departments of commerce. These various successes have encouraged women to claim an acknowledged place in the medical profession. They were met, as usual, with some frowns and a few jeers, but the prevailing disposition seems to be to leave the course open to them, and they are fast becoming an honorable and established class of physicians. Is this a time to talk of going back to the patriarchal system?

Hannah More once said, "I really think there is no animal so much indebted to subordination for its good behavior as woman." In less than fifty years after I heard a plain, untutored man begin his address to a large audience thus:—"I am an individual; and my wife there, she is an individual; and we are all of us individuals." The world moves.—*Mrs. L. M. Child.*

A FEMALE CAVALRYMAN.

A Mrs. Frances F. Sigel is now in Washington, applying at the Pay Department for back pay for services rendered in the Western armies as a cavalryman. She says she enlisted in 1861, with her husband (a John Clayton,) in the 13th Missouri cavalry, and fought for two years as a cavalryman in our armies. She fought under Grant, Sheridan and Rosecranz. She was in the battles of Shiloh, or Pittsburg Landing, and Stone River, and at the latter battle her husband was killed and she severely wounded. Her sex became known and she was discharged the service. She has married since, and is now endeavoring to get the pay due her when discharged, but there is no law which would authorize her payment, females not being recognized by law as soldiers. Mrs. Sigel's appearance and manners cannot be said to be very prepossessing. She has evidently seen hard service in camp or elsewhere, and has contracted all the rude airs, attitudes and manners of a man. She wears a Scotch cap, cocked on one side of her head, chews tobacco, smokes, and swears like a very trooper, as she claims to be. She is accompanied by her present husband. Both are very poor, and have been compelled to sleep in the station-house every night they have been in Washington. Altogether, Mrs. Sigel, who bears traces of having once been in better condition — once even good looking—presents a sad illustration of the effects of a woman stepping out of her natural sphere to enter upon a career entirely foreign to the design of her creation. A friend asks:—"Would she not be a valuable subject for the study of the advocates of what is called 'Woman's Rights?'"

A young lady in Wisconsin brought a suit for breach of promise against a male correspondent, and on the trial introduced several commonplace letters on various topics to sustain her case, on the ground that the letters were signed, "*Ever yours.*" How could he be *ever hers* unless he intended to marry her? was the logical conclusion of the unsophisticated damsel; but the jury, not seeing it in that light, non-suited her.

Choice Miscellany.

ADIEU TO THE RURAL.

[The following lines are addressed to the Rural by one who regrets his inability to continue his subscription, but who fills the place he occupied in our list by remitting for a friend:]

There is a saying, old and true,
"The best of friends must part"—
And so, Dear Friend, I part from you,
Tho' sorry to my heart!
Sweet has thy counsel always been,
Thy company and looks;
And often, for a chat with thee,
I've laid aside my books.

"A friend in need's a friend indeed"—
And I have found thee such;
And of thy many favors, now,
I cannot say too much.
Thy manner always pleasing, too,
Adorned with every grace,
And always so obliging, kind,
To suit my very case.

Did I some information need?
'Twas always well supplied,
And found to be quite honest, too,
When practiced, proved, and tried.
Sometimes on thy arrival, true,
I might be rather sad;
But then, thy pleasant tidings came
To cheer and make me glad!

Thy "wit and wisdom," too, indeed,
Would often mirth provoke;
For no one had a better knack
To crack a timely joke.
But if too serious for thy fun,
My case thou still couldst reach,
And, kind and sympathetic still,
A word in season preach.

If troubles e'er beset my mind,
And doubt for daily bread,
Thy good advice aroused me up,
And made me "go ahead,"
Till doubts and fears were vanished quite,
And joy and comfort came;
Then, for my want of energy,
I'd almost blush for shame.

Thy liberal favors shown to me
Deserve a rich return,
To help thee on thy mission good,
Thy lamp to trim and burn,
To light the darksome vision more
Of many in thy way,
And by thy kindly aid to still
Prevent their going astray.

But I can only thank thee, friend,
And wish thee well indeed,
And for thy progress through the world,
Can only say, "God speed!"
Thy welcome to my humble cot
Would never be denied,
Could I but there, as I would wish,
Thy needed fare provide.
But since I must deny myself,
Thy pleasant face to view,
Excuse me, and accept my wish,
Adieu, my friend, adieu!

MAKE HOME PLEASANT FOR YOUTH.

Under this heading Mary Vinton writes a capital article in a late Rural—short, pithy and graphic, as all articles should be when written for the richly endowed columns of the Rural. She very properly urges well-to-do farmers, not to restrict their children to the homely life and scanty privileges, of dress and schooling, which stern necessity had imposed on their own early life. But there is a medium in all things, and at this time of prosperity among farmers how often we see parents transcend the line of safe precedents by too much ill-timed indulgence to their children; how many mothers are working themselves into the grave that their daughters may keep fair hands, dress in the top of the fashion daily, dissipate their leisure hours with sensational reading, which does much to weaken, but nothing to strengthen the mind?

Then the sons, instead of being taught to love and respect the farmer's calling, and to be so educated as to make the farmer's life both respectably progressive and prosperous, are early taught how much more easy and profitable it is to be a merchant, a lawyer, or a doctor, than a farmer who lives by hard work alone. "Anybody can plant corn," says Farmer Higgins, "but my John has had too much expended in his education to make a farmer of him." Then the mother says, "My girls ain't strong enough for farmers' wives; and as they are good-looking and dress well, if they are only accomplished enough they may yet both of them get rich husbands,—who knows?"

Mary Vinton is right; the sons and daughters of farmers should be allowed every reasonable privilege of education, dress, comfortable, well-furnished rooms, a library of literary and scientific books, periodicals, &c., to make farm life both agreeable and truly instructive. Under such influences the labors of the farm would no longer be a toilsome, unintellectual drudgery, but one continued interesting experiment, bringing both money to the pocket and true science to the mind. All the agricultural chemists, with Liebig at their head, have designated the farm as Nature's grand Laboratory, and the practical farmer who studies and avails himself of Nature's daily lessons is a better practical chemist of the soil and its capabilities than many a learned professor. Let every farmer's son and daughter reflect that to make their calling respectable it is only necessary to make themselves intrinsically worthy of respect.

It is a great blessing to the farmer's family that with so many privileges of literature and science on the farm, they are so far aloof from the besotting struggle of pride with poverty in the town. I read a letter from a young woman the other day, who lives in a commercial city, on the wave of high fashion. Speaking of an older matron, whose education and social qualities are superior, she says:—"She is very energetic in the cause of benevolence, and it is only because she wears short skirts and warm, coarse gloves, that she does not receive the attention she merits from fashion's votaries." What a comment on the *parvenue* moneyed aristocracy of this fast age, when fashion and extravagance extinguish the virtues taught by early poverty, leaving only a self-indulgent vulgarity and insensibility in their place. For such people high social qualities have no charm, and benevolence is foolishness.

GOSSIP.

In small towns there is great temptation, from the dullness of the surroundings, to indulge in the peculiar habit of gossiping. With no earthly business of their own, the quiet-loving old women have no other excitement than the listening to "old wives' fables," and expressing their mutual surprise at the follies of the young and the perversities of the old. Their dear souls are grieved at the shocking immorality of those youth who do not woo their true loves with quotations from the Scriptures, or strive to resist "the sweet influences of the Pleiades or loose the bands of Orion," the gist of whose reckless logic is, "If the moon and stars were never to be seen, why then were they made so beautiful that the language of the poet cannot portray their loveliness?" The degeneracy of the times has been a constant theme among these superannuated remains of former ages since old Ulysses boasted the pristine hardihood of ancestors who fought the wild beasts of the mountain for want of men to match their strength, and sorrowed that "he saw not such men now, nor ever yet shall see."

These antiquated drones of humanity never tire of humming the laziness of the present. Perhaps, were it not for that optical defect peculiar to the old, they might at last discover the fault was much nearer than they had before imagined. As in "Paradise Lost," Satan exclaims "Which way I fly is hell; myself am hell,"—even so they would find that to fly stupidity were to escape themselves. I once knew one of the prettiest places in the world, which was like a nettle-bed, just because it was infested—yes, infested,—by those whom Burns characterizes as

"High, exalted, virtuous dames,
Ty'd up in godly laces."

No one expresses much sorrow at leaving the place, and most are openly jubilant.

Ah! Mr. Editor, this "venerable core" present themselves to my imagination in the form of ancient frogs in white starched caps, and conscientious 'kerchiefs. H. H. V.

GRAY'S ELEGY.

The following reference to "Gray's Elegy" was made by the Earl of Carlisle, in a recent speech. The latest American edition of Gray's writings has just been published by Sever & Francis of Cambridge:

"We are always glad to have our own judgments assisted by the thoughts and doings of eminent men; and these acquire a more impressive and thrilling interest if they have been expressed shortly before the close of their lives. Let me present you with two tributes paid to the Elegy of Gray at the end of two very varied historical careers, with just more than a century intervening between them. We are informed, upon what appears to be sufficient authority, that on the night before the capture of Quebec—which of all the single passages in the long catalogue of the British glories was perhaps the most romantic in its incidents, and the most decisive in its consequences—Gen. Wolfe, with his small band of soldiers, was being rowed up past the hostile ramparts, and between the steep cliffs which line the St. Lawrence, and there and then, in the stillness of that dark summer night, and on the eve of his glorious victory and immortal death, he repeated to those around him some of the stanzas of the Elegy, and then said, "Well, gentlemen, I had rather be the author of that poem than take Quebec." I pass on to my more recent instance. Some time ago the great American statesman, Mr. Webster, was lying upon his death-bed. * * * Even in the interval of severe pain, even in the languor of decaying nature, even amidst the appropriate and exalted topics of Christian penitence and hope, there was a further craving of the dying man yet unsatisfied. We are told that he was heard to repeat somewhat indistinctly the words, "Poet, poetry—Gray, Gray." His son repeated the first line of the Elegy—

"The curfew tolls the knell of parting day."

"That's it, that's it!" exclaimed Mr. Webster. The book was brought, and some stanzas were read, which seemed to give him pleasure. Surely it is not a slight thing to have satisfied, so far as the world they were about to leave was concerned, the latest aspirations of such a hero as Wolfe and such a statesman as Webster!"

GREAT MEN.

Homer was a beggar; Plautus turned a mill; Terence was a slave; Boethius died in jail; Paul Borghese had fourteen pounds trades, yet starved with them all; Tasso was often distressed for a few shillings; Cervantes died of hunger; Camoens, the writer of the "Lusiad," ended his days in an almshouse, and Vangelas left his body to the surgeons to help pay his debts. In England Bacon lived a life of meanness and distress; Sir Walter Raleigh died on the scaffold; Spenser died in want; Milton sold his copyright of "Paradise Lost" for £15, and died in obscurity; Dryden lived in poverty and distress; Otway perished of hunger; Lee died in the streets; Steele was in perpetual warfare with the bailiffs; Goldsmith's "Vicar of Wakefield" was sold for a trifle, to save him from the grasp of the law.

Sabbath Reading.

AFTER.

BY GEORGE COOPER.

After the shower, the tranquil sun;
After the snow, the emerald leaves;
Silver stars when the day is done;
After the harvest, golden sheaves.

After the clouds, the violet sky;
After the tempest, the lull of waves;
Quiet woods when the winds go by;
After the battle, peaceful graves.

After the knell, the wedding bells;
After the bud, the radiant rose;
Joyful greetings from sad farewells;
After our weeping, sweet repose.

After the burden, the blissful meed;
After the flight, the downy nest;
After the furrow, the waking seed;
After the shadowy river—rest!

Written for Moore's Rural New-Yorker.

WRITTEN UPON THE ROCKS.

You have all doubtless read about the boys at the Natural Bridge in Virginia, carving their names upon the massive abutment of that great monument of a higher power. Knife in hand, they draw themselves up and cut their names above those of many full-grown men who have left their autographs upon this solid tablet. But one, more ambitious than the rest, spying above him a name that has a monument far more enduring than brass or marble, deeply graven upon the American heart, he determined to write his name by the side of our Washington. On he climbs until he is above all other names upon the rock, and there he carves his own in large capitals. But he is not satisfied, and goes on cutting his name in larger letters at every step, until he finds he cannot descend and must keep on to the center of the arch. His blade is almost worn out. No longer able to grasp it, he lets it fall from his nerveless hand, and it strikes upon the rocks below. What is to be done? He is at the height of a thousand feet, hanging over an awful abyss, almost into eternity. Help has been summoned; and a man, leaning far over the bridge, lowers a rope. The fainting lad slips his arms through the noose, and in another moment the cry "He is safe!" resounds from the top of the bridge and through the rocky gorge.

We are each carving our names upon the rocks which form the great bridge that spans the gulf between this world and the next. Let them be graven in living characters, emblazoned by noble deeds. Feeling, as did the youth at the Natural Bridge, that all help must come from above, let us climb steadily, ever looking forward, so live that our names may be written upon loving hearts in letters of gold, written for eternity in the Book of Life; and, when wearied with life's labors, we can climb no farther "God will open a door from above and a voice will call: 'Come up hither.'"

Written for Moore's Rural New-Yorker.

GOD'S-ACRE.

"This is the field and acre of our God,"

And is indeed a blessed spot, though far too many make it otherwise,—the last earthly resting place of so many dear friends. All have some treasure buried here; for

"There is no fireside, howsoe'er defended,
But has one vacant chair."

Here the aged pilgrim, weary and wayworn, lies down to sleep after "life's fitful fever;" and perhaps by his side is laid the little child,—an angel lent to some lone household,—but soon, too pure for earth, called home, where

"The shroud shall be woven no never,"

a slender cord stretching across the dark, cold stream, a ray of light to lead some wanderer to the portal of light. I have treasures buried here. There are dear ones waiting for me just beyond. As I stand by those grave-mounds, beneath which they rest so quietly, I

"Cry to them softly, 'come nearer, come nearer,'"

and I feel the answer in my heart, "Nearer me now than in days that are flown." Here, too, when my "summons comes," shall I lie down at last. And, though no costly monument may rise above my grave, may some loving hand plant there the flowers I so loved in life,—bright flowers,—"God's smiles," as one has said, day-stars that look upward to a brighter, better land, pointing to where the spirit has gone.

"Blessed is the turf, serenely blessed,
Where throbbing hearts may sink to rest;
Where life's long journey turns to sleep,
Nor ever pilgrims wake to weep."

"Cloudy."

DISCOURAGED BECAUSE OF THE WAY.

We doubt not that there will be seasons, even in the happiest Christian pilgrimage, when the soul will be "discouraged because of the way." When difficulties, which we thought had passed over, will re-appear; when temptations, which we hoped had been forever vanquished, will again rise up against us; when sins, which we trusted we had forsaken will once more mar our path; and these things will lead us to feel a deep sensation of despondency; we shall be tempted to think that God cannot pardon delinquencies so frequent and unprovoked, and that we shall certainly perish on the journey, and never arrive at that journey's blissful end. Let us be careful that such feelings lead us not into temptation; that they do not close our eyes and our heads against the infinity of God's mercy in Christ Jesus.—*Blunt.*

The soul, by an instinct stronger than reason, ever associates beauty with truth.

Useful, Scientific, &c.

For Moore's Rural New-Yorker.

ABOUT SHELL-FISH.

[EDS. RURAL NEW-YORKER:—I notice with pleasure your habit of frequently presenting to your readers chapters relating to Natural History. Nothing so well combines instruction, interest and amusement. Perhaps the following paper, recently published by M. MICHELET, and not yet printed in the English language, may attract the attention of your intelligent subscribers.—O. O. E.]

If one should first visit our rich collection of the armor of the middle ages, and after having contemplated the heavy masses of iron with which our chevaliers covered themselves, should go immediately to the Museum of Natural History to see the armor of the crustaceæ, one would pity the arts of man. The first are an assemblage of disguises, ridiculous, encumbering and overpowering—good for nothing if not to suffocate the warriors and render them inoffensive. The latter, especially the arms of the *decapods*, are so frightful, that, if they were enlarged to the size of man, none could sustain the sight of them; the bravest would be cowed down and magnetized with terror.

There they are, all ready for battle, under the redoubtable arsenal, offensive and defensive, which they bear so lightly;—strong pincers, sharp lances, mandibles fit to cut iron, cuirasses bristling with darts, which have only to touch you to stab you a thousand times. We may well thank Nature for having made them of the size they are. For who could have fought them? No firearm could have hurt them. The elephant would have hidden away from them; the tiger would have climbed into the trees; the skin of the rhinoceros would not have protected him. One feels that the interior agent—the motive power of this machine, centralized in its form, (almost always circular,) must have for this very reason enormous power. The slender elegance of man, his longitudinal form, divided into three parts, with four great appendages, divergent and distant from the center, must form a comparatively feeble being. This armor of the chevaliers with the great telegraphic arms, the heavy, hanging legs, gives the sad impression of a decentralized, powerless being. The crustacean, on the contrary, has his appendices so close and compact with the body, so short, so thick-set, that his lightest blow is as if given by the whole mass. When the animal pinches, pricks or cuts, it is with his whole energy, which, even at the end of his arm, is brought into full effect. He has two brains (head and trunk;) but, in order to make himself more compact and obtain this terrible centralization, he has taken the idea of having no neck, but of having his head in his belly. Marvelous simplification! This head combines the eyes, the feelers, the pinchers and the jaws. What the eyes see the feelers feel, the pinchers seize and the jaws crush, and behind them, without intermediary organs, is the stomach, which is itself a machine for grinding, trituration and solution. In a moment all is ended; the prey has disappeared; it is digested. Everything in this being is superior. The eyes behold both before and behind. Convex, exterior, and with numerous facettes, they take in at once the larger part of the horizon. The feelers or *antennæ*, which are the organs of experiment or warning, are triply endowed—at the end touch, and at the base hearing and smell,—an immense advantage which we have not. What would be the human hand if it could smell and hear? How rapid and compact would be our observation. Dispersed among three organs of sense which work separately, the impression, for this very reason, is often inexact or transitory. Of the ten feet of the *decapod* six are hands—tentacles—and more. At their extremities, there are organs of respiration. The warrior extricates himself here by an expedient revolutionary of the problem which has so much embarrassed the poor mollusk—"To breathe notwithstanding the shell." He has replied to this:—"I will breathe by my feet and hands. Of these feeble parts by which I might be taken, I will make arms of war; and let them dare to attack me there." The only enemies they have to fear are the rocks and winds. They travel but little in the water or at the bottom, but are almost always on the shore watching for their prey. Often while they are waiting there for the oyster to yawn, to make a breakfast of him, the tide rises, takes them up, and rolls them along. Then their armor is their greatest danger. Hard and inelastic, it receives all shocks rudely, fully, and with crushing force. Their points are crushed and broken on the jagged rocks, and they never escape without mutilation. Fortunately, like the sea-urchin, they may repair themselves—substitute a supplementary member for the one broken. They depend so much upon this, that, if taken, they will break a limb of their own accord to deliver themselves.

It would seem that nature especially favors her so useful servants. As an offset to her infinite fecundity, she has in the crustaceæ an infinite amount of absorption. They are everywhere, on every coast, and as widespread as the sea itself. They divide with the vultures and gulls the essential functions of agents of salubrity. Let a large animal fall, and on the instant the birds above, and the crabs beneath and within, set to work to make it disappear. The small, leaping crab, which one would take for an insect, occupies and lives on the sandy shores. Let a storm throw up a quantity of medusæ or other bodies, and you will see the sand undulate, move, and then be covered by a cloud of these dancing undertakers, who gaily sweep the coast clean between the tides. Large, robust and cunning, the crabs are a warlike people. They have the art of war so perfect that they know how to employ even noise to frighten their enemies. They go to the combat in a menacing attitude, with their tentacles raised, and clapping their claws. But yet they are very circumspect before superior strength. I may look at them at low tide from a rock ever so high above them, but the moment they feel that they are observed, the whole crowd will beat a retreat, and in a moment they are lost in their sentry-boxes. They are not like ACHILLES, but rather like HANNIBAL. But when they feel that they are strong enough, they attack. They eat the living and the dead. The wounded man has everything to fear. It is told that they devoured several of DRAKE'S sailors on a deserted island, whom they overwhelmed with their swarming legions. No living being can fight them with equal arms. The giant polypus, who gulps down the smaller shell-fish, would risk his tentacles with them. The most gluttonous fish hesitates to swallow so thorny a being.

When the crustacean grows up he is the fright of both land and water. In his unattackable armor he is in a state to attack anything. He multiplies to excess, and would break down the balance of organized beings were it not for his armor, which is his trammel and his danger. Hard and fixed, yielding not to the variations of life, it is a real prison for him. To open through this wall a way for respiration, there has been placed at the door a casual member, the claw, which he frequently loses. To make way for his growth, for the progressive extension of his interior organs, it is necessary—dangerous thing!—that his cuirass should sometimes soften, and become no more than a simple skin. He can admit of such a change only by despoiling himself, by *peeling*, and losing a part of himself—moulting complete. The eyes, the branchi, which serve him instead of lungs, submit to it like all the rest.

It is a spectacle to see the lobster throw himself on his back and work about to rid himself of his shell. The operation is so violent that he frequently breaks his claws in it. Then he remains feeble, exhausted and soft. But in two or three days the calcareous substance reappears and makes him a new cuirass. The crab does not get off so easily; he requires much time to regain his shell; and in the interim even the feeblest of beings make game of him. A terrible return of justice and equality. The victims have their revenge. The strong submit to the feeble, fall to their level, in the grand balancing of the account of death.

If one died once for all here below there would be less of sadness. But every being that has life must die a little every day; that is to say, moult, submit to that partial death which in its renewal constitutes life. And from this comes that state of weakness and melancholy which one does not readily acknowledge. But what can be done? The bird who in season changes his feathers is sad. Sadder still is the poor adder who must change his skin. Also the human being must moult his skin and all his tissues; monthly, daily, momentarily, he is constantly and quietly loosening a little of himself. He is not dejected by it, only enfeebled in vague and dreamy moments, when the vital flame pales to return again more lucid than ever. How much more terrible is this for the poor being who must change all at once—whose frame-work must be disjointed, his inflexible envelope separated and torn away! He is overwhelmed, feeble, away from himself, a prey to the first comer. There are fresh-water crustacea who must die thus twenty times in two months. Others (the suctorial crustacea,) never recover their shells again, but remain deformed and without power or motion. They resign, so to speak, their commissions as hunters, and cowardlily seek a lazy and parasitic life, a shameful protection in the viscera of larger animals, who in spite of themselves nourish them, exhaust themselves for them, hunt and work for them.

The insect in its chrysalide seems to forget itself, not to know itself, and to remain a stranger to suffering;—one might rather say, to enjoy this relative death, like a nursing babe in its warm cradle. But the crustacean in his moult sees himself, appreciates his conditon, precipitated all at once from the most energetic life to a state of deplorable helplessness. He seems frightened and wild. All that he knows how to do is to crawl under a stone and wait in trembling. Having never met a serious enemy or other obstacle, rid of all industry by the superiority of his terrible arms, on the day when they fail him he has no resource left. Association might protect him perhaps, if the moult did not come for all, and if each was not disarmed at the same moment and incapable of protecting his sick brother, being sick himself. It is said however that of a certain species the male tries to defend his female, and if she is taken the two spouses are taken together.

STEEL RAILWAY TRACKS.

THE cheapness of the Bessemer process for converting iron into steel, and the improvements in the process for making steel rails has increased both in England and this country the disposition to introduce steel rails as a substitute for iron. The Hudson River and several other principal roads have the improved rail under trial. Opinions among English railroad managers seem to incline decidedly toward the use of steel. The London and Northwestern Railroad Company, which is one of the richest and most prosperous in England, have established works capable of making three hundred and fifty tons of steel weekly, and it is estimated that in England and Wales together at least four thousand tons of Bessemer rails are made every month. An English journal, recognized as good authority in railway matters, expresses a belief that "the time will come when iron rails will be obsolete, just as the old cast-iron trams, and, after them, the fish-bellied rail passed out of existence." The English test of a steel rail is a ton weight falling twenty-five feet, while an iron rail would be broken by the same weight falling five or ten feet.

MODE OF FISHING IN INDIA.

THE natives of Scinde, India, dwelling on the shores of the Indus, have a very primitive and original method of taking the fish necessary for their subsistence. The fisherman launches into the water a large and very light earthen vessel, and, lying face downward upon it, commends himself to the mercy of Allah, and pushes off from the shore. Impelling his singular bark forward with his feet and hands, he skims over the water, as our engraving above represents. He holds in his right hand a pitchfork about fifteen feet long, to which is attached a large net, which he closes immediately the fish is taken, and transfers the fish to his vessel. Floating with confidence over the water, the fisherman proceeds several miles from the shore, suffering himself to be carried forward by the current on account of the *pula*, a fish in much esteem, always swimming against the stream. Others content themselves with fishing for the pula with a net, standing on to the shore. In fact, it is dangerous to venture into the river, especially at noon, when the crocodiles are basking in the hot sunbeams. The English, however, do not allow themselves to be prevented by this obstacle from bathing in the river, even at midday, surrounded, it is true, by a cordon of domestics, swimming at some distance, and charged to frighten away the ferocious animals by raising loud cries and beating their hands.

M. VAN ORLICH, a German author, says that there is a temple on the banks of the Indus, in front of which the crocodiles, according to the inhabitants, never fail to stop, and, penetrated with respect for the divinity that resides in that place, they turn towards him, not the tail, but the head.

Various Topics.

A FARMER OF HISTORIC NOTE.

A FARMER named Rolfe has just died at Beaconsfield, Eng., who has an interesting history. He was the son of the farm bailiff of Edmund Burke, and the original of the famous picture by Sir Joshua Reynolds of "The Infant Hercules." Mr. Jesse, in his "Favorite Haunts," recounting his visit to Beaconsfield in 1845, thus refers to the circumstance:—"Mr. Rolfe's mother-in-law told me a circumstance I was little prepared to hear; it was the fact that her good, honest and portly son-in-law, whom I saw before me, had been the very infant whom Sir Joshua Reynolds took as the model of his well-known picture of the 'Infant Hercules.' The infantile father was the farm bailiff of Mr. Burke, with whom he was an especial favorite, that great man in his happier days frequently coming to the cottage, sometimes eating potatoes roasted in the embers of a wood fire, and once trying the merits of a rook or jackdaw pie, or rather a mixture of both. Sir Joshua Reynolds, it seems, when visiting at Burke's, happened to see the infant Rolfe sprawling on the grass, and was struck with the look of strength the child possessed, and he took him for his model of the demi-god, all powerful even in his tenderest years. He grew up a very strong and stalwart man, and so he appeared even in his old age, when he was familiarly known to the last as the 'Infant Hercules.' Mr. Rolfe lived in a snug farm close to Beaconsfield and to the statesman's favorite spot, 'Burke's Grove,' and he used to receive strangers visiting his cottage very courteously, and would show them relics of the Burke family. Among other curiosities he would, with great pride, exhibit a dagger, which he maintained was the identical weapon that Mr. Burke threw down in the House of Commons."

THE AMAZON.

PROF. AGASSIZ, in a recent lecture delivered in Boston, gave some of the general results of his explorations in the valley of the Amazon. He describes it as an immense inundated plain, rather than a river. Its length of more than two thousand miles, and its breadth of from five hundred to seven hundred miles, is in reality but one great stream, studded with islands, the main current fed by gigantic tributaries which present marked peculiarities. The flat-topped hills, which are found many hundreds of miles from the sea coast, are remarkable for the evidences of glacial action which they display, and in this fact the Professor saw a convincing proof of his favorite theory concerning the glaciers. He described the natural productions of the valley of the Amazon, and dwelt upon the capacity of the country for the support of a large and energetic population. The climate, he said, is not torrid; the equatorial heat being so tempered by the constant trade-winds that the mercury rarely rises above 84°.

The malarious diseases and fevers, of which so much has been said, he attributed to the habits of the people rather than the climate. Insufficient food, total neglect of sanitary precautions, and prevailing ignorance, are the exciting causes of the disorders which afflict the population. Plantations properly cultivated, and civilized modes of living, he contended, would remove all danger from climatic influences, and he estimated that the fertile region which is now almost neglected can support a population of twenty millions.

IT is the result of every day's experience that steady attention to matters of detail lies at the root of human progress, and that diligence, above all, is the mother of good luck. Accuracy is also of much importance, and an invariable mark of good training.

WHY WE SHOULD WEAR BEARDS.

THERE are more solid inducements for wearing the beard than the mere improvement of a man's personal appearance and the cultivation of such an aid to the every-day diplomacy of life. Nature combining, as she never fails to do, the useful with the ornamental, provides us with a far better respirator than science could ever make, and one that is never so hideous to wear as that black seal upon the face that looks like a passport to the realms of suffering and death. The hair of the mustache not only absorbs the moisture and miasma of the fogs, but it strains the air from the dust and soot of our great cities. It acts also in the most scientific manner, by taking heat from the warm breath as it leaves the chest, and supplying it to the cold air taken in. It is not only a respirator, but with the beard entire we are provided with a comforter as well; and these are never left at home, like the umbrellas and all such appliances whenever they are wanted. Moffat and Livingstone, the African explorers, and many other travelers, say that in the night no wrapper can equal the beard. The remarkable thing is, too, that the beard, like the hair of the head, protects against the heat of the sun; but, more than this, it becomes moist with the perspiration, and then, by evaporation, cools the skin. A man who accepts this protection of Nature may face the rudest storm and the hardest winter. He may go from the hottest room into the coldest air without any dread; and we verily believe he might sleep in a morass with impunity—at least his chance of escaping the terrible fever would be better than his beardless companion's.

HOW TO GO TO BED.

HALL'S Journal of Health gives the following advice how to go to bed in winter time. Those who practice retiring on the "cuddle up" plan will readily fall in with the suggestions:

"Do it in a hurry, if there is no fire in the room; and there ought not to be unless you are quite an invalid. But if a person is not in good health, it is best to undress by a good fire; warm and dry the feet well; draw on the stockings again; jump into bed, cuddle up, with head and ears under cover for a minute or more, until you feel a little warmth; then uncover your head; next, draw off your stockings, straighten out, turn over on your right side, and go to sleep. If a sense of chilliness come over you on getting into bed, it always will do an injury, and its repetition increases the ill effect, without having any tendency to 'harden' you. Nature abhors violence. We are never shocked into health. Hard usage makes no garments last longer."

ANECDOTE OF A STORK.

BIRDS do not often voluntarily take passage on board ships bound for foreign countries, but I can testify to one such case. A stork, which had rested near one of the palaces on the Bosphorus, had, by some accident, injured a wing, and was unable to join his fellows when they commenced their winter migration to the banks of the Nile. Before he was able to fly again he was caught and the flag of the nation to which he belonged tied to his leg, so that he was easily identified at a considerable distance. As his wing grew stronger, he made several unsatisfactory experiments at flight, and at last, by a vigorous effort, succeeded in reaching a passing ship, bound southward, and perched himself on a topsail yard. I happened to witness this movement, and observed him quietly maintaining his position as long as I could discern him with my spy-glass. I suppose he finished the voyage, for he certainly did not return to the palace.—*Life in the East.*

WE seldom find people ungrateful, so long as we are in a condition to render them service.

Reading for the Young.

Written for Moore's Rural New-Yorker.

KINDNESS.

BY LEWIS DAYTON BURDICK.

A CHEERFUL voice
Bids all rejoice,
Oft making cheerful and jocose
The melancholy and morose.

A friendly glance
Will oft enhance
Enjoyments of associates,
Increasing confidence in mates.

A kindly tone
Has power alone,
To drive much bitterness away,
Else in the heart of man would stay.

A trifling word
Of kindness, heard
When trying sorrows grieve the heart,
Sweet consolation will impart.

A single smile
Will oft beguile
Away anxieties of life,
And lessen wear of human strife.

A helping deed
In time of need,
Makes such impression on the heart
As time can never make depart.

Oh then, be kind!
Let hand and mind
Be active through the live-long day,
In deeds of kindness by the way.

You kindly greet
Each one you meet,
And you will find, you may depend,
That every one will be a friend.

Greene, N. Y.

THE CAROLINA PARROT.

THIS is the only species of Parrot found native within the territory of the United States. The vast luxuriant tracts lying within the torrid zone, seem to be the favorite residence of those noisy, numerous and richly plumaged tribes. The Carolina parrot inhabits the interior of Louisiana, and the shores of the Mississippi, and Ohio, east of the Alleghanies. It is seldom seen north of Maryland. Their private resorts are low, rich alluvial bottoms along the borders of creeks; deep and almost impenetrable swamps, filled with sycamore and cypress trees, and those singular *salines* or *licks*, so interspersed over the western country. Here, too, is a great abundance of their favorite fruits. The seeds of the cypress tree and beech nuts, are eagerly sought after by these birds.

The flight of the Carolina parrot is very much like that of the wild pigeon, in close compact bodies, moving with great rapidity, making a loud and outrageous screaming, like that of the red-headed woodpecker. Their flight is sometimes in a direct line, but most usually circuitous, making a great variety of elegant and easy serpentine meanders, as if for pleasure. They generally roost in the hollow trunks of old sycamores, in parties of thirty or forty together. Here they cling fast to the sides of the tree, holding by their claws and bills. They appear to be fond of sleep, and often retire to their holes during the day, probably to take their regular *siesta*. They are extremely social and friendly towards each other.

They build in companies in hollow trees. This bird is thirteen inches long; the forehead and cheeks are orange red; down and round the neck a pure yellow; the shoulder and bend of the wings also edged with rich orange red. The general color of the rest of the plumage is a bright yellowish silky green, with light blue reflections. It is altogether superior in elegance of figure, and beauty of plumage, to many of the foreign parrots. It is docile and sociable, and soon becomes perfectly familiar, but cannot be taught to speak. These birds are rapidly diminishing. According to Mr. AUDUBON, very few of them are to be found north of Cincinnati; and there are not, at present, half the number along the Mississippi that existed there twenty years ago.

FOR BOYS.—If you should see a man digging in a snow drift with the expectation of finding valuable ore, or planting seed on the rolling billows, you would say at once that he was beside himself. But in what respect does this man differ from you, while you sow the seed of idleness and dissipation in your youth, and expect the fruits of age will be a good constitution, elevated affections and holy principles?

The Publisher to the Public.

Patience, Agent-Friends!—We had hoped to be able to enter names of new subscribers and send all premiums therefor without delay, but the unexpectedly large number of club remittances received during the past two weeks—a third greater than ever before at this season—has overwhelmed us, and we must ask the indulgence of agents who do not receive their premiums promptly. It is impossible to enter names, mail papers, and also compare lists (to ascertain as to new subscribers) and send premiums at once—so we send papers, and defer comparing and sending prizes for a few days. Are doing the best we can, and trust friends will excuse temporary and unavoidable delay—not forgetting to keep on recruiting!

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly. Any one using deception will forfeit premium,—but of course no honorable man or woman (and all our recruiting friends are supposed to be such) will attempt any dodge or deception in the matter.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, twenties, or any other number. Subscriptions can commence with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless specially directed otherwise. Please note this.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 26, 1867.

NEWS OF THE WEEK.

From the National Capital.

THE receipts of internal revenue for the year ending the 20th inst., amount to $176,631,974.71. Amount of National Bank currency in circulation, $298,652,680. Securities on deposit for circulating notes of National Banks, $340,362,150.

The Committee on Banking and the Currency, it is reported, favor the bill of Mr. Randall, which establishes a sinking fund for the extinguishment of the National Debt in thirty-six years, by a modification of the Banking Act. It has been ascertained that there is but little opposition among the members of the House to the bill.

A bill has passed both Houses to set aside the net proceeds of the internal revenue in the Territories for the years 1866, 1867 and 1868, for the erection of Penitentiaries.

It is understood the President has a veto prepared for the bill providing for universal suffrage in the Territories. It is thought the President will also veto the bills admitting Nebraska and Colorado into the Union as States.

The new bill prescribing the time for the regular meetings of Congress reads, "That in addition to the regular times of meeting of Congress, there shall be a meeting of the Fortieth Congress of the United States, and of each succeeding Congress thereafter, at 12 o'clock M., on the 4th day of March, the day on which the term begins for which the Congress is elected, except that when the 4th of March occurs on Sunday, then the meeting shall take place at the noon hour on the next succeeding day."

The bill fixing the compensation of post-office route agents at not less than $900 nor more than $1,200, has passed the House.

The indications favor the idea that the Niagara Ship Canal bill will become a law.

A joint-resolution has passed both Houses of Congress to provide for the erection of the much-talked-of post-office in New York city.

The President, on the 15th inst., sent to the Senate the name of John M. Murphy for Governor of Idaho.

Bonds to the amount of $640,000 were issued last week to the Central Pacific Railroad Company for twenty miles more of completed road.

Among the Engineers' estimates of appropriations for the repair and maintenance of New York State fortifications are the following:—For Fort Porter, near Black Rock, $50,000; Fort Niagara, near the mouth of Niagara River, $100,000; Fort Ontario, Oswego, $50,000; Fort Montgomery, outlet of Lake Champlain, $60,000.

The testimony of General Sickles before the Congressional Committee in relation to affairs in South Carolina is very strong. He declared that many counties of that State require constant military control to secure to the Freedmen any of their rights.

The Ways and Means Committee are steady at work on the tax bill; it is probable that they will not agree upon any material reduction of internal taxation. The income tax, it is thought, will not be modified at all, and the tax on whisky will hardly be reduced below $1 per gallon.

The Iron and Steel Association is exerting a powerful pressure on Congress in favor of prohibitory duties.

The Fiftieth Annual Meeting of the American Colonization Society was held in Washington on the 15th inst. The report showed the receipts for the year to be $38,153; disbursements, $38,342. Six hundred and sixty emigrants sailed for Liberia last November. Six hundred and forty are now ready to sail.

The U. S. Supreme Court has rendered a decision that the Missouri law forbidding clergymen to preach or attorneys to practice without having previously taken an oath of loyalty, is unconstitutional.

The conservatory attached to the Executive Mansion was badly damaged by fire on the morning of the 18th inst., at least one-third of the valuable plants therein being destroyed. Loss on buildings $20,000. The plants destroyed are of the rarest character and of foreign origin, and cannot be replaced for years, and will cost hundreds of thousands of dollars.

Canadian Matters.

TEAMS are now crossing the St. Lawrence on the ice at Ogdensburg.

A Montreal dispatch dated Jan. 17, says the St. Lawrence River has risen a foot, and there is great danger of its flooding the city.

Patrick McGrath, Thomas Maxwell, James Burke, Daniel Quinn and Peter P. Ledwith, Fenians, were tried at Toronto last week, of an attempt to "take Canada," and found guilty. Patrick Norton plead guilty to the same charge. The sentence in each case was deferred.

The plans arranged for the defence of Montreal against any attack or inroads from Fenians or other enemies, have been approved by Her Majesty's Government at London. The Imperial Parliament will be called upon to make an appropriation of two millions of pounds sterling for the completion of the work. It is proposed to begin the erection of the defences early next summer.

The Toronto Globe learns that the Confederation Delegates in London have agreed upon the plan of Government, and submitted the matter to the British Cabinet.

Advices from Ottawa represent that much anxiety prevails there on account of rumors that the Capital of the Confederation is to be removed eastward. It has resulted in the stopping of building operations.

The exports from Canada to the United States during the year 1866, were as follows:—Wheat, 610,000 bushels; barley, 200,000 bushels; flour, 150,000 barrels; butter, 640,000 pounds; lumber, 127,000,000 feet.

Affairs at the South and South-west.

THE Legislature of West Virginia has ratified the U. S. Constitutional Amendment.

A telegraph cable to connect Florida with Cuba, it is reported, will be laid during the present year.

A dispatch from Nashville, Tenn., says the Legislature will pass an act extending suffrage to the Freedmen.

The steamer "Sunny South" with 1,045 bales of cotton, was destroyed by fire last week, on the Alabama River.

Excitement has again been revived in Lexington, Mo., by the arrival there of two companies of Gov. Fletcher's militia.

Several ballots were had in the Kentucky Legislature last week for a United States Senator without making a choice.

The steamer "Mary Swan," running between Louisville and Memphis, is reported sunk near Rockport, Indiana,—a total loss.

The Missouri Legislature has before it a resolution recommending the impeachment of the President. Also, a resolution recommending a Convention of the States in July next.

The Freedmen's Bureau agent at Galveston, Texas, reports that the Freedmen are contracting for the year's labor with great rapidity. Georgia Freedmen arrive in almost every steamer.

A Jefferson City (Mo.) dispatch says a bill has been introduced into the House to amend the State Constitution by striking out the word "white." A similar bill is before the Senate.

The Grand Jury at New Orleans has refused to find bills of indictment against any of the parties implicated in the riots last July. The District Attorney refused to administer the test oath to the jurors.

The steamer "Platte Valley," which left Memphis the 17th inst. for Vicksburg, struck the wreck of a sunken gunboat in the afternoon, and sank to the hurricane roof in three minutes. A large number of persons were drowned.

The Freedmen are leaving the vicinity of Columbia, S. C., in such numbers as to excite alarm for the future cultivation of the lands. They are chiefly bound for Florida, whither they are transported at Government expense at about five dollars per head, and a promise of rations until the working season. The main reason for leaving are the hopes they indulge of better employment in the region of their destination.

From South America.

WE have received advices from Valparaiso of December 18th, which give confirmation to the rumor that Chili had refused the mediation of England and France in the Spanish question.

The South American Congress is to meet at Lima, and all Republics which have not yet given in their adhesion to the League are to be invited.

The bark Tecumseh, with sixty cannon for Valparaiso fortifications, had arrived.

Lima advices to the 28th ult., state that an attempt was made on the night of the 20th to assassinate the President at Callao. The assassin, a Chillian, had been arrested.

The Herald's Panama correspondent of a late date, says it was rumored that the U. S. Minister to Columbia, Mr. Burton, has had a serious difficulty with President Mosquera, and had demanded his passports. Mosquera told him he did not require a passport, and he could go or stay as he pleased; whereupon Mr. Burton broke off all communication with the Columbia officials, and has referred the matter to the United States Government.

At last accounts the war in Paraguay was still going on. The Brazilian army was waiting for reinforcements to renew the attack, and the Marquis de Caxias had assumed command. The Paraguayan army is reported to be full of confidence and ready for action.

From Mexico.

A DISPATCH from San Francisco of Jan. 18, says "a letter from Durango dated Dec. 27th, states that Juarez arrived in that city on the day before, and received a most enthusiastic reception. He was escorted by over six hundred citizens and entered the city amid roaring of cannon and ringing of bells and great rejoicing of the people. Next day the President commenced operations against the invaders.

An army 200 strong was sent in the direction of Jalisco with orders to join the division of Gen. Auza and follow the French on the way to the city of Mexico.

Official news was received that a column of French troops, 1,000 strong, fell into an ambuscade near San Juan De Los Lagos and were entirely cut off, losing all their arms and material of war besides 250 prisoners. Gen. Rikers commanded the victorious party.

Gen. Placivevega left Durango Dec. 28th, for the city of Mexico, in command of a brigade. Previous to the arrival of President Juarez the French evacuated the city and went towards Zacatecas, fighting all the way to Guadalajara.

On the staff of Juarez are 18 American officers lately arrived from California."

Late advices from the city of Mexico say that Maximilian's confessor is virtually governing the Empire, the Emperor himself living quietly and secluded in the Capital. An Austrian war vessel is awaiting him at Vera Cruz. All the abandoned cities are being occupied by the Liberal troops.

The last of the French troops in Mexico were expected at the Capital daily, preparatory to a general embarkation, and the Liberal forces were following closely in their wake.

The very latest advices from Mexico state that it is expected that Maximilian will leave the country with the French or soon afterwards.

THE STATE MILITARY ASSOCIATION—Which held its Annual Meeting in Albany on the 15th and 16th inst., we should judge from the proceedings, did the State good service in the recommendations which, if carried out, will tend materially to verify the maxim, "In peace prepare for war." A larger number of members than usual were present. The Address by Inspector-General Batcheller on the evening of the 16th, was an able production, and listened to by a highly appreciative audience—military and citizens—among whom where a large number of ladies. After the conclusion of Gen. B.'s Address, the Association, per special invitation, marched to the Executive Mansion, where the "Commander-in-Chief of the Army and Navy" had provided ample rations, upon which a charge was made which resulted to the satisfaction of all concerned, and the cementing still more closely the bonds of friendship.

THE CRETAN WAR.—The Tribune's Syria correspondent says the enthusiasm of the Greeks has been fairly roused in favor of the insurgents, and the youth of Greece are hastening in large numbers to aid the Cretans in their desperate struggle against the Turks. The captain of an English gunboat, moved by sympathy for the suffering Cretans, had received certain fugitives on board his vessel and conveyed them to a place of safety. This act has been disclaimed by his Government, and the gunboat withdrawn from Crete. Meanwhile the American Consul, it is reported, has applied to our Government for permission to employ one of the vessels at his command in removing non-combatants from Crete. Sympathy for the Cretans is spreading on all sides.

MAJOR-GENERALS.—GOV. FENTON, last week, sent to the Senate of this State the following nominations:—Joseph B. Carr of Troy, late Major-General of Volunteers, to be Major-General of the Third Division National Guards, State of New York. Theodore B. Gates of Kingston, late Brevet Brigadier-General of Volunteers, to be Major-General of the Fifth Division. Henry A. Barnum of Syracuse, late Brevet Major-General of Volunteers, to be Major-General of the Sixth Division. Craig W. Wadsworth of Geneseo, late Colonel of Volunteers, to be Major-General of the Seventh Division.

THE SUNDAY LIQUOR LAW.—This law, we understand, is again fully inforced by the New York Police, to the great increase of sobriety and order and the decrease of arrests for drunkenness and disorderly conduct arising from it. These results are chronicled by the press with great satisfaction, and the inforcement of the law is urged in the interest of order and the general welfare of the community.

EARTHQUAKE IN OREGON.—A Jacksonville (Oregon) telegram says that a terrific earthquake was felt at Fort Klawath on the 8th inst. The sky was darkened with ashes and the air filled with sulphurous vapors, which came from the direction of Klawath Marsh. Klawath Lake had fallen about six feet, and Crooked Creek was completely dried up. The account purports to have been written by order of the Commander of Fort Klawath.

A GREAT ARMY IN RUSSIA.—The recruiting which is to take place in Russia from the 27th of January to the 27th of February, at the rate of four conscripts per 1,000 inhabitants, and five per 1,000 in certain districts, will produce 850,000 men. The Russian army at present numbers 800,000 men under arms; add to which the 850,000 produced by the new levy, and the round number is 1,650,000 men.

ELECTION OF UNITED STATES SENATORS.—The following persons were elected United States Senators last week by the Legislatures of their respective States:—New York, ROSCOE CONKLING; Pennsylvania, SIMON CAMERON; Missouri, CHARLES D. DRAKE; Illinois, LYMAN TRUMBULL; Nevada, JAMES W. NYE.

NEWS PARAGRAPHS.

LATE papers from England contain accounts from all parts of the country of great storms, floods and shipwrecks, and deaths from cold and starvation.

A BILL has been introduced in the Minnesota House to strike out the word "white" from the Constitution; also a resolution requesting Senator Norton to resign.

A SELECT Committee of the English Parliament, which has been investigating the subject, reports two thousand deaths in the English coal mines in the last ten years.

THE Indiana Legislature has before it a bill to make "bolting" from either House by any member, when a question is before it, a misdemeanor, punishable by a fine of $1,000.

THE Republican members of the New Jersey Legislature have nominated Frederick T. Frelinghuysen for U. S. Senator, and the Democratic members Ex-Senator Stockton.

A DISPATCH from Concord, N. H., the 14th, says Ex-President Pierce has been confined to his house by an illness of several weeks, but today is thought to be much better.

ACCOUNTS received from the east and west represent that there has been great snow storms the past few days, blocking up the railroads, and causing great suffering by the poor.

GEN. GRANT has won a lawsuit in the St. Louis courts, whereby he has secured possession of a farm sold several years ago, but for which he got no pay. On the first trial he failed.

A TOBACCONIST at Berlin, on recently opening a package from St. Domingo, was astonished to find near the top of it the dried human hand of a negro, and a little further down a bowie knife.

THE Parisians have discovered a process of photographing the likeness of the owner upon linen garments in lieu of writing the name. Washing, it is said, does not injure the portraits.

THERE was a loss of $100,000 among the shipping at Cincinnati on the 17th, caused by the flood and ice. Large numbers of coal and other barges were broken from their moorings and sunk.

THE Hudson River Rowing Association, composed of a large number of clubs, have resolved to challenge any European rowing club to row a race of three or five miles either in England or France.

A PUBLIC MEETING was held in New York on the 19th inst. to express sympathy with the Greeks of Crete, and a committee was appointed of influential citizens to collect funds, food and clothing for them.

CHARLES DICKENS has begun public readings of "Barbox Brothers" and the "Boy at Mugby" in the city of Leeds. The London journals report that "Mugby Junction" has had a sale of two hundred and fifty thousand copies.

A DISPATCH from Fort Laramie, the 11th inst., says the mail party was attacked 40 miles west of here last night by Indians, who captured seven mules and one wagon. A stealing party of Indians are reported prowling about this post.

THE bill repealing the act of the New York Legislature last session which prohibited the granting of "free passes" on railroads, passed the Senate on the 16th inst. As the bill had previously passed the Assembly, it has "gone to the Governor" for his signature.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Jan. 22, 1867.

MONEY is a little easier in this locality than a week since, but the market cannot be considered easy. There is some improvement in New York and other eastern cities, but the high rates of interest paid by outside borrowers give a pretty decided indication of the true state of affairs. Lenders, on call, are firm in their demands of 7 per cent., with best collaterals. Average commercial paper goes at 8@10 per cent.

The stringency of the market at the West continues. The Banks, as a general thing, are able to accommodate only a portion of their customers. The Cincinnati Gazette of Friday says:—"Business men are striving very hard to bridge over these rough times, in the hope that a change for the better is not far distant. Rates for money are pretty generally what lenders choose to ask. In the street, good paper ranges from 15 to 24 per cent."

This indicates about the condition of things in the leading commercial cities West and Southwest. Collections are slow and uncertain, and merchants report that they are receiving but about 50 per cent. of what they anticipated.

The general failure of the wheat harvest last year in Ohio, Indiana, and some other States, leaves farmers without the means to cancel their indebtedness from sales of surplus wheat,—and the price of pork being about half it was last year, money from that source is much less than anticipated. Ohio and Indiana, with a good crop of wheat, might have exported to the value of $50,000,000; now in some localities in those States farmers are buying wheat from the Northwest to make bread for their families.

Gold steadily advanced during the week, and touched a fraction above 137. On Saturday sales ranged from 136½ to 136⅝. The price yesterday was 136⅝. Only $156,000 in specie was sent to Europe by Saturday's New York steamers. Stocks are lower; nearly all denominations, except Governments, tend downward.

The number of mercantile failures reported in the Northern States during the year 1866 was 632, with aggregate liabilities of $17,330,000. The losses the past year are much larger than reported in any year since 1861. That year the number of failures reported was 5,935, with liabilities in the aggregate of $189,000,000. The number of failures the last year is less than half the average between 1857 and 1860. The last year has not been a year of large profits. Merchants have everywhere suffered from the decline in prices.

Business prospects for the future have an uncertain, not to say gloomy, look. Some prophesy, however, that the present condition of affairs is but the harbinger of better times. We trust this may be the case, but the indications do not very clearly point in that direction. Very much depends upon the action of Congress. There never was a time when sound financial legislation was more necessary than at present. We need a policy comprehensive and general in its principles, and then let it be permanent. The commercial writer of the Cincinnati Gazette says:

Ask a business man his opinion about the future, and it will be found he has no opinion pending the action of Congress. So much depends on legislation that business must be upset periodically to await the action of Congress, or to ascertain what direction the Secretary of the Treasury will give to his discretionary power. No business can prosper under this state of uncertainty. The continued sharp contraction of the currency would bring a crisis, but this would not be so bad as a long period of stagnation and suspense which at last would end in a revulsion. What the country needs, therefore, and what Congress should adopt, is a fixed policy.

The reduction of legal tender notes since June 1st, 1865, to the close of 1866, aggregates $183,761,887. There are 390 National Banks authorized by the United States Treasurer to receive deposits of Government funds. These banks furnish an aggregate security, in bonds, valued at $55,903,950.

COUNTERFEITS.—There are in circulation recent counterfeit 5's on the First National Bank of New York and on the First National Banks of the following places: Washington, D. C.; Scranton, Penn.; Cairo, Ill.; Boston, Mass. There are also 5's on the "Oil City Bank" in circulation. They are worthless, the bank having "gone up" in company with Culver & Co. of Venango Co., Pa.

The counterfeits above mentioned are a dangerous imitation of the genuine bill.

DRESSED HOGS.—The hogs in market last week were better fatted and heavier than heretofore. Prices have not materially changed. Shippers yesterday paid 8 cts. Buyers for home consumption, as usual, paid a little higher.

The Cincinnati Gazette of Friday says:—"Hogs advanced 15c per cental, under light receipts and an active demand. Sales were made at $6,25@6.65 gross, and $7,25@7,80 net, for light to heavy averages, the latter rate for hogs weighing 280 lbs. and upward. One of our largest packers, who has held off all the season, commenced operations to-day."

WHEAT AND FLOUR.—The markets East and West are inactive. Prices rather favor the buyer.

WOOL.—Nothing doing except in the Eastern markets, and transactions in New York and Boston have not been large the past week. Messrs. Bailey, Jenkins & Garrison of Boston, in their last week's Circular say:—"There is no material change in the wool market, and we note continued inactivity. Fine descos are in moderate demand at firm rates. Manufacturers have little encouragement to buy while the market allows no outlet for their goods at paying prices. Much interest is felt as to the course Congress will take on the proposed Tariff, and until the question is settled we look for an unsteady trade."

HOPS.—Hops have improved. Emmet Wells, of New York, in his Circular of the 19th says:—"Our revised quotations this week show an advance of 2½ to 5c. ₱ lb. in prices of choice grades. There is more inquiry for very low grades, which are extremely scarce and sell readily at 35@40c. cash."

The following are the latest quotations:—American, common to fair, 35@45c; do, good to prime, 52½@57½c; do, choice to fancy, 62½@70c.

Special Notices.

"Coe's Cough Balsam" are household words throughout the United States. As we travel we are greeted with it from rocks and fences; if we pick up a newspaper we are advised to "try it;" and as we visit our friends we see it on the shelf ready for use. It soothes fretful children, puts a veto on coughing, and is a great relief to the consumptive.

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.
For sale by all druggists. 855-52t

FOREIGN NEWS—BY TELEGRAPH.

PARIS, Jan. 15.—The last of the transports for Vera Cruz to bring home the French troops from Mexico, left Toulon last evening.

LONDON, Jan. 16.—A Florence letter to the Times says that Gen. King, the American Minister at Rome, has been invited to remove the American church outside the walls of the city. Mr. King has complied, and will hire a villa for that purpose.

PESTH, Jan. 17.—The Hungarian Diet with remarkable unanimity, evince a design to break their negotiations with Austria if that government continues to oppose the wishes of Hungary in insisting on the army organization scheme, and other measures equally oppressive and odious to the people.

LONDON, Jan. 19.—It is reported that Queen Victoria will visit the Paris Exposition, calling there while on her way to Germany. Forty-one persons are reported to have lost their lives by the breaking of the ice in Regent Park. Others who were known to be on the lake at the time of the accident are still missing. Garibaldi, at the request of an American friend, has written a letter giving his opinion on affairs in the United States. He applauds the election of colored deputies to the Massachusetts Legislature, earnestly expresses his hope for the preservation of future harmony of the Union, and urges the President to come to terms with Congress.

LIVERPOOL, Jan. 19.—The usually intense cold season has so aggravated the distress of the poor of this city that it resulted to-day in a bread riot in the streets, but the disturbance was not of a serious character.

VIENNA, Jan. 19.—The Porte has agreed to evacuate the forts held by Turkish troops in the Principality of Servia.

TRIESTE, Jan. 20.—Reports from Mirama state the Empress Carlotta has quite recovered from her severe illness. The patent for the re-organization of the Austrian armies will not be carried out.

ATHENS, Jan. 19.—The Grecian Government has sent Gen. Kabergia on a special mission to the United States.

MADRID, Jan. 20.—It is reported that the Government of Spain is about to send Facundi Joni as Minister to the United States.

ATHENS, Jan. 20.—The advices received from the Island of Candia state that the Cretans had fought another battle, in which they claim a victory over 5,000 Turks. The Cretan Assembly has issued a call to all the Powers of Europe to send agents to Candia to witness and report the condition of the country.

PARIS, Jan. 20.—The Emperor Napoleon has issued an important decree. It orders that the address of the Chambers in reply to the speech from the Throne shall be discontinued; grants to the legislative body the right of questioning the Government; proposes that offences of the press be tried in the convictional courts; that the stamp duties be reduced, and that the rights of the people to meet in public be limited only by those regulations necessary for the public safety. The decree concludes by declaring that these reforms will now crown the edifice of a State founded upon the national will. The members of the Cabinet have tendered their resignations to the Emperor.

STOCKHOLM, Jan. 20.—The Swedish Parliament was opened yesterday. The King, in his speech, said that Sweden would always endeavor to remain neutral in the various differences between the European powers.

THE

GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.
All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black.) 70c., 80c., 90c., best $1 ℙ lb.
MIXED (Green and Black.) 70c., 80c. 90c., best $1 ℙ lb.
ENGLISH BREAKFAST (Black.) 80c., 90c., $1, $1,10, best $1.20 ℙ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1.10, best $1.25 ℙ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℙ lb.
UNCOLORED JAPAN, $1, $1.10, best $1.25 ℙ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.
[For manner of getting up Clubs see former editions of this paper.] 888-tf

THE VOICELESS.

BY OLIVER WENDELL HOLMES.

We count the broken lyres that rest
Where the sweet wailing singers slumber,
But o'er their silent sister's breast
The wild flowers who will stoop to number?
A few may touch the magic string,
And noisy fame be proud to win them;
Alas for those who never sing,
But die with all their music in them!

Nay, grieve not for the dead alone,
Where song has told their heart's sad story.
Weep for the voiceless who have known
The cross without the crown of glory!
Not where Leucadian breezes sweep
O'er Sappho's memory-haunted pillow,
But where the glistening night dews weep
O'er nameless sorrow's church-yard willow.

O hearts that break and give no sign
Save whitening lip and fading tresses,
Till death pours out his cordial wine
Slow-dropped from misery's crushing presses,
If sluging breath or echoing chord
To every hidden pang were given,
What endless melodies were poured
As sad as earth, as sweet as heaven!

The Story Teller.

Written for Moore's Rural New-Yorker.

WRECKED.

BY ERNST HERRY.

I DISPLACED a book in my library—an envelope fell out that had been mislaid there, a dainty, white, scented envelope, that reminded one of fallen snowflakes or crushed flowers. I picked it up and sat down by the window. There were only a couple of cards, wedding cards, in it; but they told me such a sad story of a wrecked life. Back to the halls of the Past, pale-faced Memory led me, and I paused before two pictures hanging there—the one a perfect EVANGELINE, with great masses of purple black hair, and eyes of dusky splendor, with a whole world looking out of their luminous depth. Sweet, sweet ETHEL! "That glittering face so proudly pure" haunts me now like a dream of angels. And the other, a frank, manly face, with clusters of chestnut curls above a broad, white brow; mirthful, boyish eyes; the mouth curved haughtily; and upon the finely cut lips an expression of rigid determination and self-will, each face the index of the noble soul within; and yet both were very, very proud in their repose. O pride! pride! Pride was the rock upon which both of those lives were wrecked! They were residents of the same city, both wealthy, and moved in the same circles; so, of course, they were acquainted before they met that summer at NETTIE B——'s. But there they met in daily intercourse; and in those long, bright summer days, filled with music, and drives, and pic-nics and flirtations, they learned to love each other. They were a gay party of city fashionables who met there—young, unclouded hearts, who had as yet looked only upon life's sunny side,—and from morning until night NETTIE B——'s beautiful home rang with merry voices from happy hearts. And so the golden summer days floated by and brought unto two hearts at least the first untolding of their destiny.

The summer came to a close, and still the gay party lingered. October came, and still they were dreaming in the violet and golden light. But at last active preparations were made for a general breaking up and regreful leave-taking.

It was a glorious evening, the last week of their stay. The programme for the evening had been a boating excursion; but for some cause it had been given up, and the company had merrily betaken themselves to the great library parlor, where, gathered in groups, they were eagerly discussing "something new." Boating, pic-nics, rides, dancing, tableaux, "everything" was voted "worn out." "Even to flirting!" cried NETTIE B——, shrugging her pretty shoulders and glancing mischievously over one to where her piqued lover, CARL SHIRLEY, was paying assiduous attention to EVA GILLETT, who he knew perfectly well was already engaged; "even to flirting! So, good people, give us something *new* to end this summer with."

Every one laughed. Even CARL, after looking fierce for a moment, joined in the general laugh, in the midst of which KITTIE M——, the mischief of the party, mounted an ottoman, and, commanding silence of the perfect Babel of voices, suggested—first, that they should give a vote of thanks to their beautiful friend and hostess, NETTIE B——, for her generous hospitality; and secondly, that that grand summer should close with a double wedding, and that the only two *known* engaged couples—FRANK WOLSEY and his betrothed wife MAUD STANLEY, HARRY BURNS and ETHEL GREY—should be the parties. The proposition was received with shouts of applause; and so, almost without gaining their reluctant consent, preparations were made at once, and one beautiful October morning the whole company met for the last time in the stately drawing-rooms, and, in quiet contempt of what Dame GRUNDY might say of such an unusual proceeding, HARRY BURNS and ETHEL GREY, FRANK WOLSEY and MAUD STANLEY, were married, and, after going through the prescribed forms of congratulation and partaking of the splendid entertainment, dispatched brief letters home and set out on a wedding tour.

There was never a more noble couple than HARRY BURNS and ETHEL GREY! I said it then, and I say it now in the face of the after events. Yet, viewed in the light of those after events, I know that that marriage would never have taken place had it not then and there. They were eminently fitted for each other; they loved each other truly and were equals in every respect, even to the family pride in the noble, old Scotch blood that ran in their veins,—a pride that their parents had brought with them from the old home in Scotland to the new home in America. But, unknown to them, there had been a feud between the two families—a bitter, deadly feud that sprang up a half century back in the old home in Scotland,—but the fires of which had, with true Scottish pertinacity, been kept burning as brightly as they did in those first days, when, from their castellated mountain fortresses, their ancestors bade defiance to their enemies or shivered a lance with them in the valleys.

How little a thing will influence a human life—a word, a look, to ruin or to save! It was a dreary, rainy day in the city when those two letters reached their destination,—those two letters bearing upon their long, white pages a message that was to turn the tide of more than one life in that great city. HARRY'S father was sitting in his office conversing with a friend when the mail carrier brought his to him. The old man took and opened it carelessly; but the thin cheek flushed crimson, and the dim eyes flashed with more than the fires of youth as he read. "That ever son of his should mate with one of that hated race! his only son—his pride!" But then the fires burned low again—the man's true nobility asserted itself. HARRY did not know, *he* was not to blame, nor ETHEL perhaps. For HARRY'S sake he would use her well—for HARRY'S, his idol's, sake.

But the other letter to ETHEL'S aunt! I was spending a few days there and happened to be with her when it arrived. We were sitting in state in the large, handsome drawing-rooms when the servant brought it in. She rose to take it, remarking, pleasantly, that it was from ETHEL; she "was expecting her home soon; this would probably say when she was coming. MATTIE PIERCE came yesterday, she had heard. I would not mind if she read it, would I?" Breaking it open, her face grew suddenly white, and she staggered as if from a blow. I thought she was faint, and both the servant and myself sprang forward; but, waving us back with stately courtesy, she walked slowly and firmly up to her own room, her lips shut closely and her brow contracted as if in pain. She did not come down again. Several hours afterward I went up to her room. She was walking the floor, but stopped short when I entered and answered me in her usual clear, even voice; but her face was as white as the face of the dead. But, whatever the struggle was, there was no trace of it when she came down the next morning. She did not, however, announce ETHEL'S marriage; but in a few days the cards came out, and great preparations were made for the reception. It was curious to watch the meeting between her and HARRY'S father,—such stately, old school politeness! But no one would have dreamed that in their hearts were burning the fierce fires of a hatred that would never go out. She was never cordial; but I think in her reception of HARRY she approached the nearest to cordiality that I ever saw her; and yet all the while I fancied I detected that strange glitter in her eyes that I saw there that day—an expression that I did not like.

Of course, as they were wealthy and great favorites in society, there were a great many parties given in their honor; but I think they were both glad when it was all over and they went to reside in their own beautiful home, the most perfect picture of a home that I ever saw. There was everything that a passionate love of the beautiful could suggest, wealth buy, or a refined taste arrange. And they were so devoted to each other! they must have been very happy for the first six months of their married life.

But then ETHEL'S aunt began to be lonely in her splendid home,—she could not live without ETHEL; and so she too came to reside with them. It was beautiful to see their reception of her, the regard they paid her wishes, the thousand little nameless attentions to make her feel welcome and at home, though they knew that those cozy, pleasant evenings at home would be broken in upon by the presence of a third—that it would never be quite the same as when they were but two. But they never gave such thoughts utterance. Nothing could have been more cordial than their reception of her, nothing more tender than their regard for her, and she, moving about in her haughty way, was yet so gentle and thoughful, so purring and cat-like. Honestly, I do not see how that woman could have had the heart to do as she did. I do think she loved ETHEL, but I believe she would have torn her own heart out if it had stood in the way of her revenge. She was strong in her likes, but in her hate as relentless as death itself. For a few months, however, all was brightness and sunshine. But then a tiny cloud came up—an undefinable feeling that all was not the same between HARRY and ETHEL,—a something separating those two, united for life, a shadow which I doubt if either could have defined.

Months passed; she was working slowly but surely. It would never do to show the black flag at once; that would be only betraying herself. The woman played her cards well. "Small causes lead to great results," you know. It is from such little things a human life is made up.

Heaven knows what infernal machinery that woman set to work; I do not, I can only give the result. She was skilled in hypocrisy, in every kind of deceit. She brought her great knowledge of human nature to her aid; with their great pride to assist her. She made trivial things look as black as midnight, as black as her own heart; but they could not see that. She sowed dissension between them by all the thousand ways by which the guilty mislead the innocent. She forged ETHEL'S writing upon a leaf of her journal, as if it was from ETHEL, and then placed it in HARRY'S way, as if it came there by mistake. Of course ETHEL did not know this; she felt herself misunderstood and so remained in her own room the more, became paler and thinner, but more reserved and stately. That true, noble nature could not brook the distrust which her great pride would not allow her to explain unasked. If either of them had spoken! But HARRY also was too proud to ask for an explanation that was not given voluntarily. Poor child, she had nothing to explain! And so he too grew pale and thin; and the careless, mirthful look left his eyes forever, under that mental anguish. I do not seek to excuse them; they were both much to blame; but they were very young and life had been all sunshine; how could they know how to meet the storm? Neither for a moment doubted ETHEL'S aunt. How could they? She made them think her an angel of light; she would go to them and beseech them to be reconciled, always contriving to make matters worse. Heaven knows what they must have suffered during those terrible months. It could not last! For weeks they had been living virtually separated though under one roof. They were too proud to let a whisper of this reach the world. It would have killed them all, I think. ETHEL'S aunt had no intention of this; she could arrange it another way, for her heart never misgave her, she never turned back one iota, in the face of all that terrible suffering she did arrange it!

I don't know that I have mentioned that HARRY and his father were both lawyers and in partnership. About this time they were conducting a case of great importance that required the presence of one of them in a distant city. It was a situation involving an absence from home for months, a situation of great responsibility and danger, requiring a keen intellect and a brave heart, such as HARRY possessed. At any other time such a separation must have been painful; but I think it was a relief to them both, though both must have known that it might be forever. But I do not think either thought of this.

Shortly after this I saw ETHEL. Her manner was as quiet and stately as usual; but her eyes had a deep, far-away look in them, as if searching for something they could not find; and her voice, which was always soft and low, had a sound in it that thrilled you. Her physicians said she was going into a decline which baffled their skill. I do not think, besides myself and the servants, there was one out of the family who knew what ailed her. The servants were all old ones; indeed, I never saw a better appointed household. It is a peculiarity of these old Scotch families that they retain in their service the families of their servants. The GREY servants had been in the family since time immemorial. From parent to child, they would have died before they would have told. It was about this time that ETHEL'S aunt decided upon taking her to Europe for her health, the complicated state of HARRY'S business affairs being the excuse given for his not accompanying her. I think, now that she had attained her object, and wiped out the imaginary blot upon the family honor by bringing misery upon the BURNS, she would have made her happy if she could. Just before they started ETHEL wrote to HARRY. The letter was misunderstood and a brief reply sent. Then they started. I have but little more to write. They went on the ill fated ——, and were lost at sea.

Poor, poor ETHEL!—the dark sea is thy resting place now; only the cold waves envelope that queenly form! only the sea-weed for a pillow! Yet when I heard of it I did not weep for her; for I knew that at last the weary heart had found rest, and the weary soul peace. But her aunt! Let us hope that in that last hour, when the ship was reeling and pitching, and her soul stood unmasked in the presence of that awful night, the black waves and Death, the proud heart uttered, and the LORD of Mercy heard, a prayer for pardon.

And HARRY. I never saw him but once afterward. His face was deeply furrowed then; and many gray hairs rested among the chestnut curls. People said it was sorrow for his beautiful young wife's death; and so in truth it was; but I think he would have given all that he possessed if he could have recalled that one letter he wrote her. Ah! that letter was read in a very different way now; for in ETHEL'S room he had found her journal,—I think she must have purposely left it for him,—and in his private study a letter from her aunt, left purposely too—a bitter, mocking letter that awoke him at once. HARRY BURNS came out of his wife's room that night a bowed, broken-hearted, ruined man. I don't know where he is now—this was many years ago—but, wherever he is, I know there is a skeleton of the past that walks beside him, and in the sacred high places of his heart there is a broken idol.

Lima, Dec. 12, 1866.

A SELF-IMPORTANT LUNATIC.

A CORRESPONDENT of the Chicago Republican tells the story of a remarkable lunatic who goes every day to the telegraph offices, corner of Broadway and Liberty streets, New York, to communicate with the President on the condition of the country. The operators always take his dispatch as if they deemed it as important as he does. Twenty years ago he was one of the most prominent lawyers in New York, had an ample fortune, and was a ripe scholar outside of his profession. He lost his reason on account of some unfortunate love affair (think of a lawyer falling a victim to his heart!) squandered his means, and at last became a monomaniac on the subject of patriotism. For years he has deemed it his duty to confer daily with the President, whoever he may be, upon the condition of the Republic; and he never fails to make out his telegram, accompanied with diagrams and characters that no one can understand, but which he declares the Chief Executive will comprehend. He is supported by his relatives, and is entirely harmless and even good-natured at all times. He is in the best of spirits in spite of the responsibility he bears, and is as thoroughly convinced that the fate of the country hangs on him as if he was a member of Congress.

Wit and Humor.

ONLY A HINT.

OBSERVE CAREFULLY THE SHADOW OF "A SMALL WAIST," AND YOU WILL SOON DISCOVER A LARGE DOCTOR'S BILL AND THE OUTLINES OF A COFFIN!

CONUNDRUMS.

WHAT is that word in the English language of one syllable, which, if two letters be taken from it, becomes a word of two syllables? *Pl-ague.*

When were there only two vowels? In the days of *no a* (Noah,) before *u* and *i* (you and I) were born.

How does the hairdresser end his days? He curls up and dyes.

At what time of life may a man be said to belong to the vegetable kingdom? When long experience has made him *sage.*

Why are good husbands like dough? Because women *need* them.

When does a severe cold resemble a brilliant idea? When it comes into one's head snddenly.

What is the largest room in the world? The room for improvement.

How many peas are there in a pint! One *p.*

EASY WAY TO DRAW SAW LOGS.—Draw them on a piece of paper with a crayon pencil.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 32 letters.
My 27, 25, 14, 6, 4 is the name of an animal.
My 31, 23, 22, 1, 2, 6, 6 is that which most persons experience.
My 32, 14, 28, 7 is something used for catching animals.
My 10, 14, 26, 15 is a musical instrument.
My 30, 29, 24 is the name of a female.
My 16, 17, 8 is a number not exceeding 10.
My 11, 25, 13 is a pronoun.
My 27, 12, 5, 9 is used by hunters.
My 6, 18, 3, 30, 1 is a number.
My 19, 2, 20 is both a conjunction and an adverb.
My 25, 21, 23 is a fluid.
My whole is an old and good saying.

Blood's Station, N. Y. D. S. PARTRIDGE.

ANSWERS TO ENIGMAS, &c., IN No. 886.

Answer to Miscellaneous Enigma:—He died in defense of his country.

Answer to Nautical Enigma:—Fore-top-gallant-sail.

Answer to Anagram:

The proudest motto for the young!
Write it in lines of gold
Upon the heart; and in thy mind
The stirring words enfold;
And in misfortune's dreary hour,
Or fortune's prosperous gale,
'Twill have a holy, cheering power—
"There's no such word as fail!"

Answer to Mathematical Problem:—21 minutes and 5.9 seconds.

Answer to Charade:—Love.

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

RESTORE YOUR SIGHT!
USE

DR. J. STEPHENS & CO.'S PATENT
CORNEA RESTORERS,
OR RESTORERS OF THE EYESIGHT.
They will Restore Impaired Sight, and Preserve it to the Latest Period of Life!
SPECTACLES RENDERED USELESS.
The most eminent Physicians, Oculists, Divines, and the most prominent men of the country, recommend the use of the CORNEA RESTORERS for Presbyopia, or Far or Long-sightedness, or every person who wears spectacles from old age; Dimness of Vision, or Blurring; Overworked Eyes; Asthenopia, or Weak Eyes; Epiphora, or Watery Eyes; Pain in the Eyeball; Amaurosis, or Obscurity of Vision; Photophobia, or Intolerance of Sight; Weakness of the Retina and Optic Nerve; Myodesopia, or Specks or Moving Bodies before the Eyes; Ophthalmia, or Inflammation of the Eye or Eyelids; Cataract Eyes; Hemiopia, or Partial Blindness; Sinking of the Eyeball, etc.
They can be used by any one with a certainty of success, and without the least fear of injury to the Eye. More than 5,000 certificates of cures are exhibited at our office. Cure guaranteed in every case when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sent gratis. Address DR. J. STEPHENS & CO., OCULISTS,
PRINCIPAL OFFICE, No. 340 BROADWAY, NEW YORK.
P. S.—Dr. J. STEPHENS & Co., have invented and patented, *MYOPIA*, or *CORNEA FLATTENER*, for the cure of NEAR-SIGHTEDNESS, which has proved a great success. Write for a Circular. 856-26teo,

A VALUABLE MEDICINE.—Dr. POLAND'S White Pine Compound, advertised in our columns is a successful attempt to combine and apply the medical virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

THE GREAT NEW ENGLAND REMEDY!
DR. J. W. POLAND'S
WHITE PINE COMPOUND
Is now offered to the afflicted throughout the country, after having been proved by the test of eleven years, in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

THE WHITE PINE COMPOUND cures Sore Throat, Colds, Coughs, Diphtheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other complaints. For Piles and Scurvy, it will be found very valuable. Give it a trial if you would learn the value of a good and tried Medicine. It is pleasant, safe and sure. Sold by Druggists and Dealers in Medicine generally. [888
GEO. W. SWETT, M. D., Proprietor, Boston, Mass.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remedies the ill effects of *Bad Dyes.* Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor.* All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y.
☞ BEWARE OF A COUNTERFEIT. 882-26teo

IVINS' PATENT HAIR CRIMPERS.
FOR CRIMPING AND WAVING LADIES' HAIR—No Heat required in using them. Ask your storekeeper for them, if he does not keep them for sale write to the manufacturer. E. IVINS,
871-13teo] Sixth St. and Columbia Av., Philadelphia.

BIRDSELL'S PATENT COMBINED
Clover Thrasher and Huller,
Patented May 13, 1858, Dec. 13, '59, April 8, '62, May 13, '62;
MANUFACTURED AND FOR SALE BY
JOHN C. BIRDSELL, SOUTH BEND, INDIANA.
This Machine operates in clover thrashing similar to grain seperators, doing all the work at one operation and is too well known to require comment. Please send for Circular. **B. H. Ketchum,** of West Henrietta, N. Y., will fill orders from Western New York, as he has made arrangements with me to manufacture the same; also furnish repairs. As my right to this machine has been so fully established by the recent trial in the United States Court, at Canandaigua, buyers will see the importance of purchasing of a manufacturer whose right has been established. JOHN C. BIRDSELL, South Bend, Indiana, formerly of West Henrietta, N. Y. [862-cotf.

THE TILDEN TOMATO!
GET THE GENUINE!
TRUE SEED WILL GIVE SATISFACTION!
Seldom, if ever has a new Fruit or Vegetable seeking public favor, met with so flattering a reception as has this Tomato. Hundreds in attesting to its value, declare it to be the only and truly *Perfected Tomato.* There seems to be no room for or want of an improvement; it possessing every quality which goes to make up a good Tomato. It is very prolific, early, fruit large, smooth, free from ribs or wrinkles, of excellent flavor, very solid, few seeded, and admits of being pared without waste as readily as an apple. Its keeping and carrying qualities are all any one can ask for. I take the utmost pains in securing seed, using none but the best specimens. No other varieties are grown on or within one mile of my place. Single packets, containing seed enough for 200 plants, sent post-paid, on receipt of 25 cts; 3 packets, 50c; 12 do, $2; 100 do, $12,50. Address
886-8otf HENRY TILDEN, Davenport, Iowa.

BRICK MAKERS BUY THE BEST—Lanier's improved Iron-clad Brick Press and Grind Mill combined; awarded first premium N. Y. State Fair, 1865. Largely improved in 1866; the most perfect Brick Machine for 1867; makes common brick with great rapidity, superior quality, and Press Brick that have no equal, with the same machine. Address for Circular and description, I. A. LANIER, Inventor and Manufacturer, Albion, Orleans Co., N. Y. 886-2t

COLGATE'S AROMATIC VEGETABLE SOAP.—A superior **Toilet Soap,** prepared from refined **Vegetable Oils** in combination with **Glycerine,** and especially designed for the use of **Ladies** and for the **Nursery.** Its perfume is exquisite, and its washing properties unrivalled. For sale by all Druggists. 839-52t

NEW MUSIC BOOK FOR GRAMMAR SCHOOLS.—THE GRAMMAR SCHOOL CHOIRS:—Containing Willard's Method of Teaching Vocal Music, adapted to Schools by John Hullah; also, selections for Devotional Exercises, Exhibitions, and Festival Occasions. Adapted and arranged in One, Two and Three Parts, by J. B. SHARLAND, Teacher of Music in the Boston Grammar Schools. $1. Sent post-paid. OLIVER DITSON & CO., Publishers, Boston, Mass.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

THE care of the stock yet absorbs a good share of the farmer's working hours. Although the days are lengthening, yet they are too short and the weather is too severe to permit much out-door work being done. Nor should the farmer toil arduously through the winter months; let him rest, read, visit his friends, and gather from every source at hand all knowledge possible. He may find in the end that no time has been better used by him than that he employs in forming definite plans for the ensuing season's operations, in recruiting his energy for the work, and in enjoying social intercourse with his neighbors. Let his interest in the Farmers' Club, and the agricultural journal yet be prominent and active.

Stock.—Should be kept thriving. The owner's eye should watch closely for the first sign of backward tendency in condition and regulate the food accordingly. This is an important month for breeding animals; they should gain strength and condition gradually to support the demands which Nature will make upon them later in the season. Breeding stock should have warm quarters, plenty of air, and plenty of exercise. A different course somewhat may be taken with fattening stock. Keep them quiet, warm, and in stables or apartments dimly lighted.

Fodder. — Use the coarse fodder liberally, but feed some hay also. A feed of roots two or three times a week, if no more can be afforded, is of great service to the health of stock. Horses should have carrots. Otherwise give them a bran mash occasionally. Remember that milch cows pay cash for a liberal supply of food. Without rich food good butter cannot be made.

Manure. — How much manure are you losing yearly by want of care or by badly shaped yards? Not much? How quickly will water leached through a tub of ashes carry away their strength. And all the rains and snows that fall on your manure leach through it and run off — perhaps into a stream of water. A great deal is wasted in this way, and if you cannot cover your manure you can, at least, form the yard so as to prevent a great share of this waste. That is a good subject to study this month.

Clover Seed.— Should be thrashed this month; in cold weather it shells out best. It *may* be thrashed with a flail and sown in the chaff, although this is a clumsy way of doing it. But if you can sow it even it is apt to catch well.

Seed Grain.—All your seed grain should be provided this month. Sow the best only, and it is a good plan to change seed from one quality of land to another; also to get it from a distance. Have your seed clean and pure.

The Workshop.— Much time may be profitably spent in this. On stormy days you can overhaul your tools and put them in perfect repair. You can make many new ones, and perhaps a few gates, or bars or posts for a back lot where they will be used but seldom. You should see what new implements you want, and procure them in season.

EXTENSIVE POULTRY KEEPING.

J. C. D., Medina, N. Y., asks "for information in regard to the most approved practice in managing an extensive poultry yard for the purpose of raising chickens and eggs for market."

To the uninitiated it would seem at first glance that nothing is easier than to organize and manage successfully an establishment for producing large quantities of poultry and eggs for market. So much space, so many enclosures, so much food, and the requisite stock, are all, seemingly, that are wanted to insure success. On paper the profits of the business are flattering, and it seems to be one that may be largely extended. But the sober truth is, that though many have tried, we cannot at present point to a single immense poultry establishment in this country as a proof that the enterprise is feasible. On the contrary, it has been tried several times, and as often failed. "Poultry cannot be kept together in large numbers," is an axiom now; yet it is equally true that no farm stock pays better, even when half cared for, than the few dozen fowls that wander over every farmer's premises. And when well cared for they prove so remunerative that it is no wonder people catch the "hen fever," and speculate on large poultry establishments.

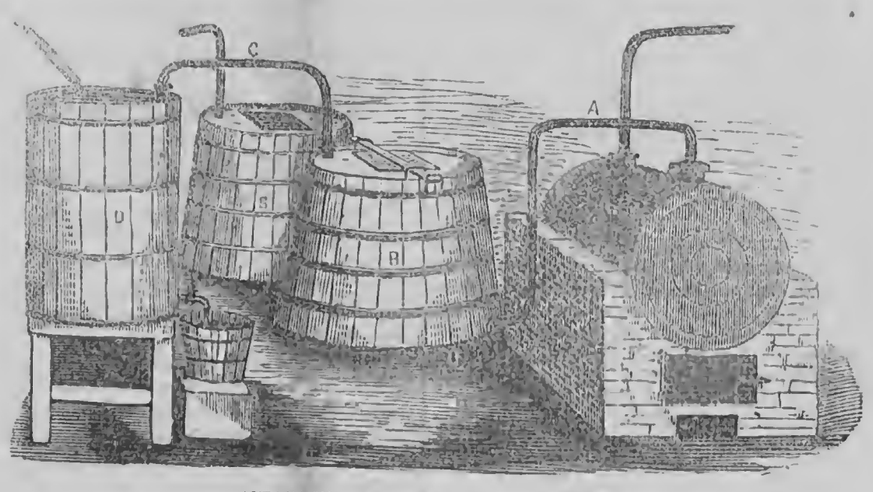
Is it, then, not possible to keep poultry on a large scale for market purposes? Yes, we think it is; but it is likewise *impossible* to keep large quantities of fowls together and have them thrive. Poultry growers have worked too much on the wrong plan of crowding many together, and confining them in too cramped quarters. That will never do. The fowls must be colonized—only a few put together—with ample quarters, plenty of range, drink, and food various and abundant, and having little or no connection with other fowls. But there is no reason why colonies may not be multiplied indefinitely. This, we are confident, is the only system of keeping large quantities of fowls with profit or success.

There are many minor considerations which require careful attention from one entering on this business. Animal food must be cheaply and readily procured, hence the proximity to waters furnishing plenty of fish might be an object. Sheds, shelter, fresh water and range are essential, and to obtain these cheaply the establishment might be located on wild lands, or those unfit for agricultural purposes. The market should be within easy reach, and the best ones should be sought out. The eastern cities are the best markets for poultry in this country, and some of the cheap, sandy lands of New Jersey, if well watered, are eligible locations for poultry establishments.

THE CULTURE OF PEPPERMINT.

NUMBER TWO.

HAVING your peppermint ready for the distillery, the next operation is to distil or steam it. For steaming "mint," an iron boiler is used with a copper or tin worm. Any steam boiler of the capacity of ten-horse power and upward, will answer the purpose. Two large tubs are necessary, and should be made of three-inch pine plank, free from knots and checks. They should be made steam tight, and bound with iron hoops. Make the tubs four feet and a-half in diameter at the bottom, and four feet at the top, on the inside. A false bottom, perforated with small holes, should be placed four inches above the main bottom, to allow the steam free circulation under the "mint." The steam can be conducted from the boiler to the tubs in wooden pipes, iron-bound at the ends. The hole in the upper head of the tubs should be twenty inches or two feet in diameter, large enough to admit of a man standing in the tub while filling it. They should be about four feet and a-half deep on the inside. The hole in the top of the tubs should be closed with a cover or "cap" fitting perfectly tight, and held down with a lever or brace on the top. The steam should be conducted into the tubs at the side, just above the lower head, and out, at the top, either *through* the head, or at the side close *under it*. The object of using two tubs instead of one, is that one can be emptied and filled while the "charge" is running off from the other. In other words, they are used alternately; the steam being first let into one and then the other. It is not essential that the worm should be coiled up in a round tub. On the other hand, a cheaper one can be made and used in an oblong or square vat. Twenty-five feet of two-inch and the same length of inch and a-half pipe put together with elbows, (the whole



APPARATUS FOR DISTILLING PEPPERMINT.

DESCRIPTION OF DISTILLING APPARATUS.— The steam passes from the boiler through the pipe, A, into the tub, B, which is filled with the mint: from the tub through the pipe, C, into the worm coiled in the tub, D, where it is condensed and the product flows into the small vessel at the bottom. When the charge in the first tub, B, is distilled the steaming pipes are connected with the second tub, B, and the first one re-charged. The artist has represented the covers of the tubs as having holes in them for the purpose of filling and emptying. It would be more convenient in this respect to have the entire cover lift up.

to be well soldered or brazed together) to suit any sized vat, will answer the purpose, or it can be laid in a small flume built in a running stream. In distilling peppermint the oil is carried off by or with the steam, and in passing through the worm the water and oil are condensed and run off together into what is called a receiver. The water sinks to the bottom and runs off, while the oil remains on the surface and is dipped off with a small dipper. It is then filtered through paper, and is ready for market. The receiver is made like a common watering pot with the top of the spout about two inches lower than the top of the receiver. A piece of shingle or tin should be placed in the receiver in a slanting position, to allow the steam to strike on as it issues from the worm to prevent the oil from being forced to the bottom and there making its escape with the water. To guard against accident the oil should be dipped off two or three times a day.

The oil is put up and sent to market in strong tin cans that hold from 20 to 23 lbs. each. For a filtering apparatus, have a tin box made eighteen inches square and twelve inches deep. Four inches above the bottom, put in another tin bottom perforated with smooth holes. Have a small brass or lead faucet put in close to the lower bottom for the purpose of drawing off the oil. Spread your filtering paper over the perforated bottom and up the sides; then pour in your oil. For convenience and safety, the filtering apparatus can be put into a cheap frame similar to that of a common wash-stand, with a board cover hung on hinges, and high enough to admit of the can standing under the faucet. Blank newspaper will answer a very good purpose for filtering oil, but we get here a kind of paper called *filtering paper*, which is similar to common tissue paper, only somewhat heavier.

It is seldom that more than three crops are obtained from one planting, and frequently the third crop is a light one; yet generally it pays the expense of labor and the use of the land. The straw makes excellent manure, and that from the second and third year makes very good fodder for sheep and young cattle. It is generally stacked or piled up as it comes from the "still," and the cattle or sheep are allowed to run to it during the winter. As to an average crop, I would say that a field of six acres, two years ago, yielded twenty-two lbs. to the acre. Last year eighteen lbs., and this year six lbs. to the acre, making, as will be seen, an average of fifteen and one-third lbs. to the acre for the three years. This is a rather low average and one that I think can with safety be relied on.

INDUSTRIAL COLLEGES—COURSE OF STUDY.

IN a recent public address by Prof. J. B. TURNER of Illinois, the course of study proper to be pursued in industrial institutions, is sketched. The ideas are novel, but seem judicious—at least worthy of consideration in connection with collegiate industrial enterprises. The Professor says:

"Instruction in the regular course in the agricultural department of the institution ought only to be given in the six winter months, on all these matters of practical science; leaving the boys to remain at home, where they ought to be to help their parents, acquire home habits of industry and taste, during the summer months, and to observe and watch on the farm, or in the shop at home the application of those principles taught them during the winter season at the university—thus following the indications of nature and applying the mind to the vigorous mastery of knowledge, and of principles, in the cold and bracing winter months, when the mind is most active, and bracing, strengthening and invigorating the body by out-door work during the summer months.

"Those who preferred, or had no home and no parents to go to, could remain on the farm of the institution, and aid the professors there in conducting their experiments during the summer months. Thus all pupils would be accommodated with six months alternate study and work—proper development both mental, moral and physical — while their parents would not be deprived of either their society or their aid, year in and year out. Some have objected that if pupils were on the farm only in winter they would lose all the advantages of the experiments there performed in summer. Does an intelligent boy need to watch a corn-stalk night and day the year round to see it grow all the time, in order to understand how and why it does grow? If so, he could remain during the summer months and sit down on the fence somewhere and actually see the process. But the truth is all these experiments are needful for the professors and not for the boys; for as soon as the professors know definitely and certainly what to teach the boys, they can teach it to them in winter or summer, by day or by night, at one time as well as another, so far as the science and the principle of the thing is concerned, and we must beware of that servile curse of sheer imitation, which has killed all our old agricultural schools, and will kill all our new ones if followed without due variation and discretion."

AGRICULTURAL SOCIETIES.

IN recently looking over a mass of communications we found a well written one dated Scott, Cortland Co., N. Y., Oct. 5th, 1866. It referred to an Agricultural Association recently formed there, and the good results produced, as manifested in its first exhibition. We regret that the article was overlooked, and, though late, now quote its concluding paragraph:

"Looking back twenty-five years to the inauguration of the N. Y. State Agricultural Society, one cannot but see that a vast space has been traversed in the fund of knowledge accumulated and made applicable to the objects and interests of the farmer; and however imperfectly its plans may have been executed, whatever lack of zeal, energy or devotion, its friends and supporters may have manifested at any time, nothing can be clearer than that our County Societies, and these more recent movements by towns and local communities, are the natural offspring of its exertions and teachings. What higher object can be aimed at or reached? Ought it not to be and is it not the main, appropriate aim of all Agricultural associations to impress upon the farmer the one idea, that he is to be his own teacher, through his daily experience and observation, and through the enlightenment and facts derived from the columns of your journal and of such as yours? I am quite sure these neighborhood efforts to reach a higher style of practical farming, so beautiful in themselves, so inexpensive, so social, so family like, cannot fail to secure the approval and co-operation of all right-minded men. What words can describe the effect upon society, upon families, if we were able by any process to double our present crops and the profit of our stock? We ought to quadruple these—it can be done. Let us do it."

POULTRY IN THE N. Y. MARKET.

THE finest poultry that we receive comes from the lower part of Burlington Co., N. J., where the farmers take great pains to procure the best stock and raise the finest birds for market. Their geese are remarkably fine and large, frequently weighing 20 pounds, and generally from 16 to 18 pounds. Their poultry is usually dry picked, the flesh very firm and sweet, and always fat; much superior for eating to any raised elsewhere. The farmers there have evidently learned the art of raising poultry to perfection. The poultry raised in the upper part of the country is not so good, yet it is a very fair article—lacking the sweetness of taste. For a few days previous to Christmas our market makes a splendid display of the choicest and largest poultry. Many a noble *Tom*, weighing from 20 to 25 pounds, is exhibited, ornamented with rosettes of red, white and blue ribbons, to attract the attention of the passing crowd. I presume no market in the world displays more choice stock than ours during the holiday weeks, and it is nothing unusual for some of our largest dealers to sell several tons per day.

The Burlington Co. farmers raise large quantities of capons and slips for market; in fact, I believe they are the only ones who do raise them to any extent. These are very profitable, selling several cents per pound higher than fowls, but the capons always sell for the most money. I have known them to be sold for 40 cts. per pound. An extra pair will weigh about 20 pounds, while the average weight is 16 pounds. These birds are dressed differently from other fowls; the feathers around the head, neck, wings and tail being left on. The difference between a capon and slip is easily detected by the comb; a capon has little or none, while on the slip it is long and flabby. I presume most of your readers know that a capon is a castrated cock, and a slip is so called from an imperfect operation, which permits the comb to grow, and thus detects the error.

Of late years the growers of this State have greatly improved their poultry, and much of it comes to market in fine condition, comparing very favorably with the Jersey stock. The Western States send the poorest stock to our market that we have, and it is rather surprising that they do, for grain is cheaper there than in the Eastern States, and the freight from two to three times more; yet they send in their poultry about half fat, and receive from 3 to 5 cts. per pound less than they would if they fed plenty of corn. One great defect in their poultry is their breed of fowls, which is never improved by cross-breeding, and consequently is rapidly failing, and the dealers often wonder if they ever raise a crop of *chickens*,—for they never get a sight of them, — only old hens and roosters Could some of our poultry raisers see their stock on arrival in market, they would scarcely believe it to be the same that they shipped, particularly if it be of a poor quality. Poultry that is fat and fine carries much better than a poor article; for that often has a sickly, watery look, showing the absence of a good, solid diet.

Persons desiring to send poultry to market profitably should remember to have it always fat and dressed with care. Cut off the heads and tie up the necks, pack in clean boxes, and lay clean rye straw between each layer. Mark the weight and address in a plain manner, and your own initials on each package, and send a bill of weight and number of packages to your commission dealer. I will give the reasons for observing the above rules. Poultry that is fat and neatly dressed will always bring a good market price, and it will bring more money with the heads off than on, and that saves freight. Boxes are preferable to barrels, because they pack more neatly and carry better. Rye straw preserves the poultry brighter than any other kind, if clean, and also keeps it longer from tainting. Cut straw is very objectionable, as it has a tendency to must the poultry. The address should be plain, to enable the express company to deliver correctly; the initials, to enable the dealer to know who sends it, and the weight on it, to detect any stealing that might take place in transportation.

NOW AND THEN.

New York, Jan. 15, 1866.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

EXECUTIVE COMMITTEE MEETING.—The Executive Committee of the New York State Sheep Breeders' and Wool Growers' Association will meet at the American Hotel, in Auburn, on Wednesday, February 20th, at 10 o'clock A. M., to make arrangements for the next State Sheep Fair. HENRY S. RANDALL, *President.*
H. D. L. SWEET, *Secretary.*

THE SENATE TARIFF BILL.*

THE Finance Committee of the United States Senate have reported a tariff bill, as an amendment to the House bill which passed last winter, embracing some important changes in the proposed rate of duties. But no changes are made in the duties on wool, except in a single particular. Woolen "flocks" is taken from the class which includes woolen rags, shoddy, mungo, extract of wool and waste, on which the proposed duties are twelve cents a pound, and is put down to three cents a pound. There are a few slight alterations in the phraseology, but as a general thing the language is precisely the same with that of the House bill, in regard to wools, as that bill was drawn up by the Wool Growers' Committee last winter. The new classification of wools, and the new mode of carrying that classification into effect, recommended by the latter, are adopted entire in both the House and Senate bill, and in Mr. WELLS' form of a bill, so that it is probable they will be engrafted into any wool tariff which receives the sanction of Congress. This is a material change from the present system, and it is hoped will prove a most beneficent one in putting an end to fraudulent invoices. It certainly will, if our custom house appraisers and other officers possess decent intelligence and perform their duties with decent fidelity.

We have heretofore published the wool clauses of the House bill, and as the Senate bill is offered as an amendment to it, we now give its corresponding portions:

SEC. 3. *And be it further enacted*, That in lieu of the duties heretofore imposed by law (on the articles mentioned and embraced in this section,) there shall be levied, collected and paid, on all unmanufactured wool, hair of the alpaca, goat, camel, and other animals, imported from foreign countries, the duties hereinafter provided.

All wools, hair of the alpaca, goat, and other like animals, as aforesaid, shall be divided, for the purpose of fixing the duties to be charged thereon, into three classes, to wit:

CLASS 1.—*Clothing Wools:* That is to say, merino, mestiza, mels, or metis wools, or other wools of merino blood, immediate or remote; Down clothing wools; and wools of like character, with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

CLASS 2.—*Combing Wools:* That is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools, of English blood, and usually known by the terms herein used; and also all hair of the alpaca, goat, and other like animals.

CLASS 3.—*Carpet Wools and Other Similar Wools:* Such as Donskoi, native South American, Cardova, Valparaiso, native Smyrna, and including also all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

For the purpose of carrying into effect the classification herein provided, a sufficient number of distinctive samples of the various kinds of wool or hair embraced in each of the three classes above named, selected and prepared under the direction of the Secretary of the Treasury, and duly verified by him, (the standard samples being retained in the Treasury Department,) shall be deposited in the custom-houses and elsewhere, as he may direct, which samples shall be used by the proper officers of the customs to determine the classes above specified, to which all imported wools belong.

And upon wools of the first class, imported unwashed, the value whereof, at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and in addition thereto ten per centum ad valorem; upon wools of the same class, (unwashed,) the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty-two cents per pound, the duty shall be twelve cents per pound, and, in addition thereto, ten per centum ad valorem.

Upon wools of the second class, and upon all hair of the alpaca, goat, (camel,) and other like animals, (and upon noils,) the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty-two cents or less per pound, the duty shall be ten cents per pound, and, in addition thereto, ten per centum ad valorem; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty-two cents per pound, the duty shall be twelve cents per pound, and, in addition thereto, ten per centum ad valorem.

Upon wools of the third class, the value whereof at the last port or place whence exported into the United States, excluding charges in such port, shall be twelve cents or less per pound, the duty shall be three cents per pound. Upon wools of the same class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed twelve cents per pound, the duty shall be six cents per pound:

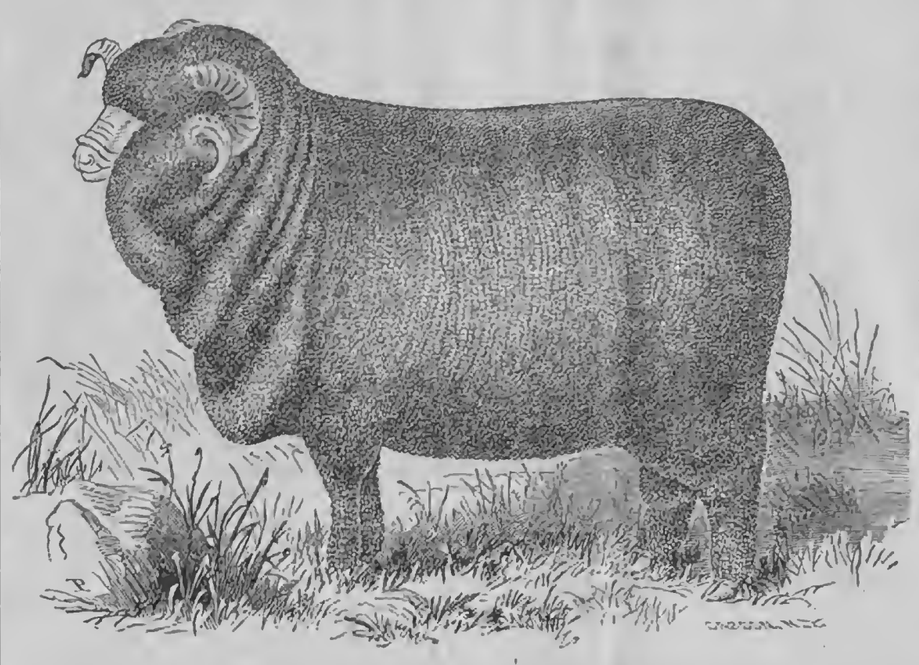
Provided, That any wool of the sheep, or hair of the alpaca, goat, (camel,) and other like animals, which shall be imported in any other than the ordinary condition as now and heretofore practiced, or which shall be changed in its character or condition, for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be subject to pay twice the amount of duty to which it would otherwise be subjected, anything in this act to the contrary notwithstanding; *Provided further*, That when wool of different qualities is imported in the same bale, bag, or package, it shall be appraised, by the appraiser, to determine the rate of duty to which it shall be subjected at the average aggregate value of the contents of the bale, bag, or package; and when bales of different qualities are embraced in the same invoice at the same price, whereby the average price shall be reduced more than ten per centum below the value of the bale of the best quality, the value of the whole shall be appraised according to the value of the bale of the best quality; and no bale, bag, or package shall be liable to a less rate of duty in consequence of being invoiced with wool of lower value: *And provided further*, That the duty upon wool of the first class which shall be imported washed shall be twice the amount of the duty to which it would be subjected if imported unwashed, and that the duty upon wool of all classes which shall be imported scoured shall be three times the amount of the duty to which it would be subjected if imported unwashed.

On sheepskins (and Angora goatskins,) raw or unmanufactured, imported with the wool on, washed or unwashed, the duty shall be thirty per centum ad valorem; and on woolen rags, shoddy, mungo, (extract of wool,) and waste, the duty shall be twelve cents per pound; and on woolen flocks the duty shall be three cents per pound.

We understand that the action of the Finance Committee on the above clauses was unanimous, and it is believed that the Senate will pass them. It is a significant fact that Senator MORGAN of New York, who resides in the city of New York, and who has often been claimed specially to represent its *commercial* interests, favored these provisions in the Finance Committee (of which he is a member,) and we have his own authority for saying that he favors their passage. It cannot but be regarded as a good omen of success that we receive this important aid from the very headquarters of free trade,—and from a gentleman of the ripest commercial and financial experience. When such men as Senator MORGAN and Senator FESSENDEN favor the passage of the wool tariff, it will be a good warrant to all but the advocates of free trade that the claims of the wool growers have been just and moderate, and that they embrace nothing inconsistent with the true interests of the great body of consumers.

But we again earnestly caution our brother wool growers not to suspend their exertions. The battle is not over. Combinations of disappointed interests may, and we fear will, very seriously endanger the passage of the bill. Again we say, let letters, petitions, resolutions, &c., continue to *rain* upon Congress. The soldier who rests on his arms before the victory is won, does not deserve victory, and very rarely achieves it.

* This article was intended for publication last week, but owing to the snow blockade did not reach us in time for insertion.—M.



INFANTADO RAM, YOUNG GOLD DROP.

OWNED by Messrs. BAKER & HARRIGAN, Comstock's Landing, N. Y., bred by Mr. HAMMOND of Vermont, and got by Gold Drop, by California, by Sweepstakes, etc., (see Practical Shepherd, page 121.) His dam was by Sweepstakes. He is three years old past, has produced a fleece of 22½ pounds, and a scoured fleece of seven pounds and two ounces.

PENNSYLVANIA STATE WOOL GROWERS' ASSOCIATION.—This Association met at Pittsburgh, Jan. 16, the President, F. JULIUS LE MOYNE, in the chair, J. McD. Glenn, Secretary. A committee consisting of Messrs. James Slocum of Fayette county; John N. McDonald, F. Patterson and John S. Russell of Washington county, and Hugh Lee of Allegheny county, were appointed to prepare business for the Convention. This committee reported as follows:

That it is of the first importance that the wool growers' interest of our country should have ample protection, and that the present tariff is wholly inadequate for that purpose. The Association therefore respectfully but earnestly urges upon Congress the passage of the bill, on Wool and Woolens, as passed by the lower House of Congress at its last session.

The Report, after full discussion, was unanimously adopted. On motion of J. McD. Glenn, the following additional resolution was unanimously adopted:

Resolved, That believing free trade or a tariff which extends no protection to wool, would be ruinous to the best interests of the country, we pledge ourselves without distinction of party, hereafter to support no person for a State or National office, who is not heartily in favor of protecting American industry.

It was also *Resolved*, That a copy of the foregoing proceedings be forwarded to our Representatives and Senators in Congress.

The following officers were elected for the ensuing year: *Prest.*—Dr. F. Julius Le Moyne of Washington county. *Vice-Prests.*—James Slocum, Fayette county; J. C. White, Lawrence county; H. G. Cree, Greene county; J. J. Blair, Butler county; Geo. Rex, Westmoreland county; J. Hoagland, Mercer county; John Cain, Beaver county; Gen. Harry White, Indiana county; Joseph H. Thompson, Armstrong county; Asa Manchester, Washington county; Hon. Wm. F. Johnston, Philadelphia. *Sec'y and Treas.*—J. McD. Glenn, Allegheny county. *Ex. Com.*—John H. Ewing, David Houston, and Maj. Samuel McFarland, all of Washington county. Member of Executive Committee of National Wool Growers' Association, James Slocum of Fayette county.

DATING AND SIGNING LETTERS.—New correspondents are requested in all cases, in dating their letters, to give the name of their *State*, as well as post-office, for the former oftentimes cannot be made out from the post mark; and, secondly, to sign their letters *legibly*. A signature in which several letters are only represented by angular marks all looking alike—called *running hand*—cannot, like a word in the body of the letter, be ascertained from the context; and capital letters distorted into unmeaning flourishes constitute riddles which require a vexatious waste of time for their solution, and which are often erroneously solved.

Dairy Department.

AMERICAN DAIRYMEN'S ASSOCIATION.

SECOND ANNUAL MEETING.—DISCUSSIONS.

WE continue this week our Report of the annual meeting of the American Dairyman's Association and give a synopsis of some of the discussions.

The question first brought up was, — Ought farmers to be taxed on the manufacture of cheese, and should not measures be taken to have the Internal Revenue laws, or the Commissioner's decision in this regard, changed? Mr. E. G. STORMS, Montgomery, opened the discussion by reading an essay. He contended that dairymen were more at the mercy of buyers and consumers than most other classes of producers. The product of the dairy cannot be held long on hand; it must be sold for what it will bring. A cheese is in its prime at from one to four months old, according to the state of the weather; after that time it begins to deteriorate, and soon becomes too rank for the popular taste. Whether a reduced temperature and an air-tight varnish would maintain the flavor intact for a greater length of time, remains to be determined by experiment. We are consequently compelled to sell or submit to inevitable loss by holding on. Then there is an annual depreciation of our stock of about three dollars per head, and every dollar's worth of cheese costs from 25 to 30 cents for hired help. The speaker had entertained hopes that the factory system would control the market, in a measure, by concentrating the business in fewer hands, and enable salesmen to get better prices; but the insane competition springing up among dairymen would defeat the object in view by multiplying factories to such an extent that concert of action will be impossible. Often there are three or four factories where there should be but one. The statement was made that by a decision from the proper department the tax would not hereafter be assessed on dairymen; but as each assistant assessor interprets the law to suit himself, in some districts it was collected and in others it was not.

W. H. COMSTOCK, Oneida, said it was originally intended by the framers of the act to exempt cheese from its operation, but the Commissioner had defeated this intent by his ruling. He moved that a Committee be appointed to visit Washington for the purpose of getting the tax removed. The motion was carried.

The next question which was taken up was,—Is the branch factory system practicable, and is its adoption to be advised?

L. N. BROWN, Otsego Co., said the first and greatest objection to the original factory system is the expense and trouble of carrying milk long distances. He had, therefore, put into practical operation the plan of working the milk at different points, and drawing the cheese together instead of drawing the milk. He erected cheap buildings, in size 18 by 24 feet, and furnished them with all the apparatus of a nice factory, with ranges for holding twelve or fifteen cheeses — or a load—which, when made, were immediately boxed and drawn to the curing house. The rennet, annott and bandages, were all prepared at the curing house and sent with the teams when they went for the cheese. The advantages of this system are, first, it gets a large amount of cheese together by drawing the milk but a short distance; second, as the milk is drawn but a short distance it is delivered early in the day, and in better condition. In many instances the difference of one hour in the time of the delivery of the milk puts it in bad condition, so as to cause much difficulty in the manufacture. A third advantage is the facility with which the patron can obtain his share of the whey. By these advantages the speaker thought the permanence of the factory system would be established, but he believed the day of drawing milk long distances is nearly over, and unless the branch system be adopted the large factories will break up into smaller ones, which will fail to be sufficiently profitable to stimulate individual enterprise, and dairying would then be conducted much upon the old plan, and the average quality of American cheese lowered. From a mile and a half to two miles is as far as it will be found feasible to draw milk, and this distance will generally get together the milk of two or three hundred cows; this can be worked in one vat and by one hand, without any additional help.

One objection brought against this system is that there will be as many kinds of cheese manufactured as there are branch factories. Facts and observation show that this is not the case. During the past season no more uniform lots were made than those turned out at branch factories. A dairy of 1,000 cows can be manufactured nearly as cheap at four branches as if the milk were all delivered at one place. The good condition of milk brought from short distances makes up for any extra labor. It is said, too, that the branch system requires more experienced hands, but in practice no trouble is had in this line. There is commonly a spirit of rivalry among the different branches as to which shall excel. In reply to questions Mr. B. stated that the object in drawing the cheese together was to cure it properly; it was drawn the next day after being made—while green. A properly constructed curing house was expensive.

Mr. FARRINGTON, Canada West, had experience in the branch system. It had been adopted by one of the largest manufactories in Canada, and he endorsed all that had been said in favor of it. The curing can be done more skillfully in one place. Large factories on the present system cannot be continued, as people will get tired of drawing their milk long distances. No more cost is made to the patrons by the branch system than by the other. In reply to a guest Mr. F. stated that ice and cold water were necessary to be had at all the branch factories.

The question next discussed was, — What are the requisites of purity of flavor in cheese, and how can they be secured?

President WILLIAMS opened the discussion. He said he was not prepared to do more than introduce the question, his plans having been frustrated by the report of the Committee of officers. This purity of flavor is the one great question for dairymen to consider; cheese will sell better with any other defect than with bad flavor. To trace the cause of flavor we must begin with the soil that grows the grass on which the cow feeds. Was not prepared to say what soils are best. The grass should be pure and clean—not mixed with foul weeds; cows should not fill themselves with weeds. There are certain phenomena which can be accounted for only by the fact of cows eating weeds.

Cows should be in perfect health. There is a disposition among dairymen to aim at quantity, when their real interest is to produce the best quality. In making butter the *best* milk is sought for, but in cheese the *most* is the object. Having got the milk, it should be kept from impurities—a pan of milk placed in a room with onions will soon taste of the latter. So with other things. Everything with which the milk comes in contact should be pure. These points are not attended to strictly enough—often there are stenches around the factory, the pig-sty, decomposed whey, and other things.

J. H. CHAPMAN, Madison Co., continued the discussion on this question, and read a lengthy essay. He said the first requisite for purity of flavor in cheese is pure, sweet milk in the vat when ready for the rennet to be mixed with it. This statement would clash with the ideas of some of the leading cheese factory men, for they had preached that first class cheese could not be made unless the milk had been well shaken up by being conveyed several miles in the milk wagon to the factory. The milk is generally exposed to the rays of the sun hot for two or three hours in the cans, while waiting for the milk wagon, and its flavor is injured by being put into the cans unstrained. The second requisite is a careful and scientific cutting and handling of the curd from the time it is first cut until the heat is finished. "Coarse curds cheese" is getting to be a dangerous compound, for the best and most expert buyers will scarcely look at it. More weight of cheese can be made by the "coarse curd" system than any other, but it is done at the expense of fine flavor, and by getting a larger quantity of water in the cheese. I have come to the conclusion from experience that the best cheese is that having the least amount of water in it. The speaker asserted that the quality of cheese had deteriorated in this State during the last season, and this result had been brought about by the competition of factories. The great aim of the managers was to get as much water as possible into the cheese by a system of "coarse curds," and quick application of heat, and keep it there with heavy doses of salt. The amount of water depends on the comparative coarseness of the curds, and the time consumed in heating up from 80° to 98°, and this time in factories is controlled by the condition of the milk at the time the rennet is stirred in. Sour cheese results from the milk cans becoming sour and the faucets foul. He complained of the rascality practiced in some factories by sending skimmed and watered milk. He argued in favor of private dairies. Unskillful salting was one of the main causes of porous cheese. The true way is to let out the warm water and run cold water through the vat, stirring the curd at the same time, so as to reduce the temperature of the whey down to 88°; then remove it quickly into the cooler; stir it thoroughly with the hands for one minute, then mix in the salt and keep stirring for a few minutes afterwards. Let the curd remain at rest for half an hour, then put it into hoops and press it gently for two or three minutes, then as hard as you can, and continue trying the screws every five minutes for half an hour, and you will have a well pressed cheese without any honeycomb on the lower face. The distinctive features of factory and dairy cheese consist in factory cured being allowed to remain in the vat until the whey turns. Dairy curd is taken out of the whey as soon as it will distinctly squeak by being pressed against the front teeth. Dairy cheese has a sharp, biting flavor which suits the home but not the foreign market. Mr. C. did not wish to to be understood as arguing against the factory system, but as opposed to their being conducted by incompetent or rascally managers.

Mr. FARRINGTON, Canada West, thought there was danger of getting too much water out of the curd. Twenty years ago he had the idea that too much water might be left in the cheese, but had found that too much might be abstracted. In that case it would be too hard. Thought the private system would never be extensively tried again. The speaker attempted a scientific explanation of the general poor flavor of cheese made this season. It had been very wet and much ammonia had been fixed in the soil and feed, and this had affected the flavor. Different States or localities produced cheese of different flavors.

Rural Notes and Items.

N. Y. STATE AG. SOCIETY.—The Annual Meeting of this Society will be held in Albany on the second Wednesday (13th) of February instant.

TO CORRESPONDENTS.—Many valuable articles for our practical departments have recently been received, and will be noticed or published ere long. Some will keep, and are filed accordingly; others will be given as soon and fast as we can find room for them.

DEFERRED.—In order to make room for the proceedings and discussions of the American Dairymen's Association and Fruit Growers' Society of Western N. Y., we are obliged to defer several articles intended for this number, and over a page of advertisements.

THE WEATHER continues cold and tedious. Quite a snow storm occurred on Sunday night, just a week later than the one mentioned in our last. The earth is abundantly covered with the "poor man's manure," (snow,) and the fleece is daily increasing in weight and thickness.

STATE HISTORICAL SOCIETY OF WISCONSIN.—This highly flourishing institution held its annual meeting Jan. 3d. It appears by the annual report that its library, cabinet, portrait gallery, etc., already large, are rapidly increasing. Hon. HENRY S. RANDALL of New York, who has been an honorary member for some years, was elected an honorary Vice President. Hon. EZRA CORNELL of New York was elected honorary member at a meeting held Dec. 18th.

AYRSHIRE HERD BOOK.—A Committee appointed by the "Association of Breeders of Thorough-Bred Neat Stock," to collect and arrange Pedigrees of Ayrshire Cattle, request all breeders and owners of stock to send in full pedigrees of each animal, with the fee of Fifty Cents each, that they may be registered in the second volume of their Herd Book, on or before the first of July next. Mr. J. N. BAGG of West Springfield, Mass., favorably known in public agricultural labors, has undertaken the editorship of the new Herd Book, to whom all letters should be addressed.

ABOUT "OFFICIAL ORGANS."—The President of the New England Ag'l Society, Dr. GEO. B. LORING, having innocently designated the Massachusetts Ploughman as the "official organ" of the Society in its communications with the public, gets a smart rapping over the knuckles therefor. The N. E. Farmer says of the selection:—"This is the first instance in which the managers of any Society have openly avowed the principle of official patronage." The Boston Cultivator is equally pointed in its condemnation of the assumption of power—claiming that it is designed or calculated to advance the interest of one journal at the expense of all the other Agricultural papers in New England. The comparatively limited circulation of the favored journal is also mentioned.

—With due deference to our respected contemporaries, it strikes us that they are making "much ado about nothing" of importance. The same thing, substantially, has been "did" and doing in this State for years—for a journal of comparatively small circulation (one of the editors of which has long been a prominent officer of the State Ag. Society,) has a faculty of publishing various announcements, etc., in regard to the doings of our State Society before anybody else is advised of the great things that are going to happen. And yet we never felt grieved about the matter, and the RURAL and the world generally have kept right on.

THE AGRICULTURAL PRESS.—We are glad to observe that our contemporaries of the Agricultural Press generally open the new year with vigor and other manifestations of prosperity. May all earnest and honorable laborers in the cause of Rural Improvement be abundantly rewarded. We have in type, and will give now and next week, notices of changes in a number of old and the launching of several new crafts.

THE SOUTHERN FARMER.—This is the title of a handsome quarto (16 page) monthly, just started at Memphis, Tenn., "devoted to Agriculture, Horticulture, Stock-Raising, and all other Industrial and Mechanical Interests of the South." It is the neatest and best filled of all the new journals we have seen this year. The editor, Dr. M. W. PHILLIPS, is a veteran agricultural writer and experienced planter—just the man to conduct a Southern rural journal. The initial number is alone worth the price of the paper for a year, and if the Farmer is not well supported it will be a reproach to the industrial people of the South. We cordially welcome and commend this new enterprise of our long-time friend and correspondent, and trust it will achieve as great success as it merits. Published by M. W. PHILLIPS & Co.—$2 per annum.

WISCONSIN FARMER.—This journal has been changed from an octavo monthly to a quarto weekly of four columns to each of its eight handsome pages. The first two numbers of the year make a fine appearance. May the spirit of its motto, "Forward," be manifested in its career. Published by W. B. DAVIS, Madison, at $2.

THE RURAL ADVERTISER.—This monthly has been considerably enlarged and improved and is now entitled the "Practical Farmer of the Middle States, and Rural Advertiser." It is a good paper and cannot fail of commending itself to the farming community. It is published by PASCHALL MORRIS, Philadelphia, at $1 per annum.

THE FARM AND FIRESIDE.—A quarto weekly bearing this title has just been commenced—No. 1 hailing from Philadelphia, and No. 2 from Woonsocket, R. I. It is quite unique in style, and presents a novel appearance. We have not perused the two numbers received sufficiently to speak of their contents. Published by S. S. FOSS—$2.

FARMERS' ADVERTISER.—This is the title of a new and well-filled semi-monthly, published by PLANT & BRO., St. Louis, Mo., and edited by Dr. L. D. MORSE, an enthusiastic friend of rural art and progress. Nos. 1 and 2 of Vol. II look and read well, and we cordially wish the enterprise success. Terms, $2.

HORTICULTURAL.

MEETING OF THE WESTERN NEW YORK FRUIT GROWERS' SOCIETY.

The Fruit Growers' Society of Western New York convened at the Court House, in this city, on Wednesday forenoon, Jan. 23d, and adjourned *sine die* on the afternoon of the next day. The session was an industrious one, and the attendance did not disappoint expectation. Many distinguished pomologists from the East and West sent communications, regretting their inability to be present, assigning various reasons, prominent among which was the bad state of the railroads. We are glad, however, to record the presence of Mr. Elliott, Cleveland; Mr. Griffith, North East, Pa., and Mr. Larrowe, Hammondsport. The forenoon session was devoted mainly to business matters. The standing committees were called on to report, but had nothing but excuses to offer. The following gentlemen were elected officers of the Society for the present year:

President—H. E. Hooker, Rochester.
Vice-Presidents—E. W. Herrendon, Macedon; John Fisher, Batavia; J. H. Babcock, Lockport.
Secretary and Treasurer—James Vick, Rochester.
Executive Committee—T. C. Maxwell, Geneva; B. Fish, Rochester; M. Mackie, Clyde; E. A. Bronson, Geneva; F. C. Brehm, Waterloo.
Standing Committee on Native Fruits—J. J. Thomas, Union Springs; T. G. Yeomans, Wulworth; W. S. Little, Rochester; S. B. Gavitt, Lyons; John Crane, Lockport.
Standing Committee on Foreign Fruits—P. Barry, Rochester; Charles Downing, Newburg; Edward Frost, Rochester; W. B. Smith, Syracuse; E. Moody, Lockport.

While the committees were in consultation, opportunity was given for gentlemen to become members of the Society for a year by the payment of one dollar. The matter of publication of the proceedings by the Society was also discussed, and the collection of a larger membership fee proposed, to meet the expenses. This was, however, ruled unconstitutional, and the subject was laid on the table. Later in the session Mr. Barry referred to the subject again, and gave notice that he should move to amend the Constitution at the next meeting, so as to double the fee of membership, for the purpose of raising funds with which to publish the proceedings of the Society. He considered the reports of Horticultural Societies as among the most valuable publications of the kind. He also gave notice of a change of title to "The Western New York Horticultural Society," and a committee was appointed to consider the subject. Mr. Barry thought the discussions of the Society should take a wider range, and include ornamental productions, as shrubs, shade trees and flowers, which were Horticultural subjects as strictly as fruits.

The Business Committee reported a number of questions for discussion, which we will give in connection with the debates thereon.

The show of Fruit was meager, and a considerable portion of that on the tables came from abroad. M. B. Bateham, Ohio, exhibited several plates of apples. L. A. Ward, Rochester, two apples, and a pear (labelled "Le Belle Angevine") received from France on the 20th of last October. The pear weighed twenty ounces and measured nearly eighteen inches in circumference. Ellwanger & Barry exhibited several plates of pears, among which were the Doyenne d' Alencon and Josephine de Malines. W. C. Bryant and J. W. Seward exhibited apples. A. D. Strong also sent specimens of apples from Ashtabula, Ohio. J. W. Bailey sent a box of dried Adiroudac grapes, to show the capacity of this variety for making raisins. John Crane, Lockport, exhibited Rogers No. 4. F. W. Lay, Greece, a box of Isabellas. R. Rowley, Rochester, some very perfect clusters of a grape claimed to be a seedling from the Isabella, and valuable for its quality of long keeping. It was named the Carielle, but some prominent pomologists present thought it might be cultivated for twenty-five years and then doubts would be raised if it were not a genuine Isabella.

WEDNESDAY AFTERNOON.

The President, H. E. Hooker, Rochester, delivered a brief address. He said that a review of fruit growing in Western New York during the past year would be but a rehearsal of failure. He passed by many usual topics—saying they would be brought out in the discussions—and spoke of the importance of Horticulture to aid progress in virtue and social improvement. He used the term Horticulture in a comprehensive sense, wishing it to embrace the culture of flowers and all the plants that grow to minister to the beautiful as well as the useful. He thought the discussions of the Society should take a wider range, and embrace those topics as well as that of fruits. The progress of a nation might be marked by its advance in Horticulture; a people in a country like this must develop a love for it, or degenerate into materialism. He spoke of the advantages which the love and practice of Horticulture would bestow on farm life. In the garden husband and wife can find mutual employment and pleasure, and nothing exerted a greater influence to make farm life attractive to the young; a country home should be one where all the pleasures of a cultivated taste can be procured. The orchard, the garden and the conservatory should all find place on the farm. These will relieve farm life of its barrenness. The whole family can meet and work in the garden; it requires the faculties and attention of all. The results of Horticulture are important to society at large; cities and villages are ornamented and made attractive. The skillful, patient worker in its fields is amply rewarded for his toil. He urged the Society to aim to develop in the young a true and lasting love of Horticulture.

The subject, What one variety of grape is best for garden culture in Western New York? was taken up.

Mr. Barry said if a man told him he had room in his garden only for one vine, he should advise him to plant the Delaware.

Mr. Fisher, Batavia, inquired how many he would expect to gather for his own use, even if the vine bore twenty-five bushels? Regarded the Delaware as valuable, if he could preserve the fruit from the birds. From forty or fifty vines he did not gather any last year. The robins took them all.

Mr. Barry thought that fact decisive in favor of the excellence of the Delaware.

Mr. Perry, Canandaigua, named the Concord for Connecticut. Had not been long enough in Western New York to fruit the Delaware. In the State named it mildewed near the salt water.

Messrs. Maxwell, Geneva, and Hoag, Lockport, named the Delaware.

Mr. Quimby, Irondequoit, named the Isabella, if allowed only one variety. It ripened well with him last year.

Mr. McVean, Scottsville, said the Isabella would never ripen on heavy clays, and seldom on other soils. The Delaware was slow in coming into bearing, and the robins were protected by law.

Mr. Ellwanger, Rochester, said the Delaware comes early into bearing, and yields fruit abundantly.

Mr. Smith, Syracuse, named the Delaware.

Mr. Langworthy, Greece, would select a better keeper than the Delaware—one that could be enjoyed longer. The Isabella kept better.

Mr. Barry, Rochester, thought this consideration would not apply to a single vine for the garden.

Mr. Fisher, Batavia, named the Concord as the best for garden culture in Western New York. Did not regard it as either first or second in quality. The great mass of fruit brought to market is unripe.

Mr. Brooks, Wyoming, thought the Isabella could not be depended on one year in four. The Delaware was hard to beat.

Mr. Rowley, Rochester, would choose a seedling from the Isabella, named the Carielle.

Mr. Lay, Greece, had found the Concord a poor keeper; would choose the Isabella.

Mr. Seeley would choose the Delaware, if the birds would let it alone; otherwise he would take the Creveling.

A vote being taken, the Delaware was found to be the choice of the majority.

On the question of what should be the second variety, Mr. Younglove, Middlesex, east shore of Canandaigua Lake, named the Diana. It could be ripened where the Isabella failed; was a good keeper and delicious in winter. Keeps as easily as apples.

Mr. Barry, Rochester, named the Isabella.

Mr. Brooks thought the Isabella would stand about No. 59 in Wyoming.

Mr. Warner, Brighton, named the Diana. If only partially ripe it is far ahead of the Isabella.

Mr. Younglove, Middlesex, said if restricted to one variety he should certainly choose the Diana. It ripened evenly, but did not always color uniformly; but the green berries were as sweet as the others.

Mr. Warner, Brighton, said the Diana did not suffer from the depredations of the birds as much as the Delaware.

Mr. Crane, Lockport, named the Diana to succeed the Delaware. The former keeps till May or June.

Mr. Farley, Union Springs, would choose the Creveling. The objection to it was that the berries were straggling on the bunches.

Mr. Larrowe, Hammondsport, said it should be considered that the garden is generally rich land. In such the Delaware does best. For garden culture the grape that bears the richest soil does best. In his locality the Catawba was best for field culture, but he would not recommend it for the garden. Would also name the Hartford Prolific. Would put the Diana and Isabella before the Delaware for the garden. He did not speak very favorably of the Delaware; it was troubled with disease. The Creveling ripened unevenly.

Mr. Griffith, North East, Pa., said that in order to determine the best grape we should have some stand-points to judge from; the fruit should ripen, be of fine flavor, and the vine should be a reasonable bearer. He named the Delaware and Diana, but intimated that the Iona is ahead of either.

Mr. Moody, Lockport, named the Delaware as first, but it was hard to save the fruit from the robins. Would name the Diana next; that comes to greatest perfection on poor, hard, clay soil. If there is a hard, clay spot in the garden, keep the manure from it and plant a Diana vine. Had great hopes of the Iona. Of all the black grapes yet tested would recommend the Israella.

Mr. Griffith, North East, Pa., said the Diana *must* have a lean soil—one directly opposite to what the Delaware requires. The rule was—develop the vine properly.

Mr. Smith, Syracuse, said the Diana never ripened in his locality. Would name the Creveling as the second best.

Several gentlemen mentioned the fact of the Delawares bursting last season when ripe. Mr. Crane, Lockport, thought it was owing to the wet season and was not likely to happen often.

Mr. Sylvester, Lyons, named the Delaware as his first choice. In his locality it had not bursted, nor had the birds troubled it much. It was a better keeper than it had credit for. The Diana would not bear high culture; it needed a lean soil and much bearing wood should be left on. Of the Isabellas nine-tenths of those in Western New York last season were worthless. He named the Adriondac as being early, thrifty, and healthy. Had ripened it for eating by the 22d of August. Last season the varieties that ripened well were the Delaware, Creveling, Hartford Prolific, Israella, Adriondac, Concord and Iona.

Mr. Larrowe, Hammondsport, expressed surprise that Dr. Sylvester should name several before the Concord. He understood Mr. S. to have been one of the Greeley Committee. The Dr. replied that he was only one of six, and the majority ruled.

Mr. Perry, Canandaigua, preferred the Iona for garden culture; it would bear a rich soil.

Mr. Ross, Penfield, said he planted 100 Diana vines eight years ago, and had never sold fruit of any account. His soil was deep, sandy loam.

Mr. Sylvester, Lyons, explained regarding the award of the Greeley Committee to the Concord grape. Mr. G. wanted a grape for general cultivation—for the million. The Concord, they thought, met that want better than any other. It would ripen from Maine to Georgia.

Mr. Griffith thought the popular taste had been greatly underrated. The "million" were not satisfied with the award. He believed that 999,000 and a few of the other thousand were in favor of some better grape.

Mr. Fish, Rochester, said he had a Diana vine planted near the south side of a barn; the soil had been made very rich, yet he had harvested very good crops of fruit. His experience was in favor of high manuring.

Mr. Hoag, Lockport, advised planting Diana on poor, clay, stony soil. That was his experience. On a gravelly, warm soil they had done poorly.

Mr. Elliott, Cleveland, Ohio, named the Clinton. Western N. Y. sent out large quantities of these vines some years ago. In Ohio they found the Clinton to be a good wine and a fair table grape when grown on light, sandy soil, with good culture.

Information was called for about the Adriondac. Mr. Frost, Rochester, said it was the best grape he had eaten this year; the fruit he tasted grew at Naples. Mr. Hoag said it ripened early; Langworthy, that it was one of the best early grapes; Ellwanger, that it ripened first with them this year; Elliott, Cleveland, had cultivated it three years; it was set in cold, clay soil, not underdrained, had received no protection, and so far it had proved perfectly hardy. He had heard that it killed out somewhat in Southern Ohio, and on sandy soil it proved tender with him. With Mr. Farley, Union Springs, it ripened first, and was free from disease; soil, still clay, well enriched. Larrowe, Hammondsport, did not think highly of it. Sylvester, Lyons, said it ripened the last of August on loamy soil; was hardy, free from disease, and a good keeper. Perry, Canandaigua, thought it one of the best early varieties we have. Hooker, Rochester, thought from his own experience that the vine was uncommonly hardy.

Rogers' Hybrids were next up. Crane, Lockport, spoke highly of No. 4; thought it better than the Concord, and regarded it as valuable. Nos. 15 and 19 were the next best of the series. Hoag preferred No. 4 to the Concord. It never failed to ripen on his soil. Farley, Union Springs, had fruited No. 4 and preferred it to the Concord. Ellwanger, Rochester, thought No. 4 far ahead of the Concord; the berries were larger. Perry said the No. 4 was much like the Black Hamburg. Elliott, Cleveland, had observed No. 4 throughout the West, and thought highly of it. Griffith, Pa., preferred No. 4 to the Concord, but thought it did not approach the Iona. It resembled the Black Hamburg. Sylvester, Lyons, thought very well of No. 4; was pleased to see the Concord referred to as a standard of excellence; considered it a tribute to the award of the Greeley Committee. Perry spoke highly of No. 1; it ripened late however—with the Isabella. Crane, Lockport, regarded No. 1 as too late, and somewhat foxy in flavor; Nos. 3, 4, 15, 19 and 39, were preferable. Hoag had fruited No. 1 four or five years; it was a good grower, good bearer, and had good color, but ripens with the Isabella. Would think it a valuable grape further south. Thought well of No. 15. Perry said No. 15 had a habit of not setting well except when planted near other vines.

WEDNESDAY EVENING.

The discussion of Grapes being resumed Mr. Brehm, Waterloo, spoke of the Iona. He had fruited it for three years; thought it one of the best varieties we have; ripens nearly with the Delaware. If planting a vineyard of one acre would set the Diana and Iona. The Iona is ten days earlier than the Diana. Had exposed vines all winter and thus far found the Iona perfectly hardy.

Mr. Sylvester, Lyons, had fruited the Iona one year; ripens two or three days later than the Delaware, if anything. Fruited the Iona, Israella, and Adriondac in the same row. The Adriondac ripened a few days earlier; Israella and the Iona later. The Iona makes a good growth and carries its leaves well.

Mr. Crane, Lockport, had fruited the Iona last year; was somewhat disappointed with its time of ripening, which was the same as that of the Diana.

Mr. Bushnell, Iona, said his connection with Dr. Grant was well known; was with him before the Iona was sent out, and since then had traveled extensively and had sought out the Iona wherever it was to be seen. Where the Delaware or Catawba will succeed the Iona will also. At Dansville, N. Y., Syracuse, and other localities, it ripened with the Delaware; it is a ranker grower than the latter.

Mr. Rowley, Rochester, had fruited the Iona for two years; found it a few days later than the Delaware, growing and the same row. The vine was healthy and quality No. 1. The Israella was more vigorous.

Mr. Elliott, Cleveland, thought it ripened about ten days earlier than the Catawba, and is a moderately vigorous grower. Its tendency to rot is as great as the Catawba's. Did not consider it could be tested in less than four or five years.

Mr. Farley, Union Springs, gave a good character to the vine, but the fruit did not ripen as soon as he had expected.

Mr. Griffith, North East, Pa., gave a very high character to the Iona. He is well known as an enthusiastic believer in its merits. He had traveled widely to see it under different circumstances, and the best proof he could give of his faith in it was the fact that he had purchased 20,000 vines to plant. He considered it the best American grape. Had tested Iona wine with the best European kinds, and found but one better.

Pres. Hooker, Rochester, said he had not fruited the Iona, but from what he had seen of it he could give it unqualified praise.

Mr. Brooks, Wyoming, protested against the practice of nurserymen of sending out weak, worthless vines among farmers.

Messrs. Barry and Griffith defended the nurserymen. If it were not for them new grapes would never have been disseminated.

GROWING APRICOTS IN POTS.

In the "Proceedings" of the Royal Horticultural Society, Mr. Rivers gives his method of growing apricots in pots, and he ascribes his success to the chalky, loamy soil in which he grows them, and to ramming it hard in the pots. This corroborates my experience in growing apricots on a wall when I used a quantity of old lime mixed with the soil of the border, and had a layer of the roughest lime and brick rubbish laid six inches thick in the bottom of the border for drainage. I was told the trees would not thrive in such a mixture, and that they would gradually die branch by branch; but the reverse is the case, no canker having yet appeared, and the trees are so fruitful year after year, that the apricots here cannot be all used or preserved. The length of the wall is 360 feet, and the height 13 feet, and the trees, when planted in 1859, were lifted from the old kitchen garden, and filled all the available space at once. The trees when in the old garden never bore regular crops, and from £5 to £6 was usually spent every year in buying apricots to supply the deficiency.

After the trees were planted in 1859, the bad seasons of 1860 and 1861 occurred, but they bore good crops, and very large ones in 1862, 1863, and 1864. This year I left 270 dozen to ripen, but as the summer turned out so dry and hot, and the border being only about 15 inches deep, I had to water and mulch the roots well; the fruit, therefore, of all the large sorts swelled to the usual size. This apricot wall is covered every spring with long hot-house lights, which were saved from the old kitchen garden hot-houses. They are put on as soon as the blossom buds begin to swell; and to this covering, and the border, I ascribe the uniform success in getting good crops. Apricot trees when in blossom cannot be kept too dry and airy for the fruit to set well; and the lights, not being put too close together, and open at the ends, just fulfil this purpose, keeping all the rain, hail, and snow showers off. A slight degree of frost, or cold winds, will not injure apricot blossoms so long as they are kept dry. On this wall I have planted a few younger trees of the newer varieties of apricots for successional purposes, and find that the St. Ambrose is an excellent early variety.

Horticultural Notes and Queries.

Iowa State Horticultural Society.—At the first annual meeting of this Society, held a few days ago, the following officers were elected: *President*—D. W. Kauffman. *Vice President*—Jas. Matthews. *Secretary*—W. W. Beebe. *Treasurer*—D. Leonard. *Directors*—Messrs. Earhart, Neal, Brown, L. Kauffman, Miller, Foster, Jokes, Kimball and Sloan. All the officers are said to be practical fruit growers, and though the Society is in its infancy it ought to achieve marked success with such leaders.

Manuring Grapes—Profits, &c.—"A Subscriber," writing us from Seneca Co., N. Y., says:—"I have a number of Isabella grape vines that are seven years old—all worthless on account of the richness of the soil. They do not ripen the wood, nor is the fruit worth eating. As to profits, I will give you those of ninety Delaware vines two years and six months from setting. I sold one hundred and five dollars' worth of fruit, one hundred and eighty-seven dollars' worth of wood and layers, and have fifteen gallons of wine, worth at least thirty dollars."

Propagating Pear Trees from Roots.—It is stated by European pomologists that pear trees may be readily propagated by cuttings from the roots. Such roots should be selected as have one or more terminal fibers, and those that are often cut off or left in the earth when a tree is transplanted succeed well. They cannot be too small, but should not be larger than the finger. The wounds at the large ends of the roots should be covered with the same composition to protect them as in grafting. They must be set obliquely.

Soap-suds for Currant Bushes.—An Indiana correspondent informs us that the soap-suds and wash-water from the house were applied to a row of currant bushes during last winter, and the result thereof was an abundant yield of fruit last summer. The bushes were vigorous and berries large. A few bushes further from the house, which were not treated with the waste-water, produced very poorly both of new wood and fruit. The average crop of currants in the neighborhood was also poor in quality.

Osage Orange Seed—Evergreens.—(L. W. P., Conneaut, Ohio.) Osage Orange seed will doubtless be extensively advertised in the Rural, when the proper season arrives, with prices, &c. Western seed dealers deal in it most largely. Evergreens are grown from seed which will, doubtless, be advertised by those interested, in due season.

Smith's System of Fruit and Meat Preserving—The attention of fruit growers and others interested is directed to the Card of the General Agents of this System, (which was exhibited and partly explained at the recent meeting of Fruit Growers' Society of Western New York,) in our Special Notice column.

A Gardener Wanted.—(W. B., Syracuse, N. Y.,) We do not know of any person competent to take charge of green-houses, and skillful in propagating grape vines, who at present wants a situation. Doubtless there are many, however. Advertising will find them.

American Pomological Society.—The next meeting of this Society will be held at Saint Louis. The session will commence on the 11th day of September.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Steamed Chicken.—Prepare a plump fowl as for roasting, if not very old—say two years. Place it in a steamer over a kettle of boiling water, and steam two hours, then bake half an hour. It is much nicer than baked or roasted.

To Make Vinegar.—The way I make vinegar, away out here where we cannot get pure cider vinegar, is:—I have ready a keg or jar and fill it half full of rain-water; then put in a little molasses and yeast; then, when we use apples, just throw in the parings and cores, taking care not to put in wormy ones. In a short time we have good vinegar—much better than the "celebrated western cider vinegar, made in twelve hours."—Iowa.

A Valuable Recipe.—A great many letters and other writings are written in pencil. This is particularly the case with the letters which our brave soldiers sent home from the army. The following simple process will make lead pencil writing or drawing as indelible as if written with ink:—Lay the writing on a shallow dish, and pour skim milk upon it. Any spots not wet at first may have the milk placed lightly upon them with a feather. When the milk has wet the paper all over, take it up and let the milk drain off, and whip off with a paper the drops that collect on the lower edge. Dry it carefully, and it will be found to be perfectly indelible. It cannot be removed even with India rubber. It is an old recipe and a good one.

Varnish for Leaves.—Can any one of your numerous correspondents give me a recipe for a varnish to preserve autumn leaves? I have tried to preserve their fading beauty by drying the moisture with a warm iron, but they are not so perfect as I have seen them when varnished. I wonder if all Rural readers are aware what lovely rustic frames these variegated leaves make, by just weaving them together by means of their stems, and fastening around the picture with tacks?—A Lover of the Beautiful.

Cream Sponge Cake.—Beat two eggs in a teacup, fill with sweet cream; one cup white sugar; one and one-half cups flour; two teaspoons cream tartar; one do. soda; salt. Nice. Try it.

Molasses Cookies.—One cup molasses; one egg; six tablespoons melted butter; three do. sour cream; one teaspoon alum, grated, dissolved in a little hot water; two teaspoons level full of soda; mix soft; bake quick; roll rather thick.—Mrs. L. H. Bennett.

To Cleanse Chimneys.—An excellent way to cleanse chimneys of houses in which bituminous coal is used, is to saturate a newspaper with kerosene and stuff it in the flue, and set fire to it.

B. T. BABBITT'S SOAP AND SALERATUS FACTORY.

We had an opportunity lately of passing through this great establishment, which is one of the largest in the country, embracing Nos. 64, 65, 66, 67, 68, 69, 70, 72, and 74, Washington-st. The space occupied by it seems incredible. Nine buildings, of four or five stories, with a depth of from 60 to 100 feet each, and most extensive steam power are embraced. Mr. Babbitt laid the ground-work of this immense business some twenty years ago, making a very humble start in a single store. With untiring effort, enterprise, and personal supervision, in twenty-three years he has become one of the millionaires of New York. He is still an active and *hard-working* man. The manufacture of soap—an article so necessary—is always profitable. Soups of all kinds find a ready market everywhere, and though millions of pounds are poured out of the immense boilers daily, it is soon consumed. This mammoth house gives constant employment to over two hundred persons, and huge engines with thousands of pounds of steam keep its machinery in motion. Steam is conducted through the entire block by pipes, some of which cross the street and supply power to two buildings on the opposite side. A boiler, which is said to be the largest in the world, and which rises from the ground floor to the fifth story of one of the buildings, it is said will make at one time nearly 200 tons of the best soap, which at the present prices would bring $52,000. Here is soap for the million in one turn of this monster pot. The grease, etc., is melted by the agency of pipes filled with steam, which run throughout the base and sides of the boiler.

Mr. Babbitt is an extensive manufacturer of saleratus, of which from fifteen to eighteen tons are turned out daily. In addition to this, another article universally used—the Star Yeast Powder—is said to possess superior qualities, adding twenty pounds and more to a barrel of flour when made into bread. It is compounded of flour, water, and common salt, does not ferment, and is very easy of digestion. Mr. Babbitt believes that bread made of this Yeast Powder will prevent indigestion and dyspepsia.

We are pleased to see that his custom is widespread in all parts of this country, and we are informed that he has upward of 10,000 regular customers in the United States and foreign countries, which we do not doubt, seeing the number of wagons, drays and carts, continually loading and unloading, and the immense piles of boxes, both inside and outside of the buildings, labeled Soap, Saleratus, Yeast Powders, Sal Soda, Soap Powder, Super Carbonate of Soda, and Concentrated Potash, all of which articles are manufactured by him. With a man of his energy and enterprising spirit, there is no such word as "fail."—*De Bows' Review.*

Are You Satisfied—To pay for a pound of Saleratus and only get 14 or 15 ounces? if not, then buy *Best Chemical Saleratus.*

Ladies' Department.

RETROSPECTIVE.

BY W. A. CROFFUT.

In a wagon made of willow
Wheeled I once a little maiden;
Ringlets shining on the pillow—
Rolling homewards, treasure laden,
Like a boat upon the billow.

Five years fled; oh, how I missed her
When I left the village school!
But she said she'd be my sister,
As we lingered by the pool;
And I passionately kissed her.

Five more fleeting years renew it:
Little wagon made of willow—
Loving eyes are bent to view it,
Loving hands adjust the pillow,
And we've fitted rockers to it!

AN INDICTMENT.

Low-browed woman, that stole my love!
Fairer than I—less true;
You fooled him first with your wily tongue
And your eyes' deceitful blue.

You looked in his, till you made him swear
His first love was all a dream;
While you let him toy with your yellow hair.
And bask in your smile's false gleam.

Well-a-day for your eyes so bright!
Weeping has made mine dim;
You would smile on, though he lay in his grave—
I could have died for him.

CRINOLINE.

For the past two or three months the itemizers have been trying their sharpest wits on announcements of the collapse of crinoline. The supposed fact that the hoop-skirt has been deposed and the female world is about to return to the statuesque drapery of the olden time, has been heralded with every possible variety of pun and comment. But it appears that the news venders and humorists have been too fast. Crinoline is destined to a reduction, but not to abolition. A New York paper says:—"No one who promenades Broadway now-a-days will doubt that the long-foretold, long-delayed 'collapse of crinoline' has at last come to pass. It is visible to the most careless observer, and has proof in our most fashionable ladies as they 'march along.' The immense circumference of skirts and sweep of train that came in vogue a dozen years ago, and have been expanding and lengthening ever since until recently, are now things of the past. In their stead masculine eyes are gratified by neat, trim dresses, at once moderate in size, gracefully brief, and pre-eminently *piquant*." Though crinoline was so loudly and persistently decried and ridiculed, on its introduction eleven years ago, probably there is not one man of a thousand who would wish to have the institution abolished. The ladies, however, seem to be about equally divided on the question, many of them honestly confessing that, so far as convenience is concerned, the broad skirts are a nuisance.

POCAHONTAS.

One would naturally suppose that of all species of composition, history should be the most reliable, the most straightforward and simple. We know that science is progressive, that it arises from an infinite series of experiments, many of which reverse or nullify the conclusions drawn from former ones; so that the text-books of twenty years ago may be worthless to-day. We know that the poetry of all ages has sprung almost wholly from the fancies of the poets, and varies with their varying moods. But history has always formed the staple of what staid people call "solid reading;" and many of them, with inherited prejudices against fiction, discourage all reading which is not of the nature of history or biography. These advocates of "solid reading" must be rather taken aback by some of the results of late researches and comparisons in history. Not only has it been proved that great facts have been systematically falsified, but many of the romantic episodes and legends turn out to be as purely fictitious as the highest wrought passages of a sensation novel. The last of these disenchantments has come from a collation of authorities and comparison of dates on the story of Pocahontas saving the life of Captain John Smith. That touching anecdote, which has been the chief topic of interest in every schoolboy's first lesson in American history, and which has given him his first idea of what is ordinarily called romance, must be completely blotted out. A Massachusetts antiquarian, Mr. Chas. Deane, has proved that the whole story was invented by Smith to bring himself into notice, after Pocahontas had been converted to the Christian faith, married Rolfe, and visited England, where she was so warmly received and attracted so much attention.

Virtue.—Virtue is not a mushroom that springeth up of itself in one night, when we are asleep or regard it not, but a delicate plant that groweth slowly and tenderly, needing much pains to cultivate it. Neither is vice a spirit that will be conjured away with a charm, slain by a single blow, or dispatched by one stab. Who, then, will be so foolish as to leave the eradicating of vice, and the planting of virtue in its place, for a few years or weeks? Yet he who procrastinates his repentance and amendment grossly does so; with his eyes open, he abridges the time allotted for the longest and most important work he has to perform; he is a fool.—*Barrow.*

A Constantinople journal announces the birth of a daughter to the Sultan, and states that she is to bear the name of the Princess Eminee.

HOMESICKNESS.

What is it—of how many ingredients is it composed?—can you tell, Rural readers? Were you ever homesick, away from home and friends, engaged, perhaps, in some distasteful work, and *then* feel that sickening, overpowering sensation come over you? Did you care whether you lived or died at that period? Returned soldiers, I ask of you, is there, can there be, a sickness equal to this soul-dying feeling? You have suffered immensely on the battle-field, starvation has stared you in the face—a shattered limb has been your reward, perhaps, for service nobly done—but is all this in real, physical pain, an equal to the overpowering feeling that attacks both mind and body when away from the loved best of earth? Will some one of the Rural's contributors tell us wherein this sickness centers—in the heart, mind, body, or in all, and of what it is composed? S. J. C.

LeRoy, N. Y., 1867.

ANGLING FOR HEARTS.

Not to say it profanely, there be among the super-excellent sex "fishers of men." And very expert anglers some of them are. No "brown hackle," made to skip over a mountain stream in May time, is half so fatal to the trout as are the sidelong glances shot from under the dark lashes of Beauty to many a susceptible gudgeon with whiskered gills. We have known a young lady to hook a dozen such in a single evening, and have them all "in a string." A sweet smile behind a fan is an attractive bait, and we have seen much execution done with such a lure by a pretty girl who had the knack of it. The poet who insists that "Beauty draws us by a single hair," goes a trifle too far, but she certainly often draws us by a braid or ringlet, and, at the risk of ears, we venture to add, sometimes with an artificial one. Little mouse-like feet and their belongings, if expertly *handled*, are temping bait, at all times and in all places, and make especial havoc among the male fish on the main streams when those channels of communication are somewhat muddy. Some ladies, musically gifted, fish with the voice, and many a fine fellow has been caught by a song. A saucy bonnet sometimes does the business, and we have even known a victim to be landed safe on the shores of matrimony by means of a bloomer hat. One pretty young lady of our acquaintance has had wonderful success on the ice. She rarely visits one of the skating ponds without hooking several whiskerandos through the heart. A pair of skates baited with two dainty gaiter boots, trimmed with fur, are, as Izaac Walton might say, "very killing" at this season. Unpretending domestic anglers, who fish for steady-going souls with a needle and thread, or knitting work, or even a broom or a duster, also secure a good many substantial prizes, and it is said that a great catch was once made by a lady up to her elbows in suds, a fact which proves that it is not amiss to throw out a *tub* to a whale now and then.—*Ex.*

THE MARRIAGE LAW IN ITALY.

The conflict between the civil and ecclesiastical authorities upon the marriage question in Italy has had curious results. It has been discovered that certain ladies residing in the southern provinces, the widows of government officials, who, as such, were entitled to the receipt of a pension, had contracted fresh matrimonial obligations without ceasing to make their usual half-yearly applications to the treasury. In due course the facts, or part of them, came to light, and the payment was disputed. The ladies, however, insisted that, as they were married simply by a priest, without conforming to the conditions of the law, which regards the civil contract only as binding, they were still, strictly speaking, widows, and consequently entitled to draw their allowances as before. As no provision had been made for such cases, the authorities were compelled to submit, and the pensions have been paid.

Female Sculptors.—When Harriet Hosmer wished to acquire a knowledge of anatomy preparatory to becoming a sculptor, the Boston Medical Society were shocked by her father's request to have her attend their lectures. It seemed to them a gross impropriety for women to be thus inquiring into the structure of the human frame. The freer West granted to Miss Hosmer what the East denied. She has taken a high and honorable place among the artists in Rome, and is not one whit the less a lady for being a sculptor. The career which she opened has become so thronged with competitors that female sculptors have ceased to be a novelty.

Bonnets.—If it were possible to govern such matters by the ordinary rules of taste and common sense, instead of by unaccountable freaks of fashion, millinery would be altogether discarded in the winter and the head covered with a hood, which, by the way, might give as much opportunity for the display of taste in variations and adornments as the present wire and lace affairs. For summer wear, however, the small, triangular bonnet, which has been so much ridiculed, is undoubtedly at least an approximation to the true idea.

Small Things.—If small streams are not able to bear great ships or yield great treasures, they may at least water some drooping flower; if not by the fireside at home, by the wayside in life's pathway.

Truth always fits. It is always congruous and agrees with itself. Every truth in the universe also agrees with all others.

Floral apostles, that in dewy splendor weep without woe, and blush without a crime.

Choice Miscellany.

ON THE STAIRS.

BY EDWIN R. JOHNSON.

Swift though the foot-fall of midnight advances,
Let us linger a while on the stairs—
Nothing to witness our words and our glances
But the astral that over us flares.
Ah, how in contrast with gloomy November
The gleam of their brilliance appears!
You may forget them, but I shall remember—
Remember these glances for years.

Press but the fingers for needless assurance,
Touch the lips for a token of truth—
Ah, how it girds for heroic endurance
The pitiful weakness of youth!
So rises purpose that never shall slumber,
So rings its brave song in my ears;
You may forget them, but I must remember—
Remember these moments for years.

What though the spirit be robbed of its buoyance,
Still wrapped in the cumbersome clay;
What though the wear of incessant annoyance
Shall fritter endeavor away,
Turn the fair June into dull-eyed December,
Drown exultation in tears;—
You may forget them, but I shall remember—
Remember these moments for years.

Even as now I pass out of the portal,
To the slumberous silence of night,
So if Remembrance, immured but immortal,
From the dwelling of earth take her flight,
Then, when the ashes of life's falling ember
Grow ghastly with flickering fears,
You may forget them when I shall remember
These moments surviving the years.

[*The Galaxy.*

ALEX. SMITH AND N. P. WILLIS.

We have received the announcements simultaneously of the death of two men holding very similar positions in the world of letters on either side the Atlantic. Alexander Smith, the young Scottish poet, died in Edinburgh on the 5th of January; and Nathaniel Parker Willis died at "Idlewild," on the Hudson, on the 20th.

Mr. Smith was born in Kilmarnock, Dec. 31st, 1830, and consequently has closed his short career at the early age of thirty-six, a time of life which seems especially fatal to poets. He was intended for the church; but as circumstances prevented him from entering that profession, he followed the business of his father, that of a pattern designer for a lace factory. At the age of seventeen he began to write poetry, and in 1853 published his poem "A Life Drama." In 1854 he was appointed Secretary of the University of Edinburg. He afterwards published, in connection with Sidney Dobell, "Sonnets of the War," "City Poems" and "Edwin of Deira." These brought him into general notice as a poet of great promise. But latterly he seems to have taken more to prose writing. His volume of essays, entitled "Dreamthorpe," though rather faint, showed the outlines, so to speak, of a classical author, but lacked in vigorous filling up.

Mr. Willis was born at Portland, Me., January 20th, 1807, and died on his sixtieth birthday. His parents moved to Boston when he was about six years of age, and he graduated at Yale in 1827. While in college he published a series of "Scripture Sketches" in verse, which gave him a temporary reputation as a poet, and immediately after graduating he entered upon that editorial career which ended only with his life. He edited first The Legendary and The Token, and in 1828 established the American Monthly Magazine, which, at the end of two or three years, was merged in the New York Mirror, a weekly literary journal, published by George P. Morris, with whom Willis continued to be associated till the death of Morris a few years since. He went to Europe in 1831, and traveled extensively on the continent, and in 1835 married a daughter of Gen. Stace of the British army. The results of these travels appeared in "Pencillings by the Way," and "Inklings of Adventure." In 1837 he returned to this country and settled on a farm, which he called "Glenmary," in Tioga Co., N. Y. Here devoted himself for two years to agriculture and the writing of articles on rural life, which were afterwards published in a volume entitled "Letters from Under a Bridge." In 1839 he went to New York to edit the "Corsair," a short-lived literary journal, and in the same year he went to England, where he published "Loiterings of Travel" and two dramas of no great merit, "Tortesa, the Usurer," and "Bianca Visconi." On his return to America he established, in 1844, in New York, a daily paper called the "Evening Mirror," of which Morris was associate editor. But the death of his wife soon after, and his own failing health, induced him to go again to England, where he published a collection of Magazine articles under the title of "Dashes at Life with a Free Pencil." He returned to New York in 1846, and published a complete edition of his works, and in the same year married a daughter of Hon. Joseph Grinnell of New Bedford. In conjunction again with Morris, he began the publication of the "Home Journal," a weekly paper, which still survives, and to which Willis contributed to the last. Besides the books already mentioned, he published the following:—"People I Have Met," "Life Here and There," "Hurrygraphs," "Life of Jenny Lind," "Fun Jottings," "A Health Trip to the Tropics," "A Summer Cruise in the Mediterranean," "Famous Persons and Places," "Out Doors at Idlewild," "The Rag Bag," "Paul Fane," and "The Convalescent."

Willis dealt almost exclusively in the elegancies of literature; and though his writings cannot be classed very high, they are among the best of their kind. His prose, which is generally vivacious and sparkling, is altogether better than his poetry, which sounds too much like foppery in the pulpit. As a man, he was eminently courteous and kind-hearted and was somewhat noted for his generous treatment of young and unknown authors in whom he disvovered indications of literary ability.

SOLITUDE.

The natural idea of solitude, as conveyed by language, is a place where there is no human society. Writers often speak of dreary solitudes meaning the same thing; but real solitude is something more than this,—a loneliness of spirit which probably every person feels at times. Some persons of a refined and cultivated nature are not solitary when alone with Nature; a thousand joyous voices speak to them in a language they can interpret, and they never enjoy better and purer companionship than on such occasions. Others, more meditative than practical, find society in their own thoughts. A hundred varied themes give them subjects for entertaining and profitable musing. They are, in a measure, independent of the outer world for enjoyment. To such minds the world of books owes some of its richest treasures, in the shape of beautiful thoughts, clothed in appropriate language. Some persons, on the contrary, never enjoy anything unless it is in a crowd, and it is usually necessary for them to change their places of residence, and their friends often, in order to be satisfied. They are usually solitary on rainy days. Those whose lives are mainly of the affections are not apt to love solitude. They long for the society of those they love. The world was made, in their estimation of it, to hold their idols. But there are times and places when every person will be more inclined to feel solitary than at others. Many a one may, while taking a lonely walk to church, on a bright Sabbath morning, feel the companionship of nature fill his heart with love to God and man, while perhaps the same person, walking the crowded streets of a city, jostled by the crowd, every individual of whom is unknown to him, will feel lonely indeed. Good health, cheerfulness, industry, and a well balanced mind, are good preventives of that vacant loneliness which oppresses many; but a proper amount of congenial society is necessary to keep everyone in a healthy frame of mind. B. C. D.

Elkhorn, Wis.

GOOD FEELINGS.

We know a blunt old fellow who sometimes hits the nail on the head more aptly than philosophers. He once heard a man much praised for "*good feelings.*" Everybody joined and said the man was possessed of excellent feelings.

"What has he done?" asked the old genius.

"He is possessed of the most benevolent feelings," was the reply.

"What has he done?" cried the old fellow again.

By this time the company thought it necessary to show some of his favorite doings. They began to cast about in their minds, but the old man still shouted, "What has he *done?*" They owned they could not name anything in particular.

"Yes," answered the cynic, "you say that he is a man that has good feelings. Now, gentlemen, let me tell you that there are people in this world who get a good name simply on account of their feelings. You can't tell one generous action they ever performed in their lives, but they can look and talk most benevolently. I know a man in this town that you all would call a surly, rough, and unamiable man, and yet he has done more acts of kindness in this county than all of you put together. You may judge people's actions by their feelings, but I judge people's feelings by their actions."

Naturalness.—Whenever you see a man or woman not afraid to betray some faults, you may be assured they have a dozen times more virtues veiled to counterbalance them. Faultless and not faulty folks are most to be dreaded, as at heart they are more dangerous and despicable. The policy of hypocrisy, as practiced in the parlor and in public, by this or that description of person, of either sex, influencing them to be so sage or sober, when they are simply silly or insipid, is enough to sicken a whole college of physicians. Give us a woman or girl who dreads not to do an act as her free heart dictates, without the fear that this or that upstart may laugh or talk about her.

The Business Man.—It was the memorable petition of a goodly banker, as morning by morning, he went to his place of business, "Lord, give me the faith of Abraham, the wisdom of Solomon, and the patience of Job." Ye tradesmen—ye men of merchandise—ye men who have to labor in the world for a maintenance, and yet have no sympathy with its evil pursuits, its unprincipled practices, its misnamed pleasures—there is a pattern prayer for you. Love is the law of the universe—emanating from God, binding myriad worlds together in the boundless space, and harmonizing all their motions without conflict.

How to Prosper.—1. Rise early; begin and end the day with God, always.

2. Be active; whatever you undertake drive it—drive it through, with your might; don't falter.

3. Mind your own business. Some people interfere, dabble in other men's matters. Stop it.

4. Be diligent; don't lounge. There are many loungers now-a-days; street talkers. Some Christians, (so-called,) lounge about, and gabble nonsense! Man, take your name from the church-book—scratch it off, quick, quick, else, repent, and do your first work.

A conviction of one's own inferiority soon prompts a thorough search into the weaknesses of the superior. There is nothing that the slave sooner learns than the faults of the master.

Sabbath Reading.

WE WAIT THE BLESSED THOUSAND YEARS.

BY A. A. HOPKINS.

We wait the Blessed Thousand Years!
The Present, with its hopes and fears,
Its longings all unsatisfied,
Looks through the portal opening wide
To let the Future in, and waits
Its coming through the portal-gates.

O Future! near, and yet so far—
Where shines the bright millenial star—
Haste thy approach! The days are long
Till Right shall triumph over Wrong,
Till Morning chase away the Night,
And faith be verified in sight!

We wait the blessed Thousand Years!
Dim, undefined, as through our tears
We forward look, there seems to rise
A newer earth, with brighter skies
Than those which beam erewhile on this,
Where hope attains to fullest bliss;

Where all the fret, the din and moil,
That round these weary days of toil,
Shall find completest recompense;
Where, unrestrained, our soul and sense
Shall feed and ripen on the food
Gleaned from the fields of perfect good;

Where every pampered lust shall be
Unknown, and man be fully free;
Where buds of promise know no blight,
And pure desire brings pure delight;
Where all discordant noises cease,
And only echo songs of peace!

Blest Thousand Years! O righteous God,
The thorny paths the world has trod
Are wearying its heart and strength—
Methinks they weary Thee, at length!
Bring, then, the paths that lead erewhile
Through blooms which hide no secret guile!

We wait the blessed Thousand Years!
We wait and labor. He who hears
A people's prayer for noblor things,
Will give the good time swifter wings;
While that for which we long and wait
Our faith and works may ante-date!

Albany, N. Y., Jan., 1867.

Translated for Moore's Rural New-Yorker from the German of Krummacher.

DEATH AND SLEEP.

In brotherly embrace the Angel of Sleep and the Angel of Death passed over the earth. It was evening. They reclined on an eminence not far from the dwellings of men. A mournful stillness reigned all around. The evening bells in the distant village ceased to sound. Calm and silent, as is their manner, both these beneficent genii of mankind lay in confiding embrace, and already the night drew near.

Then the Angel of Sleep arose from his mossy couch and scattered with a light hand the invisible seeds of slumber. The evening wind bore them to the quiet habitations of the weary peasants. Now, sweet sleep encircled the inhabitant of the rural cottage, from the aged who walks with a staff, to the infant in the cradle. The sick forgot their pain, mourners their sorrow and the indigent their care. All eyes were closed in sleep. Now, after having fulfilled his mission, the benevolent Angel of Slumber lay down again beside his sterner brother. "When the morning dawn awakes," cried he, with joyous innocence, "mankind will praise me as their friend and benefactor! Oh, what joy to do good unseen and secretly! How happy is our mission as good spirits. How beautiful our calming avocations!"

So spake the friendly Angel of Slumber. The Death Angel in quiet sadness heard him through, and a tear, such as immortals only shed, stood in his large, dark eye. "Ah," said he, "would that *I* had the happy thanks of men to rejoice me as you have. The Earth calls me her enemy and the disturber of her joys!" "O, my brother," replied the Angel of Sleep, "will not the good in their awakening recognize in you their friend and benefactor, and thank and bless you? Are we not brothers and the messengers of one Father?" So spake he. Then the eye of the Angel of Death glistened, and the two brotherly genii joined in a closer embrace.

Vineland, Wis., 1867. DeWitt C. Church.

A GOOD LIFE.

It is a good life, within and without, that makes us fitting instruments for the divine hand, or, as we sometimes express it, polished shafts in God's quiver. A good life is beautiful. It holds the observer's eye as with a charm. It begets a disposition to pry into its sources. It raises the wonder how men can live so nobly, and excites the wish, the longing to be good. How many thousands upon thousands have been thus drawn to Christ? To them the crucified and risen Christ was nothing. They knew him not. But they have seen his representatives, and have learned from whence the divine comes to man. They would be like their friend, and that friend tells them that he has his life from another; that his goodness is only the semblance and reflection of another's; that none is truly good save one. And besides this fitness, as of a magnet, to draw to Christ—this being a thing of beauty to win for Him—he becomes by a good life a fitting instrument for aggression. He who can challenge the confidence of his fellows has a license to improve and warn. He whose life is hid with Christ in God is moved to industry by his zeal for God. Repulse will not dishearten, nor disappointment chill him. But let us remember a good life is more than a steady one, more than a quiet and inoffensive one. It is an inward force of goodness, seeking expression in work.

Conversion without conviction is no better than conviction without conversion.

The Reviewer.

AMERICAN LEAVES: Familiar Notes of Thought and and Life. By SAMUEL OSGOOD, author of "The Hearthstone," "Studies in Biography," "Student Life," etc., etc. [12mo. pp. 330.] New York: Harper & Brothers.

THIS volume contains fifteen essays, each, as the title indicates, concerning some phase of American life. All but one of them are reprinted from Harper's Magazine. There is nothing remarkable in Dr. Osgood's style, and nothing very brilliant in his ideas; but he writes good, fair, unpretentious English, and generally talks sound, common sense. The papers here gathered have one of the most desirable of all qualities in essays—a smooth, flowing motion that carries the reader through to the end, if once he begins their perusal. The mechanical execution of the volume is quite handsome. For sale by STEELE & AVERY.

WORSHIP IN THE FAMILY AND SCHOOL-ROOM. A Manual of Devotion. By Rev. W. T. WYLIE. [8vo. pp. 540.] Springfield, Mass.: W. J. Holland & Co.—1866.

THIS volume is made up of Scripture Lessons, with prayers written expressly for and suited to each, by some of the most eminent divines of many denominations. Each lesson is prefaced with an appropriate piece of music, rendering the volume admirably adapted to the devotion of families, schools and meetings generally. It is highly commended by some hundred of the more prominent divines of the day. Sold by W. J. HOLLAND & Co., 87 Main St.

American Magazines.

IF there could be a periodical combining the best features of all our American magazines, it might come very near the ideal of a perfect monthly. If any thing were wanting, it would be in respect of good poetry and tales. Of the former especially there is a woful lack in our periodicals. There are enough correct rhymers and versifying moralists; but of living and powerful poetry, either popular ballad or ringing lyric, very little is produced. And our best tales still come from over sea; though one would suppose that American life, with its rapid changes and sudden downfalls and uprisings, offers the best possible field for the writer of short, intense stories. Excepting these two features, our periodicals rank high and well deserve the liberal patronage which they receive. We have good essayists, keen satirists, genuine humorists and reliable scientific men, who contribute to their pages their best productions. And the magazine offers the best possible medium for introducing a new writer to the public. He is sure of a fair hearing, which is not always the case when one makes his *debut* in a bound volume; and if his composition be of a peculiar kind, the list of a popular monthly will pretty surely include enough who can appreciate it to make him a respectable audience. It is not to be wondered at that periodical literature has been so greatly increased of late; but it is certain that some of these ventures which have set out with grand promises must soon die and disappear, as their predecessors have before them, either from want of brain capital or from mismanagement of their resources.

THE ATLANTIC MONTHLY still holds its place as the acknowledged head of American magazines; but one of its competitors at least is pressing close upon it and may soon surpass it in popularity if not in prestige. The Atlantic has the advantage of including in its list of contributors the standard authors and literary authorities of the country; but a vast deal of journey work is done for it by third and fourth rate writers. Besides this, it has an overpowering sense of its great reputation and the necessity for preserving it. The consequence is that it approaches the heaviness of the review. The current number opens with the second installment of Dr. HOLMES' story, which, it seems to be understood, is to be *the* attraction of the magazine this year, and contains, among others, the first article of Prof. AGASSIZ on "Glacial Phenomena in Maine," and one on "Comic Journalism" by one who evidently has had experience of what he discusses.

THE GALAXY, our only fortnightly, has achieved, perhaps, the most wonderful success that has ever befallen a periodical in this country. It is the most democratic of any that we have, admitting discussions on any topic of public interest, except partisan politics and sectarian religion; and by giving the names of the authors it saves itself from shouldering any perplexing responsibility. It professes to, and undoubtedly does, publish all articles solely for their merits, without regard to their authorship. And though its editor, like all others, is liable to misjudgment, it will probably bring out enough new writers of ability, who might have waited forever for recognition by the older magazines, to give it a regular and reliable corps in the future.

HARPERS' MONTHLY still holds its place with those who like an illustrated magazine with a good deal of historical and descriptive matter. The noticeable features of the current number are an article entitled "Something About Fishes," with illustrations of one hundred and fourteen species, very finely engraved, and nine pages of most villainous doggerel, purporting to describe a visit of Diedrich Knickerbocker to modern New York, which exhibits a scarcely less "plentiful lack of wit" and imagination than of correct versification and pure English.

BEADLE'S MONTHLY, which has just entered upon its third volume, is a readable, illustrated periodical, filled up with contributions from the pens of our minor *literati*. The most noticeable article in the current number is on Edgar A. Poe, by Mrs. E. Oakes Smith. She lauds him to the skies and overlooks his terrible failings, as only a foolish woman could; but as she was a personal friend of his, her contribution to our knowledge of him will be welcome. Poe is the sphinx of American literature, and will probably continue to be its most interesting character until Hawthorne is better understood. Mrs. Smith makes one statement which takes us by surprise, and which, if true, is not generally known. She says:—"It is asserted that Poe died in consequence of a drunken debauch. This is not true. At the instigation of a woman, who considered herself injured by him, he was cruelly beaten, blow upon blow, by a ruffian who knew of no better mode of avenging supposed injuries. A brain fever followed, his friends hurried him away, and he reached his native city only to breathe his last."

NORTHERN LIGHTS, an illustrated weekly, is one of the latest of the new comers in this field. If it is edited by "Edmund Kirke" and Mrs. Julia Ward Howe. If future numbers are not a great improvement upon the three that have been issued, its career must be short indeed, unless the purse of its proprietor is very long.

ENVY feeds upon the living; after death it ceases—then every man's well-earned honors defend him against calumny.

Useful, Scientific, &c.

THE AELLOSCOPE.

THIS instrument (the name of which is from two Greek words, signifying *the storm viewer*,) is the invention of Prof. H. A. CLUM of Rochester, N. Y., and though a most important addition to the practical results of science, has never been adequately described in any journal. The principle is very simple; and a study of the accompanying engravings, with a brief and clear explanation which we shall endeavor to give, will enable any one to understand it. The object sought is to construct an instrument which shall be more sensitive than the ordinary mercurial barometer, recording nicer gradations of change in the atmosphere, and predicting storms longer in advance.

Figure 1 represents the instrument as it appears complete, standing about eight feet high, covered with a glass dome. The principle employed is that of connecting a buoy made of several sealed air-chambers, (E E, fig. 2,) with a float resting on a column of mercury, in such a manner that the combined chambers, whose specific gravity remains the same, are buoyed up more or less, according as the surrounding atmosphere is more or less dense, and the motion resulting from fluctuations is communicated to a hand on a dial plate, from which any person, without the slightest scientific knowledge, may read the indications.

Fig. 2.—B is a cistern containing mercury, and C is a tube, sealed at the top, rising from the cistern. In this tube the mercury rises in vacuo. This, it will be observed, is precisely similar to the ordinary cistern barometer. In the tube, C, is another tube, J, floating in the mercury. This tube is air-tight, and at the bottom is fastened by a rod (*i*,) to the cross-bar (*l*,) which is by means of the rods (*m m*,) fastened to the framework, by which all the chambers (I I,) from four to six in number, are fastened together. The tops of these chambers are globes (*g g*,) forming part of them, and there is also a crowning globe (F,) which, like the vertical chambers, is air-tight, and is connected by the arms (I',) with them. In this globe is a tube, (*o*,) or as it were a very deep dimple from the bottom, the only object of which is to receive a stationary, upright spindle (*r*, fig. 3,) that prevents the apparatus from tipping over, or having any motion but the vertical one. The air inclosed in the cylinders (E E,) and the crown globe (F,) is condensed, to make sure that it shall always be heavier than the amount of atmosphere it displaces; for were the atmosphere ever to become heavier than this inclosed air, the latter would tend to act as a buoy, and a trouble would arise similar to that which one would experience in trying to weigh a balloon with common scales.

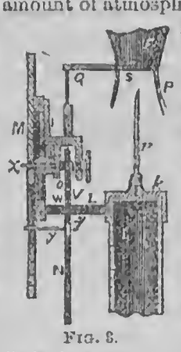

FIG. 3.

Figure 3 shows a section of the upper part of the instrument and the arrangement by which motion is communicated to the hand on the dial. This is very simple, and is accomplished by a taut thread, with adjusting screws, fastened above and below to the framework which holds the air-chambers together, and passing around the axle of the hand.

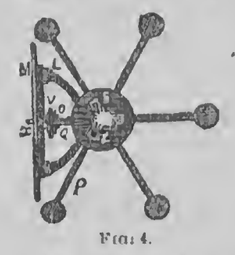

FIG. 4.

Fig. 4 shows a horizontal section, seen from the top.

Fig. 5 represents the dial. The slot (S,) has an indicator passing through it, which shows the variations of inches, like a common barometer. The circumference is divided into a scale which will represent a variation of a thousandth of an inch in the height of the mercury.

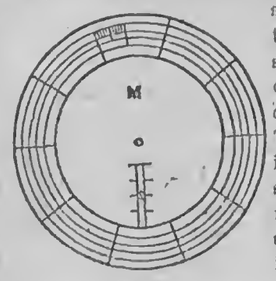

FIG. 5.

Operation.—Suppose that, from any cause, the atmosphere grows denser. Its weight will press down more upon the mercury in the cistern (B, fig. 2,) and force it farther up in the tube (C,) lifting up the float, (J,) and at the same time this increased density of the atmosphere makes it more capable of buoying up the chambers (E E,) with their condensed air, and the more extensive these are the greater will be the gain of motion and nicety of indication. Thus the sluggishness of the mercury is overcome; and careful observations prove that the instrument will predict a storm a week or more in advance of its appearance.

When the weather is steady, the action of the Aëlloscope is very interesting. Commencing at a period about sunrise, the fractional indicator will commence slowly to move forward, as if imitating the progress of the sun until 1 P. M. Then it will begin to return from its morning walk to the point from which it started. This will be its daily duty when the atmosphere is undisturbed in a period of prevalent steady weather. After the sun has set, say towards 8 P. M., the indicator will again commence a forward motion, but of more limited range, returning before sunrise to its place of departure. The range of the day journey of the indicator will vary from 10 to 100 thousandths of an inch; and the night walk to the more restricted range of from 5 to 50 thousandths of an inch. These journeys are indicative of very generally prevailing fine, steady weather. A storm a thousand miles off makes it tremble, and arrests the progress of its indicators, as if it were in the grasp of the distant tempest. And when all other indicators give promise of an undisturbed sky, and speak no other language than that of the visible horizon, the Aëlloscope will speak distinctly and correctly of changes marching on their way a week or more before the hands of other instruments are affected by their coming.

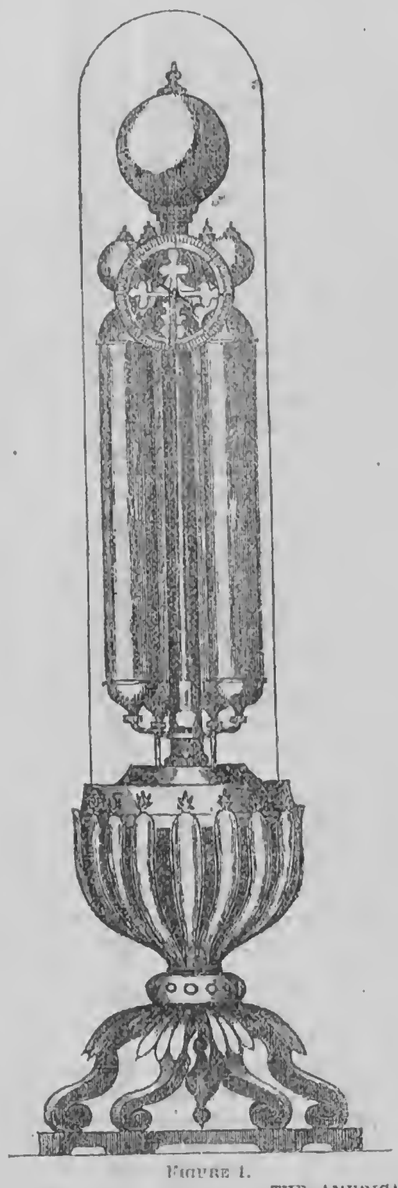

FIGURE 1.

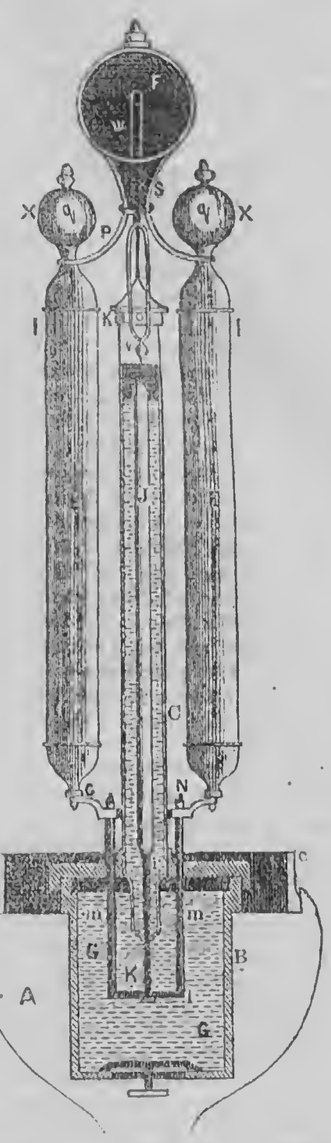

FIGURE 2.

THE AMERICAN AELLOSCOPE.

The cost of the Aëlloscope is from $1,000 to $10,000. A splendid one, eight feet high, with all the metal parts, except the base, plated with silver and burnished, has been constructed for the Paris Exposition. Prof. CLUM has exhibited his invention—the result of twenty-five years of study and experiment—to the scientific men of Europe, and has received the most flattering testimonials of their appreciation of its usefulness. And if it shall prove, by further tests, to possess all the merit claimed, as above stated, the Aëlloscope will reflect credit upon Prof. CLUM as its inventor, and Western New York as the place of its origin.

Various Topics.

CRETE—THE ISURRECTION.

THE accounts received from time to time of the progress, or rather the continuance of the insurrection in the island of Crete have attracted general attention to it, and a sketch of its history may be acceptable at this time. The island is one hundred and sixty miles long and from fourteen to fifty miles broad, containing 4,036 square miles, and is situated in the Mediterranean, eighty-one miles from the extremity of the peninsula of Morea. A chain of high mountains, covered with forests, runs through the whole length of the island, from east to west. The highest peak is the celebrated Mount Ida, which rises 7,670 feet above the sea, into the region of perpetual snow. On the north side the country slopes gradually to a fertile coast with good harbors. On the south side the shore is steep and rocky. Grain, wine, oil, wool, flax, silk, cotton, honey and cattle might be produced in abundance, did not the oppressions of the Turks discourage the industry of the inhabitants. The population at one time numbered 1,200,000, but at present is reduced to 300,000. In Grecian mythology Crete is made the scene of many adventures of the gods and heroes. Here SATURN is said to have reigned, and afterwards MINOS, 1,300 years before CHRIST. After the banishment of the kings it became a republic, and subsequently the home of pirates, until it was conquered by the Romans. In 823 it passed into the hands of the Saracens, who built the capital city, Candia, on the ruins of the ancient Heraclea. In 963 they were expelled by the Greeks; and in 1204 the Byzantine sovereign sold the island, against the will of the inhabitants, to the Venetians, who, aware of its importance, fortified the cities and gained the good will of the people by instituting a milder government than they had before known. About the middle of the Seventeenth century the Turks attacked it, professedly on account of a Turkish prize taken by the Maltese and carried into the harbor of Candia. It was bravely defended, and a war arose which lasted twenty-five years, culminating in the siege of Candia, which the Turks invested with 80,000 men. This lasted two years and four months, when on the 27th of September, 1669, the garrison capitulated. This siege is one of the most noted in history. During its progress fifty-six assaults were made by the Turks and ninety-six sallies by the Christians. Four hundred and seventy-two mines were sprung by the former, eleven hundred and seventy-three by the latter. 30,985 Christians and 118,754 Turks were killed or wounded. The present insurrection has been going on several months, and though the Turks far outnumber the natives, but little, if any, progress has been made in subduing it. The sympathies of Christian Europe, governments as well as people, are generally with the Cretans, notwithstanding the fact that monarchies usually discourage rebellions. It is impossible to say how it will end; but if some of the great powers of Europe become involved—which seems not unlikely—it may result in stripping Turkey of all her possessions this side of the Bosphorus, and perhaps in a partial compensation to Austria for her loss at Sadowa. Meanwhile, subscriptions and other schemes for the relief of the brave Cretans, who will shortly be suffering for the necessaries of life, are being started in Russia, England and this country.

WRITING IN CYPHERS AND IN SHORT-HAND.—These abbreviated modes of writing are not of modern invention. The ancients had ingenious cyphers for their secret dispatches, and sent private orders to their commanders or ambassadors, which could not be opened, so as to be legible, without a peculiar contrivance or the key. Cæsar's usual method was to write by agreement the fourth letter of the alphabet for the first; for example D for A, and so on, varying the arrangement occasionally. The Romans had also short-hand writers, a chosen number of whom were employed by Cicero to take down a speech of Cato. Martial and Ausonius bear testimony to the surprising skill of some of them.

RICHELIEU'S HEAD.—Richelieu's head is making some stir in the foreign newspapers. It appears that several heads are in existence, accredited to the great Cardinal. One was lately buried at Sorbonne. A Paris correspondent of the London Star says:—"Merimée assures the country that he possesses another; and now we are informed that there has been discovered, in the Rue des Boulangers, on a dust heap, a human skull bearing the following inscription:—'This is the true head of Cardinal Richelieu.' The *commissaire de police* of the *quartier*—having remarkably little to do during this rainy weather—is going to institute inquiries as to whence this occiput is derived.

ECHO ANSWERS.—What must be done to conduct a newspaper right? Write.

What is necessary for a farmer to assist him? System.

What would give the blind man the greatest delight? Light.

What is the best counsel given by a Justice of the Peace? Peace.

Who commit the greatest abominations? Nations.

FOSSIL REMAINS IN ILLINOIS.—It is stated that the fossil remains recently found in the coal beds of Bellville, Ill., constitute the lower jaw of an immense carniverous reptile, which probably belongs to some hitherto undescribed species of the Saurians, which inhabited the tropical woods and savannas of the West before the bed of the Mississippi was formed. This discovery is an important one, since as yet but few remains of the larger animals of the carboniferous period have been discovered.

ENVELOPES.—In the vicinity of Aberdeen, Scotland, are five paper mills, which employ two thousand five hundred persons. In the city the paper is made into various forms, grocers' bags, cards, envelopes, &c. The most important item is envelopes, which are there manufactured more extensively than anywhere else in the world, one million being turned out every day, most of them folded and stamped entirely by machinery.

Reading for the Young.

THE POWER OF WILL.

"IT is impossible," said one of NAPOLEON'S staff officers to the great commander, on his explaining some movement which he desired to make. "Impossible!" thundered out the chieftain, "impossible is the adjective of fools!" The utterance, though probably one of passion, shows the unconquerable will of man when determined to succeed in an undertaking. Yet with how many does the simple utterance of that easy word put a stop to some bold thought, some noble deed, or some grand attainment. Impossible! How so? It certainly would be so were you to allow it so. But strike the rock, and see how fast the waters of plenty will drive away the light air of impossibility. Look at yonder smith with a great bar of iron in his hand. See him in his vain efforts, attempting to bend it. You say that he *can't do it*. Wait and see! There, see him place it under his foot. Now he presses heavily on one end. "It yields!" ah, does it though? You said he could *not* do it; but he *has*, notwithstanding your prediction to the contrary. Do you not feel your impotency in your "can't," in comparison with his *trying*? Were I to lay down my pen and say I "can't write," the world would receive no benefit from my presence in it; but if I "dig in" and "dig on," I may be of some good to mankind—at least I shall have the consolation of knowing that I tried; and if I fail, I am none the worse off for attempting.

E.

THE KENTUCKY GIANT.

THIS is a jolly companion to the German Dwarf, [given in the RURAL of Jan. 19,] and, like it, never fails to produce roars of laughter when performed at an evening company. It is necessary to have two persons to represent the giant, and the method of enacting the part is best explained by the accompanying engraving. It will be seen that one boy puts on a *long* cloak, and perches himself upon the shoulders of his companion, who arranges the folds of the cloak so that the parts shown by the *dotted* lines in the illustration, are entirely concealed from the eyes of the spectators. The boy who *does* the head and shoulders of the giant should carry a long staff, as a cane, and, if he wear a stove-pipe hat, with a feather in it, it will greatly *heighten* the effect. The giant's wife may also be represented by one person, with the assistance of a cane and piece of lath, the latter eighteen inches long, fastened about four inches from the top or end of the former, thus forming a cross. The person representing the giantess attires himself in an old dress. A long shawl is pinned over the lath, an old bonnet placed on the end of the cane, and the preparations are complete. The giantess usually walks into the room and pretends to look for a nail in the wall (this gives the performer an opportunity of concealing his face,) and, after looking at the wall a minute or so, he stoops down as low as he can, at the same time being careful to lower the cane. He then *gradually* rises, until he stands upon the tips of his toes, and *as he does so*, he as *gradually* raises the cane with the bonnet and shawl upon it, until he appears to touch the ceiling. The lath represents the shoulders of the giantess, the bonnet her head, and the cloak covers the whole deception. The giantess, if well done, is sure to be greeted with shouts of laughter.—*The Play-Room.*

YOU CAN'T CATCH IT.

YOU can't catch it, boys or girls. You may be as fleet of foot as the antelope, or you may fly as on the wings of an eagle, but you can't overtake it.

Cannot overtake what?

The bad word which has passed your lips! It has fled to heaven, and written itself upon the book of GOD. You can't catch it.

The wicked deed you performed! It soared to the judgment, and was stereotyped on the memory of the Judge. You can't catch it.

The sinful thought you indulged! Its image was caught by the light of GOD's eye, and photographed on the roll of your history. You can't catch it.

Beware, then, O children, what you think, what you do, what you say.

CURIOUS RIDDLE.—It is said the following riddle, circulated by an emissary of the Austrian Government, was the *real* cause of Count Bismarck's illness. The riddle is this:—In Prussia proper, (that is, in *old* Prussia, and not in any of the new provinces *sewed* on to the kingdom by the *needle*-gun,) there lived a blind beggar; that blind beggar had a brother; that brother died; *the man who died had no brother*; what relation, then, was the blind beggar to the man that died? This was too much for Bismarck; nor were his feelings alleviated when it was suggested that the "blind beggar" might have been the *sister* "of the man who died," which was, in fact, the simple truth of the matter.

IT is one of the worst of errors, to suppose that there is any other path of safety than that of duty.

INTELLECT is not the moral power; conscience and honor, not talent, make the man.

THE more merit a man has, the more does he applaud it in others.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., FEBRUARY 2, 1867.

NEWS OF THE WEEK.

From Albany.

THE Senate has voted, 20 to 3, to remove from office George W. Smith, County Judge of Oneida county, for bribery.

The bill to extend the time for the collection of taxes has passed both Houses.

The movement for a railroad on the west side of the Hudson River, is attracting more than usual attention. Mr. Henry Smith of Albany, has introduced a bill in the Assembly providing that the County Judges of Albany, Greene, Ulster, Orange and Rockland may appoint three freeholders from each town applying as commissioners, to hold office for three years, whose duty it must be to subscribe in the name of such city, village or town to stock in the proposed company, and to issue bonds for the payment of such stock to an amount not to exceed 30 per cent. of the assessed property of the village or town, interest at 7 per cent., payable semi-annually, to run for a term not to exceed thirty years. The city of New York may, to the extent of $2,000,000, and the city of Albany to $1,000,000, guarantee the payment of the bonds; also, to subscribe $2,000,000 each. Such bonds shall be for $1,000 each, bear interest at the rate of 7 per cent. annually, and run for a term not to exceed thirty years.

. — We trust the time is not distant when the people on the line of the N. Y. Central will arouse to their interests, and head the exorbitance and swindling to which they are now subjected in various ways by that huge and conscienceless monopoly.

From the National Capital.

DURING the discussion in the Senate on the Tariff bill, Mr. Cattell presented tables setting forth the following facts, compiled by the Chief of the Bureau of Statistics: — The value in gold of the annual product of the people of the United States for the year 1860, was in round numbers as follows:—Those engaged in agriculture, $160,000,000; manufacturers, including all processes between the raw material and consumption, and thus comprising cost of dwellings erected, railroads and canals equipped, home-made manufactures, &c., $91,700,000; mining, $100,000,000; fishing, $13,000,000; hunting, $2,000,000; woodcutting, &c., $25,000,000; domestic commerce, $1,500,000,000. The sum represents the net annual earnings of or gross increase of money value derived from railroads, canals, turnpikes, steamboats, &c., employed in the transportation of passengers and commodities within the country, including money value of all incidental labor devoted thereto. Foreign commerce, $190,000,000. Net annual earnings or gross increase of money value derived from exchanging products with foreign countries, that is from foreign imports and exports, and from carrying to and fro of passengers, etc., engaged in improving the face of the country and subduing it to the purposes of society, $24,000,000,000. This sum represents the yearly increase of value of lands and other immovable property brought under cultivation or improved, and comprises the permanent ways of railroads and canals and all real property, giving a total gold value of $6,756,900,000. The same reduced to currency at 1.40, the estimate for 1868, was $9,458,000,000. Of the $6,756,000,000 gold value produced in 1860, $6,000,000,000 were consumed during the same time, leaving a surplus or annual gain of $756,000,000. As the product of 1866 was about the same in gold value as that of 1860, the surplus was of course the same, the latter amounting in currency in 1866 at 1.40 for gold to $1,057,000,000, and of this amount $561,000,000 in currency was paid to the Government in the form of taxes.

A state dinner will be given by the President every Tuesday evening during the session of Congress, to which the members of the Senate will be invited, beginning at the head of the list, and inviting a number to each dinner. A number of Representatives, heads of departments and others, will also be invited each evening.

Two "affairs of honor" have occurred in Washington during the week, and more are promised in certain contingencies. The first was the crossing of weapons by two newspaper correspondents attached to leading New York newspapers, who were tenacious of their status, but whose blows were without force; for, while the willing canes would gravitate downward naturally they were restrained by the unwilling arms of the combatants, and no damage was done. On Monday, Delegate Holbrook of Idaho, made an assault with a cane upon an inoffensive man named Henry Cummins, also of Idaho, in the lobby of Willard's Hotel. The latter was considerably bruised, and, being unarmed, came out second best. The quarrel was a political one, Mr. Holbrook being a Johnson man, and Mr. Cummins, it is said, being a correspondent of some Radical papers.

The Respectable Lottery.

ONE of the sensations of the week is the long-talked-of drawing of the "Crosby Opera House Association." One report says the Opera House has fallen to an obscure man named Lee, in one of the interior towns of Illinois; another says it was drawn by one of the thirty-five thousand unsold tickets retained by Mr. Crosby and put into the wheel with the rest; still another denounces the whole thing as a swindle. It makes little difference what the truth of the matter is. In its best aspect, the scheme was no more or less than a lottery, although many good people invested who would have been horrified at the idea of patronizing one of the old-fashioned cash prize lotteries. Whatever evil effects would flow from the one—the stimulation of a desire to get something of value without rendering an equivalent—must follow the other. It would at least take a subtler logic than we can command to prove the slightest difference in the principles or results of the two.

From Alabama.

THE Supreme Court of Alabama in a case on appeal from the Loudon County Courts, has decided that the existence of the State was not destroyed by secession, and the military and political courts that followed. The Government of the State was a *de facto* Government, though not in harmony with the United States Constitution and Government, and that all acts under the authority of said *de facto* Government before surrender so far as they were executed, are valid. The validity of such acts does not depend upon the conformity of Law to the Constitution of the United States. Guardians who have made investments in Confederate bonds, and received Confederate treasury notes, under authority of the act of December 1st, 1861, in good faith, are entitled to credit on account thereof. This decision in this case settled the question of liability when an administrator received Confederate treasury notes in payment of debts due the estate. Chief Justice Walker delivered the opinion.

From Louisiana.

GOV. WELLS, in his message, favors the adoption of the Constitutional Amendment. He assumes that Congress will require the Southern States to enfranchise all citizens; refers to the July riots, denouncing the assault and the killing of the conventionists as an unwarranted and unprovoked massacre to gratify the hatred felt by the police and mob against the loyalists; reviews the financial condition, urging increased taxation to pay the obligations of the State and for the maintenance of its credit. He gives a favorable report of the progress of the work on the levees. He recommends the universal education of the masses; suggests a division of the school fund; also an appropriation for the establishment of schools for freedmen; advocates a system of internal improvements, and advises an address setting forth inducements for foreign immigration to the State.

A Confidence Woman.

A SUBSCRIBER, residing in Illinois, mentions the performance of a woman in that region by which a credulous German was done out of $500—the sum total of his savings for several years. He was accosted by a woman, recently from "fader land," in reference to the purchase of a farm, which she wished to make. Said she had $7,500 in gold in Chicago, a piano worth $500 and other household property. Offered the man $100 to buy the farm for her, which he did. Finding the woman unmarried, Hans grew amorous and proffered marriage, was accepted and the knot was tied. The parties then started for Chicago, the woman having the man's $500 in her pocket, for the money deposited there, but before reaching that place both woman and money disappeared, leaving the man destitute alike of wife and money.

Pensions.

THE Commissioner of Pensions, in reply to the question as to what amount of money will be required to give pensions to the surviving soldiers of the war of 1812, and to the widows of such as are deceased who are in necessitous circumstances, says 527,654 soldiers were enlisted and 296,916 served sixty days or more. Three-eighths of the last number were supposed to be alive in 1858. The number of surviving widows is estimated at 23,196. This makes the total number of surviviors 13,538, but it must be remembered that the table leaves out of the estimate 147,200 soldiers who served only one month, and 85,538 who served over one month, but assumed to be less than sixty days, which would add, by the same calculation as in the table, 87,277 soldiers and 18,182 widows, making a grand total of 239,997 as alive in 1859.

From New York.

A MEETING has been held to consider the subject of relief for the South. Resolutions were adopted for the appointment of a commission of thirty to raise contributions, and distribute supplies among the destitute without respect to race or opinion, and philanthropic men and women in other cities and communities throughout the North are earnestly invited to aid in the work. Rev. Henry Ward Beecher, Hon. Horace Greeley, Gen. Robert Anderson, and Rev. Dr. Kendrick addressed the meeting.

From the Far West.

THE Indians have surrounded fourteen men at Spring Creek, about fourteen miles from Mud Creek, Nevada. They ran off the Cole & Donelson herd of cattle on the 20th inst. They are doubtless the same Indians who drove off the Government herd at Fort Laramie a few days ago. The weather is extremely cold and pursuit has not been attempted. Unless this thieving is soon stopped, all the stock in the country will be run off.

From the Northwest.

DISPATCHES dated the 25th ult., from La Crosse, Prairie du Chien, Madison, Wis., St. Paul, Minn., and other points west and northwest, say that they are in the midst of the heaviest snow storm which has fallen for many years. It had reached a depth of eighteen or twenty inches on the level, and was drifting badly. Trains had all hauled off.

From Tennessee.

IN the lower branch of the Legislature a bill passed on the first reading to organize, train and equip the loyal militia, and provide for a cavalry regiment in each Congressional District, composed of white and colored men, and subject to the order of the Government. Another bill passed striking the word "white" from the franchise law. Both will become laws in some shape.

RESCUED. — A young lady, while going on board the steamer Hard, moored to one of the wharves of Norfolk, Virginia, accompanied by her mother, was blown overboard by the heavy wind from the northwest. A colored man, connected with the steamer, immediately jumped overboard and rescued her from drowning, as well as freezing. Supporting the young lady with one arm, and swimming with the other, the worthy seaman reached the wheel, and held on until both were drawn up from the freezing river.

NEW COUNTERFEITS. — New counterfeit $5 U. S. Treasury notes (greenbacks) of the issue of March 10, 1863, have just made their appearance in Eastern cities, the South having been pretty well flooded with them. The words "United States" have a scratchy appearance. In general appearance, paper and printing, they are well calculated to deceive. A close imitation of $1 notes is also in circulation. The nose of Chase in the counterfeit is a very different affair from the genuine, and by this bad nose shall the counterfeit be known.

UNLUCKY.—Miss Jarrett of New Jersey, has had a persevering run of ill-luck. In 1863, she dislocated her knee; in 1864, a careless man punched out her right eye with an umbrella; in December, 1865, she was run over by a sleigh and badly injured. A fortnight ago her pocket was picked of $150 on a Brooklyn ferry boat. Going back to hunt for the money, a crowd of skylarking boys knocked her down, dislocating her hip and breaking a rib.

FIVE thousand citizens of Western North Carolina have petitioned the House of Representatives through Speaker Colfax, asking the formation of a new State in that region, or the reconstruction of North Carolina on a loyal basis. The petition was referred to the Committee on Reconstruction.

THE President has approved the bill providing that in addition to the regular meeting of Congress there shall be a meeting on the 4th of March.

A GREAT STORY.—It will be seen by an advertisement elsewhere that the New York Weekly is publishing another new story from the pen of the renowned romancer, Leon Lewis.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Jan. 29, 1867.

THERE is no improvement in the money market, either in the seaboard towns or in the commercial cities at the West. In Philadelphia, Boston and New York, particularly in the latter, there is a more unsettled state of affairs than was apparent a week since. There have been several heavy failures among the brokers, and a few suspensions in other branches of business. The Bank of North America met with a loss of $180,000 by certifying the check of a broker, on the supposition that he would make his account good. The paying teller having doubts of the soundness of the operation, declined to certify, and the matter was referred to Mr. Yelverton President of the Bank, who wrote "good" upon the check. No money was deposited to meet it. The loss does not involve more than half the surplus funds of the Bank. Yet the mortification of Mr. Y. was so great that he was attacked with paralysis the next day, of which he died. The event has caused much greater caution to be observed, for the present at least, in certifying checks. The panic in the stock market in New York, from Thursday to the close of the week, was very great, and prices fell off very rapidly. The weakest stock in the railway market was New York Central. The recent difficulty between the Central and Hudson River and Harlem Roads in regard to freights, and the investigation of the matter by a Committee of the Legislature, at Albany, no doubt operated unfavorably in regard to Central stock, and caused it to touch a lower figure than it otherwise would. On Friday it sold at 97½. There was an advance in Central on Saturday, and sales yesterday were made at 101¼. To show the depreciation in stocks in the last two weeks, we give the prices of a few leading shares Jan. 11th and Jan. 25th:

	Jan. 11.	Jan. 25.	Decline.
New York Central	110¾	97¼	13½
Erie	65¾	55	10¾
Hudson	131	120½	10½
Michigan Southern	80½	66	14½
North-Western Preferred	81½	56½	25
Cumberland Coal	91	33	58

Some shares have not declined as much as those we quote above, but in all the leading stocks, except Governments, there has been a fall of from 3 to 58 per cent. During the worst of the excitement Government securities were slightly depressed, and in some instances sold a fraction off, but there has been no essential decline in 5-20's or 7-30 bonds.

The New York city Bank shares are selling at full rates. Bank of North America, notwithstanding its loss, sold at the close of the week at 107. If the condition of the stock market, as money dealers sometimes assert, is a true barometer indicating the state of monetary affairs, we can hardly anticipate, for a time at least, the fairest kind of a financial atmosphere. It may be prudent for weak vessels to take in sail.

It was announced a few days since that Mr. McCulloch would cease the $4,000,000 per month contraction of the currency—but subsequently the statement was contradicted. The Secretary of the Treasury is not growing popular with commercial men. Some of the ablest financial papers, east and west, are denouncing his measures as ruinous to the business interests of the country. The western journals are especially severe in regard to his policy.

Manufacturers in New England and the Middle States are passing through a severe ordeal. Many firms have spent the money they made the past two or three years, and have now large stocks of goods on hand, that cannot readily be sold. They are therefore short of money, and must be until trade improves.

The Boot and Shoe business at the East is very dull and unsatisfactory.

Louisiana sugar plantations are now offered at very cheap rates.

The State of New York has 3,025 miles of railroad, cost-$152,579,769.

The American Steel and Iron Association recently held a meeting in Washington. The members from different parts of the country report great depression in the iron business.

New England cotton spinners are now purchasing very lightly.

A movement has been made in the Legislature of Massachusetts to repeal the usury laws.

WOOL.—Buyers in the villages in Western New York are taking small lots of wool. For best fleeces the price is 45@47c. Coarse wools are dull. The Chicago Journal says:—"There is no life in the market for wool, and it is useless giving quotations." This applies also to Michigan. In that State there is still a large amount of wool to come forward. The Boston Commercial Bulletin of Saturday says:—"The wool market is firm, with a fair consumptive demand, and the choice grades of both fleece and pulled have rather an upward tendency. Manufacturers exhibit a little more disposition to take hold of fine wool, and pay current rates with less hesitation." The sales in Boston last week foot up 750,000 lbs., at a range of 40 to 70c. for fleece, and 35 to 60c. for pulled. Combing wool, native, 63 to 65c. Foreign wools are dull.

The largest clip of wool in Harrison Co., Ohio, about 2,000 fleeces, was sold last week to a manufacturer in Ware, Mass., at 60c. ₩ lb.

DRESSED HOGS.—The market is much the same as last week. The season of packing at the West generally closes between the 1st and 15th of January. This year the lower prices, and indisposition of packers to operate, has extended the trade somewhat later, but at most points west the business for this season is now nearly over. The number of hogs slaughtered has been very large, and at the prices paid—unless there shall be an active foreign demand, which now seems hardly probable—the profits on this year's packing must be light.

WHEAT AND FLOUR.—The market is dull and inactive. Low grades of western flour have declined in the eastern market about 50c. ₩ bbl.

HOPS.—The light supply at the east keeps prices up, but the demand is not large. Emmet Wells' Circular says the enforcement of the liquor law in New York and Brooklyn will reduce the consumption of hops in those cities about one-third.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		Fruits, Vegetables, Etc.

MORRIS, Burlington, N. J.

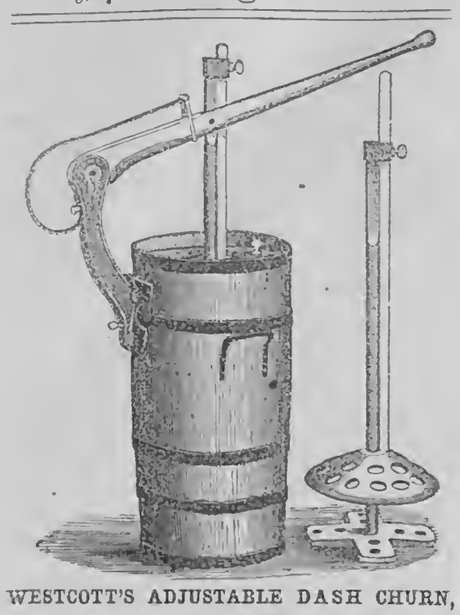
Special Notices.



WESTCOTT'S ADJUSTABLE DASH CHURN, AS RECENTLY IMPROVED.

THE SENECA FALLS CHURN MANF'G CO. respectfully announce to the Butter-Makers of America that they have recently made great improvements in the general construction of their Churn, for which a patent was issued Nov. 13th, 1866—*making three distinct patents that have been granted upon this Churn.* These improvements consist in substituting a *flat* steel spring (which is not liable to break) to lift the dashers, in place of a coiling spring—in making the cover of the Churn in one piece, instead of two,—and in doing away with the screw cut upon the dasher rod for adjusting the upper dasher, which adjustment had to be made inside the Churn. The improvement allows this adjustment to be made outside the Churn, and above the cover, by means of a slide attached to the upper dasher and held in any desired position by a malleable slide and set screw near the top of the dasher rod, (as represented in the cut.) The whole Churn is now of a much better quality, more simple and easily managed, and is also of the proper shape to produce the largest quantity of butter from a given quantity of cream, and to effect this result in the shortest possible time and in the easiest manner. With these improvements it is believed that the Adjustable Dash is by far the

BEST CHURN IN THE WORLD!

It had previously received the highest approval of practical and scientific men and the press, and been awarded the FIRST PREMIUM by the N. Y. State and other prominent Agricultural Societies,—and acknowledged to be the greatest improvement on the old dash Churn yet invented.

This MODEL ADJUSTABLE CHURN is gaining favor all over the country, being universally approved wherever tested. Indeed, the demand has been such that it has thus far been impossible to supply it, though the Company have a large factory constantly in operation, with a view of filling all orders from any part of New York, which territory is reserved. [For cut and description of our Factory, and also of Churn, see RURAL of May 26, 1866.] The Company proposes to sell Rights of Counties and States, except New York, and to furnish Churns to purchasers of such rights at a liberal discount, if they do not wish to manufacture. Every Churn is made of the very best material, and in the best manner.

Sizes and Prices.—Five sizes of the barrel-formed Churn (see cut,) are manufactured, holding from five to thirty gallons. The retail price of No. 1, (the largest size, thirty gallons,) is $16; No. 2, (three-fourths barrel,) $14; No. 3, (half barrel,) $12; No. 4, (quarter barrel,) $10; No. 5, (one-fifth barrel,) $8. *Orders for single Churns must be accompanied by cash.*

☞ Rights will be disposed of for States and Counties, except New York State, which is reserved.

Address **H. P. WESTCOTT,**
Sup't Seneca Falls Churn Mf'g. Co.,
889 Seneca Falls, N. Y.

A CARD.

BUFFALO, Jan'y 25, 1867

D. D. T. MOORE, Esq.:—Having enjoyed the privilege of attending the Convention of Fruit Growers recently held in your city—an association embracing as large amount of talent as we ever saw assembled to discuss the great fruit interests of the country—we cannot (in justice to ourselves and the Association) neglect to return our sincere thanks to its officers and members for their gentlemanly kindness and generous forbearance in permitting us to exhibit our Fruit Green Corn, Corn, &c., and allowing opportunity to explain our method of preserving the same at a time when the large amount of business before the Society rendered it quite inconvenient to do so. As we promise to do and are doing more than the public generally are at this time prepared to believe; and as some doubts were expressed by a few in that Association, at a time too precious for even a short discussion; and as some doubts were expressed by a few as to our ability to hold Grapes without mould or decay, and at the same time retain the natural flavor of the same; we would therefore, as a proof of its practical truths, make the following propositions to the President of the Western N. Y. Fruit Growers' Association;

1st. If the President of the Association will designate place and time, appoint a Committee of five, himself to act as Chairman of the same, we will in their presence put up and deoxygenate a can of Grapes and a can of the same Apples that were exhibited at the Association and generously presented by the same through their gentlemanly Secretary.

2d. We will leave these cans of Grapes and Apples in the hands of the Chairman of said Committee, he simply complying with the conditions required by our system in the perfect preservation of all organic substances..

3d. At the expiration of six months from the time those cans are sealed, they shall be opened and tested in the presence of said Committee, also of one of our firm, and as many others as the Committee may select.

The foregoing propositions we consider as but just to ourselves and the Association, for which we have the highest regard. It is desirable that should the President of the Association see fit to do so, (and of that we have no doubts,) the time and place should be designated soon, as the fruits we shall put up will come from the vicinity of Rochester.

Yours Truly,
STODDARD, TODD & PHILLIPS,
General Agents for Smith's System of Fruit and Meat Preserving.

"Prevention is Better than Cure," is an old adage, and must have been written before COE'S DYSPEPSIA CURE was discovered, for one bottle has, in many instances, cured Dyspepsia in its worst form, whereas it would take one a life-time to learn to so live as to prevent this troublesome disease.

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 855-52t

FOREIGN NEWS BY TELEGRAPH.

QUEENSTOWN, Jan. 23d—evening.—The steamships City of Baltimore and Novia Scotian have arrived here.

LONDON, Jan. 24.—The official journal of Copenhagen denies that the Danish Government has any intention of selling the Island of St. Thomas to the United States. Advices from Paris state that France is disgusted with the measures recently put forward by the Emperor Napoleon.

Quite formidable bread riots have occurred at Greenwich. Dispatches received here state the recent war has ended, and volunteers have gone back to Greece.

LONDON, Jan. 25.—It is announced officially to-day that the British Government has accepted the plan submitted by the Provincial delegates for the union of the Canadian Provinces. A Canadian railway loan for four million pounds sterling, guarantied by the British Government, is soon to be put upon the market.

PARIS, Jan. 23.—Information has been received that the workmen are riotously assembling in the streets of Madrid. Their clamor is for bread. A serious outbreak is anticipated and the Government is taking active measures to meet it.

PARIS, Jan. 24.—The French, Russian and Prussian Governments have resolved to negotiate in common with the Porte upon the Eastern question.

LIVERPOOL, Jan. 24—Eve.—Steamship Liberian from Portland, January 12, arrived at Greek Island this noon. The cotton market closes firm, with sales of 8,000 bales during the day. Middling New Orleans are quoted at 15½. The market for goods at Manchester is dull and drooping. The affairs of the Atlantic and Great Western Railroad have been referred to a committee of inquiry.

BERLIN, Jan. 25.—Count Bismarck declines a seat in the German diet. The Duchies have been formally annexed to the German Confederation. The German diet is to meet for the first time on the 24th of February.

LONDON, Jan. 25.—Eve.—Consols for money 90¾; United States 5.20's, 72¾; Illinois Central 81; Erie 43.

PARIS, Jan. 25—Eve.—United States 5.20's 72¼.

LIVERPOOL, Jan. 26.—Cotton steady and prices are unchanged. Middling uplands 14½d. The provision market is active. Beef advanced 2s 6d for American. Bacon firm.

Mixed Western corn has declined to 42s to 42s 6d per quarter.

LONDON, Jan. 26.—Austria is strongly increasing her military forces on her Turkish and Russian frontiers in apprehension of war.

MADRID, Jan. 26.—Spain is about to reorganize her army, which is to consist of 200,000 men, excluding the reserves.

Fanning, 71 23d St., N. Y., Piano $450; Mrs. G. Parker, Boston, Mass., Gold Watch, $100.

A Chance to draw any of the above Articles by purchasing a Sealed Ticket for 25 cents.

OPINIONS OF THE PRESS.

THE NEW YORK PRIZE ASSOCIATION advertise their scheme in our columns to-day. Their offers are tempting to those who have a weakness for lotteries. The original investment is but twenty-five cents, and this entitles every one to something. If, on ascertaining what that something is, the subscriber chooses to pay one dollar for expenses, he can obtain the article drawn. We have reason to believe that this association is one of substance and good faith. Much capital is behind it, and the plan upon which operations are conducted, is calculated to draw a large share of business. As an example of the good faith of those who manage it, we may state that a lady of our acquaintance last week DREW A GOLD WATCH WHICH WAS PROMPTLY FORWARDED TO HER. The thing is worth trying at all events.—*Sunday Times*, Boston, Jan. 13, 1867.

This is not a "Lottery Swindle," offering "Houses and Lots," and "$10,000 in Greenbacks," as some do who never put such tickets in the wheel, and who do not give one prize in one thousand tickets. Messrs. Ray & Co. distribute thousands of prizes, varying in value from $100 to $500. They draw every day, and one ticket draws less than one dollar in value. YOU WILL KNOW WHAT YOUR PRIZE IS BEFORE YOU PAY FOR IT. We know the firm personally, and have witnessed their mode of doing business. Purchasers receive the article drawn without delay or postponement.—*Gazette*, N. Y., Dec. 8, 1866.

Entire Satisfaction Guaranteed to All.

☞ 6 Tickets for One Dollar, 13 for Two Dollars, 33 for Five Dollars. Great Inducements to Agents.

All Letters should be addressed

J. H. RAY & CO.,
599 Broadway, New York.

888-2t No. 8 West Third-st., Cincinnati.

THE GREATEST STORY OF THE AGE!

In keeping with the promise which we made some time back, to keep

THE NEW YORK WEEKLY

in the front rank of literary journalism, and to maintain its claim to the position which it undoubtedly holds—that of being the leading story and sketch paper of the United States, if not of the world—we are now gratified to be able to announce that we have commenced the publication of

ANOTHER GREAT STORY.

It is from the pen of that world renowned romancer,

LEON LEWIS,

Author of "The Silver Ship," "Syria the Jewess," "The Step-Daughter's Portion," etc., etc. It is entitled

THE WATER WOLF;
OR,
THE DEMON OF THE BERMUDAS.

The mere announcement of a story by a writer so extensively and favorably known as Leon Lewis, would perhaps be enough to cause everybody to read it, but

"THE WATER WOLF"

has especial claims to public approval, in that it is somewhat different from anything else which its gifted author has thus far given to the world. As its title implies, it is a story of the Bermudas, and partakes largely of the wild, the weird, and the grand. The heroine is a most glorious creation—a creature all beauty and sunshine, tender, impulsive, generous and courageous—who is cast away upon one of the Bermuda Islands, and falls into the hands of a desperate villain, who is a deadly enemy to her father. While here, she encounters the dread scourge of the Islands, the frightful

WATER WOLF,

the simple description of which fearful monster causes the flesh to creep with horror. The story is full of action at the very start, and the reader finds his attention enchained before he has read a dozen sentences. It is full of the most thrilling situations, and possess a plot of the greatest intricacy and of the most ingenious character.

THE WATER WOLF

will unquestionably add greatly to the already great reputation of LEON LEWIS, and will undoubtedly be extensively read. Recollect that

The Water Wolf;
OR,
THE DEMON of the BERMUDAS,
BY LEON LEWIS,

IS NOW READY, AND FOR SALE EVERYWHERE.

OUR TERMS.

THE NEW YORK WEEKLY is sold by all News Agents throughout the United States. The price is SIX CENTS, but in cases where Agents have to pay extra freight, a higher price is charged. When there is a News Agent in the town, we desire our friends to get the WEEKLY through him. We do not wish to mail the paper except in places where there is no other means of getting it. When sent by mail, single copies, $3 per annum; four copies, $10, which is $2.50 a copy; eight copies $20. The party who sends us $20 for a club of eight copies, (all sent at one time,) will be entitled to a copy *free*. Postmasters and others who get up clubs, in their respective towns, can afterward add single copies at Two Dollars and Fifty Cents.

The NEW YORK WEEKLY and the ILLUSTRATED LITERARY ALBUM will both be sent for $6 ℔ annum.

☞ SPECIMEN COPIES SENT FREE.

STREET & SMITH, Proprietors.
11 Frankfort St., New York.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, illustrated. Price $2—sent post-paid.
Address D. D. T. MOORE, Rochester, N. Y.

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ℔ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ℔ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1.20 ℔ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ℔ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.

[For manner of getting up Clubs see former editions of this paper.] 888-tf

FLAX.

MALLORY & SANFORD'S IMPROVED FLAX and HEMP BRAKES,

As now made, are the strongest and best ever used. They occupy about 5 feet square, weigh about 1,000 lbs., require one man and a boy, and one to two horse-power to work them; breaks from 2,000 to 3,000 lbs. Flax straw in 10 hours, taking out 65 to 75 per cent. of the woody matter. This machine will save 120 lbs. to the ton more than any other machine in the world. It will break tangled straw as well as straight. We have also an entirely *new tow shaker and picker*, works perfectly and does the work quicker and better than any other machine, and prepares the stock for Rope. Also a *new tow comber*, which cleans and straightens the tow, free from shrive, rapidly making it fine and straight. Send for circular or see machines in operation at 98 William St., New York.
Address JOHN W. QUINCY, Treasurer,
No. 98 William St., New York.

THE SNOW-FLOWER.

BY ALICE GARY.

THE fields were all one field of snow,
The hedge was like a silver wall;
And when the March began to blow,
And clouds to fill, and rain to fall,
I wept that they should spoil it all.

At first the flakes with flurrying whirl
Hid from my eyes the rivulet,
Lying crooked, like a seam of pearl
Along some royal coverlet—
I stood, as I remember yet,

With cheeks close-pressed against the pane,
And saw the hedge's hidden brown
Come out beneath the fretting rain;
And then I saw the wall go down—
My silver wall, and all was brown.

And then, where all had been so white,
As still the rain slid slant and slow,
Bushes and briars came out in sight,
And spikes of reeds began to show,
And then the knot-grass, black and low.

One day, when March was at the close,
The mild air balm, the sky serene,
The fields that had been fields of snows,
And, after, withered wastes, were seen
With here and there some tender green;

That day my heart came sudden up
With pleasure that was almost pain—
Being in the fields, I found a cup,
Pure white, with just a blood-red vein
Dashed round the edges, by the rain.

The rain, which I that wild March hour
So foolishly had wept to see,
Had shaped the snow into a flower,
And thus had brought it back to me
Sweeter than only snow could be.

The Story Teller.

"SENT BY EXPRESS."

MARIAN HARLAN was alone in the world—her mother just buried.

She was a beautiful, brown-haired girl, with soft, shy eyes of a velvet-gray, and rosy lips compressed to a firmness far beyond her years. For after all she was only seventeen, and so Deacon Gray was telling her, as he sat by the fire spreading his huge hands over the tardy blaze and asked:

"But what are you going to do to 'arn your bread and butter?"

"I don't know. Mamma had an uncle in New York who ——"

"Yes, yes; I've hearn tell about him; he was mad 'cause your mother did not marry just to suit him, wasn't he?"

Marian was silent. Deacon Gray waited a few minutes, hoping she would let him into her secret meditations; but she did not, and the Deacon went home to tell his wife that "that Harlan girl was the queerest creature he had ever come across."

In the meantime Marian was packing her few scanty things into a little carpet bag, by the weird flickering light of the dying wood fire.

"I will go to New York," she said to herself, setting her pearly teeth firmly together.

"My mother's uncle shall hear her cause pleaded through my own lips. Oh I wish my heart would not throb so wildly! I am no longer meek Minnie Harlan; I am an orphan all alone in the world who must fight life's battle with her own single hands."

Lower Broadway at seven o'clock P. M. What a Babel of crashing wheels, hurrying humanity and conglomerate noise it was. Minnie Harlan sat in the corner of an express office, under the flare of gas lights, surrounded by boxes, and wondering whether the people ever went crazed in this perpetual din and tumult. Her dress was plain, gray poplin, with a shabby, old-fashioned little straw bonnet tied with black ribbons, and a blue veil lay on her lap. She had sat there almost two hours, and was very, very tired.

"Poor little thing," thought the dark-haired youngest clerk nearest her who inhabited a sort of wire cage under a circle of gas lights.

"Mr. Evans."

The dark-haired clerk emerged from his cage with his pen behind his ear in obedience to the beckoning figure of his superior.

"I have noticed that young woman sitting here for some time; how came she here?"

"Expressed on, sir, from Millington, Iowa."

As though Minnie Harlan were a box or a paper parcel.

"Who for?"

"Consigned to Walter Harrington, Esq."

"And why has she not been sent for?"

"I sent up Mr. Harrington's address to notify him some time ago. I expect an answer every moment."

"Very odd," said the gray-haired gentleman.

"Yes, sir, rather."

Some three-quarters of an hour afterwards, Frank Evans came to the girl's side with an indescribable pity in his hazel eyes.

"Miss Harlan, we have sent to Mr. Harrington's residence—"

Minnie looked with a feverish red upon her cheeks, and her hands clasped tightly on the handle of her faded carpet bag.

"—And we regret to inform you that he sailed for Europe at 12 o'clock this day."

A sudden blur came over her eyes; she trembled like a leaf. In all her calculations, she made no allowance for an exigency like this.

"Can we do anything further for you?" he asked.

"Nothing; no one can do anything now."

Frank Evans had been turning away, but something in the piteous tones of her voice appealed to every manly instinct within him.

"Shall I send you to any other of your friends?"

"I have no friends."

"Perhaps I can have your things sent to some hotel?"

Minnie opened the little leathern purse and showed him two ten cent pieces, with a smile that was almost a tear.

"That's all the money I have in the world."

So young, so beautiful, and so desolate! Frank Evans had been in New York all his life, but he had never met with an exact parallel case to this. He bit the end of his pen in dire perplexity.

"But what in the world are you going to do?"

"I don't know, sir. Isn't there a work-house or some such place I could go to, until I could find something to do?"

"Hardly." Frank Evans could scarcely help smiling at poor Minnie's simplicity.

"They are putting out the lights and preparing to close the office," she said, starting to her feet, and added "I must go somewhere."

"Miss Harlan," said Frank, quietly, "my home is a very poor one; I am only a five hundred dollar clerk; but I am sure my mother will receive you under her roof for a day or two, if you can trust me."

"Trust you?" Minnie looked at him through violet eyes obscured in tears. "Oh, sir, I should be so thankful."

"How late you are, Frank. Here, give me your overcoat; it is all powdered with snow, and—"

But Frank interrupted his bustling cherry-cheeked mother, as she stood on tip-toe to take off his outer wrappings.

"Hush, mother, there's a young lady down stairs."

"A young lady, Frank?"

"Yes, mother; expressed on from Iowa to old Harrington, the rich merchant, and she is entirely alone. Mother, she looks like poor Blanche, and I knew you wouldn't refuse her a corner here until she could find something to do."

Mrs. Evans went to the door and called cheerily out:

"Come up stairs, my dear; you're welcome as flowers in May. Frank, you did quite right."

The days and weeks passed on, and still Minnie Harlan remained an inmate of Mrs. Evans' humble dwelling. "It seems just as though she had taken our dead Blanche's place," said the cosy little widow, "and she is so useful about the house. I don't know how I managed without her."

"Now, Minnie, you are not in earnest about leaving us to-morrow?"

"I must, dear Mrs. Evans. Only think; I have been here two months to-morrow, and the situation as governess is very advantageous."

"Very well; I shall tell Frank how very obstinate you are."

"Dearest Mrs. Evans, please don't! please keep my secret."

"What secret is it that is to be so religiously kept?" asked Frank Evans, coolly walking into the midst of the discussion, with his dark hair tossed about by the wind, and his hazel brown eyes sparkling archly.

"Secret!" repeated Mrs. Evans, energetically wiping her dim spectacled glasses. "Why, Minnie is determined to leave to-morrow."

"Minnie."

"I must, Frank; I have no right further to trespass on your kindness."

"No right, eh? Minnie, do you know that the house has been a different one since you came into it? Do you suppose we want to lose our little sunbeam?"

Minnie smiled sadly, but her hand felt very cold and passive in Frank's grasp.

"You'll stay, Minnie?"

"No." She shook her head determinedly.

"Then you must be made to stay," said Frank. "I've missed something of great value lately, and I hereby arrest you on suspicion of the theft!"

"Missed something!" Minnie rose, turned red and white. "Oh, Frank, you never can suspect me!"

"But I do suspect you. In fact I am quite sure the article is in your possession."

"The article!"

"My heart, Miss Minnie! Now look here; I love you, Minnie Harlan, and I will be a good and true husband to you. Stay and be my little wife!"

So Minnie Harlan, instead of going out as governess, according to the programme, married the dark-haired clerk in Ellison's express office.

They were quietly married early in the morning, and Frank took Minnie home to his mother, and then went calmly about his business in the wire cage, under the circlet of gas-light.

"Evans!"

"Yes, sir."

Frank, with his pen behind his ear as of yore, quietly obeyed the behest of the gray-headed official.

"Do you remember the young woman who was expressed on from Millington, Iowa, two months since?"

"Yes, sir; I remember her."

A tall, silver-haired gentleman here interposed with eager quickness:

"Where is she? I am her uncle, Walter Harrington. I have just returned from Paris where the news of her arrival reached me! I want her; she is the only living relative left me!"

"Ah! but sir," said Frank, "you can't have her."

"Can't have her! what do you mean? Has anything happened?"

"Yes, sir, something has happened; Miss Harlan was married to me this morning.

Walter Harrington started.

"Take me to her," he said, hoarsely, "I can't be parted from my only relative for such a mere whim."

"I wonder if he calls the marriage service and wedding ring mere whims," thought honest Frank; but he obeyed in silence.

"Minnie," said the old man, in faltering accents, "you will come to me and be the daughter of my old age? I am rich, Minnie, and you are all I have in the world."

But Minnie stole her hand through her husband's arm.

"Dearest uncle, he was kind to me when I was most desolate and alone. I cannot leave my husband, Uncle Walter; I love him!"

"Then you must both of you come and be my children," said the old man, doggedly. "And you must come now, for the great house is as lonely as a tomb."

Frank Evans is no longer an express clerk, and pretty Minnie moves in velvet and diamonds; but they are quite as happy as they were in the old days, and that is saying enough. Uncle Walter Harrington grows older and feebler every day, and his two children are the sunshine of his declining life.

Wit and Humor.

HOMELY GIRLS.

THE editor of the Cleveland Herald, having been tolerably profuse in his compliments to the pretty girls of Cleveland, has been requested to say a good thing in behalf of the homely ones, and he does it thus:

First—The homely girls of Cleveland are in a hopeless minority, but they mean well. 2. They go to church every Sunday, and are fond of their meals. They had rather have their meals regularly than new bonnets. 3. They understand their business and wear No. 6 gaiters. 4. They are bright, intelligent, devoid of low jealousy, fond of music, dance at parties as though it was the chief end of life, and always go in when it rains. 5. They always thank the gentlemen for giving them seats in the street cars; never flirt with the boys, because it is out of their line, and keep out of the fire. 6. They never have half a dozen young sprigs keeping company with them. 7. They wash their own handkerchiefs, iron their own collars, and darn their own stockings. 8. They never wear waterfalls that weigh over one hundred and fifty pounds, and have neither "rats" nor other animals in the hair. 9. They don't call the young trash "perfectly splendid." 10. They never eat between meals. 11. They are all going to get married. 12. They will all marry well. 13. Their children will be bright and shining lights in the world. 14. They won't keep hired girls till their husbands can afford them. 15. They sleep under musquito bars when convenient. 16. They can make coffee and nut cakes, and can do chamber-work. 17. They are O. K.

Hurrah for the fellow who wrote that. His head is level. We like homely girls ourself, with their quiet, kind, cheerful ways. We endorse them.

FALSE CALVES.—The "gay deceiver" who runs the local department of the New Albany (Ind.) Ledger tells of a new invention of which he has a patent, gotten up for the purpose of determining whether or no a lady wore patent calves. It was a cane with a fine needle in the end of it. As a lady passes, with her beautiful turned pedal extremities exposed to view by the "filter," the calves are slightly punctured with the cane. If the lady kicks, the calves are genuine; if she does not, they are "false."

A CHINAMAN'S OPINION OF RUM.—Taking a walk one day through the commissariat stores in Hong Kong with a friend, I came to a portion of that establishment where four Chinamen were emptying a large tub of rum, which they were carrying in gallon measures to another portion of the building. Addressing myself to the one who was apparently the head of the party, I inquired:—"Do you like rum, John?" "No, sir," said the Chinaman. "Why not?" "Rum not proper, sir; make Chinaman *number one fool*."

INALIENABLE RIGHTS.—Every woman has a right to be any age she pleases, for if she were to state her real age no one would believe her. Every woman who makes puddings has a perfect right to believe that she can make a better pudding than any other woman in the world. Every woman has a right to think her child the "prettiest baby in the world;" and it would be the greatest folly to deny her this right, for she would be sure to take it.

ON one occasion when John Sime, the well-known banker of San Francisco, was beaten several times in succession at the game of whist, Will King indulged in the most uproarious laughter, grinning from ear to ear, much to the disgust of Mr. S., who, turning upon him reprovingly said, "What a pretty object your face would make should it become suddenly petrified!" "Yes," said a heretofore silent partner, "it would become grin-stone."

A POET has undertaken to immortalize a recent flat-boat calamity on Oil Creek. The following melancholy stanza tells the whole story:

"She heaved and sot, and sot and heaved,
And high her rudder flung;
And every time she heaved and sot
A worser leak she sprung."

"WHERE is the East?" inquired a tutor, one day, of a little pupil. "Where the morning comes from," was the prompt and pleasant answer.

A CLERGYMAN gave a toast that was not very gallant, at a late firemen's celebration:—"Our fire engines—may they be like old maids—ever ready, but never wanted."

WHERE is paper money first mentioned in the Bible? When the dove brought the green-back to Noah.

THE man who courts a young lady in the starlight probably expects to get a wife in a twinkling.

Congenial spirits meet?

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

PUBLISHER'S SPECIAL NOTICES.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Local Club Agents.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

The Price of the Rural.—If any one objects to the price of the RURAL, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the RURAL (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the RURAL NEW-YORKER is really the cheapest paper of its class.

[From our Regular Edition of Jan. 12.]

—We commence the new year with a *bona fide* edition of *Seventy-Five Thousand Copies*, in the belief that we shall have that number of subscribers. But whether we shall increase or diminish this edition will depend upon the efforts and success of Agent-Friends throughout the Country. What say, Gentlemen and Ladies, Boys and Girls of the gallant "Rural Brigade?" Must we recede, or will you cause a demand for full One Hundred Thousand Copies of Vol. XVIII of the RURAL NEW-YORKER?

A COUGH, A COLD, OR A
SORE THROAT,
REQUIRES IMMEDIATE ATTENTION, AND SHOULD BE CHECKED.
IF ALLOWED TO CONTINUE,
Irritation of the Lungs, a Permanent Throat Disease, or Consumption,
IS OFTEN THE RESULT.

BROWN'S BRONCHIAL TROCHES

HAVING A DIRECT INFLUENCE TO THE PARTS, GIVE IMMEDIATE RELIEF,

For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases,

TROCHES ARE USED WITH ALWAYS GOOD SUCCESS.

Singers and Public Speakers

will find *Troches* useful in clearing the voice when taken before Singing or Speaking, and relieving the throat after an unusual exertion of the vocal organs. The *Troches* are recommended and prescribed by Physicians, and have had testimonials from eminent men throughout the country. Being an article of true merit, and having *proved* their efficacy by a test of many years, each year finds them in new localities in various parts of the world, and the *Troches* are universally pronounced better than other articles.

OBTAIN only "BROWN'S BRONCHIAL TROCHES," and do not take any of the *Worthless Imitations* that may be offered. SOLD EVERYWHERE. 881-13teo

EMPLOYMENT.—The Auburn Publishing Company offer THE BEST HISTORY OF THE REBELLION. *Latest, Cheapest, most Complete.*
THE BEST ILLUSTRATED NATURAL HISTORY.
THE BEST WORK ON THE DOMESTIC ANIMALS.
THE BEST WORK ON THE FARM AND GARDENS.
THE BEST FAMILY RECEIPT BOOK, &c., &c.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

NO TRAVELING AGENTS are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

☞ FOR TERMS and other particulars see last page.

WHEAT GROWING IN WESTERN N. Y.

WE should like to have the subject of wheat culture in Western N. Y. discussed somewhat freely in our columns by farmers of wide experience and accurate observation. No more appropriate or vital question for our Farmers' Club could be found, and it would have an interest extending as widely as the culture of the plant itself,—for it is likely that circumstances which have modified its prosperity in this section may operate sooner or later in other localities as well.

We take it for granted that none will dispute the assertion that wheat culture in Western N. Y. is far less successful now, and has been for some years past, than it was formerly. Once a farmer could safely *rely* on the success of his wheat crop; yields of thirty-five and forty bushels per acre were common,—now wheat growing is a sort of risky venture, which high prices only stimulate many to take, and we would travel some distance to look on the standing field of wheat that would "shell out" the forty bushels per acre. And not only has the product diminished, but the quality has likewise deteriorated. Genesee flour is not a brand as celebrated as in the days of the past. What are the causes of this state of wheat culture, and what are the forces we must employ to remove them? These are questions of present and future importance to the farmers, not only of Western and Central New York, but of the whole wheat growing region of the United States and Canada.

Some will answer that the *grain elements* in the soil have been diminished to such an extent by overcropping, that a proper supply of them is lacking, but that the *straw elements* have been returned in the manure, and, therefore, we get a good growth of straw but a light yield of grain. But others will refute this argument by pointing to virgin fields but recently cleared of forest, showing by *their* yield that the theory cannot be correct. Some will ascribe the failure to the ravages of the midge and the consequent deterioration of the wheat plant; but the results from the best imported seed in seasons and localities free from the ravages of the midge, will not sustain this assertion. Others may attribute it to the increased severity of the climate consequent upon the removal of the forests, but the heavy growth of straw in numerous instances shows that the vigor of the plant is not diminished by the severity of the winter. Even high manuring and perfect protection, with good seed, fail to produce such crops as once made the valley of the Genesee famous for their quantity and quality.

Some specific cause, doubtless there is, which operates to deteriorate the wheat crop. If we can understand it, skillful culture most probably can control it; let us discuss the subject, compare notes, make experiments, until the golden grain fields shall wave as richly as of yore in the Valley of the Genesee and other wheat growing sections of the Empire State.

THE CARROLL MANSION, CARROLLTON, MD.

THE Doughoregan Manor of CHARLES CARROLL of Carrollton was among the last, if not the last, of those Baronial estates which came down from Colonial times. It contained nearly 13,000 acres, and until quite recently was entailed. The entail, however, has been broken and the lands divided among the heirs, and in a few years it will have passed into the hands of strangers, and exhibit a more attractive appearance than at present, occupied by tenants.

The mansion, of which the above cut is a representation, stands on a gentle eminence some half a mile from the Frederick Pike, and near the 15th milestone from Baltimore. It is approached from the highway by what would have been a magnificent avenue, if, instead of the scraggy yellow locust, the original proprietor, some fifty or sixty years ago, had planted the native trees of the adjoining forest—oaks, chestnuts, &c. The yellow locust makes valuable fence posts, but a very unsightly shade tree.

The architectural appearance of the mansion has nothing particularly inspiring or attractive, and but for its historic associations would hardly challenge a second look by the casual passer. The center or main building must have been built nearly or quite a hundred years ago, as the chapel on the right-hand side is the second Roman Catholic chapel ever built in Maryland. The chapel was originally built of hewn logs, but during the lifetime and occupancy of the late Col. CHAS. CARROLL was weather-boarded, painted and put in complete repair, both inside and out, and is now a very pretty little private chapel. The services of the church are held there every Sabbath. During his life the mansion was repaired and enlarged to its present dimensions.

In the days of its prosperity, the CARROLL Mansion was one of the noted places for its elegant hospitality—and I have heard many a sigh at the remembrance of the good times which were had there during the holidays. My informant has often been there when it was not unusual for a hundred or more guests to be at one time participating in the festivities of the occasion. The large retinue of servants, (nearly one thousand,) the gay equipages, the cavalcades of horsemen, and women with their servants, trooping up the broad avenue, must have made it indeed a pleasant time to remember. But the scene has changed—and if it were a proper time and place to moralize, a very entertaining chapter could be written upon the changes which have come over the country since the last of the signers of the Declaration of Independence ("CHARLES CARROLL of Carrollton,") stood in the front door or worshipped in the adjoining chapel. T. C. P.

RURAL FARMERS' CLUB.

The Silver Pheasant Fowls.

MR. G. W. CONE, Stanley Corners, N. Y., commended this variety of fowls some weeks since in the RURAL. He now writes us again in this wise:—"Having received letters of inquiry from RURAL readers, in various parts of the country, in regard to my fowls, I wish, with your permission, to reply briefly through the columns of your paper.

"First, I have no fowls for sale. If I conclude to ship my eggs this spring for setting I shall advertise in the RURAL, otherwise no one need write for them.

"The Silver Pheasants are medium size, handsome, easy keepers, and very peaceable and orderly. For the last two years my garden has been on one side of my barn, and cornfield on the other, with no fences. I have never kept my fowls confined, nor lost a hill of corn. I usually have a little corn *lying around loose* where the hens can get it without scratching for it. They are very hardy. Dr. BURNETT speaks of them as being valuable only as ornaments. Last year my hens averaged over two hundred (200) eggs each, and every pullet that I raised last summer paid me more than a dollar in eggs before Christmas. If the Doctor, or "any other man," has a better *paying* breed I would like to see them advertised for sale. I will undertake with my Pheasants, this year, to make more clear money, in proportion to the number, than any other person with other varieties. We will report honestly at the end of the year, and the one who shows the smallest figures shall send to the proprietor of the RURAL one gallon of oysters, (charges prepaid.) Here is a challenge for the whole world. Who accepts?"

Sowing Plaster Early.

J. HEALY, South Dansville, writes:—"In answer to the question of C. E. HOOD, 'whether it will do as well to sow plaster in February or March as in April or May, if the ground is clear from snow?' I would say that for the last five or six years I have sown my plaster in March with good results, and have more than once sown it on snow three or four inches deep. I believe the beneficial effects of plaster are more apparent when sown in March than when sown in May or June. Some four or five years ago I prepared a field of barley by plowing in the fall. In March, while the ground was yet frozen, I sowed it with plaster, three pecks to the acre, omitting one lane fourteen paces wide through the center of the field. In May I sowed it with barley, and seeded it with clover and timothy, mixed half and half. At harvest time there was at least one-third less barley on the land not plastered than on either of the adjoining lands, and the difference was still more apparent in the clover next year, and the effect was perceptible still the third year, in that the clover on the omitted land was nearly all killed out, while on the rest of the field it was not. On land that I intend to seed down I always sow plaster, as it gives the young clover a much better start than it otherwise would have. In answer to the second question, it is my opinion, formed more from observation than my own experience, that sand and gravel soils *feel* the effects of plaster more sensibly than the heavier soils, and clover more than timothy."

A Couple of Good Hogs.

A CORRESPONDENT writing from Vernon, N. Y., informs us that Mr. JOHN BETTS of that place, killed a pig nine months old which weighed, dressed, just four hundred and seventy-seven pounds. He adds the query; who can beat it? Another correspondent from Allegany Co., says that Mr. M. S. DAVIS of that place, slaughtered a pig, recently, sixteen months old, that weighed, dressed, six hundred and forty-eight pounds. We leave it to our readers to say which beat.

Marl as a Fertilizer.

J. C. BURROUGHS, Hudson, Ohio, asks for information, through our Farmers' Club, respecting the value of marl as a fertilizer, as compared with plaster, especially for grapes, and its relative value burned or unburned. The bed which he possesses is nearly pure, being ninety per cent. marl; the soil to which he proposes to apply it is a gravelly or sandy loam. Who will furnish us with experience in the use of marl?

Rotation of Crops Named.

JOHN R. VOLCK, Angola, Ind., names this rotation of crops for his section of country: Divide that part of the farm designed for tillage into six equal fields; plow sod in the spring for corn, next spring sow to oats, the autumn following to wheat, seeding with clover and timothy. Mow one year, and pasture two, then plow for corn again. There can be enough barnyard manure made to manure one-sixth of the farm each year; put this on the field for oats. By all means keep something constantly growing on the ground.

COMPARATIVE VALUE OF FERTILIZERS.

Experiments on Worn-out Soil with "Boston Flour of Bone," Hen, Hog and Privy manures, Unleached Ashes, Plaster, Salt and Lime.

BEING forced by the ravages of the white grub in my plantation of small fruits, to depend upon something else for a livelihood, last spring I leased a twenty-acre field that had been cropped for at least eighteen years without rest, pasturing or the return of anything in the shape of manure to the soil. On seven acres, by twice plowing and applying thirty bushels of unleached ashes to the poorest part, I harvested 145 bushels (of 50 lbs.,) of best quality buckwheat. Five acres were occupied with oats for fodder, peas, sweet corn and potatoes. The remaining eight acres, being very level and of even quality—or, as the first experiment will show, without any quality, I planted to corn. The soil is of a black and loamy nature, with a *limestone* rock for bottom. Its natural products were quack Canada thistles, June grass and a perfect torrent of quick-growing, low-creeping, climbing, choking weed that I call wild buckwheat. Yield 400 bushels sound ears and 100 bushels unsound.

Two acres in the center were devoted to experiments; five rows, of thirty-two rods in length, containing one-fifth of an acre were occupied with such experiment. First—five rows were without manure or top-dressing; yield, three bushels very doubtful good corn and three bushels very poor corn. Cost per acre—just as much plowing, cultivating and harvesting as a good crop. Yield per acre—fifteen bushels good and fifteen bushels poor corn. This is, of course, the standard for comparison in what follows.

Second—five rows, immediately after the corn was covered, were top-dressed with a mixture of one peck of salt and one peck of air-slaked lime. Yield—eight bushels good and three bushels poor. Cost of mixture for one acre $1.50; extra labor, fifty cents; total, $2. Gain per acre, fifteen bushels good corn.

Third—five rows were dressed with one peck of Boston flour of bone, dropped in the hill and covered with the corn. Yield—six and a half bushels sound and four bushels poor. Cost per acre, $4.16; add fifty cents for dropping; total, $4.66. Gain, seventeen and a half bushels good and five bushels poor.

Fourth—five rows were top-dressed immediately after planting with a mixture of one peck of plaster and one bushel of unleached ashes. Yield, seven and a half bushels sound and three bushels poor. Cost of mixture for an acre $1.25; extra labor, fifty cents; total, $1.75. Increase, twenty-two and a half bushels sound corn and no increase of poor.

Fifth—five rows were dressed with a mixture (dropped in the hill and covered with the corn,) of one-fifth of a bushel of Boston flour of bone, one-fifth of a bushel of plaster and two bushels of unleached ashes. Yield—ten bushels good and three of poor corn. Cost of mixture per acre, $5.66; extra labor, fifty cents; total, $6.16. Increase of yield per acre, thirty-five bushels sound corn. The six acres not devoted to experiments were planted with this mixture with the same uniform results.

Sixth—five rows were manured with the contents of the privy vault, composted with a black, gravelly soil and one bushel of plaster, dropped in a shallow furrow and covered before planting the corn. Yield—thirteen bushels good and three of poor. I estimate the cost of manuring an acre at $8. Gain, fifty bushels good corn.

Seventh—five rows with hog manure, and eighth, five rows with hen-droppings. Treated the same way as the last and at the same estimated cost, and gave the same results.

Ninth—five rows were top-dressed immediately after planting with a mixture of one bushel of unleached ashes and one-fifth of a bushel each of plaster, air-slaked lime and salt. Yield—fifteen bushels of good and two and a half of poor corn. Cost of mixture for one acre, $2.53; extra labor, fifty cents; total, $3.03; making a gain of sixty bushels good and two and a half bushels less of poor corn than the first experiment, where no manure was used and at a cost of only about five cents per bushel. What is very noticeable is that the yield of these five rows is much more than those of the second and fourth combined, where the salt and lime were applied to five rows and the ashes and plaster to the other five.

The hen and hog manure made a very rank growth of stalks and leaves and one bushel extra of poor corn. The five rows with night soil growing between these lacked one foot in height. The five rows with ashes, plaster, salt and lime, growing next the hog manure, showed full eighteen inches less in height, though exceeding it in yield. The growth of stalks in the other experiments, including the five with flour of bone, was about the same as this last; but in No. 5 and the field of six acres, where the flour of bone was mixed with asher and plaster, the growth of stalks was quite rank. H. H. DOOLITTLE.

Oaks Corners, N. Y., Jan., 1867.

ABOUT LOWER DELAWARE.

R. B. U. writes us from Milford, Del., giving some information of interest to those meditating a "change of base" to a milder climate. "The climate," he writes, "is mild and healthy; we are strangers to extremes of heat or cold. The farmer can work all the year; I have not seen a dozen days in two years in which I could not work in perfect comfort out of doors. The sea breeze modifies the heat of summer, and the nights are pleasant in the hottest season. Stock does not require feeding more than half as long as in Northern New York. The soil, although much run, under an exhaustive and shiftless system, is very generous, and easily brought back to a condition of fertility. Fruit and vegetables grow luxuriantly, and the transportation being good their culture is profitable. The land is slightly rolling and easily tilled. There is great variety of surface soil, but the subsoil is wholly clay. Delaware must become the great source of supply of peaches; single crops have, in some instances, paid for the farms on which they were grown. Sweet potatoes flourish, and so do all berries. Timber is plenty. Schools, churches, &c., convenient. You may bring your religion and your politics, or any of your wholesome Northern ideas here and find not only toleration but *appreciation*."

—We have lately received several communications speaking of the climate, soil, topography, etc., of various Southern localities—especially Virginia, Missouri and Tennessee—extracts from which we purpose giving in future numbers.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

EXECUTIVE COMMITTEE MEETING.—The Executive Committee of the New York State Sheep Breeders' and Wool Growers' Association will meet at the American Hotel, in Auburn, on Wednesday, February 20th, at 10 o'clock A. M., to make arrangements for the next State Sheep Fair. HENRY S. RANDALL, *President.*
H. D. L. SWEET, *Secretary.*

SHEEP ON WORN-OUT SOUTHERN LANDS.

CHARLES A. MCNUTT, Leon, Ashtabula Co., Ohio, writing to us in behalf of himself and "some of his neighbors," asks the following questions:

1. Will the natural grasses, weeds, &c., which grow on the worn-out plantations of Eastern Virginia make feed for sheep?

2. Is it necessary to feed sheep artificial food, in winter, in that State, east of the mountains?

3. Will you state the advantages and disadvantages of raising sheep there?

Various species of natural grass which spring up in the regions indicated, are both nutritious and palatable to sheep: others are not so. The same is true of weeds.

The term of winter feeding in Eastern Virginia is much shorter than in New York, or in the extreme northern portions of Ohio where Ashtabula Co. is situated. In many parts of southeastern Virginia, sheep require but very little artificial feed, if they have a sufficient range of pasturage, whether of domestic or wild grasses. They are only fed a few corn blades, during the most inclement periods of the winter.

The natural advantages for sheep raising in Eastern Virginia are short winters; a mild and salubrious climate that demands far less care, and far less expensive structures, for the winter protection of sheep; and the climate or herbage, or both combined, conduce to the production of a very superior *quality* of fine wool.

The greatest disadvantage for this husbandry, on the *worn-out* soils, is the want of sufficient feed. It is true that the most impoverished lands of Virginia, which were once sufficiently fertile to yield remunerative crops, now, acre for acre, undoubtedly produce a larger amount of nutritious herbage than a great share of the extensive sheep walks of Australia. But in the latter country the dimensions of these walks are measured by square miles instead of acres. Great numbers of them, owned, or leased from the Crown by individuals, exceed Virginia counties in size. The sheep on them travel as far daily to obtain sufficient subsistence, as an American drover would drive his sheep during a regular journey from one part of the country to another, or to market. There are, here and there, large quantities of worn-out lands in Eastern Virginia which can be purchased very cheaply. But in many, if not most cases, they are the "old fields" of plantations, portions of which are still under cultivation, and which have on them buildings and fences which would have to be paid for. Tracts of land lying together, large enough for the employment of the Australian system, could not, in our opinion, be purchased at the extremely low prices which would render such a system profitable. And no other system could, in our judgment, be made profitable on such lands, against the competition of *fertile* lands in other regions which are equally cheap, by the acre. When we speak of obtaining sufficiently large and sufficiently cheap tracts of lands in Eastern Virginia, we do not, of course, have any reference to those barren sand plains which belt so much of its eastern coasts. These have not been "worn-out:" they never were productive. And an attempt to raise sheep on them, on a large scale, would be absolutely *farcical*, when fertile natural pasturages can be bought in the Southwest and Northwest for a dollar an acre, or even less.

Many of the worn-out lands of Virginia can undoubtedly be restored to fertility at a cost which would be considered low in any country where agriculture is remunerative. Some of them have been exhausted only on the surface, and a deeper plowing turns up enough fertile soil to support, with or without the aid of gypsum or marl, a good growth of clover. If this clover should be plowed under as green manure, a sufficient basis of fertility would be established, probably, to produce good and permanent pasturage. Many persons have successfully and profitably undertaken the renovation of worn-out lands in Fairfax Co., near the city of Washington. It is possible they could have done so without the benefit of a near local market for their products. Sheep are the very best animal auxiliaries in fertilizing land. It would be profitable to keep a sufficient number of them for this purpose, and for their saleable products, wool and mutton. In other words, they are highly useful, both in producing and maintaining the fertility necessary to a good system of general or convertible husbandry, and in directly supplying a due portion of its saleable products. We hold that every farmer in Virginia should keep more or less sheep. But where sheep husbandry, instead of general husbandry, is the primary object, it ought to be evident to all who understand the facts, that it is not expedient, at the present prices of virgin and fertile grass lands in the West, and even in some portions of Virginia, to buy or renovate *exhausted lands* for sheep. If anything were gained for that special husbandry in Eastern Virginia by greater nearness to market, it would be lost, a dozen times over, by the inferiority of the worn-out soils for pasturage.

There are, however, *unexhausted* soils in Virginia and in all the other Southern States, which are admirably adapted to sheep husbandry, even when made a primary or exclusive object. Their peculiar climatic advantages have been adverted to already. They can be bought cheaply. A friend of ours recently purchased a cultivated farm of twelve or thirteen hundred acres, only three or four miles out of Huntsville, Alabama, for six dollars an acre. It was bought for grazing purposes. Another friend was offered a choice and most eligibly situated farm in Georgia, having good buildings, fences, &c., and six hundred acres of excellent pasture land in cultivated grasses, for twelve dollars an acre. As good bargains can be made in Missouri, and probably in other Southern States. With such opportunities to purchase highly productive grass lands, who would expend time and money in reclaiming barren ones?

THE WINTER.

THE present winter, up to the time of this writing, (Feb. 1st,) has been one of great severity throughout very extensive portions of the United States. The cold, without, perhaps, being more severe than that which has occurred during short periods of nearly every winter, has been much more continuous. Great bodies of snow have fallen, blocking up with their drifts roads and railroads, and obstructing travel and transportation. We hear of severe losses of sheep in comparatively mild regions, where winter shelter is not provided, because it is not usually found indispensable. The newspapers mention, for example, extensive losses in portions of Ohio; and they state that 100,000 sheep perished on New Year's Day in the vicinity of San Antonio, Texas. Making due allowance for the usual popular exaggeration in such cases, there is no doubt that a very unusual number have died in consequence of the severe weather.

We have heard of no uncommon mortality in New York and New England. In those States it has come to be considered a settled point that it is more economical to give sheep effectual winter shelter. Even sheds open but on one side are not thought to afford sufficient protection, unless entirely screened from winds and drifts by surrounding buildings; and then, barns or stables which can be closed up, so that the temperature in them can be raised by animal heat in intensely cold weather, are generally and decidedly preferred. Sheep in their prime, and in high or good condition, will safely withstand great extremes of cold, if well fed and well protected from wind and snow. But cold twenty-five degrees below zero—as it has been in Central New York during one of the "cold terms" of the present winter—or even a considerably more moderate temperature, bears with great severity on lean or old sheep, and on tegs which are not in first rate condition. It rapidly saps their strength, and leads to decline and death. And all sheep, whatever their age or condition, keep easier and better if shielded from extreme cold.

All domestic animals require more and better feed in such a winter as this, to supply the requisite amount of animal heat. No well informed man needs to be told that this is one of the uses to which Nature puts all the nutritive substances which are received into the stomach, and that if the supply of them is deficient—not proportioned to the emergency—the animal more readily succumbs to external cold. A few extra bushels of grain, fed during periods of severe and protracted cold, are paid for ten times over in the increased health and strength of the sheep and the increased production of wool. A sheep kept lean and shivering through the winter is much less likely to live through it; is much less likely, if a ewe, to raise a good lamb; and will yield a pound less of wool. The *starving* system is as objectionable as the *pampering* system, against which we have so often warned our readers.

There is such a thing as keeping sheep too warm, in close stables, in the coldest weather. A person of any experience can readily determine the proper temperature by his own feelings. A degree of ventilation is necessary in all cases. Sheep turned out of a hot stable for drink, exercise, or other purposes, or compelled to endure a draft of cold air rushing into their stables after they have been closely shut up for hours, are liable to take cold and contract inflammatory diseases. Obstinate and dangerous catarrh is one of these; and during some winters it assumes an endemical and maligunant type which is very fatal.

Condensed Correspondence, Items, &c.

GOITRE.—"W. S.," Oakland Co., Mich., writes us that he lost most of his lambs in the spring of 1862, and three-quarters of them in 1863. He attributed it to feeding too much corn and changed the feed to oats, but the disease continued just as fatal. The next winter he gave no grain to his ewes, but fed them ruta bagas, and lost about half of his lambs. During all this time the ewes were kept closely yarded, having an open shed, and were let out of the yard half an hour each day. Thinking that perhaps they did not get sufficient exercise, he, in the winter of 1866, when it was not too cold, daily turned them several hours on an old meadow forty rods from the barn, where they could get considerable green grass. He thus sums up the result:—"A few old crones died and I cannot keep my sheep in quite as good condition as before, but I lost but four lambs out of eighty from goitre—though most of them had it very lightly.

AUSTRALIAN WOOL.—We have received through T. B. CLAPP, 26 Central St., Boston, Mass., samples of wool, forwarded by J. H. CLOUGH of the London and Australia Agency Company. They were cut from the prize ram at the Skipton Show in Australia, Sept. 13, 1866. This ram was bred by J. L. CURRIE, Esq. of Lara Victoria. Age of the ram 4 years; live weight 170 lbs.; shorn Oct. 10, 1865; growth of fleece 11 months; estimated weight of fleece 14 lbs. to 15 lbs. The samples are from 3½ to 4 inches long, and finer, softer and freer from yolk than the wool of American Merino rams. We have heretofore described the Australian Merinos introduced into the U. S. Two of them were from the flock of Mr. CURRIE.

ALPACAS.—"A Subscriber," Shushan, N. Y., inquires where he can purchase ten alpacas, and the price. We are unable to inform him.

Dairy Department.

AMERICAN DAIRYMEN'S ASSOCIATION.

SECOND DAY'S PROCEEDINGS.

JACOB ELLISON, Herkimer, spoke of the English style of cheese making compared with the American. He said it was well understood in England that soil, water, grass and climate have great influence on the quality of the cheese. The English dairymen were far ahead of us in point of cleanliness, and the English climate was more favorable. We must have appliances to regulate the temperature of our factories. American cheese was sometimes injured by excessive heat in the holds of vessels on the passage to England. He had seen the "fat frying out" of the cheese boxes in the vessels.

Considerable discussion ensued on the matter of publishing a circular, and it was resolved to issue one weekly if sufficient funds for the purpose could be collected.

The proper form and material for cheese boxes was next discussed.

Mr. ELLISON stated they should be made large enough to slip off easily, for all cheese intended for foreign markets. It was not desirable to split off the boxes when weighing, as was necessary when they were tight. The boxes should be well seasoned, and the nailing carefully done.

Several gentlemen spoke in favor of making the boxes more substantial, and some thought sawed hoops preferable to the cut ones.

At the afternoon session the question "What is the best stock for dairy purposes?" was taken up. S. S. WHITMAN, Little Falls, said that two questions regarding this subject were prominently presented. First, can dairymen obtain cows from abroad to fill up their dairies? And second, is it advisable for them to depend on this foreign supply instead of raising their own stock? He argued that it was neither safe nor profitable to depend on purchasing cows at random for filling up dairies; that calves could be reared with better results as to cost and quality; that care should be strictly observed in breeding for the dairy in the selection of the bull as well as the cow, so that the good qualities of the one may not be counteracted by the bad ones of the other. Formerly it was easy to buy good cows, but last spring a good supply could not be obtained, either in this State or Canada, at safe prices. One cause of this was the high price of beef; another was that the factory system of making butter and cheese had extended, and enabled towns and neighborhoods where these had not heretofore been produced, to make as good as Herkimer or Oneida. This system was extending, and the value of cows was therefore rising. Besides there was real difficulty in finding just the right kind of cows for sale. People would not sell their best at any rate. Changing cows from one herd to another injures them for the first season; they will never come up to their real standard until the second season after purchasing. Again, by purchasing cows dairymen were liable to introduce into their herds that disease that had prevailed so extensively in Herkimer, Oneida and Lewis counties, namely, abortion. Mr. W. advised the raising of calves from the most perfect animals of both sexes, and that constant attention be given to the improvement in dairy qualities.

Mr. RIGGS, Lewis Co., stated that butter of good quality could be made from whey. He had sold it for forty cents per pound in New York. His process is to separate the whey from the curd, place it in a tin vat and add a liquid acid. One gallon to the whey of fifty gallons of milk, if the whey is sweet, but less quantity if changed. After this apply heat until it indicates a temperature from 200 to 212 degrees, Fahrenheit. When the cream rises and is skimmed off and placed in a cool place, let it stand till the next day. Then it is churned at a temperature ranging from 56 to 68 degrees, depending on the weather, and it is worked over and salted in the usual manner of butter making. It will produce on an average one pound of butter from the whey of 150 pounds of milk. The acid is made by taking any quantity of whey at boiling heat after the cream is extracted, adding one gallon of strictly sour whey to ten gallons of this boiling whey, when all the casin remaining in the whey is collected together in one mass and is skimmed off. After the whey is let stand from 24 to 48 hours it is ready for use as acid. This process is repeated as often as necessity requires.

Mr. EGGER, Cortland Co., stated that he had a patent process for making butter from whey. A circular bearing testimonials of his success was read by the Secretary. Mr. E. had made $1,600 worth of butter from whey during one season.

On the question of grains and grasses Mr. LEWIS, Herkimer Co., recommended, with other varieties, quack grass for pastures and meadows on exhausted or wet soils. He said quack grass was more tenacious of life and did better for pasture than clover or timothy. It would grow either end up on the poorest soil, and produces better hay than timothy. In feeding grain he strongly advised the use of oat meal. For soiling he did not consider sown corn as valuable as many did. Clover was cheaper and better. Cornstalks contain too much juice. He would feed dry hay with them in summer time.

On motion, the Association adjourned *sine die.*

A MILKMAN IN A FIX.—A report was made awhile since in an Irish paper relating to a milk vender who sought to increase his profits by diluting his milk with water. Unfortunately for him instead of relying upon a pump for a supply of water, he had recourse to a running stream. Not being particular, and perhaps in a hurry, he chanced to dip up some of the small fish which abounded in the fluid of this extra cow. In serving his customers the fish turned up, in the cans filled, leading to his exposure and punishment. Yankee milkmen are too smart to be thus caught.

Doings of Agricultural Societies.

Kentucky State Ag. Society.—At the annual meeting of this Society, Jan. 13th, a resolution was adopted calling a State Agricultural Convention to meet in Frankfort on the 21st of February. All county agricultural societies are requested to send delegates. Hon. ROBT. MALLORY was elected President, and the following list of Directors: 1st Dist.—Phil. Swigert, Zeb. Ward, Wm. Warfield, R. W. Scott, J. Hall, L. J. Bradford. 2d Dist.—J. B. O'Bannon, L. Young, Wm. Johnson, J. R. Hughes, S. T. Drane, B. R. Young. 3d Dist.—David King, G. H. Priest, Blunt Hodge, J. McGowan, Chas. Anderson, W. W. Waring.

Maine State Board of Agriculture.—At a recent meeting of this Board the following gentlemen were elected officers for the current year: *Pres't*—SAMUEL WASSON. *Vice Pres't*—Asa Smith. *Sec'y*—S. L. Goodale. *Messenger*—Asa R. Boardman.

Washington Co. Ag. Society.—This Society held its annual meeting at So. Hartford, Jan. 8. The following board of officers was elected: *President*—S. W. CROSBEY of White Creek. *Vice Pres'ts*—Bernard Blair, Alexander Buckley, R. Niles Rice, L. V. Baker, Deliverance Rogers and Lewis Potter. *Rec Sec'y*—Russell W. Pratt. *Cor. Sec'y*—M. Ingalsbe. *Treas.*—William M. Holmes. *Directors*—Otis Dillingham and Milo Ingalsbe. It was decided to hold the next Annual Fair Sept. 10th, 11th and 12th.

Fulton Co. Ag. Society.—The officers of this Society for 1867, are: *President*—HENRY R. SNYDER. *Vice Pres'ts*—William Logan, Rilus Eastman, Ralph Sexton, Oliver Getman, Jacob Boshart, Francis Wells, William F. Baker, John W. Cline, George Stewart and William Bliss. *Sec'y*—Isaiah Yanney. *Treas.*—Mortimer Wade.

Orleans Co. Ag. Society.—At the late annual meeting of this Society the following board of officers was elected: *Pres't*—THOS. S. FOSTER. *Vice Pres't*—Hezekiah Brown. *Sec'y*—Samuel W. Smith. *Treas.*—Cyrus Farwell. *Directors*—Edson B. Rogers, James Bailey, Charles A. Donalds, Thomas Packer, B. F. Baldwin, Alvah S. Morgan.

Yates Co. Ag. Society—Held its Annual meeting Jan. 12, 1867, and the following officers were elected: *Pres't*—THOS. J. LEWIS. *Vice Pres't*—Cha's H. Ketchum. *Sec'y*—J. D Jacobus. *Treas.*—Jas. Burns. *Directors*—Wm. T. Remer, Peter H. Crosby, Wm. S. Green, Joseph Abbott, Geo. Shearman, John L. Dinuff, Alanson Foster, Ira Disbrow, Darius Baker.

Madison Co. Union Ag. Society.—Officers for 1867: *President*—DANIEL WORDEN. *Vice Pres'ts*—Geo. W. Bentley, J. G. Sisson, E. Franklin Blanding, Samuel M. Hodges. *Sec'y*—John D. Clarke. *Treas.*—M. Lewis Murphy. *Directors*—William Crumb, Silas Ramsdale, Hosea B. Clarke, Orlando Woodward, Gordon B. Burdick and Reuben P. Wilcox.

Northumberland Co. (C. W.) Ag. Society.—The members of this Society met in Cobourg, Jan. 16th. The officers for the present year are: *Pres't*—WILLIAM RODDICK. *Vice Pres'ts*—John Henderson, Glover Bennett. *Sec'y*—Charles Bourn. *Treas.*—Walter Riddell.

Saginaw (Mich.) Ag. Society.—This Society has made choice of the following officers for the present year: *Pres't*—B. H. YORK. *Vice Pres'ts*—Wm. J. Bartow, Geo. F. Van Vliet, William M. Bratnic, I. N. Smith. *Sec'y*—Geo. F. Lewis.

Connecticut River Ag. Society.—At the annual meeting of this association, recently held at Windsor, Vt., the following officers were elected: *President*—HENRY HUBBARD of N. H. *Vice Pres't*—George Olcott, N. H. *Sec.*—Alexander McLane of Fairlee, Vt.

Vienna Agricultural Society.—This Society has made choice of the following gentlemen as officers for the present year: *President*—C. WAGLUM. *Vice Pres'ts*—J. Mosier and H. A. Wilson. *Sec'y*—H. D Eaton. *Treas.*—J. Herman.

Whitchurch (C. W.) Ag. Society.—This Society met at Lemonville, Jan. 12th., when the following officers were chosen: *Pres't*—J. R. BROWN. *Vice Pres't*—M. Jones. *Secretary*—Robert Smith. *Treas.*—P. W. Playter.

York, East Riding, (C. W.) Ag. Society.—The officers of this Society for the current year are: *Pres't*—JOHN CRAWFORD. *Vice Pres'ts*—T. Gibson and John Carter. *Sec. and Treas.*—J. Robinson.

West Middlesex (C. W.) Ag. Society.—This Society met at Strathroy, Jan. 19th. Officers elected for 1867: *Pres't*—GEO. BUTTERY. *Vice Pres'ts*—Thos. Moyle and Alexander McKeelar.

Portage Co. (O.) Ag. Society.—*Pres't*—CONSTANCE H. CHAPMAN, Brimfield. *Vice Pres't*—Geo. W. Dean. *Sec.*—Frank Ford, Ravenna. *Treas.*—N. D. Clark.

Cuyahoga Co. (O.) Ag. Society.—*Pres't*—C. S. GATES, Brooklyn. *Vice Pres't*—W. W. Richards. The list of officers yet incomplete.

Logan Co. (O.) Ag. Society.—*Pres't*—Dr. D. W. HARRIS. *Vice Pres't*—Charles Folsome. *Sec.*—James Walker. *Treas.*—W. V. Marquis.

Knox Co. (O.) Ag. Society.—*Pres't*—GEO. B. POTMIN. *Vice Pres't*—Robert Miller. *Sec.*—Alexander Cassil. *Treas.*—John D. Thompson.

Stark Co. (O.) Ag. Society.—*Pres't*—H. R. WISE. *Vice Pres't*—Jacob H. Buir. No Secretary and Treasurer yet named.

Ashland Co. (O.) Ag. Society.—*Pres't*—D. G. TEMPLETON. *Vice Pres't*—J. J. Winhigler.

Champaign Co. (O.) Ag. Society.—*Pres't*—E. M. BENNETT. *Vice Pres't*—Daniel Blose.

Wayne Co. (O.) Ag. Society.—*Pres't*—I. N. JONES. *Vice Pres't*—W. W. Taggart.

Sterling (Mass.) Farmers' Club.—The Mass. Ploughman denominates this a live club, having 121 active members on its roll. At a late meeting officers were elected as follows: *Pres't*—JOSEPH P. HAYWOOD. *Vice Pres't*—Luke Sawyer. *Sec.*—E. Sawyer. *Treas.*—William D. Peck.

Volinia (Mich.) Farmers' Club.—At a recent meeting of this club B. G. BUELL was re-elected President; M. J. Gard, B. Hathaway and John Huft, Vice-Presidents: H. L. Rogers, Secretary; L. H. Warner, Treasurer, and John Struble, Librarian.

N. Y. State Ag. Society.—The Annual Meeting of this Society will be held in Albany on the second Wednesday (13th) of February instant.

Rural Notes and Items.

TO CORRESPONDENTS.—For the information of new correspondents, and occasional old ones of short memories, we again reiterate that all articles intended for publication in the RURAL NEW-YORKER should be accompanied with the proper name and post-office address of the writer—except in cases of regular correspondents or those with whose manuscript we are familiar. A failure to comply with this just and imperative rule by writers has been the sole cause of the rejection of many articles we have lately received. Let it be understood that, although correspondents may use their initials or a *nom de plume*, before the public, *we must have the real name and address of each*, as a guarantee of the good faith of the writer, and for our protection generally.

—Another thing. We cannot become responsible for the safety or return of manuscripts, especially poetry and literary essays, unless instructed on the subject—with stamps for return postage.

—One thing more. We *do not* at present wish to augment the number of paid contributors to the RURAL, particularly to the Literary Departments,—yet if articles, essays or tales are sent us at specified rates, we shall, as heretofore, pay as asked, if we accept and publish.

SEASON IN NORTH-EASTERN ILLINOIS.—THE TARIFF.—Under date of Jan. 28, HUGH HULS of Kane Co., Ill., writes:—"We have had a very pleasant winter so far. Our frosty season set in about the 6th of Dec., and up to date the weather has been very mild, with the exception that two or three times the barometer has stood at zero. For three weeks past we have had very good sleighing. On the night of the 24th we had quite a snow storm which made the snow one foot on the level, and the weather mild and sleighing fine.—At present we as farmers feel somewhat excited on the tariff question. We look to Congress for protection of home industry. If they don't put us on an equal footing with the manufacturers we feel as though our rights had been set at naught, and as if producers had been crushed to the ground. For one I feel that if we can't be placed on an equality with the manufacturer, I should want free trade for all classes and let every one go on his own hook. As it now stands, universally, the producer has to put his products in market and sell them for what they will fetch, while every branch of mechanics is protected."

OUT-DOOR WHITEWASH.—The P. M. at Edgefield, Tenn., wants a recipe for a good whitewash for fences—one that will not wash off by the rain. We therefore re-publish the following:—Two quarts skimmed milk; 2 ozs. fresh slaked lime; 5 lbs. whiting; put the lime into a stoneware vessel, pour upon it a sufficient quantity of milk to make a mixture resembling cream, and then add the balance of the milk. Crumble the whiting and spread it on the surface of the fluid. Stir or grind as you would lead paint, and apply as you do other paints. It dries quick, and a second or third coat can be added if desired. It is inodorous, does not rub off. This quantity will cover 57 square yards with one coat. It may be colored, if desired, by adding coloring matter.

POULTRY PROFITS.—Many persons are making inquiries as to the profitableness of raising poultry on a large scale. Here are some figures of profits from a small number of hens. In a recent number of the N. E. Farmer was a communication from MOSES EATON, Jr. of South Hampton, N. H., showing the cost of 44 hens and their product for one season. The hens and their keeping amounted to $70. They produced eggs to the value of $74.73; chickens, $49.15; total sales, $123.88. Hens on hand, (44,) $22. Balance in favor of the owner, $53.

MISSOURI AGRICULTURAL COLLEGE.—In the Farmers' Register, of recent date, is an appeal to the people of St. Louis County to supply the means necessary to render available the land grant of Congress, in aid of an Agricultural College in Missouri. In that State, as in several others, operations are retarded by conflicting claims as to a location of the contemplated institution, and by a lack of means to purchase grounds to erect the necessary buildings and put them in condition for use.

AMERICAN ARTISAN AND PATENT RECORD.—This excellent journal commences the year with dimensions considerably enlarged and greatly improved. It is an interesting record of arts, mechanics, manufactures, mining, engineering and chemistry, and repertory of patents. Its illustrations are numerous and of a high order of execution. It is furnished to subscribers at $2.50 per annum. Address BROWN, COOMBS & Co., New York.

THE ILLINOIS PREMIUM FARM advertised in this paper is worthy the attention of any one wishing to purchase a first-class rural homestead. We are assured that it is in the most perfect order for immediate operations. The buildings, fences, platform scales, pumps, etc., are complete, and there are 1,100 apple trees, with other fruit and ornamental trees and shrubs in profusion, on the premises.

THE CHEESE FACTORY SYSTEM IN EUROPE.—Mr. WILLARD states that while in Europe he was informed that efforts were making to establish the American cheese factory system in Northern Europe. Parties from Norway visited England to examine the process of dairy husbandry there, and were advised to adopt the American factory system of cheese making.

MILK ESTABLISHMENT IN SWITZERLAND.—The Utica Herald states that an American company is establishing a milk condensing factory near Lake Zug, in Switzerland. The machinery has already arrived there, and the necessary buildings will be completed during the present season.

ILLINOIS INDUSTRIAL UNIVERSITY.—The question as to the location of this institution is now before the legislature of Illinois, inducing a sharp competition from various sections of the State. The Southern section is striving hard to carry off the honors supposed to attach to the location of the State institution.

AGRICULTURAL COLLEGE.—C. W. WRIGHT of Scio, is informed that there is an Agricultural College in operation at Lansing, Michigan. Information concerning it can probably be obtained by addressing President ABBOTT at that place.

WHEEL HAY RAKES.—(L. B. R., Sodus, N. Y.) The spring steel tooth wheel rakes would do good work on stony land, providing there were not too large boulders. There are several patented, each one of which claims to be the best. They are generally advertised at the proper season.

ADVERTISERS whose favors are deferred are assured of our regret at the necessity—our first duty being to give subscribers full value received for their money.

HORTICULTURAL.

MEETING OF THE WESTERN NEW YORK FRUIT GROWERS' SOCIETY.

[Continued from page 39, last number.]

MR ELLIOTT, Cleveland, called for information on Arnold's No. 1. It is one of several varieties originated by Mr. ARNOLD, Canada West, and said to possess considerable merit. Nothing of importance regarding it was elicited.

Mr. CRANE, Lockport, called for information about Allen's Hybrid. He had one vine that fruited, and it was subject to mildew. Could not get a perfect cluster. Messrs. HELMER and HOAG, Lockport, BARRY, Rochester, BREHM, Waterloo, ELLIOTT, Cleveland, reported that it mildewed badly.

The Israella being called up, Mr. BUSHNELL, Iona, gave it a very high character. Had seen it in many localities and thought it the best black grape known. BREHM, Waterloo, said it ripened with the Hartford Prolific or Adirondae; was better in quality than the Hartford Prolific. Has good keeping qualities, hangs firmly to the branch and is one of the best market grapes. ROWLEY, Rochester, had fruited it one year; the vine is vigorous, free from disease, and the bunch solid. SYLVESTER, Lyons, said his experience thus far with it was favorable. It ripens with the Adirondae, and the flavor is good. GRIFFITH, North East, Pa., said it was hardy and a good grower. As compared with the Iona, the fruit lacked sprightliness, but it was better than other early grapes. PERRY, Canandaigua, said it ripened a week earlier than the Delaware.

The Ives Seedling was next discussed. ELLIOTT, Cleveland, had seen it some years ago. Formerly it was regarded as a poor grape, latterly it has been looked upon with more favor. It is a strong grower and has a compact bunch. Although highly praised he could not see its great merits. He did not give it a high character; it was second rate for the table and for wine. Ripens ten days earlier than the Isabella. GRIFFITH, North East, thought better of it. At Cincinnati, where wine was known, this sells for a high price. Thought it would produce twice as much per acre as Norton's Virginia, and for colored wine he thought no grape so valuable. ELLIOTT thought Norton's Virginia preferable to the Clinton to grow in Western New York for wine purposes.

GRIFFITH could not produce a crop of grapes from Clinton vines; thought it would be a valuable grape for red wine if productive enough. LAY, Greece, thought the Clinton a good wine grape. SYLVESTER, Lyons, said it was a good keeper when well ripened—good for the table in February.

Mr. MOORE, Rochester, spoke of the Diana Hamburg. Last season his vines were cut by the frost so that he had no fruit. The vine is a slow grower and forms large buds; the leaf mildews a little. On a soil of clay loam, in an open field, the vine stood exposure to the winter without injury. In 1865 the fruit ripened ten days earlier than the Diana. The bunch is widely shouldered, and color of fruit brown purple.

At this point a resolution was offered and unanimously adopted, tendering the thanks of the Society to President HOOKER for his able and instructive address.

The Creveling was next discussed. THOMAS, Union Springs, though it a very fine grape. SYLVESTER, Lyons, had fruited it five years. It is a good grower and hardy, but the bunches are not compact. Ripens later than the Adirondae. CRANE, Lockport, had seen very fine, compact bunches exhibited in Rochester. Mr. BARRY, Rochester, considered it a very valuable grape, and the looseness of the bunch not a serious objection. LITTLE considered the Creveling the finest black grape grown. BRONSON had seen it growing side by side with the Concord, and the bunches were the finest he ever saw. Thought it might have been fertilized by the Concord. ELLIOTT, Cleveland, had been told that the Concord and Creveling did not blossom simultaneously. There must be humbug about the idea that the Concord helps the Creveling. HOAG, Lockport, had fruited it some years and never grown a perfect bunch. HOOKER, Rochester, said the Creveling stood next the Concord in his collection, yet he had never seen a fine, compact bunch. Still, he would not exchange the Creveling for any other variety in his collection. He considered it very fine flavored; valuable for garden culture, but would not recommend it for market purposes. YOUNGLOVE, Middlesex, had never seen perfect bunches of the Creveling but once; then it was growing side by side with some Catawbas, and the clusters were very fine. BROOKS, Wyoming, thought it a good and early grape; thought it should be disseminated. GRIFFITH, North East, did not think any amateur grower should be without it. ELLIOTT, Cleveland, said that south and south-west it was being tried extensively for wine.

The To Kalon was next discussed. LAY, Greece, had the impression that it was hardly worth cultivating at all. HOOKER, Rochester, said it was a fine grape in quality, but subject to so many drawbacks that it was impracticable to cultivate it largely. BREHM, Waterloo, thought it a very good fruit, but subject to rot. SYLVESTER, Lyons, had a fine crop of To Kalons two years since; if we could grow them they would be valuable. ELLWANGER, Rochester, said they had always proved free from disease with him.

The Lydia grape being called up, ELLIOTT, Cleveland, said it was a chance seedling, probably of the Isabella, and originated on Kelley's Island. He spoke highly of the fruit, but gave it the character of being a shy bearer. The bunches are short and compact, color green, skin thick and very sweet. It has been ripened the last of July.

Mr. GRIFFITH, North East, spoke of the Mottled grape. If it had originated in the East it would have been spread all over the country. It originated with Mr. CARPENTER on Kelley's Island, and he was determined to let the grape progress on its own merits.

The Walter was next discussed. (This is a new seedling, originating on the Hudson River, and claiming to be a cross between the Diana and Delaware.) BARRY had seen the fruit on the original vine; the latter was fenced with a very high fence. Found the fruit very sweet, with a tough pulp. GRIFFITH said he was exceedingly mortified with the report of the Committee at Cleveland in favor of the Walter. He thought the fruit resembled the Diana so closely that no one could tell the difference. THOMAS had seen the fruit on two occasions; it very much resembled the Diana, but was said to be earlier. He thought the proprietors of the vine had made a great mistake in not having it tested by various persons in widely separated localities. SYLVESTER, Lyons, thought the fruit not as sprightly as the Iona; it is very sweet and has some pulp; the skin is very thick and without acidity or astringency. Thought it would dry into a perfectly sweet raisin. He considered it distinct from any seedling we have, and likely to prove of great value.

SECOND DAY.

President HOOKER reminded the Society that much time had already been devoted to the discussion of grapes, and we ought not to forget that other fruits were also of great importance. He did not consider it wise to devote so much time to one fruit. Other gentlemen concurred in these views. On motion of Mr. SYLVESTER the President appointed a Committee to draft resolutions, embodying the expression of the Fruit Growers respecting a movement on foot to procure the repeal of the law fixing the size of apple barrels. The sentiments of the Fruit Growers were strongly and unanimously in favor of the law fixing the size of barrels, and the resolutions expressing these views were to be presented to the Legislature of the State.

The question whether such species of birds as the robin, which are very destructive to fruits, should be destroyed, and what measures can be taken to protect the crops against their ravages, was then called up.

Mr. THOMAS said he was a friend to birds, especially to hawks, crows and owls, but there were one or two kinds of birds which ought to be destroyed. Among these were the robins. If we would have some kinds of fruit, we must kill them. Killing a few will frighten the rest away. He did not think it an act of cruelty, as they were destroyed instantly, while in the ordinary course of nature they would die a lingering death from slow starvation. The birds, however numerous, will not protect the fruit from insects. The services of one man on a place were of more value than those of the birds, and it is better to employ the man and destroy the fruit-eating birds. He had had crops of blackberries wholly taken by the robins.

Mr. KENDIG, Waterloo, had frightened the robins from an acre of Delaware vines by shooting a few; they returned, but two or three onslaughts effectually put them to rout.

Mr. KEECH, Waterloo, said the robins robbed him from strawberry time until grapes ripened. Frightened them away by killing five. He thought they could easily be kept away if the matter was attended to in time, as they will not frequent a spot where a gun is fired often.

Mr. FISH said he was a friend to the birds and liked to have them around. They were a household pleasure. He had an abundance of birds, and an abundance of fruit around his premises. Was totally opposed to killing them, and thought we should grow something for them.

Mr. THOMAS thought people should do as they liked about fostering or destroying the birds on their own premises.

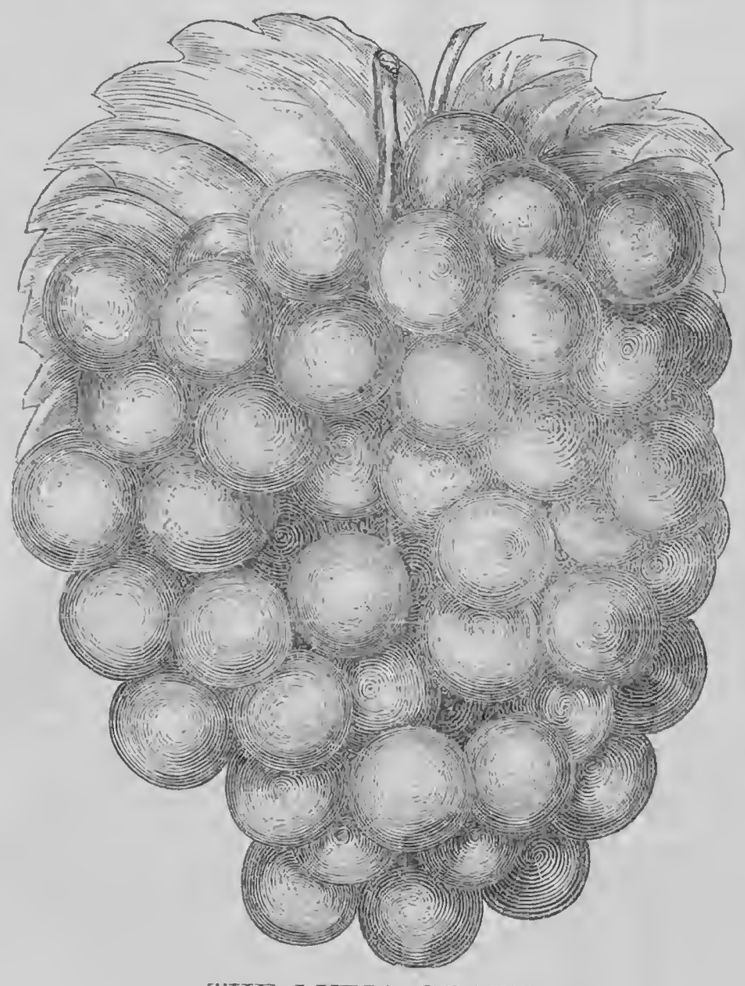
Mr. BREHM, Waterloo, said a law existed making it finable to kill birds, even on one's own premises.

It was thought advisable to permit each one to be master of the birds on his own premises. GRIFFITH, North East, thought fruit growers would not be very cruel to them. The matter was finally referred to the Committee on apple barrels.

Some talk was had next about pears. Mr. BARRY said Mr. FISHER of Batavia, had desired the discussion of the failure of this fruit in some sections and its success in others. Mr. F. had lost many trees with the blight and he was discouraged; but a neighbor of his had succeeded well. Mr. B. thought one great cause of discouragement was that pear growers would not replace their dead trees. Mr. FISHER's pear garden was yet a very rich one.

A gentleman said Mr. FISHER had stimulated his trees highly with manures.

Mr. THOMAS said that much manure was not the thing for pear trees. Choose a good soil, manure but little and keep the cultivator going all summer. The object was to secure a moderate and healthy growth. He thought one foot enough for bearing trees, and two feet for non-bearing. There is also a natural difference in localities; at Boston he believed the fire-blight had never been seen. Failure here was due, to a great extent, to over-manuring.



THE LYDIA GRAPE.

THIS grape was brought up in the Fruit Growers' Meeting, and a very good character given it by those best acquainted with its merits. It is certainly one of the most promising of our white or green colored grapes, of which class the Rebecca is the best known type. The Lydia is supposed to have sprung from Isabella seed, originating on Kelley's Island, and was introduced to notice by Mr. CHARLES CARPENTER. It has been ripened in July. Bunches large, not shouldered; berries sometimes oblong as seen in the engraving; color greenish white; skin thick; flesh sweet, with little of the native aroma; ripens very early. The vine is hardy and a strong grower, but it is said to be somewhat shy in growing large crops.

"ROSES IN DECEMBER."

EDS. RURAL:—I have just received a very refreshing letter from a friend and customer at Houston, Texas. With snow-banks all around us, anywhere between ten and twenty feet in height, without a mail from the West the last four or five days, and the thermometer at zero, it almost makes one dissatisfied with his lot here in the North, to read of showers of roses and hyacinths and narcissus in a letter dated the latter part of January. But to the letter, an extract of which I give:

"It would do your heart good to see my garden, filled, as it is, with your hyacinths, narcissus, &c., all in beautiful bloom. It is a wonder. I have been trying all my life to get ahead of Nature as she exhibits herself in flowers on our prairies, and have succeeded at last. She does wonders beyond what LINNÆUS ever dreamed of, but she grows no hyacinths in January. I had a splendid show of roses until after Christmas. Christmas day I clipped off as many as I could carry." J. V.

THE STRAWBERRY BED.

EDS. RURAL:—I propose to give through your wide-spread paper a few suggestions in relation to establishing a good strawberry bed, which I think would be highly appreciated by every person owning even a very small piece of land.

In the first place procure a sufficient quantity of virgin soil from the woods, taking it from the surface not over five or six inches deep. Strew this upon the plot designed to be used for the bed to the depth of four or five inches. Then loosen up the soil to the depth of ten or twelve inches with the spading fork, which will leave a portion of the new soil on top, and mix some with the original soil; then rake it over thoroughly to pulverize the lumps of earth. The ground now being in good condition to receive the plants, procure at least four different varieties—say one variety strong with stamens, the balance pistillates, all different. Plant these alternately in hills two and a half feet each way apart, giving room to hoe between and gather the crop without injury to the plants.

Now comes the most important part of the management, viz.:—Keep the ground clean of grass and weeds, and above all keep the runners all cut off, and do not touch the plants from the time they commence to bloom until the fruit is ripe. For winter covering, corn stalks are as good as anything.

The above treatment will remunerate any person who may try it, and furnish more pleasure and comfort to the family than ten times its cost. *Try it.* J. K.

Waterloo, N. Y., 1867.

Horticultural Notes and Queries.

SIX GOOD VARIETIES OF PLUMS.—A correspondent asks us what plums we would recommend for culture for market, etc. We have selected six varieties. First, "Coe's Golden Drop;" fruit large, oval; color light yellow, with dark red spots; flesh firm; flavor rich, sweet; ripens last of September. Second, "Bradshaw;" fruit large, oval; color dark violet red; flesh juicy, sweet; ripens middle of August. Third, "Fellenberg," or Italian prune; fruit medium, oval; color dark blue; flesh juicy, sweet and good; ripens first of October. Fourth, "Lombard;" fruit medium, roundish, oval; color delicate violet red; flesh yellow, juicy and pleasant; ripens last of August. Fifth, "Reine Claude de Bavay;" fruit large, roundish; color greenish yellow; flesh yellow, juicy, melting; ripens last of September. Sixth; "English Damson;" fruit small, oval; color purple; flesh melting, juicy, tart; ripens in September.

BORERS—TOMATOES.—Mr. H. J. FOSTER of Quincy, Mass., writes the N. E. Farmer that he had an apple orchard which was badly infested by the borer. Some three years ago, while removing borers from his trees, he noticed that invariably there were no signs of their work to be discovered wherever a chance plant of the tomato had sprung up from seed in the soil or from manure. Acting on this discovery he planted tomatoes extensively about his apple trees and quince bushes and found them a complete protection from the assaults of the borer, as the beetle, which deposites the egg of this pest, will not go near a plant of this character.

APPLES FOR ILLINOIS.—At a late meeting of the Illinois Horticultural Society a general discussion on the apple took place. The "Yellow Bellflower" was not regarded with very high favor. The "Belmont" ranked with the preceding—was not a reliable bearer. 'Benoni," a tardy bearer and not very good in quality. "Ben. Davis," an apple of rather poor quality, but decidedly the most prolific and profitable of any grown in that region. The "Carolina Red June" was declared to be No. 1 every time, in tree, fruit and greenbacks.

RASPBERRIES—AN OFFER.—A. S. FULLER, Bridgewood, N. J., offers $100 for the best four quarts of raspberries for general cultivation as a market fruit. The only restrictions placed on the award are that the plants shall be hardy and prolific. The offer is made through the American Institute Farmers' Club.

Domestic Economy.

AN INDIAN LOAF.

A LADY contributor to the Practical Farmer says:—"To make an Indian loaf as good as it can be made, scald ten minutes one quart of good coarsely-ground yellow meal. (Finely ground meal will never make light bread or anything else.) Sift and stir in thoroughly a pint of rye flour without using any more water. Then thin with milk—sour milk if to be had—until the batter is nearly as thin as for griddle cakes. It will stiffen up all the time by reason of the meal's swelling. Salt sufficiently, and if sour milk is used, then put in soda or saleratus to sweeten it. If 'wet up' with sweet milk or water, use as much good yeast of any kind as you would to leaven a wheat loaf of the same weight. The very best thing to bake the loaf in is a common glazed earthen basin or crock. Grease the inside well and let the vessel be large enough so that at first the loaf shall not more than half fill it. If made with sour milk, set into the oven at once. If with sweet milk, or water and yeast, let it rise an hour. Bake covered over close, at a moderate heat, never less than five hours; six is better. And then it ought always to sweat in the pan an hour in a warm place after coming from the oven, before going to the table."

STEAMED BROWN BREAD.—Five cups Indian meal; two cups flour; one cup sweet milk; two cups sour milk; one-half cup molasses; one teaspoon soda; one teaspoon salt. This will make a two-quart basin loaf. Place in a steamer over boiling water, and steam at least three hours, and longer is better. It will have a tender crust, and is excellent.

AN INQUIRY.—I am having considerable trouble with my white flannels and knit underwear shrinking in washing, and would like some of your lady readers to give me a remedy, having no doubt that there are many among the readers of the RURAL that know how to prevent it.—J. S. R.

"ECONOMY IS WEALTH."—*Pyle's O. K. Soap; Pyle's Saleratus, Pyle's Cream Tartar—Standard articles, designed for the intelligent and economical everywhere.* For general usefulness and good weight they have no superior, and the proprietor, believing that consumers are the best judges, respectfully solicits a fair trial. All first-class grocers keep these goods, and every package bears the name of JAMES PYLE, Manufacturer, 350 Washington street, corner of Franklin street, New York.

PLEASE CONSIDER.—You can buy *Best Chemical Saleratus* at the same price that is charged for other brands that are *short weights* and cheap goods, hence do not fail to always get best Chemical.

EMPLOYMENT FOR WOMEN.—I am anxious to furnish women who are willing to persevere in an honorable occupation, with means of making a splendid income. One wanted in every town and county in the United States. Address, with stamp, for particulars. J. G. ARTHUR, Hartford, Conn.

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ℔ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ℔ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ℔ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ℔ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.

Ladies' Department.

THE FLIRT REFORMED.

After a young lady's natural appetite for flirtation has been cloyed, or after her exploits in that line have been suddenly terminated by some mortifying defeat, she is quite apt to become all at once exceedingly conscientious, very rigorous in her exactions of duty towards both herself and others, and somewhat microscopic in her distinctions of right and wrong. Her conscience, which before was lean indeed, has swallowed up all her other characteristics and may almost stand as a synonym of herself. At the same time her habits of life have undergone a change. Her costume is more subdued than formerly, though none the less elegant. She makes an immense amount of tatting, probably because she finds the shuttle a potent charm against the great contractor for idle hands, and never lends more than half an ear to tales of gossip. If she becomes religious, her worship follows the severest forms, and her creed, whatever it may be, is held or stated with that tone which admits of no question. The world, that was once her play-room, ceases to be anything but a workshop or an alms-house; and the temple, where she followed Momus and mingled with the maskers, is consecrated to the most searching ordeals of delicate self-condemnation and the most approved process of humiliation. When the change is the result of the first cause mentioned—a sated appetite—she is pretty certain to tone down into a most worthy and reliable woman, such as the everyday world needs and can scarcely can get along without—one efficient in everything practical, and charitable in all that appeals to the feelings. But if the new life be only the retreat which pride offers to baffled skill, or the virtue of necessity, it is scarcely to be trusted; for the old propensity may show itself at any time when the old mortification is for awhile forgotten in a revival of the old power with a tempting opportunity for its display. If there are those who can arrive at perfect sobriety of life and conduct only through a round of follies, it is certainly better that they should reach it thus than not at all; but the contemplation of the process gives us the same sad feelings excited by the common sarcasm that a convent is but a receptacle for the remnants of shattered lives. If any man is ever foolish enough to suffer more than a momentary pang from being victimized by one of these female buccaneers of society, he may be amply revenged by witnessing the early effects of reformation upon a flirt.

Written for Moore's Rural New-Yorker.

MYSELF AND I.

It was with a weary hand that I turned the key in the lock of the school-room door, and a very weary heart I carried with me that night—a night never to be forgotten. Dull, heavy clouds hung low in the December sky, and the wind sobbed and sighed through the pines with a restless tone that suited my own mood. Out before stretched a long, straight road, heavy and dark with mud, with patches of dirty snow that the wind had blown so closely together as to defy even the driving winter's rain. Here and there a low house stood out, black and weather-beaten, and a lofty pine, shriveled by the lightning, tossed its bare arms towards the sky in helpless beseeching. Not a feature of dullness, not one of the impotent cries of Nature that I did not see and hear. To my eye, no light shone beyond the darkness; for my soul, no sun had yet arisen "with healing in his wings."

Defiant and restless, I picked my way as best I could along the soft, grassy path. It was not often even now that I was so very bitter, but the day's duties had pressed heavily, and mind and body alike shared in the consequences. So intent was I that the steady splash of a horse in the water and loud, eager voices were close upon me before I noted them. Then I turned. I saw only Auntie Dill, as I had heard her called, riding home from mill with her bag before her, and near her, stepping in and out to avoid the deeper water and keep pace with the horse, Old Mother French, a coarse, strong woman. It was Auntie Dill speaking.

"But, neighbor, they do say she knows as well as any one that she is a'most gone, and that she does not take on a bit."

"Yes, so I hear, poor thing! What will become of 'em all? Jim is'nt just the one I should want to leave my children with. They'll have to come up without any of his help. I pity 'em all."

They were up with me now, and the dull clouds awoke and sent down their messengers in a sharp, quick shower. Together we hurried through the bars and up a short lane to the door of one of those low, brown houses—to me, though I knew it not, the door of a brighter life. It was "Jim's" home, and on the low settle lay the dying wife and mother, "resting," she said, "for she had been very busy," and her eye turning with all a mother's love upon the little ones about her, told us why so busy. "Getting ready to leave them," she added to us; "I cannot look far out into their lives; but what I cannot see I trust, and I know it is not in vain."

The two women were damp and afraid of the "rheumatis';" so, while they talked in tones low for them by the fire, I drew near to the humble mother and learned how one may "suffer and be strong," and that even above the graves in our hearts the fairest flowers of life's adorning may spring.

The half hour shower passed on, and I bade my life-teacher "good bye." Before the next day dawn she passed "within the veil," but I that night closed over in my soul a new grave, whose tablet was inscribed "Myself," and determined that henceforth the "I," strong to live and do for others, should be my only name.

Lapeer, Mich., Jan., 1867. Howe Benning.

ADELAIDE RISTORI.

The great artist whose portrait we present above was scarcely heard of in this country until she came here a few months since, though she has been known in Paris for the past ten years as a great tragic actress, a rival of Rachel. Adelaide Ristori, Marchioness Capranica del Grillo, was born at Civita di Friuli in 1826. Her parents, who were poor, belonged to a company of strolling comedians; and when but two months old she was introduced to the foot-lights, in a basket, in a play called "New Year's Gifts." From her fourth to her twelfth year she played children's parts; and at the age of fourteen she appeared as *Francisca di Rimini*, and made an impression which went far towards deciding her future success. She soon after joined the company of the King of Sardinia, and at the theater of Livourne became firmly established as an accomplished *comedienne*. When twenty years old she married, in spite of the opposition of his parents, the Marquis Capranica del Grillo, heir of one of the noblest ducal families. She then left the stage for a time, but soon returned and attempted tragedy, in which she was not immediately successful. Her first triumph in this new *role* was in Paris at the opening of the Great Exhibition in 1855. She made her debut in that city at the Italian Opera House, in the character of Francisca di Rimini. The audience was small; but by chance Eugene Scribe, Alexander Dumas and Jules Janin were present. M. Dumas wrote next day:—"Last night I was at the representation of '*Francisca di Rimini*' at the Salle Ventadour. I looked around the theater, but did not see Rachel. I beg that she will go and see how the death-scene is performed." M. Scribe called immediately on Ristori, and, in her absence, left his card, on which he inscribed:—"Eugene Scribe, in acknowledgment of his admiration for Madame Ristori, and with thanks for the great pleasure he experienced last night." Jules Janin was the most enthusiastic in her favor. "Ristori, Ristori!" he wrote, "she is the rage of the day? She is tragedy itself. She is comedy itself. She is the drama. She reigns—she governs—she commands, and the crowd obeys." She has since won unbounded admiration in the characters of *Myrrah*, *Mary Stuart* and *Medea*, the latter of which was refused by Rachel. Ristori met with great success in England, Russia, Germany and Spain; and the tour of this country upon which she has just entered promises to be no less brilliant. Against the purity of her private life no breath of scandal has ever been uttered. She is the mother of two children, a son and a daughter, who travel with her. Whatever may be the character of the modern stage, and undoubtedly there is evil enough connected with it, the presence and influence of such a woman and such a genius as Ristori must tend to purify and exalt it.

Choice Miscellany.

A CHAPTER ON VALENTINES.

According to some authorities St. Valentine was a bishop, according to others a presbyter, who was beheaded at Rome in the Third Century and was early canonized. Wheatley tells us that he was "a man of most admirable parts, and so famous for his love and charity that the custom of choosing valentines upon his festival took its rise from thence." By other writers the origin of the institution of valentines has been referred to the supposed fact of birds selecting their mates on that day; still others derive it from the practice, during the Roman festival of the Lupercalia, in the month of February, of putting the names of young women into a box, whence they were drawn out at random by the young men.

Whatever may have been the origin of the custom, it is certainly in theory a very pretty bit of nonsense, and one that the soberest might relish once a year; it offers an opportunity for the exercise of wit that without it would never come into play, and brightens up pictures which the cobwebs of the counting house have obscured or the smoke of the workshop tarnished; the gray-haired accountant turns to the old ledger of love, where his first ventures are recorded, and runs over again accounts long since balanced and closed; and the young blacksmith grasps the smallest but most powerful of implements to strike off the rhymes that are glowing in the forge of his fancy. In truth, however, the custom of sending anonymous missives on the 14th of February has of late years been sadly abused, and consequently has fallen into disrepute. No language can be too severe to condemn the vulgarity and cowardliness of taking advantage of the freedom of this occasion to send to any person that which is vile in itself or which in its particular application is calculated to give pain to the receiver. Still, there is no reason why the pleasantry of the anniversary should be dropped; and indeed it is every year a source of innocent amusement in several little circles that we know of. We have a vivid recollection of one Valentine eve when six young gentlemen—a miniature literary club—sat around a table, drew at random the names of their own or each other's young lady acquaintances from a box, and were allowed twenty minutes to rhyme off valentines to them, which were duly engrossed and mailed. A suitable penalty was prescribed for failure.

Time was called, and Arthur's valentine was demanded. Either Arthur was not born a poet or the name he had drawn was not sufficiently inspiring. In truth, he had not the facility in rhyming which the others possessed,—a lack, by the way, which was more than compensated for by his fluency and wonderful versatility in conversation. This fact suggested the obvious remark that the best valentine he could send was his face. Of course his poem was not finished; but we insisted on hearing what he had, and he began:

To Lizzie.

O Lizzie, Lizzie,
I'm always busy,
And nearly dizzy,
Thinking of you;
The day is waning,
My heart is paining,
And tis not feigning;
For I wish to woo.
I'm going to do it,
Though you reject my su-it ——

If there was any more, it was lost in the burst of laughter that greeted this strange expedient for a rhyme, for the ingenuity of which it was voted to remit his penalty.

Ulrich came next, and read us the following

Lines to a Rich Young Lady.

Maiden with the raven locks
And the fringed eyes so brown,
If thy father *hath* "the rocks,"
Need thy heart be kindred stone?
If so, speak, or by a frown
Let the dismal fact be known.

Maiden with the swelling bust,
Where the heart I covet lies,
If thy father *hath* "the dust,"
Do not, by your many wiles,
Seek to throw it in my eyes,
Blinding hopes and quenching smiles.

Thy father's fields I know are broad,
While my own are "gone to grass."
By rogues from every rood outlawed,
My heart's the only acher left;
And now I see by you, a lass!
Of even that I'll soon be reft.

If thy father *hath* "the soap,"
Do not wash your hands of me,
Make it mine, and then I hope
To scour the country o'er and o'er
And keep my reputation free
From all the stains it ever wore.

Secured, like thieves, in public stocks,
Maiden, what a life we'd lead,
With that "soap," that "dust," those "rocks!"
O hear my prayer, as down I kneel,
Grant me the hand I so much need,
And I'll be true to thee as steel!

Gerald was a puzzle to all the young ladies of his acquaintance—or rather to those who would have been such if they could ever have got acquainted with him. Whatever were his personal attractions, the interest in him was of course heightened by the mystery of his reticence, which the boldest and sharpest of the young ladies had never succeeded in penetrating. When his turn came he deliberately intoned the following:

To Martha.

I love you, sweet Martha, and beg you'll unbar the
Door of your heart at my call.
You're an angel, my darling—except when you're
snarling,
The morning just after a ball.

Your form it is airy, you've a foot like a fairy,
Or would have, were't not for the bunions;
Your lips are like roses, and your breath, I suppose, is,
Except when it savors of ——.

This production was immediately condemned to the flames by the indignant five, and its ungallant author voted a "horrid wretch" and declared in contempt for an hour and a half. He pleaded in defence that he only wanted to be original by dealing to some extent in facts.

Edmund had drawn the name of Susan Brown, whom he had never before heard of. He read:

Of all the girls within this town,
The sweetest is Miss Susan Brown,
Of twenty suitors in a row,
Myself would be the boldest, oh!
It's I that loves Miss Susan Brown!
For her I would my life lay down!
It's I will write a valentine
And ask her if she will be mine!

I saw a lady at a fair,
The noblest of the ladies there.
The showmen all their wares threw down,
And madly followed Susan Brown.
It's I that loves Miss Susan Brown!
For her I would my life lay down!
It's I will write a valentine
To ask her if she will be mine!

I saw a lady at a show,
She had a deuced handsome beau,
Who got all smiles and ne'er a frown
From the sweet face of Susan Brown.
It's I will go myself to drown,
All on account of Susan Brown.
And I will burn this valentine;
For she can nevermore be mine.

Roland produced what he called

Lines to One who Don't Deserve them.

There is an air of virgin white,
Of icy chastenees' pure control,
In stainless beauty, like the light
That plays on fields around the pole,—

There is a glacier touch round all
Her lovely form and beauteous face,
And from her iceberg shape so tall
A chilliness robs the half its grace.

A clear, unspotted page is she,
A cold, ethereal Arctic Zone—
A sight that one could wish to see
But that its genial warmth is gone.

And yet, alas! in spite of chill
And freezing welcome deadly pale,
That waits on him who, lured to ill,
Attempts in that dread clime to sail,—

In spite of all, as many be
Who strive to reach the icy pole,
So lovers seek the open sea
They fondly deem lies round her soul.

Sidney's was a longer and rather more elaborate effusion than the others; and he had touched it up while they were being read. It was addressed

To Lucy.

Fair Lucy, in Italia's clime
They usher in the fasting time,
The sad and somber days of Lent,
With feasting and with merriment.
Then high and low, commingled, meet
In gay disguises on the street;
Then flowers, light, gaudy missiles fly
At every masker passing by.
Imagine, in such time and place,
A scion of the Tenton race,
Dispiseless, standing mid the rout
Armed with *his* queen of flowers, the kraut.
A lady delicate and gay
Comes brightly smiling up the way.
He aims and hurls his huge bouquet!
Need I sing how the missile sped
And "took" the fair one on the head
And keeled her over almost dead?
Or how the culprit, sans disguise,
Confest to everybody's eyes,
Is soon o'ertaken as he flies?
Or need a single line be spent,
Detailing his just punishment?
Of course there needn't, not one; for all
The story's good for is the moral.
Applied it reads:—I'd like to join
This mask of good St. Valentine;
And you're the girl I'd like to smite
With flowers of fancy gay and bright.
But if perchance my awkward throws
Should hit you with a "giant rose!"
(That choicest flower my garden grows)
Who threw it? never need be asked;
I'd stand convicted and unmasked.
And so for greeting 'tis more wise
To let this little tale suffice.

WIT AND WISDOM.

Where boasting ends, there dignity begins.

It is better to be alone than in bad company.

Conquest is the child of hearts which trust themselves.

Patience and applicable courage overcomes all obstacles.

Death is a black camel, which kneels at the gates of all.

He who is at war with his neighbor cannot be at peace with himself.

The original of all men is the same; and virtue is the only nobility.

Parties at a dead lock should extricate themselves with a skeleton key.

The religion that is always searching for "a hope," is a hopeless religion.

Men are never placed in such extremes but that there is a right to guide them.

Wholesome sentiment is rain, which makes the fields of daily life fresh and odorous.

Passion may not unfitly be termed the mob of the man who commits a riot on his reason.

Why is the early grass like a penknife? Because the *spring* brings out the *blades*.

Why does the railway conductor cut a hole in your ticket? To let you pass through.

Why is the second son's fortune like a fair complexion? It is spoilt by the son and heir.

Gold is the only idol that is worshiped in all lands without a temple, and by all sects without hypocrisy.

Wesley says, "Condemn no man because he does not think as you think. Let every one enjoy the full and free liberty of thinking for himself."

A man down East complains of his daughter's extravagance because she persisted in buying a waterfall for her head, when she already had a cataract in her eye. He couldn't *brook* that.

Sabbath Reading.

THE BEST INVESTMENT.

Ben Adam had a golden coin one day,
Which he put out at interest with a Jew;
Year after year awaiting him it lay,
Until the doubled coin two pieces grew,
And these two, four—so on, till people said,
"How rich Ben Adam is!" and bowed the servile head.

Ben Selim had a golden coin that day,
Which to a stranger asking alms he gave,
Who went rejoicing on his unknown way—
Ben Selim died, too poor to own a grave;
But when his soul reached Heaven, angels with pride
Showed him the wealth to which his coin had multiplied.

Written for Moore's Rural New-Yorker.

WHY STAND IDLE?

The command to labor in the vineyard of the Lord is binding on all, high and low. Though much has been done to elevate the minds of men, yet much, very much, remains to be done. All over the land, men, women and children are in the daily and hourly practice of sin, who need better influences thrown as a web around about them, to keep them from being drawn into the tempter's snare. The field is large; and the laborers are unable to meet the demands which are coming from all parts of it. Dear reader, are you engaged in the great work? If not, why not?—for, in the language of the Saviour, "why stand ye here idle?" Why not enlist in this great and heavenly work immediately? Your reward is certain; for He who bids you labor has promised to give you what is right, to reward you according to your work. Enlist, then, in this glorious enterprise; coöperate with those already in the work, and let your influence for good reach far and wide. Reader, do not say you have no influence on those with whom you associate; for you do have an influence either for good or for evil.

There are different kinds of labor to be engaged in by different individuals; yet all aim at the one great object, the elevation of our fallen race. Like an army, we may not all be officers or leaders in this work; yet as privates we may render valiant service in the cause of our Master. While you may be a teacher or pupil in the Sabbath-school, I may be more intimately connected with the cause of temperance or other reformation; yet we are each sowing the good seed which will in the end yield a golden harvest.

Oh, do we realize the many temptations that are continually looming up to beguile us—the many devices which the evil one presents, to allure our minds and cause our feet to tread "bye and slippery paths!" As laborers in this good work, do we feel that the seeds of dissipation and vice of every name are daily sown broadcast by the enemy? But shall we be discouraged or dismayed by this array of agencies which are being continually brought against us? Never! Our great leader, the Lord of hosts, has promised us victory over all that may come against us. And although dark clouds may at times gather and threaten to wash away the seed which has been sown, yet our Heavenly Father will protect the right and overthrow the wrong. Your great leader in this work has promised you, if you are "faithful unto death," a "crown of life;" and this crown is promised to all who enlist, and who labor faithfully in this glorious struggle to overthrow Satan and his followers.

Christian soldier, gird on thine armor then, enter the conflict with zeal; and in the end you have the assurance that you will march triumphant over the dark river into the "better land," with "palms of victory" in your hand. Oh how joyful to realize that we, after life's conflicts are over, are to aid the angel choir in chanting praises to that Being who sits on the "great white throne." J. L. Kennell.

Chili Center, N. Y.

Remember the Drunkard.—Cannot ministers of Christ agree to preach more frequently and more earnestly against drunkenness and the dangers of the cup? From many pulpits this whole subject is practically excluded. The drunkard is rarely prayed for; the young not warned against this cunning device of the devil; the law of God against drunkenness is substantially ignored! And yet it is undeniable that the bottle is sending more souls to perdition than all the infidel tongues and pens in the land. We utter no railing against our brethren who ignore this stupendous moral evil; but we would not choose to have a son of ours trained up under such a ministry.—*Rev. T. L. Cuyler.*

Which Way do You Lean?—"If the tree fall toward the south, or toward the north, in the place where the tree falleth, there it shall be." Eccl. xi, 3. There is a solemn meaning couched under this metaphor. The tree will not only lie as it falls, it will also fall as it leans. And the great question which every one ought to bring home to his own bosom, without a moment's delay, is this:—What is the inclination of my soul? Does it, with all its affections, lean toward toward God, or from him?—*J. J. Gurney.*

Conflict of Faith.—If Satan and I ever did strive for any word of God in all my life, it was for this good word of Christ—"Him that cometh unto me will I in no wise cast out;" he at one end and I at the other. O what work we made. It was for this that we did so tug and strive; he pulled and pulled; but, God be praised, I overcame him, and got sweetness from it.—*Bunyan.*

Prayer.—Prayer that has no faith in it is like a human body without a soul in it—it is dead.

Sin and punishment, like the shadow and the body are never apart.

Useful, Scientific, &c.

For Moore's Rural New-Yorker.

SIMPLICITY OF SCIENCE.

The impression is abroad in the world that science and all subjects connected with it are necessarily complex and abstruse. And here is one of the greatest barriers to progress in scientific investigation. The mind must be disabused of this impression and be convinced of the simplicity of science and learn to look at simple nature as she is; then shall we be able to advance steadily, step by step, in the light of true science, from particular facts to the most general conclusions.

Science, in its most general sense, is knowledge arranged and classified, as opposed to loose or fragmentary knowledge. Here we can easily see the difference between the man of science and him who is destitute of it. An individual who possesses a retentive memory may collect and hold in his mind a large amount of isolated facts; but so long as this knowledge is in confusion and unclassified, he can never be said to be scientific. On the other hand, he who possesses but little knowledge on any subject, but has it reduced to order and system, is really a scientific person. Science is either pure or mixed — or, in other words, abstract or concrete. Pure science, as the pure mathematics, is the science of ideas; and its simplicity is seen in the clearness and exactness of its definitions and first principles, and also in its simple system of symbolic language by which ideas are represented. Words are the signs of ideas; but the great source of confusion and misapprehension among people is to be found in the different ideas they attach to words. How many different ideas are conveyed by the word *iron*. Many regard it as an incombustible material, while the chemist conceives of it as burning with a brilliance scarcely conceivable. The poet speaks of it as an emblem of strength, and the smith as substance susceptible of being "molded like wax." The electrician sees it stretched into wires for the purpose of conducting news from one region to another over land and sea. "The meaning of such a term is like the rainbow—everybody sees a different one, and all maintain it to be the same." This is also true of many other words. But from the words and symbols used in the pure science of mathematics no such confusion can arise. The abstract idea conveyed by the words "square," "circle," "parallelogram," &c., are so perfectly defined that they are apprehended by all minds alike; and so, also, of the symbols used in this science. It is purely ideal, unmixed with matter or material things. It is indeed a fairy land through which the mind is conducted by conventional symbols, as thought is conveyed along wires constructed by the hand of man. Geometry is abstract, and, though regarded by many as complicated and abstruse, is really one of the most simple of the sciences, beginning with a few of the most obvious self-evident truths and proceeding gradually, by the most easy steps, till it stands in all its completeness and simplicity before the mind.

The mixed sciences are not as complete and simple as the pure, because of the greater looseness in their definitions and first principles. Before the middle of the Sixteenth Century true science was in its infancy. It consisted chiefly in forming theories independently of facts, and then endeavoring to make facts, when discovered, conform to the previously formed theories. Not till after the publication, in 1620, of the *Novum Organum*, by Lord Bacon, did science begin to be investigated by the truly scientific or inductive method — that is, by first ascertaining the facts, and upon these as a foundation constructing the theory. Hence the beauty and simplicity of science.

"How charming is Divine Philosophy;
Not harsh and crabbed, as dull fools suppose,
But musical as is Apollo's lute,
And a perpetual feast of nectared sweets,
Where no rude surfeit reigns."

Rome, Mich., Jan., 1867. P. H. Dowling.

A VERY IMPORTANT DISCOVERY.

The "Rosetta Stone," a marble found at the Fort St. Julian, by Bouchard, in 1799, is the principal authority for the translations of the hieroglyphic and Demotic characters which have been made by Egyptologists. It contains the same inscription in three shapes, one being in Greek, a knowledge of which latter language gives the key to the rest—a key only used after much painful suggestion and many failures by the learned men who interested themselves in the subject. The Rosetta Stone has been considered the most important of all discoveries connected with the ancient Egyptian language, and its inscriptions have been studied and speculated upon since its discovery by a host of learned men, including Champollion, Young and others. This marble, so valuable to science and history, has been re-enforced, if we may properly use that word in this connection, by a very late discovery made at San, in Egypt, by the eminent Egyptian scholar Lepsius. He has discovered another monumental stone, containing billingual inscriptions, the Greek containing no less than seventy-six lines, of considerable length, and in small letters. The inscription states that it was made in the reign of Energetes I. It relates the good deeds of that monarch, describes some of his military expeditions, and mentions the institution of two feasts in consequence. The most important matter established by this stone, in addition to the number of hieroglyphics which it contains, is the fact that they were two years in use in Egypt, one a reckoning for the common people, the other as established and computed by the priests. This was previously suspected by M. Lepsius, and stated in his chronology. The discovery at San renders the matter beyond all question. This very interesting stone was closely copied, and the inscriptions will soon be laid before the scientific world, the most interesting and valuable contribution to Egyptian studies that has been made for many years.

WHEN I AM OLD.

Southern Editorial Correspondence.

WASHINGTON — THE PAST.

Washington! What peculiar emotions rise up in the mind of an American at that name!—when applied to the *man*, the symbol of an era in the world's history, the birth of a nation; when applied to a *city*, the capital of a nation which is soon to be the second in the list of nations upon the globe. I fear the man, the era, is little remembered by the millions whose eyes are now turned towards the city wherein centers so much that is affecting their destiny for untold years to come, or of the thousands who continually wend their way hitherward, seeking for place or pleasure, or drawn by business from the further ends of the Continent.

The war settled the fate of Washington. Before the war there was a vague feeling that it was not permanently established, and that the seat of government might follow the great tide of population and be located somewhere in the Valley of the Mississippi. But now all thoughts of a removal are abandoned, and its growth is rapid beyond all precedent, and henceforward will be equally rapid. It has a population now of nearly 100,000, and bids fair to double in the next five years.

The first time I visited the city was the winter after Gen. Taylor had been inaugurated as President. Mr. Fillmore presided over the Senate, and Clay and Webster, Calhoun and Mason, and Seward, Jeff. Davis, Benton, Cass, and Houston were among the men who wielded the legislation of the government and made history as well as laws. I looked into the old Senate Chamber the other day for the first time since that visit. It seemed small for the United States Court, then in session. But what a change! The robed Justices occupied the Vice-President's desk, a lawyer was droning out an argument upon some important cause, and other lawyers—of note in their several localities—were lounging around or whispering jokes and idle gossip, where formerly only Senators walked and talked.

The crested waves of that tide which no human power could stay were already then visible, and gradually rising. Whoever has scanned well the history of the human race must have learned that through all its teachings nothing has been more true than that the two forms of civilization, slavery and freedom, could not long exist in the same government without coming into collision. The "irrepressible conflict" had already begun, and could only be closed by mortal combat. It was only a question of time, and no human agency could avert it, for none were willing to make the sacrifices necessary to free the slaves—for universal freedom was the only thing that could give the government stability and the people peace.

One-half of the money expended by the North in the war of the rebellion would have paid for every slave, and forever extinguished slavery on this Continent. But the South would not sell, and the North would not buy,—so the war came and its cause was blotted out.

Perhaps it is well. The busy bee could only store its honey in the *dead* carcass of the lion. Henceforth we shall, as a nation, be a homogeneous people, and become a power among the nations.

I intended to describe the objects of interest that strike a stranger on his visit to this city, but I find I have been dreaming of the past, and must defer for another letter what I might have put into this. T. C. P.

Washington, 1867.

Written for Moore's Rural New-Yorker.

SOUTHERN RELIEF.

A great and glorious meeting was held at Cooper Institute, New York, on Friday evening, Jan. 25th, at which the pride and party prejudices of the creature gave way to the benevolence of the heart. 'Tis true that some of the reverend speakers, not being for the moment under the shadow of their Master's cross, let out a little in glorification of the valiant North; but even the worldly-renowned Ward Beecher was so penetrated by the stirring vital interest of the occasion that he soon doffed his political homily to nobly advocate the cause of that holy benevolence which so adorned the daily life of his great Master, confessing, as he did in spite of his carnal nature, that the Christian's revenge was to do good to his enemy, and to feed and clothe him in the dark hour of his destitution?

From the late well authenticated reports, there is no doubt but that the short crops of grain at the South have caused a famine in the land which all previous accounts failed to impress on the public mind; and at this time the daily suffering for bread, as well as clothing, is intense, among both the white and black population. But, aside from our duty as a Christian people to relieve the vital necessities of the suffering South, self-interest demands that we should encourage and stimulate the Southern people at this time, above all others, to enable them to pass through the trying transition state from slave to free labor, that they may learn the imperative necessity of educating their own white hands to administer to their own necessities. The question now is, not what would the South be without cotton; but what would the commercial and manufacturing prosperity of the North be without the aid of this King of the textiles?

Some of us who lived through the war of 1812, and witnessed the scarcity of money and the general prostration of trade that immediately followed it, were expecting the same collapse of trade after the late war; but cotton almost alone saved us from such a consummation. The whole South was bare of goods and all northern productions; but they had a very large supply of long-hoarded cotton; this textile was then not only our great article of export, but it set every cotton mill at the North in motion, and the trade of the country increased instead of decreasing, as it did after the last war with England. How necessary it is, then, that Southern industry should be sustained and encouraged, that the production of her great all-paying staple may not fail, and the best soil and climate in the world for the perfect growth of the cotton plant become a desert waste.

January 29th, 1867. LXXVI.

A TRAVELER'S DREAM.

"A. D. R." in one of his letters to the New York Tribune, indulges in the following strain of what can scarcely be called extravagant prophesy:

At midnight the train-boy awoke me with—"We are crossing the Mississippi." Rising drowsily upon my elbow, I looked down from my window at the great river as our train glided slowly across it. Adieu to interior ferries; they belong to the dead Past. Soon we shall ride from New York to San Francisco without change of cars. Around the world by railway with two ocean ferries!

Upon these closing lines my pen lingers, and I listen for the voice of the future brakesman. Day after day on the continental journey he opens his door and shouts to sleepy passengers—"Chicago—Change cars for New Orleans." "Missouri River—Change cars for Saskachawan, Leaveuworth, and Galveston." "Rocky Mountains—Change cars for Santa Fe, El Paso, Matamoras and the City of Mexico." "Salt Lake—20 minutes for dinner—Change cars for Fort Benton, British Columbia, Pah Ranagat, Panama, Lima and Valparaiso." "Virginia, Nevada—Change cars for Owyhee, Columbia River, Puget Sound and Kamtschatka." "San Francisco—Passengers for New Zealand, Honolulu, Melbourne, Hong Kong and all points in Europe, Asia and Africa, will keep their seats till landed on the wharf of the daily line of the Pacific Mail Steamship Company,—Baggage checked through to Pekin, Calcutta, Grand Cairo, Constantinople, St. Petersburg, Paris and Liverpool!"

WHAT WILL SHE DO?

At the college of France, among the lecturers, M. Laboulaye, who is lecturing on Comparative Political Economy, and M. Chevalier, known to Americans by his book on the United States, are attracting occasional American listeners. M. Laboulaye, in the course of his reflections, sometimes makes flattering and felicitous allusions to America, and then the students clap lustily. In truth, the French people fancy we have arranged some matters as they yet intend to do. "Why," said Lord Bulwer Lytton, the other day in Paris, to a distinguished American, "why is it that you Americans are so friendly with the French and so severe upon the English?" "Because," replied Mr. ——, "the French people have always been with us, and every French writer of any distinction advocated our cause during our civil war, while in England, almost without exception, all the men of political weight, and almost all your distinguished writers, sided with the rebels."

"The truth is," replied Lord Lytton, "you are going to be powerful: your growth of millions, in some generations, will make you fearfully powerful to Europe.'

"And in the meantime what will Europe be doing—she will not stand still?"

"That is true, that is true," replied Lord Lytton.—*Paris Letter.*

Charity can tolerate even intolerance.

VOICES — WHAT THEY INDICATE.

There are light, quick, surface voices, that involuntarily seem to utter the slang, "It won't do to tie to." The man's words assure you of his strength of purpose and reliability, yet the tone contradicts his speech.

Then there are low, deep, strong voices, where the words seem ground out, as if the man owed humanity a grudge, and meant to pay it some day. The man's opponents may well tremble, and his friends may trust his strength of purpose and ability to act.

There is the coarse, boisterous, dictatorial tone, invariably adopted by vulgar persons, who have not sufficient cultivation to understand their own insignificance.

There is the incredulous tone, that is full of a covert sneer, or a secret "You can't dupe me" intonation.

There is the whining, beseeching voice, that says "sycophant" as plainly as if it uttered the word. It cajoles and flatters you—its words "I love you; I admire you; you are everything you should be."

Then there is the tender, musical, compassionate voice, that sometimes goes with sharp features (as they indicate merely intensity of feeling,) and sometimes with blunt features, but always with genuine benevolence.

If you are full of affection and pretence your voice proclaims it.

If you are full of honesty and strength of purpose your voice proclaims it.

If you are cold, and calm, and firm, and consistent, or fickle, and foolish, and deceptive, your voice will be equally truth-telling.

You cannot wear a mask without its being known that you are wearing one.

You cannot change your voice from a natural tone without its being known that you are doing so.—*Agnes Leonard.*

"GO ON, SIR, GO ON."

Arago says, in his "Autobiography," that his master in mathematics was a word or two of advice which he found in the binding of one of his text-books. Puzzled and discouraged by the difficulties he met with in his early studies, he was almost ready to give over the pursuit. Some words which he found on the waste leaf used to stiffen the cover of his paper-bound text-book caught his eye and interested him.

"Impelled," he says, "by an indefinable curiosity, I dampened the cover of the book and carefully unrolled the leaf to see what was on the other side. It proved to be a letter from D'Alembert to a young person disheartened, like myself, by the difficulties of mathematical study, and who had written to him for counsel. 'Go on, sir, go on,' was the counsel which D'Alembert gave him. 'The difficulties you meet will resolve themselves as you advance. Proceed, and light will dawn and shine with increasing clearness on your path.' That maxim," said Arago, "was my greatest master in mathematics." Following out the simple words, "Go on, sir, go on," made him the first astronomical mathematician of his age.

CURIOUS STATISTICS.

Some statistical genius declares that "more money is expended in the United States for cigars, than for all the common schools in the country."

A wag, who is undoubtedly a lover of the weed, seeing the statement going through the papers, gets off the following:

"It has been estimated that the cost of washing linen that might just as well be worn two days longer, amounts to enough in this country to more than defray the expenses of the American Board of Foreign Missions.

"The expense of buttons on the backs of our coats, where they are of no earthly use, is equal to the support of all our orphan asylums.

"It is estimated that the value of old boots thrown aside, which might have been worn at least a day longer, is more than enough to buy a flannel night-gown for every baby in the land. Also, that the cost of every inch on the full shirt collars of our young men, is equal the sum necessary to put a Bible in the hands of every Patagonian giant."

A Fashionable Preacher.—A young lady writes from San Francisco her experiences of the preaching of one of the fashionable clergymen of that city, which are worth reproduction. She says:—"I went to hear him preach last Sunday night. He is certainly one of the best elocutionists on this coast. And such gestures! they are so graceful. He is said to live finely: keeps seven fine horses! But who would keep slow and poky ones, I should like to know, if they were able to afford better ones?"

Youth's Reading.

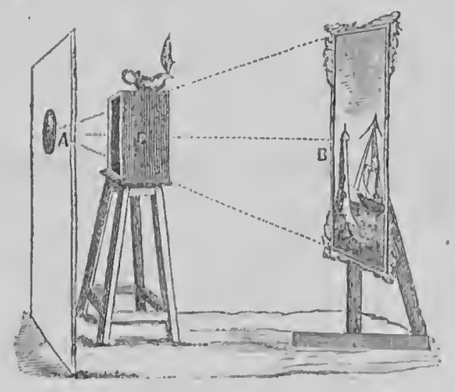
LET IT PASS.

Be not swift to take offense;
Let it pass!
Anger is a foe to sense;
Let it pass!
Brood not darkly o'er a wrong
Which will disappear ere long;
Rather sing this cheery song—
Let it pass!
Let it pass!
Strife corrodes the purest mind;
Let it pass!
As the unregarded wind;
Let it pass!
Any vulgar souls that live
May condemn without reprieve;
'Tis the noble who forgive,
Let it pass!
Let it pass!
Echo not an angry word;
Let it pass!
Think how often you have erred;
Let it pass!
Since our days must pass away
Like the dew-drops on the spray,
Wherefore should our sorrows stay?
Let them pass!
Let them pass!
If for good you've taken ill;
Let it pass!
Oh! be kind and gentle still;
Let it pass!
Time at last makes all things straight;
Let us not resent but wait,
And our triumph shall be great;
Let it pass!
Let it pass!
Bid your anger to depart;
Let it pass!
Lay these homely words to heart;
Let it pass!
Follow not the giddy throng;
Better to be wronged than wrong;
Therefore sing the cheery song—
Let it pass!
Let it pass!

—[*All the Year Round.*

THE COSMORAMA.

The cosmorama is very simple in construction, and may be formed at very little trouble and expense, while it may be varied to infinity. It consists merely of a picture seen through a magnifying glass, exactly in the same manner as in the common shows exhibited in the streets; the difference not being in the construction of the apparatus, but in the quality of the pictures exhibited. For the common shows, coarsely-colored prints are sufficiently good; in the cosmorama, a moderately good oil painting is employed. The contrivance will be readily understood by the following illustration:



In the hole of the door or partition insert a doubly-convex lens, A, having about three feet focus. At rather less than the focal distance of the lens from it, place, in a vertical position, the picture, B, to be represented. The optical part of the exhibition is now complete; but as the frame of the picture would be seen, and thus the illusion be destroyed, it is necessary to place between the lens and the view a square wooden frame, formed of four short boards. The frame, which is to be painted black, prevents the rays of light passing beyond a certain line, according to its distance from the eye; the width of it being such that upon looking through the lens the picture is seen as if through an opening, which adds very much to the effect; and, if that end of the box, or frame, next the picture have an edge to it, representing the outlet of a cave, a Gothic ruin, or a rocky archway, which might be partially lighted by the top of the box being semi-transparent, the beauty and apparent reality of the picture would be very much enhanced.

Upon the top of the frame is represented a lamp to illuminate the picture; while all extraneous light is carefully excluded, by the lamp being contained in a box, open in the front and at the top.—*The Play Room.*

POOR JACKO.

Some time ago a gentleman, who had been very kind to an Italian emigrant, received from him the present of a fine monkey. Pleased with his present, the gentleman spent much of his time teaching Jacko (the monkey) various tricks, so that in a little while he could very successfully imitate his master in most things. Desirous of exhibiting the remarkable traits of his favorite, the gentleman resolved to invite some of his male friends to a dinner party; and that Jacko might play the gentleman to advantage there was but one thing lacking — Jacko as yet had not learned to smoke. To remedy this, his master one day lit a cigar, an example which Jacko soon followed. But, alas! it fared badly with him. Many a wry face did he show, but, encouraged by his master, he continued to puff, puff away. At last, overcome by the pernicious fumes, his eyes rolled in their sockets, his limbs gave way, and down he fell as drunk as a toper, and all that his master could do was of no avail, poor Jacko died! No wonder, for tobacco is a poison, and hundreds of men and boys have been killed by it.

A college of physicians has said that not less than 20,000 in our land die every year by the use of this poison.

Three young men formed a smoking club, and they all died within two years of the time they formed it. The doctor was asked what they died of. He said "they were *smoked to death*"—*Temperance Banner.*

Whose is Wealth?—Wealth is not his who gets it, but his who enjoys it.

LOOK HERE, FRIENDS!

THERE IS YET TIME

To Form Clubs and Secure Prizes!

Read the Rural's Premium List, *(which is promptly sent free to all applicants,) and you will see it is the* **MOST LIBERAL** *ever offered by a Publisher. Take, for example, the offer of* **WEBSTER'S DICTIONARY** *(the latest Illustrated, Unabridged Edition,) for only Twenty* **new** *Subscribers, —or for* **30** *Subscribers,* **15** *of them being* **new.** *The Rural is so popular and valuable that almost any one can obtain subscribers enough to secure this inimitable work. Try, and if you fail of securing the requisite number, you will be sure of some valuable prize,—and if you get more you may secure a Watch, Sewing Machine or Melodeon.*

Now's your Time to form a Club and make it Pay. We can still supply back numbers (from Jan. 5,) so that all may have the volume complete, with Title Page, Index, &c. If you want large Show-Bills, Specimen Numbers, &c., we will send them free.

☞ *Look over our Premium List, and then "pitch in" and strike us with a Club — which will secure you a Valuable Return.*

Back No's of this Vol. can still be supplied.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., FEBRUARY 9, 1867.

NEWS OF THE WEEK.

From Washington.

THE work of rebuilding that portion of the Smithsonian Institute building destroyed by the fire of 1865 is progressing quite rapidly under the direction of the building committee, consisting of Chief Justice Chase, General Delafield, Professor Henry and Mayor Wallach. The new roof will be constructed entirely of wrought iron, with a slate covering fastened with copper wire, forming a room absolutely fire proof. This principle of construction has been carried out uniformly, and much has been done to strengthen the weakened walls of the building and towers. An important improvement has been effected by the erection of substantial iron stairs from the northern or main entrance. The expenses of all the work are defrayed by the savings arising from the limited income of the Institute fund, no assistance having been received from the Government, although a large amount of Government property is stored in the building. The payment of such extra expenses is a heavy tax upon the fund created by its English donor for scientific purposes, and this fact accounts for the apparent want of alacrity in prosecuting the scientific labors.

Another roll of honor has just been published by Quartermaster General Meigs, at the instance of the Secretary of War, containing the names of soldiers who died in defence of the American Union, interred in the cemeteries of the States New York, Wisconsin, Pennsylvania, Iowa, Maryland, Missouri, North Carolina, Arkansas, Kansas and Dakota Territory.

Gen. Grant has announced his intention to visit Europe this year, and will probably sail in April next, so as to be present at the Paris Exposition. He will take his family with him.

It is said that a special agent sent to the frontier to investigate smuggling frauds, was able to make arrangements with twenty-two custom house officers out of twenty-three, the whole number in the district, for smuggling goods into the United States.

Death of Washington Hunt.

EX-GOV. WASHINGTON HUNT died in New York on the morning of the 2d. He was born at Windham, Greene county, Aug. 5th, 1811, was admitted to the bar at Lockport in 1834, and in 1836 was appointed First Judge of Niagara Co. In the beginning of his political career he belonged to the Democratic party, but afterwards joined the Whigs and was elected to Congress three times in succession — 1843 to 1849. In 1849 he was elected State Comptroller, and in 1850, receiving a plurality of 262 votes over HORATIO SEYMOUR, became Governor. In 1862 he was again a candidate, but was defeated. After the dissolution of the old Whig party, Mr. HUNT, who had been a leader of the conservative wing, became gradually identified again with the Democratic party, in whose ranks he had first entered the field of politics. Of late years, however, he has not taken a very active part in political contests, except in 1864, when he was a delegate to the Chicago Convention and stumped this State in the ensuing campaign. He lived in retirement on his farm near Lockport, and gave his attention chiefly to books and horticulture. He was a prominent member of the Protestant Episcopal church, and was repeatedly a lay delegate to its triennial conventions.

Compliment to an Inventor.

ON Saturday evening, Feb. 2d, a large number of the most prominent citizens of Rochester assembled at the rooms of Prof. CLUM, inventor of the Aëlloscope, which we described in the last number of the RURAL, to bid him good bye on the eve of his departure for Europe, whither he is going with his instrument designed for exhibition at the Paris Exposition. An elegant supper was provided, toasts offered and congratulatory speeches made. Prof. CLUM gave an interesting account of the labors performed and the difficulties encountered during the quarter of a century he had given to the working out of his idea, and acknowledged his special obligations to the press of Rochester for assistance rendered in bringing his invention before the public.

About Yachting.

A GOOD deal of interest in the subject of yachting has been manifested during the past two or three weeks, and the excitement has been prolonged by the publication of engravings of the recent yacht race across the Atlantic, with descriptions of the vessels and the incidents of their voyage, portraits of the owner of the "Henrietta," sketches of his life, and all that sort of thing. The last sensation was caused by his offering his yacht as a present to Prince ALBERT, which H. R. H. politely declined, of course. Yachting is a very elegant sport, but so costly that only gentlemen with bottomless purses can indulge in it. As to the recent trial of speed across the Atlantic, which has excited so much comment, in the first place it was a foolhardy piece of business, entailing a needless sacrifice of life; and in the next place the feat performed was nothing wonderful, as regards speed, for old Newfoundland fishermen smile at it and tell of dozens of instances in which it has been surpassed by smaller craft not half so well manned and equipped. If there is anything extraordinary about the "Henrietta," there might be some sense in publishing the portrait of the mechanic by whose ingenuity she was constructed or the sailor by whose skill she won the race; but for the illustrated papers to give the picture and biography of the man who merely happened to have money enough to purchase her, but never drove a spike or trimmed a sail, is simply absurd. And this subject brings to mind the curious use to which the word "international" has been put lately. A few sporting gentlemen of New York meet a like number of the same kind in England at a supper to talk over the yacht race and arrange future contests. All well and good! But that is not enough — it must be called an "international" affair, and the speakers must dwell upon its great importance to "the two countries" and the wonderful effect it would have in binding both governments and people in a closer friendship. So, too, when two bruisers, one from each side of the water, met at Farnsborough to mash each other's countenances, of course it was nothing less than a "great international contest" — a proof of the prowess of England and America.

From the South.

ALABAMA has just taken a State Census, and reports a total population of 945,244, whereof 442,445 are blacks. In 1860, she had 864,296, of which 435,132 were slaves. It may be inferred from this that the Southern States have generally nearly if not quite as many inhabitants now as in 1860, and will have more in 1870. The stories that the blacks are "dying out" seem to be utterly baseless. A good many of them have migrated northward or been taken to Texas; but they will number at least 4,000,000 in 1870.

It is officially reported that the freedmen throughout Florida are renewing contracts. General Ely had arrived from South Carolina with a colony of eight hundred freedmen. The colonization in the southern portion of the State seemed to be very popular.

NEW YORK, Jan. 28.— The Herald's New Orleans special says Bowie county, Texas, is in revolt. Capt. Tremble, late of an Illinois regiment, a planter there, was recently shot and wounded. His life was also threatened. He came to New Orleans and returned with twenty cavalrymen to remove his family. He found that his wife and child had been driven into Arkansas; the negroes on his place were manacled and driven through the streets in presence of the cavalry, who were forced to fall back before 300 unreconstructed.

From Mexico.

ADVICES from San Fillipe state that Col. Quirogo, the last commander who passed through that city on the retreat of the Imperial forces, imposed a forced loan of two thousand dollars on the inhabitants, and as the sum of five hundred dollars was yet wanted to complete the amount ordered, Quirogo ordered three of the inhabitants to be shot. A priest was ordered to administer spiritual consolation, and the execution was about to take place when the sum of two thousand dollars was completed.

General Mejia, when passing through San Fillipe and Hidalgo, opened the doors of the jails and entered all the premises.

Matters were quiet in Tampico and vicinity. Gen. Gomez was in command and the troops were well armed and regularly paid.

From the Plains.

LATE Omaha papers mention the murder by Indians of a number of settlers at the Lawrence Ranche, about 50 miles north-west of Julesburg.

The Montana Gazette reports that Mr. Raissiel, his wife and two children, and Joseph McKnight, settler at Camp Cook, and an Indian guide, were attacked by Indians at Eagle Creek. The latter was killed, and Mr. Raissiel was wounded. Mrs. Raissiel, who is a squaw, and her two children were taken prisoners, and a wagon, four mules and a saddle horse were carried off by the Indians. McKnight and Raissiel escaped.

From Canada.

ON the morning of the 1st a train ran off the track near Brantford, throwing one car down an embankment, killing a brakeman and injuring several passengers.

The total number of Fenians tried in Toronto since June is 107; 32 were convicted, 20 acquitted, 49 dismissed for want of evidence, 18 discharged on bail, and 3 remaining still for trial. The condemned will be sent to Kingston Penitentiary when the sentences upon those convicted at the present assizes shall have been completed.

The returns of the revenue in the Canadian Provinces for the month of January amount to $457,901.

Late Fires.

DURING the past two weeks the following fires have occurred:—At Mobile, loss $50,000; at New Orleans, $25,000; at Vicksburg, $75,000; at St. Louis, $40,000; at Cincinnati, $30,000; at Shunbula, Miss., eighteen houses; at La Grange, Ga., half the town; at Chicago, $17,000; at New York, $13,000, $60,000, $26,000 and $15,000; at Henrietta, this county, the Congregational church, loss $2,500; at St. Louis, $12,000; at Newark, N. J., $30,000; at Mansfied, O., $10,000. at New Orleans, $10,000.

NEWS PARAGRAPHS.

A NEW YORK Post Office clerk named Miller has been sentenced to imprisonment in the State Prison at Sing Sing for ten years for robbing letters.

CONSIDERABLE excitement was caused in Jackson county, Ill., the other day, in consequence of the Board of School Examiners expelling a colored boy from school.

BOTH houses have passed a resolution by which alcohol and burning fluid, made from distilled spirits which have already paid a tax, are exempt from further taxation.

A RESOLUTION was adopted in the House of Representatives the 4th inst., directing the Committee of Ways and Means to report a bill to prohibit the reduction of greenbacks this year.

HORACE GREELEY lately attended Schuyler Colfax's reception, and was mistaken by the doorkeeper for a hackman, and treated with great rudeness before he gained admission.

HON. PHILIP JOHNSON, Representative in Congress from the 11th district of Pennsylvania, died suddenly on the evening of the 31st ult. His death is attributed to congestion of the liver.

THE Post Office Committee have been instructed to inquire into the expediency of establishing a package post on all the great lines of travel, for carrying money and merchandise at special rates.

LATE advices from Japan state that, owing to internal disturbances in the country, rice has risen in value to such an extent as to cause the Government serious alarm. Several riots were reported to have taken place.

THE Indians of Florida express a determination to keep the negroes heretofore held in their tribe as slaves, denying that white men's laws are applicable to them. The negroes have appealed to the military authorities, and trouble is anticipated.

THE death is recorded at Bergerac, in the Dordogne, of a widow named Pilland, at the age of one hundred and five years. The funeral service was performed by the son of the deceased, a priest, aged eighty, who is cure of Beaumont-du-Perigord.

GOV. ANDREW, in his address before the N. E. Historic Genealogical Society, said, "there is no error possible, into which wise men have not at some time fallen; nor any wrong of which even good men have not at some time been guilty." This truth teaches us the obligation of charity.

IN Portland, Me., Mr. and Mrs. A. W. Clarke and four boarders were almost simultaneously taken violently sick. A physician was called who pronounced them to have been poisoned by arsenic. How it was administered is a mystery. Two of the number are still in a critical condition.

A GENTLEMAN in Syracuse the other evening found on his doorstep a basket containing a neatly dressed child one day old and a note which said, "Expressed to Charlie Snow from Heaven." Being certain that he had not ordered any goods from Heaven, Charlie turned the consignment over to the Poormaster.

THE English papers are full of bits of news about the recent storm and cold snap. A train was snowed in for twelve hours between London and Salisbury on the 5th ult. A switch tender was frozen to death at Reading, and a donkey in London. The sentinels at Colchester Camp were relieved every hour instead of once in three hours as usual. In Dublin, too, several persons were frozen to death.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE, ROCHESTER, Feb. 5, 1867.

THE money market in Western New York is easier than last week, and regular customers now find no difficulty in obtaining such accommodations as their business requires. Business men are not extending. The uncertainty in regard to the future has led prudent parties to rather curtail their operations, and to avoid new and hazardous undertakings. This course of itself tends to give ease and stability to financial affairs. The first of February shows considerable improvement in New York and other eastern cities. Capital has increased and rates of interest are lower. All that seems to be wanted now is to feel that the Secretary of the Treasury will not pursue a course detrimental to the business interests of the country, and that Congress will not adopt or sanction any extreme financial measures.

Mr. Randall's bill for retiring the National currency and supplying its place with greenbacks meets with much opposition. In the last week or ten days large and influential delegations of bankers and commercial men have visited Washington to present their views to members of Congress, and especially to the committees having the currency questions under consideration.

Gold continued without much change until near the close of last week when there was an advance. The price yesterday was 136¾. The receipts of gold from California last week were over $1,000,000. A telegram from San Francisco, Friday, says a steamer had just left with $1,200,000 in gold for this side.

The Troy Whig states that surveys for the proposed new Hudson River, or West Side, Railroad, running from Albany to Hoboken, are nearly completed, and arrangements are being perfected for commencing the work as soon as the frost is out of the ground.

WOOL—There is no change in the wool market. Sales at Boston last week foot up 475,000 lbs. at 40@70c. for fleece. The market is nearly bare of good Western fleece. The Boston Bulletin of Saturday says:—"In pulled wools we note further sales at 30@35c. for No. 1; 40@50c. for Western and Eastern supers; and 50@60c. for extras—the outside figure for Rochester and other choice brands."

WHEAT AND FLOUR.—The market continues dull, and the tendency downward.

PORK PACKING.—The business has been very large at the West this season. A comparison of the number packed this season with the number last year, in eighty-seven of the principal towns at the West, shows an increase this year over last of 700,000 hogs.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		**Fruits, Vegetables, Etc.**

PRO BONO PUBLICO!

A Mysterious Record!

It is manifest from what the great wheel of progress brings to light from day to day in its unerring revolutions, that there are true, noble and great minds continually striving to solve the deep-hidden mysteries of human life and its ultimate destiny, minds who have the welfare and happiness of all mankind in view, and exert their utmost powers to accomplish that end.

Human life! what is it? and what the grand purpose of its creation?

Endowed with all the attributes of Deity, it is destined to accomplish its heavenly mission in love, wisdom, and eternal progression. Not one sacred pearl shall be lost to dim its bright luster, as time rolls on through the vista of centuries. The accumulated evidences of the past have solved the great problem that life in this world is but the school-house designed for the unfoldment of the Divine germ planted by Deity, and protected and nourished by His bountiful hand.

How sublime, how beautiful the thought that the researches and developements of the Nineteenth Century have added fresh and glorious laurels to the great temple of fame and science—in every department and phase of progressive development, the hand of the sage and philosopher is ever busy—ever ready to devise means for the amelioration of human woe, and the prolongation of life.

Think you his is an enviable position—an existence without stern obstacles and perplexing cares? Nay, far from it, for he plucks the lovely rose in peril of the thorn, he climbs to eminence and renown, and every step he gains is planted on a prostrate foe. He digs the gold and tries it; another and a bolder hand must strike the blow that stamps its worth, and gives it currency as genuine.

It must be admitted by every rational mind that the man who contributes the most towards promoting the happiness and welfare of the human race must of necessity be the most highly esteemed by his fellow man; and acting upon this principle it appears that Prof. R. L. Hamilton, of No. 546 Broadway, New York, has by patient investigation and vast experience, solved the uncertain question in relation to the vexed and important subject of Liver Complaints and other chronic diseases. The Doctor, having been very extensively engaged in the treatment of Liver diseases for a whole life-time, found a class of those cases that invariably, in spite of the most positive treatment, proved fatal, showing that there was yet some remote, hidden causes that medical science had not fully and perfectly demonstrated. In view of these uncertainties, and for the purpose of benefiting the human race to the fullest extent, Prof. Hamilton set about a series of experiments and scientific investigation which has been crowned with complete success, proving the fact which he had suspected—that in all of those lingering Liver complaints the ordinary remedies used by Physicians were of no avail, or *worse* than useless, by destroying the constitution and hastening the unfortunate victim to a premature grave.

Dr. Hamilton's valuable discoveries consist mainly in his having perfected a combination of Remedies which are PURELY VEGETABLE *and perfectly safe in any case*, no matter how delicate the constitution, or feeble the person may be—in fact after having stood the test for years it is positively proved that they cannot fail in any case to cure where there is sufficient vitality left in the system to respond to the specific action of any human agency whatever—so many thousands having been saved by their use after every thing else had been used in vain; these natural remedies may with safety be looked upon as *specifics* in the full sense of the word. For the benefit of the sick who may wish to know positively when they have derangements of the Liver of more or less severity, a combination of the usual symptoms found in such cases, will be found below.

Symptoms of Liver Complaint.

A sallow, or yellow color of the skin, or yellowish brown spots on the face and other parts of the body; dullness and drowsiness, with frequent headache; bitter, or bad taste in the mouth, dryness of the throat, and internal heat; palpitation of the heart; in many cases a dry, teasing cough, with sore throat; unsteady appetite; sour stomach, with a raising of the food, and choking sensation in the throat; sickness and vomiting; distress; heaviness, or a bloated and full feeling about the stomach and sides, which is often attended with pains and tenderness; aggravating pains in the sides, back, or breast, and about the shoulders; colic, pain and soreness through the bowels, with heat; constipation of the bowels, alternating with frequent attacks of diarrhea; piles; flatulence; nervousness; coldness of the extremities; rush of blood to the head, with symptoms of apoplexy; numbness of the limbs, especially at night; cold chills, alternating with hot flashes; female weaknesses and irregularities.

Another very prominent and common symptom is the peculiar lowness of spirits and gloomy forebodings of the unfortunate sufferer; persons of naturally buoyant and cheerful dispositions are often changed to dull, morose, and desponding hypochondriacs; those before amiable and sprightly become peevish, irritable, and unsociable; in short, undergo an entire change of manner and character.

Important Facts.

Dear reader, if you have any or all of the above-mentioned symptoms, Professor HAMILTON has remedies that will strike at the root of them as by magic. There is no such word as fail in his treatment. By them the Liver and Stomach are speedily changed to an active, healthy state, the appetite regulated and restored, blood and secretions thoroughly purified and enriched, and the whole system renovated and built up anew.

It depends much upon the length of the time the difficulty has been existing, organization of the particular system affected, climate, general habits, occupation, sex, &c. Of course, the longer the derangement, the more numerous the systems of internal discord. If nature, in her salutary struggles to relieve the blood from its poisonous qualities, throws or deposits the greater portion of it on the Lungs, there is at once more or less cough, with, eventually, all the long train of symptoms of Consumption. It is a law of the animal economy that, to be natural and free, the body must throw off all worn-out and poisonous, irritating materials, by the process called secretion and excretion, as fast as it takes on new particles by assimilation and nutrition. Now, I have ascertained by experiments that the majority of all this worn-out billions matter, taken up by the blood from the system, is separated from it by the Liver when in a healthy condition, and then thrown into the bowels, and passed off with the excretions. By this you see the moment the liver becomes affected, from any cause, it fails to separate the offensive matter from the blood and finds to an extent proportionate to the torpidity or disorder of the organ; consequently, nature seeks other outlets through which she can rid the blood of its unhealthy mass, when it is thrown to the surface through the pores of the skin, which it irritates and, if the unnatural process is continued long, various forms of rashes, blotches, eruptions, sores, ulcers, boils, swellings, &c., are indneed, such as are seen in different persons and localities of the globe.

So with all kinds of fits and nervous diseases. The same poison matter that is naturally, and should be, taken up by the liver, is left in the blood, and, if the brain and nervous system are weakened by overaction, or any cause, they are thrown in a negative position, which renders them incapable of resisting the accumulation, and the consequence is irregular action of the brain and nervous system takes place, and, in their efforts to free themselves of the offending substances, convulsions or fits of various kinds are produced, in all degrees of severity, from the slightest fainting fit to the most dangerous cases of apoplexy or epilepsy. Should the irritation settle, and be confined to the general nerves of the system, neuralgia and all grades of nervous affections supervene, from the most intense pains and irritability to the simple restlessness so often found in females of a delicate and imperfect organization. Restlessness at night is produced from the same; and nervous headache, drowsiness, heaviness, dizziness, roaring, buzzing, and singing in the ears and head, dimness of sight, deafness, throbbing or darting pains in the head. If the bilious matter should settle upon the mucus membrane that lines the stomach, throat, and bowels, then we had the following symptoms or manifestations of the internal disarrangement, viz:—water-brash, heartburn, sickness and vomiting, colic, pains in the sides, stomach, bowels, back or breast, sick headache, palpitations of the heart, wind in the stomach, with distress and fullness, choking spells, heat and dryness in the throat, bad taste in the mouth, canker in the mouth and throat, bad breath, thirst, cold chills, alternating with hot flashes, dysentery, diarrhea, cholera, and cholera morbus, sour stomach, with raising of the food, unsteady appetite, constipation of the bowels, all-gone feelings, etc.

PART SECOND.

Continuation of Prof. Hamilton's Theory.

Hoarseness, spitting blood, bronchitis, asthma, or phthisic, and consumption are produced by the same cause. The bilious material is thrown upon the delicate membrane that lines the air passages—irritation, with cough; more or less severe soreness through the throat, breast, sides, back or shoulders, or pains of various degrees of severity, and, unless something is done immediately to relieve nature, inflammation will supervene, followed by ulceration, night sweats, cold chills, hectic fever, rising of matter, with perhaps a little blood, diarrhea, sore mouth and throat, etc., which are indications of a powerful effort of nature to relieve the system of poisonous, bilious material which has fastened itself upon the most delicate and sensitive organs in the human system—the lungs and air passages.

In connection with the above cause we have another, which is not understood by physicians, and that is a superabundance of action of the lungs, or, in other words, they have been compelled to labor too hard. That the machine may run well all the parts must be well oiled and properly balanced. Thus it is with the human system. God, whose hands so daintily fashioned this wonderful body, has allotted in each organ a specific amount of labor, which, if properly and faithfully performed, will cause all to run smoothly and easily through life. But the moment one organ attempts to shirk its usual amount of labor upon a neighboring organ, that moment the harmony of the system is destroyed, and the organ, overtasked by its increased action, becomes, as a natural consequence, enfeebled and, no longer able to perform even its ordinary amount of work, falls into decay.

Suppose for instance, that the action of the heart—the tiny seat of life—has become impaired, and, instead of performing its customary amount of labor, it now performs only half as much as it should do—what is the result? In all cases where there is a lack of action in the liver digestive organs, and heart, the lungs are necessarily brought into powerful action, and are obliged to perform the work of their neighbors as well as their own proper functions. The labor imposed upon the lungs is, therefore, greatly in excess of what it should be in a normal condition, producing irritation, inflammation, and ultimately ulceration, general prostration, and consumption. In brief, the above are the causes that produce all cases of lung diseases, throat affections, and catarrh. Now, the natural and proper treatment for the full and permanent cure of all such complaints is simple, safe, and reliable. Instead of applying remedial agents to the lungs, exclusively, we have, by vast experience, learned that other organs should be roused to action at once, and be compelled to perform as much exertion as the lungs have been compelled to perform.

It is well known throughout this Continent.

Prof. R. Leonidas Hamilton, M. D., having, for many years, given his whole time to the treatment and investigation of Chronic Disease, more especially of the Liver and Blood, and having been long and favorably known in every State and Territory in the Union as the most skillful physician in the cure of Chronic Diseases, being formerly Professor of Materia Medica, Therapeutics, Pharmacy, Medical Botany, and Diseases of Females and Children, in Central Medical College, also, Physician to the New York College of Health, and the Central City Hospital, etc., has placed opportunities within his reach of no mean importance, and have added largely to his skill and experience.

Remember, Prof. R. L. Hamilton is the only physician in the world that has made Liver, Lung, and Blood diseases a specialty for a whole life-time, and the only one that has written a full and true theory of the origin and certain cure of such complaints. Prof. H. has now perfected a class of New Specific Remedies that do not fail to cure, speedily and permanently, where the system has not entirely broken down.

Has Treated more Cases of the kind than any other Man.

After having successfully treated over *one hundred and fifty thousand cases of Liver, Lung and Blood diseases* throughout the United States and British North America, the people can have no excuse for doubting his skill and ability to cope with all diseases to which the human family are subject. The name and fame of Prof. R. Leonidas Hamilton, M. D., has become a household word throughout this Continent, and the mere mention of his name is sufficient guarantee that the public may place full confidence in its worth and reliability. By the new system of treatment adopted by Prof. Hamilton, all chronic diseases are fully and permanently cured, with more speed and certainty than any other known method. In a majority of cases, cures are made in one quarter the time usually required by other treatments, and there is also another advantage to be gained, which is of great benefit to the laboring classes, in that no mineral or poison remedies are given. Consequently, patients are in no danger of exposure, and need not be kept from work, or compelled to change diet or general habits of everyday life.

SYNOPSIS.

For greater convenience to those wishing to write me about their diseases, I insert the following, which embraces all that I require to know in any case. Have you sallow or yellow skin? Have you brown spots on the face or any part of the body? Have you a headache? Are you dull, heavy, or sleepy? Have you a bitter or bad taste in the mouth? Have you irritation or dryness in the throat? Have you cold chills or hot flushes? Have you palpitation of the heart? Have you a dry, teasing cough? Is your appetite unsteady? Is your stomach sour? Do you raise or spit up your food? Have you any choking spells? Are you troubled with sickness and vomiting? Do you feel bloated about the stomach? Have you pain or tenderness about the stomach? Have you pains in the back, sides or shoulders? Have you a tired or sore feeling on rising in the morning? Have you colic pains? Have you constipation of the bowels? Have you attacks of diarrhœa? Have you wind in the stomach or bowels? Have you piles or fistula? Have you nervous and all-gone feelings? Have you cold feet and hands? Have you a rush of blood to the head? Have you uneasiness in laying on the sides? Have you fainting or epileptic fits? Have you great lowness of spirits? Have you gloomy forebodings? Are you peevish and easily irritated? Do you feel unsociable at times? Has your entire manner or character changed?

REMEMBER THIS!

All sick persons must remember that if they wish to be put upon a course of treatment which will cure them, they can write and answer the above questions. I can, in every instance, prescribe for them just as well as tho' I saw them; for I have constantly thousands under my treatment in various parts of the world which I never see in person; in fact, some of the best cures I ever made I have perfected in cases I never saw.

All I wish to know in any case, is the most prominent symptoms, and they can just as well be written as told to a physician, and he can treat the case as easily as though the patient were present. Have no fear of this.

Please write to me at once, all ye afflicted, when you read this, and I will answer you promptly and to the point, and state fully the facts as they appear, and whether you can or not be saved. Do not give up, even though your family physician has done you no good, for I have saved thousands after *all* hope had fled, and the grave was nigh.

In your letter do not fail to give your proper Post-Office, County and State, and your own names in a plain hand, so there will be no mistake in sending my answer. Also, if you expect a full and specific reply to your letter always inclose ten cents, for "time is money" and postage must be paid in advance. Remember this! I am always in attendance, and attend to all cases in person, and the afflicted public may rely upon my responsibility, and that they will be dealt with justly and honorably. Now, in closing, I will again say,

MAKE A NOTE ON'T.

All who read this, and feel that they are in any way diseased, please be so kind as to write me a simple, full statement of your symptoms, and by return mail you will get a reply, with every information and advice necessary, free—only inclose stamps to pay postage. Do not delay I beg of you. Any delay may place you beyond all hope of a cure. I shall be plain and tell you the whole truth, and what you may depend upon, and whether you can or cannot be saved. Have no fear of revealing any secrets to me, for they are safe in my possession.

I repeat, those who live at a distance and cannot see me in person, write me; I can prescribe and send remedies by mail or express to any part of the world. No danger in sending letters, or money in letters, for they always come safely and speedily to me. Please hand this in your friends and acquaintances who may be sick; thereby you may do much good and save valuable lives. Prevail on them to write me at once.

New and Wonderful Testimonials in favor of Prof. Hamilton's Great Success in Curing Chronic Diseases.

Important Case of Epileptic Fits!

Read the following evidence of what my treatment has done in a case of this disease, hitherto considered incurable:

BUCKHART, Ill., Oct. 18.

DR. HAMILTON:—My wife was afflicted with fits ten years, *attended with great spinal and nervous debility.* She doctored with several physicians, but all to no purpose. I read one of your circulars, and was so impressed with your new and simple theory of disease that I determined to try your remedies. Every one in the neighborhood cried "humbug," but, thank God, failed to dissuade me from our purpose. As you know, we sent for some of your remedies, which, with the help of God, have *completely and permanently cured her.* She has not had a fit since; her back is strong, and her nervous vitality and strength have returned. As every attack she had was severer than the one previous, it is reasonable to suppose she could not have lived long had for the timely interference of your wonderful skill. To God be the praise, for so speedily and miraculously have your remedies worked, that I can but recognize you as an instrument of divine power in rescuing my dear companion from a terrible death. Words can but inadequately express my gratitude and joy. I wish you to publish this, and spread it far and near. I deem it my solemn duty to all afflicted with this awful malady to do all in my power to make known to them the *true physician*, and if any doubt the authenticity of this let them write to me; I will satisfy them that it is all true. May God's blessing attend you in your efforts for humanity's good.

JOHN S. SHARP.

P. S.—If you desire, I will go before a justice of the peace and make affidavit to the foregoing. It may tend to make "assurance doubly sure," to a certain class of incredulous beings who are always ready to cry "humbug" at every new invention.

Mr. Franklin Flora of Pierce, Stark Co., Ohio, writes, June 19:

"In the year 1863 you cured me of a chronic diarrhœa of eight months' standing, which I contracted in the army. After I recovered I returned to my regiment and have never been troubled with that complaint since. A neighbor wishes me to write you and ascertain whether you can cure his son of a like disease of one year's standing. Before taking your medicine I had tried many other remedies without benefit, and I sincerely believe that were it not for you I would have been in my grave long ere this."

Mr. Cyrus Beeman of Fandon, Iowa, writes, Sept. 4:

"Your kindness and skill has placed me under very lasting obligations."

Mrs. A. Kelton of Orion, Henry County, Ill., writes, Jan. 25:

"When first I saw your advertisement, I did not give it much attention, having tried many physicians to no purpose; but, on a perusal of your theory of disease, I was forcibly impressed by its simple reasoning, and determined to place myself in your care. The result has been very gratifying, and I thank God for having had confidence to apply. After long years of suffering with 'liver complaint,' in a severe and complicated form considered incurable by skillful physicians here, I am now, after taking your remedies but a few weeks, comparatively well, and free from all disease, and also the effects of the minerals with which my system has been drugged for years. To all afflicted with liver complaint I would say apply to Dr. Hamilton, for I believe him to be not only eminently skillful in the class of diseases which he has made a specialty for so long a time, but also candid and conscientious in all his dealings—qualities of no mean importance in the true physician."

Jno. C. Palmer of Newtown, Iowa, writes, January 22:

"For twenty years I have been afflicted with a nervous sick-headache. At times it was so severe that I was completely prostrated. Many of the most skillful physicians in this section attended me, and I also tried many patent articles, but to no purpose. I have used your medicines only one month, and I now am completely cured. Your remedies are truly invaluable, and many in this vicinity who have tried them can attest to their virtues."

Eliza Lewis of Mercerville, Ohio, writes, June 21:

"I received a package of medicines from you last fall, which helped me more than any I ever took. After I had taken it I became stronger than I had been before in several years. I must send for another package, for yours is the best medicine I ever took."

Miss Ada Lapham of Perry Center, Wyoming Co., N. Y., writes, Jan. 24, 1865:

"It is some time since I received the last package of medicine from you. I feel very much better than I did last winter at this time. I have none of that languor and uninterested feeling that I experienced a year ago. Your remedies have very greatly benefited me, and I can thank God that they came within my reach. I am so much better that I enjoy myself much more than formerly. My brother is better, and appears very different than before taking your remedies. He looks better—face not as thin, and countenance wears a different look. He does not shrink from society now, and seems to enjoy himself well when he goes among friends. We have the greatest reason to praise God for having heard of you."

A Celebrated Physician Acknowledges Beat.

FANDON, Allemakee Co., Iowa, Sept. 20, 1865.

DEAR DOCTOR:—I feel that it would be injustice to you as well as myself not to acknowledge what you have done for me. Last year I was sick, attended by two said to be good physicians, and given up to die. A neighbor of mine wrote to you for me stating my disease, and you answered you could and would cure me. Your medicines were received, and after taking them until I was able to sit up to have my bed made, my family doctor called, and, seeing how fast I was gaining, said it was not your remedies that were benefiting me so much, but his, and made me believe it. I stopped taking yours and continued taking his, until I realized it was killing me, and then commenced to take yours again, and soon recovered, and have been well ever since. I am able to perform the most arduous manual labor, which I have not done in 16 years. My family physician (the one who doctored me) said the other day, "Mr. Beeman, had it not been for Prof. Hamilton you would have died last summer in spite of all we could do." I submit the case of my wife for your consideration, with every confidence that you can do as well by her as you have done by me. Believe me, ever gratefully and truly yours, CYRUS BEEMAN.

Mr. Joseph Little of Thompson, Pa., writes, Sept. 5:

"Last January I received a package of medicines from you. It is with much pleasure and thankfulness that I can now state that my health is fully re-established. The asthma and bronchial difficulties are entirely removed, with the other numerous complaints before specified. I now feel as well as any one can expect to at my age—67 years."

Mrs. John B. Parmenter of Hammond's Creek, Tioga Co., Pa., writes, Oct. 11:

"Language is inadequate to express in a fitting manner my deep and most heartfelt gratitude to you for having restored me to health by your medicines (which I took from time to time as directed), after I had been severely afflicted for many years with a general debility of the whole nervous system, liver complaint, indigestion and all their attendant consequences. I was much of the time unable to be about my house, but feel that I am now well and in a condition to attend to all my domestic duties.

"I am so thankful to you for the great benefits derived from your treatment, that I cannot speak too highly in your praise. I rest as well and sleep as good nights as I ever did, and every one who knows me is greatly astonished to find my health so greatly improved, and say that they, too, must try your remedies."

Mrs. P. A. Niblock of Madisonville, Hopkins Co., Ky., writes, Oct. 7, 1865:

"I write to return my heartfelt thanks to you for curing my husband of consumption. His recovery was so rapid that all his acquaintances were inquiring how it could be possible that such a change in his most critical position could be brought about. Your skill and treatment has been fully tested in his case. It has been a success. The most happy and astonishing results have been experienced and seen. You will soon have many applications for treatment from patients in this vicinity. Your name as a physician and gentleman stands pre-eminent here. Please send us some of your circulars, for they are in great demand. I will send you a statement of my many troublesome ailments, to get your opinion as to the probability of a cure."

Mrs. Samuel A. Firman of Carversville, Pa., writes, May 22, 1866:

"My daughter now enjoys better health than she has had before in many years past. She seems to be perfectly well. Your medicines have cured her."

Mr. Charles Carroll, counselor and attorney-at-law, of Rome, N. Y., writes, Aug. 21, 1865:

"It is well that I happened to be at your office in New York, on the 15th inst., when so suddenly attacked with the first stages of cholera; inasmuch as the medicines you immediately administered to me instantly checked the progress of the disease, which otherwise might have proved fatal. Although greatly reduced in strength, I so far recovered as to be able to leave your city by the evening boat for Albany, and to return home to Rome the following day. I continued to take the remedies you provided me with for a few days, until I entirely recovered, and have gained sufficient strength to be about and attend to my ordinary business. Your Lung, Liver and Blood preparations have been used in my family several years, and are invaluable. We dare not be without them. The virtues of your cholera and other specifics ought to be widely promulgated, that persons afflicted may easily and readily avail themselves of their use."

Mr. C. A. Staples of St. Cloud, N. H., writes, Sept. 25, 1865:

"I wrote you last Spring for medical aid, and accordingly received two packages of your medicine. I must confess that I never had anything do me so much good. Inclosed find $2, for which please send me some of your Blood and Liver Pills. I believe they are the best I ever used. I do not want to be without them."

Miss Anne P. Colby of Candia Village, New Hampshire, writes, March 18, 1866:

"I cannot find language to express my grateful thanks to you and to kind Providence for His blessings on your invaluable remedies. They have truly acted like magic on my system, and in removing ills to which I have been subject for many years. My friends and neighbors begin to see and tell me how much better I look. I call my health good now. It has not been so good in more than thirty years. I do not know that I shall need any more medicine. My appetite is good, and everything I eat sets well. Nothing seems to disagree. I think you will have patients from this vicinity soon, as I am recommending your treatment to the afflicted, and they know how I have improved. I have taken a great many kinds of pills, but never took any equal to yours—so easy and so efficacious. They have relieved my head greatly, and I really feel like another person.

"The pressure and rush of blood to my head, the soreness and pain in my right side and shoulder, and the swelling and bloat, are all gone. I really did not believe it possible that I could be cured of so many ills, of so long standing, in so short a time. Long may you live, and great success may you always have in relieving the afflicted, and may Heaven's choicest blessings ever rest upon you."

Miss Eliza Ann Carpenter of McKean, Pa., writes, August 26:

"It is with great pleasure that I am able to state that you have cured me of a spinal complaint which has been very troublesome to me. Now I can do as much housework as any one. Before taking and using your remedies I could not do much of anything. I believe I am permanently cured. I now send to you in behalf of my cousin, Sarah L. Smith, who has come 100 miles to have me do so. I think she is inclined to consumption. She has spells of spitting blood, has night sweats, constant pain in her left lung and under the shoulder blade, much bent in the lower part of the bowels, swelling in her side, throat disease, headache, &c., &c."

Eliza Ann Carpenter of McKean, Pa., writes, Sept. 12, 1866:

"The girl, Sarah Smith, about whom I wrote you, has taken your medicines, and they have worked like a charm. She can now work about the house and can ride eight or ten miles. The disease of her throat (which the doctors told her no man could cure) is about well. The bunch in her side has disappeared and she is improving surprisingly. She thinks she cannot live without your medicines. Please send her some more. Inclosed I send you the pay."

E. Goodnough of Shingle Creek, N. Y., writes, March 4, 1866:

"The medicines you sent me were received and have been taken as directed. I feel that it is but an act of justice to state, and it gives me great pleasure to do so, that I have been benefited by your valuable remedies far beyond all expectations, or the most sanguine hopes of my friends. I shall ever feel grateful to God that I was led to use the means with which He was pleased to bless me, and to you for your faithfulness in furnishing me with medicines that restored me to almost perfect health, after having suffered for years with diseases which were believed to be incurable. Indeed, I am well, and I think I need no more medicine."

Mr. S. S. Woodman of Cornville, Somerset County, Me., writes, July 30, 1866:

"I was, one year ago, one of your patients, and took three packages of your most valuable medicines. Before I applied to you, I had taken so much 'doctor stuff' that I feared no kind would do me good. The severe pain I used to have in my back and left shoulder are entirely gone. My naturally weak and feeble constitution has been built up, and (if I may be allowed to use the expression) I am an entirely new man. All this has been brought about by your truly effectual remedies. They have done for me more than I could have expected."

Harriet Johnson of Mount Morris Station, Michigan, writes, July 19, 1866:

"I think I will do without any more medicine. My complaint was of the liver and digestive organs. I feel quite well and have a good appetite. I assure you I am very thankful for the good you have done me. I have had so much poor health, that I know how to appreciate that I now have. Should I at any time feel a return of any of my bad symptoms I will write you; but I think they are effectually cured and will not again appear. May heaven's best blessings ever be showered upon you, is my sincere prayer."

Mr. A. Gould of Cohoes, N. Y., writes, April 2, 1866:

"On returning from the army I found myself suffering from fever and ague, which I have tried in many ways to cure. After taking medicines of various kinds I found I was no better. My brother recommended your remedies to me, and since I called on you and obtained some I have been rapidly improving, and am now able to perform my day's work. My liver, blood and digestive organs have returned to a healthy state, and I am now a well man."

Mr. James H. McCleary of Fayette Springs, Pa., writes, January 24, 1866:

"I must inform you of the great benefit my wife received from your medical treatment in the Spring of 1864. Your remedies restored her to health and vigor. Were it not for them I sincerely believe she would ere now have been in her grave. May God in his providence attend you in your humane labors is the prayer of your friend."

Miss Catharine Leslie of Boonville, Warrick Co., Ind., writes, May 4:

"The medicine you sent me for my daughter has been received, and two-thirds of it has been used. She has been greatly benefited by it. She does not have fits as frequently as before. The usual time for her to have them passes over. Please forward another package."

Mrs. Gideon Barber of Canton, St. Lawrence Co., N. Y., writes, June 23, 1866:

"Your medicine has worked wonders with me. I am so much better since I took them that I can hardly realize the fact that it is so; I cannot feel grateful enough for your timely relief."

Anna Hay of Hunt's Corners, Cortland Co., N. Y., writes, Aug. 8, 1866:

"Three years ago last Spring I was in very poor health and sent to you for a package of your medicines. I used them according to your instructions, and through them and the goodness of our Heavenly Father, I was restored and have been very well most of the time since."

REMARKABLE SUCCESS!

A Celebrated Clergyman Responds.

ROCKAWAY, NEW JERSEY.

R. L. HAMILTON, M. D.—*Dear Sir:* It is with pleasure that I communicate the result of the use of your medicines. When I first visited your office in New York, I could scarcely walk from the cars before your door into the office, without exhaustion. With all your prestige as a successful physician, I had but little hope that you could cure me. There was nothing strange in this. Four years and four months had passed away, and during that period I had suffered constantly with chronic diarrhœa and piles. I had some of the best physicians, and used everything I heard of that I could procure, but all in vain. Why should I think that you could do more than others? But, Sir, justice and gratitude compel me to say, that after the use of your medicines for a few months, the result was a complete cure. I ceased the use of your medicines about the 1st of September, and had no return of diarrhœa until the 24th of January, 1865, and that attack I could trace to its cause; indeed, Sir, I cannot expect to be freed from liabilities to attacks of disease any more than other men. I wish I had the voice of seven thunders, and could assemble the sick in the world, I would direct them to you, Sir, as one fully competent to heal, and whose generous and noble nature would not allow of exorbitant charges.

Yours truly, The Rev. GEO. H. JONES,
Of the Newark Annual Conference of the Methodist Episcopal Church.

Read the Testimony of Mr. Zachariah K. Post, Clerk in the N. Y. Post-Office.

GENERAL POST-OFFICE, NEW YORK CITY.

DR. HAMILTON:—After suffering long years with liver and blood disease in a severe form, and being dosed by physicians of different schools to no purpose other than an injurious one, I am now, after taking your remedies as short a time, perfectly healthy, and free, not only from disease, but also from the effects of poisonous minerals with which my system has been drugged. In simple justice to your great professional abilities, and gratitude for your kind attention, do I furnish this statement, which I will promptly corroborate by letter if any doubt its authenticity. Most heartily do I recommend all afflicted with Liver, Blood, or Lung Disease to Prof. Hamilton.

Very gratefully,
ZACHARIAH K. POST, New York P. O.

If you Doubt the Truth of the following Remarkable Cure, write to her, and she will Tell her own Story.

INCONTROVERTIBLE TESTIMONY—THE CASE OF MRS. PALMER—A COMPLETE AND PERFECT CURE.

Mrs. L. H. Palmer of Killingly, Conn., gives a history of her case, which, as she says, "was so remarkable that strangers went many miles to see her, the same as they would a great curiosity." "I seem (she writes) to have all the complaints a person can have and live. Indeed, I seem to live but to suffer. I have headache, sore throat, with a general disorganization of the system; am touched with a dry, tight cough, short breath, very costive; have night sweats, and at times afflicted with the piles, which are intolerably painful. Now I suffer with the cold, and again feel burning with the heat. I have not had a menstrual discharge in fifteen months; have sharp, running pains in my hips and kidneys, and my liver is apparently torpid and inactive." The medicines needed by Mrs. P. were at once forwarded, and the benefits derived from them are apparent from the following extract from one of her substantial letters:—"Although I had begun to be encouraged by the slight improvement, yet I felt that a crisis was coming—one which I dared not to contemplate. You can imagine my agreeable surprise when I passed the critical period with less pain than I ever felt in my life. From that time I began to improve rapidly; nature seemed to have been aroused under the magical influence of your remedies; my strength returned; my mind appeared to be relieved of all melancholy, and again the pathway of life opened brightly before me. Only last week I returned to my native place, from whence I was taken years ago on my bed, hardly expected by my friends to reach my journey's end alive. When my old acquaintances saw me returning comparatively well, they could hardly believe that such a miracle could be wrought by medicine; they say it seems 'like one raised from the dead' to see me moving around again. As long as I live I shall be a walking advertisement of your truly wonderful healing powers. Words cannot speak my gratitude. Once more I find happiness in living. If I ever succeed in accomplishing any good I shall attribute it all to you."

All letters for the above lady may be addressed to Box B, Killingly, Conn.

Important Notice!

My desire is that every person who reads will send me their address, if nothing more. I wish to send a list of several hundred of the most wonderful cases that I have cured, from every quarter of the globe, by the use of my new remedies.

NOW AND THEN.

BY MARGARET ELLIOTT.

'Tis toil now for a little while, and then 'tis rest—
'Tis strife now for a little while, and then 'tis rest;
'Tis rest eternal, rest complete,
Towards which we haste with toil-worn feet;
'Tis weariness a little while, and then 'tis rest.

'Tis grief now for a little while, and then 'tis joy;
'Tis woe now for a little while, and then 'tis joy;
'Tis joy beyond our utmost hope
Towards which with gloom and tears we grope;
'Tis sorrow now a little while, and then 'tis joy.

The Story Teller.

Written for Moore's Rural New-Yorker.

A STORY OF OAKVILLE.

BY MRS. COOK.

JAMES MURRAY was styled a bachelor by the young ladies of his town; not that he deserved the appellation by his extreme age of single blessedness, but because he could not be persuaded to mingle in the society of the fair ones. He was of a good family as respects birth and fortune. Every art was used to captivate him, but all in vain. What a pity such an interesting and well appearing man should be so exclusive! He was thought much of by the young men of his acquaintance. Was he not one of the first at their clubs and secret societies? Was he not the most liberal when they had a large bill to pay? By the older and wiser ones he was called a fast young man.

His sister MARY often begged him not to leave her so entirely to the care of other gentlemen. She thought her brother ought to accompany her when she needed the protection of a gentleman. One evening she begged him so earnestly to go with her to Mrs. HILL'S party that, for a wonder, he consented upon these conditions:—she must not keep him waiting one moment after nine o'clock, and must not object to leaving the company when he wished to, and of all things not introduce him to a partner for the dance.

She replied, "I warrant you anything you will dance with ELIZA WARD before the evening is over."

"Who is ELIZA WARD?"

"Why, brother, she is a niece of Mrs. HILL. She is poor, and her aunt keeps her as a deed of charity. I shall not tell you anything more about her; you will see her to-night."

MARY was so pleased with the prospect of having her brother for a gallant that she took unusual care to arrange her dress to please him. I might as well describe their costume for the evening. MARY wore a sky-blue silk, trimmed with rich white lace, and white slippers and gloves; no ornaments save a small diamond pin. He hair hung in ringlets. JAMES, after the fashion of the day, was dressed in a handsome suit of black, white gloves and vest. When they arrived at the party they could not help hearing the exclamations of surprise at their appearance. "What could it mean? JAMES MURRAY at a party!" Mrs. HILL was just the one, by her nice tact and affability, to put JAMES at his ease in the presence of so many ladies. It was curious how soon they found out that no one could talk so fluently as he. I fancied the graceful deference with which he conversed with them, seeking their opinions and listening to their utterance, was the charm that operated upon his fair admirers. Mr. MURRAY was so attentive to the ladies during the fore part of the evening that his sister was quite out of his mind, until she came to him and introduced her friend ELIZA WARD.

In person ELIZA was attractive rather than beautiful; her complexion was brilliant, but not fair; her eyes of a greyish tint, her hair brown and curling. He admired the girlish delicacy in her style of dress, a plain white muslin, with a blue sash around her waist. He drew her out in conversation and found her very intelligent; so easy and unaffected that he, the bachelor of Oakville, was completely enthralled without an effort on the part of ELIZA. His eyes followed her constantly, much to the indignation of her cousin BELLE HILL. MARY did not have any reason for objecting to leave the company when her brother wished, for he was among the latest to leave, and the first one to propose calling upon the young ladies after the party. BELLE soon saw that she was not the magnet.

Mrs. HILL took it upon herself to inform Mr. MURRAY that her niece was entirely dependent upon her, as it was found after her father's death in the old country, where he had gone for his health, that she was penniless. Mr. MURRAY, after hearing so much upon the subject, thought it strange, if she really were so dependent, that they said so much about it in the presence of those who were not interested in the matter. He told his sister that he had fully made up his mind that ELIZA WARD was acting a disguised part, and that Mrs. HILL was trying to help her carry it out. I have heard from good authority that when her father left this country he was heard to say that ELIZA was well provided for, as he had made a deposit of thirty thousand dollars for her. I think ELIZA prefers to gain an admirer by her worth rather than by her wealth.

MARY thought it could not be, as Mrs. HILL had dismissed the music teacher, and ELIZA had taken his place, and all her spare moments were were occupied in sewing for BELLE.

"And did you never notice how like an underling they treat her?"

Mr. MURRAY replied, "That that was the first thing that led me to think they are all acting a disguised part. Now, I think, if she were so dependent, Mrs. HILL would have dressed her very nicely, so as to display her to good advantage, in order to have her married well." He was sure she was an heiress in disguise; he was firm on that point. He prided himself upon having been so cute as to find out their secret.

Was he in the right? We shall see. All the fair ones in Oakville were in a great flutter. Mr. MURRAY was seen in broad daylight, in his handsome carriage, riding with ELIZA WARD. What a strange man he was, to take that poor girl, when so many of the wealthy young ladies would be so thankful to say that Mr. MURRAY had invited them to ride with him! In about three months the young ladies arrived at the conclusion that Mr. MURRAY was not, after all, such a gentleman as would suit their fancy.

"MARRIED.—This morning, by Rev. E. C. HULL, JAMES MURRAY, Esq., and Miss ELIZA WARD."

How circumstances alter cases! Many who a month before, if they had met ELIZA, thought it not worth while to recognize Mrs. HILL'S poor niece, were foremost in making the acquaintance of Mrs. JAMES MURRAY. We will pass over a few years, when it was whispered around that Mr. MURRAY was not as steady in his habits as he used to be. Many times he was seen, quite late at night, making a very crooked path homeward; and ofttimes assistance was necessary to keep him in an upright position; and most of his time was spent in the company of a noted gambler, who initiated him into the art and led him along by allowing him occasionally to win considerable sums, until one night, after losing a large amount, Mr. MURRAY felt confident that, by risking a still greater amount, the next throw of the dice would restore all back to him. But, instead of winning, he lost, His handsome home, everything, was staked and lost. Very much excited, he arose from the table and, calling for another glass of liquor, said, "Gentlemen, I am not as near the brink of ruin as you imagine. You all thought I married a poor girl. Far from it; I knew she was an heiress. She has kept it a secret all this while. But I guess she will fork over when she finds all is lost. I will be back in a few moments to try my luck once more."

It was after midnight when he reached his house. On entering the sitting-room, he found his wife had fallen asleep in a large arm chair, whilst awaing his return; as she never retired until her husband came home, no matter how late the hour. He was so much excited that he did not realize what he was about. Taking her by the arm and rudely shaking her, he said, "ELIZA, lend me four thousand dollars, or I am a ruined man."

Mrs. MURRAY thought she was dreaming, and tried to move from him, but he held her firmly and said, "You might as well own the truth. I knew before we were married you were rich. I should have kept still as long as you would, but am in need of money to-night — must have it. Come, give me a check on your banker. I will hand it back in a few days."

His wife, throwing her arms about his neck, said: "Dear husband, I have not one cent independent of you. I told you so before we were married."

He waited to hear no more, but pushed her from him, rushed into the hall and, not finding his hat, stepped back after it, when what a sight met his gaze! As he pushed his wife from him, she lost her balance and fell, with her left arm under her, which was broken by the fall; and her forehead was badly cut by striking the edge of a spittoon. In an instant he was a sober man. He thought that he had killed her, for she was senseless. His cries of "Oh, I have killed her! I have killed her!" soon brought his sister and the servants into the room. A servant was soon dispatched for a physician, who said that life was so near extinct he feared he could be of no use.

By daylight it was reported all over town that Mr. MURRAY, in a state of intoxication, had killed his wife, which report so frightened the men he had gambled with the night before, that they left for parts unknown, without waiting to secure the property they had won.

Mrs. MURRAY was not killed, as reported, but had a very narrow escape. She was very stupid for several hours, and did not appear to realize her situation. Her husband could not be persuaded to leave the room, even for a little rest, but would pace up and down with a pale face and uneasy air, with his hands clasped behind him, pausing every time he passed her bedside to listen if he might hear one word escape from her lips. Suddenly his face was shrouded in gloom, his lips compressed, as he bent closer to the bed. His wife, whose mind seemed to be wandering with the past, very faintly said, "My husband, save my husband." A spasm convulsed his face; and for a few moments it was frightful to behold the agony he seemed to endure; his life came up before him so vividly, as he thought how cold and negligent he had been to his wife, how he had framed deceitful excuses for his absence from home night after night, while she, through it all, had been so kind and trusting, never doubting the truthfulness of his assertions. As the stupor passed off, consciousness returned; and as soon as she was able to bear the excitement, her husband made a full confession to her, of how he had gambled and drank, and spent the best part of his life in recklessness and folly, and what a blank, barren waste it had been, as he could now see.

From that time Mr. MURRAY was a changed man. Tired and disgusted with the heartless emptiness of his life, his better nature once more gaining the ascendency, he emerged from the gay haunts of Oakville, forswearing its dissipation, and resolved to abandon forever his vicious associates and habits. In pursuance of this resolution, he entered at once upon the new course of life he had prescribed for himself, and resolved, by the help of Divine Providence, so to live as to be always found walking in the paths of honor and rectitude.

In their conversation, Mrs. MURRAY said, "There are but few persons of my age who have known and realized the evil of gambling as I have. When my father left this country for his health, he was a very wealthy man, and, being of a very active disposition, and not well enough to attend to business, he got into the habit of gambling as a pastime, and was gradually led along, until he became a reckless gambler; and one night, after losing time and again, he became so excited that he ruptured a blood vessel. Medical assistance was instantly summoned, but he survived only a few hours. After defraying all the necessary expenses and paying my passage home to my aunt's, I found that I had fifty dollars left; when, if it had not been for gambling, I might have counted as many thousands."

Mrs. MURRAY was ever after very frail and delicate, so much so that she withdrew from society, and devoted her time and means, as far as was in her power, to the relief of the suffering and needy. Many a sorrowful heart has been made glad by the thoughtful kindness and timely remembrance of Mrs. MURRAY. Her husband often says that it was the gentle influence of his wife which kept him from straying from the paths of honor and purity; and the sight of that deeply scarred forehead ever kept him in mind of the past and its bitter lessons. If you had come to Oakville a few years after, you would have found Mr. MURRAY ranked among our most worthy and influential men. Living up to their high standard, with loving hearts and the unassumed simplicity of their Christian deportment and conversation, one cannot but feel purer and better in their society.

Wit and Humor.

A QUADRUPLE SURPRISE;

OR, MR. SNOOKS' WONDERFUL VALENTINE.

What Mrs. Snooks presented to her husband on the morning of the 14th of February, to make "glorious summer the winter of his discontent."

Nurse—"Ah ha! Mr. SNOOKS! Here's a *valantine* for you; and such a valantine as don't come by post, nor by one's and two's, nuther.

Snooks—"No—I wish to gracious it did."

CONUNDRUMS.

WHY are railroad companies like laundresses? Because they have ironed the whole country, and sometimes do a little mangling.

Why can persons occupied in canning fruit, stow away more of it than anybody else? Because they can.

If a woman were to change her sex, of what religion would she be? A he-then.

What kind of a plant does a "duck of a man" resemble? Mandrake.

What is that which is full of holes, and yet holds water? A sponge.

Why is your nose in the middle of your face? Because its the *scenter*.

Why is bread one of the first necessaries of life? Because it is always kneaded.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 40 letters.

My 23, 28, 21, 26, 22, 31, 1, 2 is the name of a Union General.

My 23, 18, 17, 5, 15, 8, 13, 31, 19 is a chain of mountains in Asia.

My 35, 23, 16, 20, 19, 37, 28 is a long legged bird.

My 32, 27, 29, 28 is a Territory.

My 20, 7, 23, 16, 1 is an Asteroid

My 28, 12, 29 is a pronoun

My 1, 30, 11, 25, 33 is an article of dress.

My 3, 4, 14 are vowels.

My 6, 35, 24 is a domestic animal.

My 37, 8, 9, 36, 40, 40 is something to drink.

My 10, 21, 26, 38, 13, 39, 1, 15 is a kind of bark.

My whole is an old but true saying.

Economy, Md. MOLLIE.

ANSWERS TO ENIGMAS, &c., IN No. 888.

Answer to Miscellaneous Enigma:—Never spend your money till you have it.

Answer to Anagram:

Smooth the hair and close the eyelids,
Let the window curtain fall;
With a smile upon her features,
She hath answered to the call.
Let the children kiss her gently
As she lies upon the bed;
God hath called her to his bosom,
And the little one is dead!

Answer to Charade:—Salt-cellar.

Answer to Trigonometrical Problem:—79,9238 square inches.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14: Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.20 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates. Persons sending less than full price for this volume will find when their subscriptions expire by referring to figures on address label—the figures indicating the No. of paper to which they have paid being given.

The Publisher to the Public.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

Local Club Agents.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

The Price of the Rural.—If any one objects to the price of the RURAL, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the RURAL (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the RURAL NEW-YORKER is really the cheapest paper of its class.

[From our Regular Edition of Jan. 12.]

—We commence the new year with a *bona fide* edition of *Seventy-Five Thousand Copies*, in the belief that we shall have that number of subscribers. But whether we shall increase or diminish this edition will depend upon the efforts and success of Agent-Friends throughout the Country. What say, Gentlemen and Ladies, Boys and Girls of the gallant "Rural Brigade?" Must we recede, or will you cause a demand for full One Hundred Thousand Copies of Vol. XVIII of the RURAL NEW-YORKER?

THE TILDEN TOMATO!
GET THE GENUINE!
TRUE SEED WILL GIVE SATISFACTION!
Seldom, if ever has a new Fruit or Vegetable seeking public favor, met with so flattering a reception as has this Tomato. Hundreds in attesting to its value, declare it to be the only and truly *Perfected Tomato*. There seems to be no room for or want of an improvement; it possessing every quality which goes to make up a good Tomato. It is very prolific, early, fruit large, smooth, free from ribs or wrinkles, of excellent flavor, very solid, few seeded, and admits of being pared without waste as readily as an apple. Its keeping and carrying qualities are all any one can ask for. I take the utmost pains in securing seed, using none but the best specimens. No other varieties are grown on or within one mile of my place. Single packets, containing seed enough for 200 plants, sent post-paid, on receipt of 25 cts; 3 packets, 50c; 12 do, $2; 100 do, $12,50. Address
886-cotf HENRY TILDEN, Davenport, Iowa.

RURAL FARMERS' CLUB.

Black and Italian Bees.

M. M. BALDRIDGE, Kane Co., Ill., writes us on this topic as follows:—"A writer on bees in the first number of your paper for this year has made some statements that should be corrected at once. No apology is needed, for it is a duty we owe to your bee-keeping readers to prevent their being led astray. The writer of the article in question must be a beginner with bees, or has had very limited experience, to make the remarks that he does. He says in substance:—Black bees build queen cells before swarming; about eight days after they are started the first swarm may be expected, and the second swarm will issue about nine days after the first. The Italian bees do not build queen-cells before swarming, and the second swarm does not make its appearance till 'sixteen days after the first, so their manner of swarming is different' from the black bees, and *vice versa*. As the Italian bees do not build queen-cells before swarming, their swarms in consequence are earlier than the black bees; besides, they are ususally much larger. The Italian bees have a yellow band on the upper part of the abdomen, and the whole body is light in color; if not thus marked they are not pure.

My experience with the Italian bees dates back to the year 1860—being one of the first that got them from the importers, and I have had them from year to year since that time. I find their manner of swarming is precisely the same as the black bees. Both black and Italian bees, as a *rule*, build queen-cells before they swarm. If they do not it is the *exception* and not the *rule*. As a rule neither variety swarms until one or more queen-cells are *sealed*; and the second swarm issues from eight to ten days after the first. The reason why Italian swarms are earlier than natives, is because they breed earlier and more rapidly—producing more bees in the same length of time. They keep their brood more compact, and their families become strong some two weeks sooner than the black variety. We get swarms from the Italians in this section about two weeks before our black bees are ready thus to multiply.

Pure Italian bees are not plenty in this country. None are absolutely pure whose WORKERS HAVE LESS THAN THREE YELLOW BANDS. Queens and drones from mothers of undoubted purity sport in color and are not relied on as a test of purity. But queens bred from pure mothers must produce workers with three yellow bands to be pure. This is the test of purity now adopted by the best bee-keepers, not only of this country, but of Europe."

Cultivation of Swamp Lands.

T. J. TAFT, Onondaga, N. Y., has 80 or 100 acres of swamp land covered with from four to six feet of muck, beneath which is a marl bed. The swamp is non-productive at present, ditches that were once cut through it having become filled, and the muck will not bear up a team. He asks for information respecting the best method of managing it, and what crops would be best to attempt growing on it.

This is a question of considerable interest, and we invite readers who have had experience in reclaiming swamp lands to give us their views on the subject. The first step should be to drain it; unless it can be brought down to a certain degree of dryness, it is worthless. Capital *must* be employed. We should fancy such a meadow as a hundred level acres of rich, reclaimed swamp land would make. Perhaps it might be irrigated and two crops of hay grown in one season. It would be very profitable. Cranberries and osier willows might be grown, and, perhaps, as our correspondent suggests, peppermint. But look to the drainage first, next thorough tillage—then the harvest.

Notes from Virginia.

A CORRESPONDENT jots down some items for us from the banks of the Nansemond river, Suffolk Co., Va. "Settlers," he writes, "are coming in freely and we shall soon have good schools, churches and society. Oats, peas, cotton, sorghum and potatoes flourish well here, and almost all kinds of fruit grow in abundance where any attention has been paid to them. I think this is just the climate for the grape. We can market anything we raise in Baltimore, Philadelphia, New York or Boston, by steamers which ply regularly from Norfolk. Strawberries picked one day can be in New York the next day at evening in good condition, and last spring they sold as high as one dollar and fifty cents per quart. We had strawberries by the first of May, and plenty of ripe apples by the last of that month. Land can be bought here on the river at prices ranging from ten to twenty dollars per acre, and the best kind of land for trucking purposes. Early produce from here can be got to market ahead of that from Maryland, Delaware or New Jersey, hence it brings the highest price."

Salt, Lime and Ashes for Wheat.

"PRACTICAL FARMER," Onondaga Co., N. Y., inquires if a top-dressing of salt, lime and ashes, mixed and sown at the rate of three bushels per acre, as soon as the snow disappears in the spring, would be beneficial. Soil, gravelly loam in good condition. We should prefer to sow such fertilizers with the wheat in the fall, and would expect good results from such application; the next best time is doubtless the one indicated by our correspondent. The more vegetable matter there is in the soil the greater good will come from the salt and lime, but it is likely that experiment only can determine whether the application is a paying one or not. Let "Practical Farmer" try it by all means, but also not fail to note carefully the condition of the land, crop and season, and then leave strips through the field unsown, so that he may correctly arrive at the results.

Profits of Hens.

TRUMAN INGALLS, Albany Co., states the result of keeping sixty fowls of mixed breeds for the past year. During the year they were fed one hundred bushels of ears of corn, with the addition of sour milk in the months of June and July. From Jan. 1st, 1866, to the same date 1867, seven hundred and six (706) dozen eggs were sold for $177; eight dozen were set and fifty used in the family. Forty chickens were raised. The value of eggs and chickens was $209.50. Cost of feed $60. Profit $149.50. Mr. I. estimates that the hen manure applied to corn in the hill will increase the yield of the crop sufficient to furnish food for the fowls.

Corn in the Ear—Weight of Cob.

ARTHUR B. COLE, Downer's Grove, Ill., writes us that "After several experiments in testing the weight of corn, I am convinced that the cobs of 56 lbs. of shelled corn will weigh from 10 to 12 lbs. One instance:—I weighed 39 lbs. corn before shelling; when shelled the corn weighed 33 lbs., and the cobs 6 lbs." Mr. C. should have stated whether the cobs were thoroughly dry or not.

Feeding Poultry.

THE Mark Lane Express states that Onions are a great advantage to poultry if mixed with their food, especially during the winter season, when their customary supply of worms is cut off. If fed regularly to the fowls, it is said onions will shield them from the many diseases to which they are exposed, and with which they are so frequently afflicted.

THE WRONG APPLICATION OF MANURE.

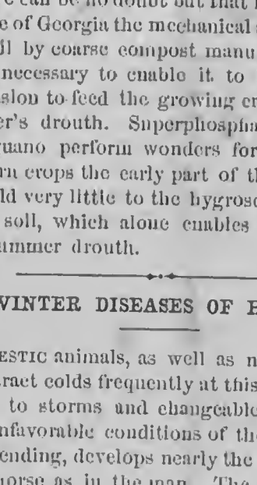
AGRICULTURAL chemists have truly said that available fertility of soil does not depend on the amount of carbon, nitrogen, hydrogen, oxygen and salts it contains, but in the relation which the several substances are enabled to act on each other. A soil may be rich in all these matters, and yet if they are not well mixed with it their chemical action is at least in part suspended, particularly in a dry season, and of course they can make no chemical combinations into assimilable plant food. The reason why a virgin soil, rich in vegetable debris, is so certain to produce maximum crops, is because Nature, in her process of enriching the soil, keeps up a yearly contribution of leaves and decayed weeds, which keep up both the chemical pabulum and the mechanical structure of the surface soil in perfect union, like twin roses on a stalk.

A Southern planter writing to the Athens Cultivator, on the great failure of the corn crop there the past season, says the only corn he had that lived through the terrible drouth and gave a fair crop, was on a piece of new ground where a bush-encumbered fence had stood; here the loose black vegetable mold was not only chemically soluble, but its absorptive capacity was so great that it held the water from the spring rains in suspension sufficient to feed the growing corn throughout the trying drouth. His other cornfields were treated with both yard manure and Peruvian guano; but as the crop failed entirely, it is evident that owing to extreme drouth no chemical re-action had taken place in the manure to make it into soluble plant food,—while the virgin soil, composed of Nature's yearly-made contributions, was as perfect chemically as mechanically.

There can be no doubt but that in the hot, dry climate of Georgia the mechanical amendment of the soil by coarse compost manures is imperatively necessary to enable it to hold water in suspension to feed the growing crop during the summer's drouth. Superphosphate and Peruvian guano perform wonders for both cotton and corn crops the early part of the season, but they add very little to the hygroscopic capacity of the soil, which alone enables it to stand a long summer drouth.

WINTER DISEASES OF HORSES.

DOMESTIC animals, as well as men, are liable to contract colds frequently at this season. Exposure to storms and changeable temperature with unfavorable conditions of the animal system attending, develops nearly the same diseases in the horse as in the man. The simplest and most general of these is a cold, to which, in the horse at least, but little attention is ordinarily paid, unless it develops unfavorably and threatens serious disease. When the horse becomes dull, his coat rough, body of unequal temperature—and in parts and in places icy-cold—attended with cough and copious defluxion from the nostrils, then it is time to employ at least some simple remedies. When the mucus membrane is involved, depletion should be avoided; let the animal rest, warmly clothed, in a roomy stall. Food cooling and slightly moving to the bowels should be given, and steaming the nose resorted to. The annexed illustration (from MAYHEWS' work,) shows the process of steaming and the apparatus used.



THE STEAMING-BAG.

The bag should be made of hair cloth or some material that will not swell, but let the water pass through readily. Put into the bag a gallon of yellow pine saw dust, or if that from other wood be used add an ounce of spirits of turpentine. Then pour boiling water on the saw dust through an opening in the side of the bag. Defluxions from the nostrils will follow this operation, which should be repeated according to the severity of the disease.

THE THROAT BLISTERED.

But far worse than a common cold is the influenza, distemper, or epidemic catarrh, as it is variously termed—an epidemic disease of the respiratory passages which prevails most in the spring of the year. The symptoms of this malady are diminution of appetite, quickening of the pulse, staring coat. The throat becomes sore and the animal can swallow nothing except with great difficulty—this is, indeed, its most characteristic symptom. Discharge from the nose follows, and swelling of the head and throat sometimes takes place. Great and rapid debility is also characteristic of this disease.

A SETON IN THE THROAT.

The treatment consists in giving a fever draught containing an ounce of spirits of nitric ether with six or eight ounces of liquor ammonial acetatis, in a pint of water twice a day. Counter irritation is also highly important, which should be gotten up by a blister, as shown in the engraving. If the cough continues troublesome after convalescing, a seton should be inserted in the position, also shown by the engraving. Steaming the head as for a cold, is one of the first, most constant, and best remedies to be used. Care should be taken to protect the sensitive animal from suffering from cold or any change of temperature. As great thirst torments the horse having this disease, a pail of chilled water should be at hand constantly, for him to use. He cannot drink much but will refresh himself by agitating it with his nose and lips.

BREEDING "IN-AND-IN."—THE NATURE AND HABITS OF WILD HORSES, Etc.

NUMBER ONE.

MESSRS. EDITORS:—It has long been my notion that writers on agricultural and other scientific subjects err, habitually and greatly, in omitting the simple facts and direct argument of their own case, in relying too much upon inferences, and in reasoning too extensively upon analogies. These analogies (be it also remembered,) are often only deceptively such, or they are very imperfectly observed. In either instance, of course, they are useless, and more than useless, as lights to the question under discussion. Another kindred vice of these writers is to ignore or deny every exceptional or antagonistic fact in nature, which tends, or seems to tend, towards an opposition to their pet theory.

Now, although your editorials (as far as I have observed,) are, in general, especially free from these faults and are rather remarkable for the fairness and fullness of their modes of discussion, yet I am firmly convinced that your answer in the RURAL of Dec. 1st, 1866, to "A Neighbor," is amenable to the foregoing criticism. And, inasmuch as the whole subject is not only most interesting to the philosopher, but of exceeding importance to breeders of men and brutes, I hold it a sort of duty, in my circumstances, thus to make public my own observations and experience in the matter. They may, at least, serve as a small contribution of facts for those who have that rarest faculty of deducing the true law of the case, and of distinguishing from it all its exceptions and false analogies.

You assume that the statement of the "refusal of the wild stallion to copulate with his own daughters," is a "story, utterly without foundation." And you cite the "testimony of as traveler in many lands,"—"a keen observer," &c., who informs you that the statement is "as unmitigated a piece of *bosh* as ever crept into a child's pictorial book." Now, hear the other side, nevertheless.

But, as I am entirely unknown to all your readers, it may not be unbecoming nor unprofitable, in my thus taking the witness' stand, for me to qualify myself, in some measure, as an expert, by at least exposing to them a few of my opportunities of being truly informed, as well as of my sincerity in the testimony. My capability in the observing, or in drawing the correct inferences from my observations, is an entirely different matter. And I have both modesty and sense enough to be silent on that point.

I begin, then, by assuring you that, although I at first, and for a long time, adopted and held the opinion adverse to either "in-and-in," or to incestuous inter-breeding, I am now, and have been for several years, a convert to the opposite theory, at least within quite close degrees of consanguinity.

My first notions were universal and exclusive—that is, for "crossing" all animals of the same "breed," as widely "out" as possible. And these opinions, I now suppose, exemplify, in myself, two of the many errors above noted, viz: of guessing at, or of knowing, (if you prefer,) one thing, and, thereupon, of *inferring* any or all others, and also of ignoring or denying all exceptions. My early observation,—rather a sad one and often of too painful and delicate a nature to publish,—was in cases of intermarriages between human cousins. Two large families of healthy parents, unusually talented, indeed; *they are all dead!* Nor, do I yet at all doubt the disastrous effects, one way or the other,—upon body or mind,—of such interbreedings in our race. But I do frankly admit my error, in therefore leaping to a like conclusion against like copulations by pigeons, rabbits, sheep, horses and other lower animals,—if in truth the last be a lower animal! As a *man*, I suppose, like the British noble, I must stand up for my order. But, as a Kentuckian, I have my doubts. The idea of classing "Boston"—honest old "Boston"—below hundreds of Congressmen I could name—fudge! And I furthermore confess my present belief that, for some reason, (inscrutable to me and, in one sense, immaterial to all,) the law seems to be entirely different with the dumb animals, or, at any rate, some of them. My reasons for this change of opinion are that I have found *too many facts* against me.

Leaving your disputed sheep-walks and passing into the domain of the horse, what facts do we disclose for our instruction? In my poor opinion the Turf Registers and Stud Books do and ever must throw more light upon this and kindred questions, than do or can all the other studies of animated nature. And this, because of the certainty of the pedigrees and of the accuracy of the *tests* in actual performances. And, exploring these records, of English and American racers, for instruction in this very question, I have found, amongst many others, such very wonderful instances of *inherited* speed, bottom, health and general hardihood of constitution, as Flying Childers, English Eclipse, Gimcrack, Whisky, Boudrow, Priam, Bay Middleton, Rataplan, Nuinlupe, The Saddler, Safeguard, The Hero, Virago, Sir Latten Sykes, Melbourne, Chatham, Flying Dutchman, The Baron, &c. Americans:—Ariel, Flirtilla, Jr., Trifle, Sir Henry, Bonnets o' Blue, Fashion, Slender Waggoner, and so many others that a list might look more like affectation of industry in the compilation than earnestness in the examples. And, when we recollect that the distinguishing quality of this family of horses is not speed, (they are no faster than many other horses,) but in the power to *keep* running, and also that, from the necessity of the case, our English ancestors, (GOD bless them!) were compelled, in instituting the "family"—by the small numbers of their Oriental roots,—to interbreed closely and incestuously,—does not our citation become more than pertinent—overwhelming? The sum of it is,—besides such instances of particular close in-breeding, *as a general truth*, this wonderful race of *hard bottomed* animals, is the pure result of "in-and-in breeding" and of incest. Nor is *our* side without help from the instances of a *mongrel* family—the American trotters. The performances of Lady Suffolk, Andrew Jackson, Long Island, Black Hawk, and numerous other most closely in-bred horses, have been unsurpassed for *stoutness*, as well as speed.

ELLMAN.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

EXECUTIVE COMMITTEE MEETING.—The Executive Committee of the New York State Sheep Breeders' and Wool Growers' Association will meet at the American Hotel, in Auburn, on Wednesday, February 20th, at 10 o'clock A. M., to make arrangements for the next State Sheep Fair. HENRY S. RANDALL, *President*.
H. D. L. SWEET, *Secretary*.

DEFERRED ARTICLES—WOOL GROWERS' ACTION—THE TARIFF.

THE length of Mr. DODGE's letter, given below, compels us to postpone the publication of several other articles of much interest, and among them the proceedings of State Wool Growers' Meetings in Maine and West Virginia. Both of these States, represented by their most spirited and intelligent wool growers, have taken substantially the same ground in reference to the pending wool tariff which has been heretofore taken by New York, Ohio, Pennsylvania, Vermont, Illinois and Wisconsin. A more complete unanimity of views was never exhibited among the widely scattered friends of a great cause. In former struggles of this kind for our rights, we have been an unorganized mass, without co-operation, or indeed *action* of any kind, and without *voice* even, except where a sensible Congressman has occasionally taken it upon himself to represent those who failed to represent themselves. But a better day has dawned. The wool growers of the United States have learned that they must be vigilant and true to themselves, or that in the clash of different and rival interests their own will never receive just and equal recognition.

We cannot sufficiently congratulate ourselves that in spite of that selfishness which is so natural to all, in spite of that fanaticism which leads so many persons to overestimate their own relative claims, and in spite of the appeals to both of these feelings, made in public journals by those who have been honestly mistaken, or by another class desirous of securing personal ends, our first great and united demand for protection was so moderate and reasonable—so just to all other interests—that it has secured the full approbation of both Houses of Congress: for, be the fate of the general tariff bill what it may, the important fact will remain that the Senate and House of Representatives have, by the reports of their appropriate committees and by their own votes, declared that the duties asked on wool are fairly required for the protection of wool growing industry. And be it remembered this is the spontaneous decision of both those bodies. It was not the result of compromise, or "log-rolling," or underhanded means of any kind whatever. It was a deliberate and voluntary recognition of our just and reasonable demands. In this view, it is difficult to believe that concededly necessary protection will be longer withheld. There certainly can be no good excuse for longer withholding it, unless we are to suppose, what ought not to be supposable, that Congress has deliberately sanctioned principles and measures which it has no intention of carrying out. [The tariff bill has passed the Senate by a vote of 27 to 10.]

MR. WELLS' REPORT.

WE give below, in the form of a letter directed to Senator SHERMAN, an able and interesting review of portions of Commissioner WELLS' report on the wool tariff, by Mr. DODGE of the Agricultural Department. It deserves the careful attention of "all concerned."

The assertion contained in Mr. WELLS' Report that what he is pleased to term "the best authority in the United States on this subject, viz: the President of the American Wool Growers' Association," declared in September, 1866, that there had not been a year during the last thirty-eight, in which the average price, (42 8-10 cents.) "for the wool marked 'medium,' would not *now* pay the actual cost of producing our heavy-fleeced American Merino wools,"—is justly pronounced by Mr. DODGE a most remarkable mistake. Our declaration occurs in the Practical Shepherd, p. 94. That work, as Mr. D. says, was written in 1863. The copyright and introduction are both dated 1863, the latter four months before the close of the year.

There is another portion of the quotation which Mr. WELLS did not perhaps entirely comprehend. There is not a practical wool grower in our land who would understand the term "*heavy*-fleeced American Merino wools" to include half or a quarter, or perhaps even an eighth, of the wool of the so-called "Merino" sheep of the country. The *heavy*-fleeced class are, in any considerable numbers, of comparatively recent origin. Our remark was intended, in part, to favor their extension, by showing that they at least could have been made remunerative, on the average, during all the recorded vicissitudes of the market through a long term of years. But *we* have always supposed that protective tariffs were not made for the benefit of a few, who have had the unusual skill to produce, or the means to buy, the most improved materials in their calling, but for the great body of the operators in that calling, who possess average materials, average industry and average skill.

In quoting our "authoritative statement" in the Practical Shepherd (pp. 97, 98,) of the cost of keeping sheep in different parts of the United States, Mr. WELLS gives the date of the statement correctly. Had he added that such cost had since then materially advanced, in some regions nearly doubled, by reason of the increased cost of land, labor and subsistence, the facts on both sides of the case would have been more fully presented.

Space prevents us from taking issue with the Commissioner on some other points, not touched by Mr. DODGE, and we will now give place to the latter.

THE SPECIAL REVENUE REPORT ON WOOL AND WOOLENS.

HON. JOHN SHERMAN,
Ch'n Senate Committee on Agriculture:

SIR:—I beg leave respectfully to call the attention of the Senate Committee on Agriculture, and the Wool Growers of the Country, to the inconsistencies and statistical errors of that portion of the Report of the Special Commissioner of Revenue which relates to Wool and Woolens. It appears to have been written from a commercial or manufacturing stand-point, with a far better knowledge of those interests than of wool growing, and evident sympathies in the same direction.

In prefacing with an allusion to the joint Convention of Wool Growers and Manufacturers, the former are thus adroitly placed in the wrong:

"It does not appear, according to representations made to the Commissioner, that the woolen manufacturers, through whom the call for the meeting originated, had any expectation that action would be taken looking to any increase of duties upon wool over and above those then existing: but, on the contrary, they hoped and expected that the wool growers would concede the propriety of a reduction of rates on those classes of wools—like the combing and carpet wools—which are not produced to any extent in this country."

And yet the fact is perfectly well known to wool growers that manufacturers were entirely conversant with these "expectations," and anxious to moderate them by a conference of their own appointment. A suspicion of attempted special pleading is repressed with difficulty in reading this passage, and throughout the entire consideration of this subject.

The first point taken in the discussion is that wool growers, in demanding a minimum of *ten cents per pound specific and ten per cent. advalorem*, desire to raise the price of wools to that extent; and it is attempted to be shown that such a rate would operate as a ruinous tax upon the resources of the country. To fortify such an assumption the astounding estimate is seriously made of a present average annual consumption of 150,000,000 lbs. of *manufactured woolens*; and upon this extraordinary blunder, which in this case is certainly worse than the crime of intentional misrepresentation, is based an estimate of increased cost of such goods to the extent of $71,250,000.

The statement of the Commissioner is as follows:

"The number of sets of woolen machinery or series of cards employed in the United States, reported to the Wool Manufacturers' Association in October, 1865, was four thousand one hundred, consuming 2,252,515 pounds of scoured wool, and substitutes for wool, per week; but these returns, it was stated, did not probably indicate more than three-fourths to four-fifths of the sets then in actual operation. Suppose, however, the balance to consume wool equal to the shrinking from the cards to the manufactured goods—and there is no doubt but they will do more than that—we have, then, as the weekly product of the country, (in prosperous times,) two million five hundred thousand pounds of cloth per week, or one hundred and seventeen millions of pounds per annum.

"Again, the weight of the woolen goods imported into the United States during the fiscal year 1865, the Commissioner, after a careful examination, estimates to have been as follows:

Woolen goods proper	17,000,000 pounds.
Carpets	2,500,000 pounds.
Dress goods, bunting, and worsted manufactures	13,500,000 pounds.
Total	33,000,000 pounds.

"These results, therefore, indicate the present average consumption of manufactured woolens in the United States to be about one hundred and fifty million pounds per annum.

"It must be evident, now, that, to the extent to which the cost of wool is increased to the American manufacturer, through the increased duties on his raw materials, it will be necessary to impose an equivalent increase of duties on the importation of foreign woolens, otherwise the increased price of wool, growing out of the duty, would act as a bounty in favor of the foreign manufacturer, and prove specially disastrous both to the American wool grower and to the American woolen manufacturer.

"To balance the duties proposed upon wool, the executive committee of the woolen manufacturers claim, and endeavor to prove it to be essential to the preservation of their industry, that, for every cent of duty imposed on wool, four cents per pound must be charged on all woolens imported. It is also clear, that if the price is to be enhanced to the extent of the duty, the advance must be estimated alike on goods made of domestic as well as of foreign wool. Consequently, for every cent of duty imposed on wool, the American consumer will be taxed four cents per pound on his manufactured woolens; which tax on the present annual consumption of the country, viz: one hundred and fifty million pounds, would amount to the sum of six million dollars for each cent of duty imposed on wool.

"Assuming the existing rate of duty upon unwashed wool at six cents per pound, the present annual tax for the protection of this interest is, therefore, ($6,000,000 x 6 cents—) $36,000,000; but at the proposed rate, assuming eleven and a-half cents as the minimum, this tax will be further increased ($6,500,000 x 5½—) $2,250,000; or, in other words, the proposed tariff on wool and woolens will tax the community (if it should have the effect sought by those who propose it) to the extent of seventy-one millions two hundred and fifty thousand dollars per annum for the protection of an interest, the whole annual value of whose product, as we have already shown, cannot be considered in excess of thirty-six millions of dollars, gold valuation."

Now, by the estimate of manufacturers it requires four pounds of foreign wool to make one of cloth; and this estimate is recognized above, by assuming the duty of one cent upon a pound of wool to be four upon a pound of cloth. The estimate of 150,000,000 lbs. of cloth is therefore equivalent to 600,000,000 lbs. of wool per annum! The following errors are included in this statement:

Error First.—While the manufacturers estimate four pounds of foreign wool to one pound of cloth, they reckon but two and one-sixteenth pounds of native wool to one pound of cloth. As our present wool "clip," by the estimate of the Commissioner, is 100,000,000 lbs., it would make 48,500,000 lbs. of cloth; and yet he counts it all as foreign wool, of which 194,000,000 lbs. would be required to make the same quantity of cloth. He therefore reckons one cent per pound of tax upon 94,000,000 lbs. more wool than we should use if his assumption were correct. Nearly one-sixth of the estimated tax on consumers, or about $12,000,000, is therefore disposed of by the exposure of this minor error.

Error Second.—Allowing for the error above, affecting the calculation of the assumed tax upon consumers, the Commissioner estimates the annual consumption of wool at 506,000,000 lbs., divided as follows:

Domestic sup.	100,000,000 lbs.,	making	48,500,000 lbs. cloth.
Foreign "	406,000,000 "	"	101,500,000 "
Total	506,000,000 "	"	150,000,000 "

To show the absurdity of the assumption that this country produces only *one-fifth* of the quantity of wool required, the following statistics, the general accuracy of which no one acquainted with the facts will seriously question, are given—showing [very nearly] the actual amount of wool manufactured or imported from July 1, 1861 to July 1, 1865, comprising almost exactly the period of the war:

Domestic Supply.

Clip of 1861	55,000,000 pounds.
Clip of 1862	67,500,000 "
Clip of 1863	82,500,000 "
Clip of 1864	95,000,000 "
Total	300,000,000 "

Foreign Importation for the Fiscal Year ending June 30, '62-3-4-5.

Years.	Dutiable Wool. Pounds.	Dollars.	Shoddy or Flocks. Pounds.	Dollars.
1862	11,654,241	6,424,767	6,291,077	442,376
1863	71,917,754	11,772,063	7,867,601	581,234
1864	87,193,462	14,595,149	8,133,391	621,514
1865	40,372,075	6,201,108	4,863,064	410,395
Total	241,137,532	38,993,079	27,155,133	2,055,519

Canadian (Free) Wool.

Years.	Pounds.	Dollars.	Cts. ₩ lb.
1862	1,916,785	569,839	29.7
1863	1,889,053	781,867	39.5
1864	3,202,042	1,328,851	41.4
1865	3,486,079	1,327,275	43.8
Total	10,585,559	4,207,832	39.6

The total foreign supply of our woolen manufactures in the four years was as follows:

	Pounds.	Cost.
Dutiable wool	241,137,532	$38,993,079
Free from Canada	10,585,559	4,207,832
Free in 1862 from other countries	301,825	55,539
Shoddy	27,156,133	2,055,519
Total	279,183,049	45,311,969

Statement of Woolens Imported for Four Years ending June 30, 1865.

	1862.	1863.	1864.	1865.
Woolen cloths and shawls	$5,547,644	$5,147,404	$10,698,035	$5,257,819
Blankets	1,945,707	1,297,864	749,793	838,741
Woolen and worsted yarns	372,538	883,011	434,549	398,130
Delaines and dress goods	17,229	1,744,639	10,069,768	7,817,139
Carpets	466,496	1,016,562	1,658,380	471,659
Flannels	30,708	.....	457,410	83,329
Felt and tasting	68,436	.....	102,910	37,213
All others	6,435,412	10,822,145	7,963,491	5,393,593
Total	14,884,394	20,411,625	32,139,336	20,347,563
Total woolens imported, 1862				$14,884,394
Total woolens imported, 1863				20,411,625
Total woolens imported, 1864				32,139,336
Total woolens imported, 1865				20,347,563
Total for four years				87,782,918

Upon the authority of R. M. MONTGOMERY, Esq., President of the Ohio Wool Growers' Association, and member of the Conference Committee with manufacturers, the amount of imported woolens is equivalent to 220,000,000 lbs. of wool.

The grand total, then, of wool obtained and woolens imported in four years represents the following amounts of wool:

Domestic supply	300,000,000 pounds.
Foreign importation	279,183,049 "
Equivalent in woolens imported	220,000,000 "
Total	799,183,049 "

Or almost exactly 200,000,000 lbs. per year, instead of 506,000,000 lbs. required by the Commissioner's estimates, or 600,000,000 lbs. upon which the consumer's tax for protection was based. So here is another reduction of that tax, amounting in round numbers to thirty-six millions of dollars, in addition to twelve millions in *error first*—a miscalculation of forty-eight millions of dollars, and less than twenty-four millions left!

The extravagance of this estimate of woolens, requiring 506,000,000 lbs. of wool annually, may be again shown by reference to consumption in former years. The manufactures and importations for a series of years preceding the war scarcely equaled an average of four and a half pounds to each individual. Mr. RANDALL's previous estimates never exceeded this quantity. During the war, as is shown above, the *production* of woolens was eight pounds to each individual. (200,000,000 lbs. to 25,000,000 people in loyal States,) but the *consumption* was scarcely more than seven pounds, as an immense amount of domestic and foreign wool and woolens remained in the hands of wool merchants, manufacturers, and wholesale and retail traders, on the first of July, 1865.

Thus the average consumption was raised from 4½ lbs. to 7 lbs., or 55 per cent, through the waste of war and the scarcity of cotton. The Commissioner's estimate would be equivalent to 15½ lbs., or three times as much as is required for ordinary consumption. Even a heavy increase from a growing preference for wearing woolens would not necessarily require more than six pounds to each individual.*

Error Third.—The hypothesis that the duty will necessarily increase the price of wool and cost of cloth by the full amount of such duty. Free traders usually assume that it does; and they very frequently *prove*, for their own purposes, from admitted facts in individual cases, that it does not. In this very report it is admitted that prices of wool are now unusually low, notwithstanding the increase of the tariff last summer. And if such a result has just happened, and has occurred before, with what fairness can it be assumed that it will not again in the least degree!

The Commissioner assumes that the prime motive of the wool growers is such increase in price to the full extent of the tax. Such increase is needed, desired, and to some extent expected; yet it is *not* the only or the principal motive. *It is a question of life or death to the business of wool growing.* By the Commissioner's own showing of increase of prices, (from, 1. Scarcity of labor, caused by the war; 2. The currency, a necessity of the war; and 3. Taxation inevitably resulting from the war,) the Government, as a vital necessity in self-preservation, *has raised a barrier fully seventy per cent. high against the use of our own wool, while he proposes to set up a barrier scarcely thirty per cent. high against the introduction of foreign wool.* The result is seen in the fact that domestic wool, throughout the country, remains unsold, while the foreign article is used in its place. If we needed a large quantity of foreign wool to supply a deficiency, there might be some excuse for its easy admission. *We do not.* Of clothing wool we have probably more in the country, including the spring clip, than will be used in a year, at the present rate of manufacture; and at fair prices our wool growers can henceforth produce all that is required, except, (for a few years to come,) a small quantity of carpet and combing wools. The clip of 1867, for the whole country, should not be less than 120,000,000 lbs., and it might be increased in three or four years to 200,000,000 lbs. If the duty should be fixed at six cents the clip would be reduced in less than three years to 75,000,000 lbs.† Can the country afford to *displace* this industry with the result of foreign labor, and throw all its capital and labor into depressing and ruinous competition with other branches of farm industry?

It is shown, then, that the bugbear tax on consumers, of $71,250,000, has dwindled about $12,000,000 by error first, $36,000,000 by error second, and probably would be reduced $12,000,000 more through the considerations named in error third. Now, it might be shown, were it not so plain as to be self-evident truth, that the destruction of the wool interest would occasion losses to production far exceeding the immense sum named by the Commissioner, and greater embarrassments to the collection of revenue than the reality of his wildest fears of protection.

There are several fallacies in this report on wools which I will not stop to consider; but there is one paragraph conveying a deception too wicked to be intentional and too gross to be inadvertent. It is a quotation from from Mr. RANDALL's work on Sheep Husbandry, as follows:

"How very striking is the fact, during thirty-eight years [ending January 1, 1862,] and with all the disturbing causes to the wool market, there has not been a single year in which the average price (42 8-10) for the wool marked "medium" would not now pay the cost of producing our heavy-fleeced American Merino wools. * * * Of the production of how many other of our great staples of industry can as much be said?"

In this report the word "now" is italicised, and marked with an asterisk pointing to a note as follows: "September, 1866." It is sufficient to say that this paragraph was written *four years ago*, and the book published in 1863! It is difficult to conceive how this radical change of date could be *honestly* effected. From the fact that the misrepresentation was promptly seized upon by those who desired free trade in foreign wool, and that it became so gross in view of the sixty per cent. advance in prices since it was written, it requires a very broad mantle of charity to cover the presumption that it was a deliberate falsification in the interest of wool dealers—made, it is to be hoped, by some wool importer, and palmed off upon Mr. WELLS as a statement of fact. Such things, however, cast a strong shadow of unreliability upon the whole report, and cannot fail to have a damaging effect upon its recommendations.

J. R. DODGE.

Washington, D. C., 1867.

* The following statement, showing the small amount of former wool supplies, strongly fortifies these estimates of *per capita* consumption:

	1840.	1850.	1860.
U. S. product	35,802,114 lbs.	52,516,969 lbs.	60,511,343 lbs.
Imports	15,006,410 "	18,669,794 "	34,586,657 "
Total	50,808,521 "	71,186,763 "	95,098,000 "

The average value of annual imports of woolens for the three decades is as follows:—Ending 1840, $13,430,625; 1850, $10,902,355; 1860, $28,268,283.

† On page 32 of Mr. WELLS' Report, he estimates the protection of the iron interest, a parallel industry so far as it utilizes a lateral element of wealth, as follows:

Iron, pig	duty 52 per cent.	
" bar, common	" 68½	"
" small round or square	" 71	"
" hoop	" 73	"
" band	" 64	"

He assumes that the wool interest is already sufficiently protected, and yet the average duty on wool, under the tariffs of 1864-5, was but 20 per cent. The determined abandonment of the agricultural interests, while according a fair and reasonable protection to the manufacturing classes, is conclusively shown by such facts as these.

Rural Spirit of the Press.

The South—Farm Labor.

THE Richmond Farmer recently adverted to the labor question at the South, in an able and well-tempered article—regretful for the immediate past, but buoyant and hopeful for the not remote future. The period since the close of the political conflict which overturned the entire industrial system of the States, has been too brief to determine what effects these changed relations are to produce, but experience so far tends to a conclusion favorable to a gradual substitution of white labor for that of the colored population. It is proposed, where the means of the white immigrants are sufficient for the purpose, to divide the larger plantations into small farms to be made over to the laborers in part payment for their services on the remainder. Where means of immediate payment are wanting, the tenant system is proposed, with the understanding that a clear title is to be given when a specified sum is paid. In this way it is expected a full supply of desirable and reliable labor will be obtained and the population be made to increase in a ratio equal to the necessities for it.

A Root Crop.

THE Boston Cultivator mentions a prolific yield of roots on a farm connected with the Deer Island House of Industry under the superintendence of THOMAS E. PAYSON. Last year 4½ acres were used for mangel wurzels and produced 264 tons gross. One measured acre yielded 73 tons of roots and 5 tons of tops. The ground was used for potatoes in '63, carrots in '64 and onions in '65. In the spring of the last mentioned year the ground was dressed with a compost of kelp and stable manure at the rate of twenty cords per acre, and plowed in. When the mangels were planted no manure was used. The drills were 2½ feet apart. This yield is claimed to be unprecedented in this country. An analysis of the roots showed them to possess an equal amount of sugar with the beet, while the yield per acre was fully one-third more. These facts are worthy the attention of stock raisers.

Winter Pigs.

"BERKSHIRE" writes the Western Rural in favor of winter dropped pigs. Those dropped in January, February and March he regards as more valuable to the farmer than any other, though it is conceded that greater care in raising them is required than for those dropped late in the spring or during the summer months. The advantage claimed for early pigs is that they will not require to be kept over, but will be ready to kill early the succeeding winter, and if properly tended will average 300 to 350 pounds each, taking a lot of a hundred or more. Pigs dropped early will require extra care, but it happens, says the writer, to be at precisely that season of the year when the farmer has the most leisure to attend to their wants and the means to provide for them.

Seeding Down Pastures.

THE President of the Franklin Co. (Mass.) Ag'l Society recently read a paper before the Farmers' Club of Montague, on the subject of seeding land for pasturing purposes. He recommends 12 lbs. of clover seed, 6 quarts of herds-grass, 1 bushel of red top to the acre. He advised farmers to raise their own seed, which they could readily do, with a little care, and at a considerable diminution of cost. The seed need not be separated, but sown with the chaff. The herds-grass should be sown from the 10th of August to the 1st of September. Some members favored rolling the land after the seed is sown, some bushing it, while others thought neither essential.

Card the Animals.

EVERY person who has practiced carding his cattle at stated times will have noticed the indications of pleasure and comfort which the operation afforded them. It takes time to do this, but it is labor which remunerates the farmer well, trifling as some may think the process to be. On this point a correspondent of the Lower Canada Agriculturist says:—"I once knew a man who fatted some of the best stock sent to market in those days, who made a practice of taking a card in his hand and using it every time he went into the yard or stable. The result was as might be expected; his cattle were always clean, quiet, healthy, improving and gentle, expressing the greatest satisfaction on his appearance."

Salt and Plaster.

A CORRESPONDENT of the N. E. Farmer gives his experience in the use of salt and plaster, mixed in the proportion of 100 pounds of plaster to 3 bushels of salt. Used as a top dressing, the result was good both with wheat and grass. The experiment was tried with corn and potatoes—the mixture being placed in the hills, and the result was the ruin of both. Applied in the way first mentioned, either singly or in conjunction, the effect is deemed to be good; not as a substitute for manure from the barn-yard, but as aids in augmenting the materials for the manufacture of manure in greater quantities and of superior efficacy in the production of farm crops.

Advantages of Draining.

AT a recent meeting of the Michigan State Agricultural Society the committee on Land Draining made a very interesting report in favor of this mode of preparing land for cropping. The following paragraph is especially worthy of consideration. Thus:—"It is worthy of note that the early frosts of the past season, which proved so destructive generally, did not materially affect vegetation in my drained lands, while it was most destructive in other lands adjacent. This fact alone would seem to be sufficient to arrest the attention of farmers, and offers additional inducements to further investigation upon this subject."

Rural Notes and Items.

THE CO. GENT. AND OFFICIAL ORGAN-ISM.—The Country Gentleman is "surprised" at our recent allusion to official organs of Ag. Societies, and scarcely believes it made by the Editor of the RURAL himself, "who has more than once been on the [State Ag.] Society's Board of Officers, while one of his chief Corresponding Editors [Hon. T. C. PETERS] occupied a similar position for many years, and only vacated the Presidency less than a twelve-month since." It further avers that the Society publishes *its own organ*, that it (the C. G.) "has never been, and is not 'substantially,' or otherwise, the organ of this, or any Association whatever," and that it is not *aware* of ever referring "to the proceedings of the State Ag. Society, past or future, otherwise than as they are made known to all the world, through the Society's Journal," (the truth of which assertion the files of the C. G. for the past year or two will abundantly disprove.) Our humble contemporary then proceeds to personate URIAH HEEP after this wise:—"If we pay greater attention to its transactions than other agricultural papers do—and even this we do not claim—it is possibly from differences in the degree of importance we attach, respectively, to these proceedings—certainly not from ever having any 'faculty' which others do not equally share. At the same time whatever aid our limited influence and circulation *can* render—feeble though it be—is cheerfully accorded to any body of farmers laboring for the farmer's good: and we cannot but regard it as uncommonly kind of our contemporary 'never to have felt grieved at our efforts.'"

Having thus fairly stated the points made by the C. G.—a trait for which we have never, in any controversy, had the opportunity of according it credit,—we beg to state that the item *was* penned by the Editor himself, with a full knowledge of the import of the language used; and we believe the files of the Country Gentleman will show that only a few months ago it published Society matter relative to the (then) proposed Implement Trial that was never "made known to the world through the Society's Journal," and which certainly *was not* furnished to at least one other agricultural paper. But the C. G. says its limited influence is cheerfully accorded "to any body of farmers laboring for the farmer's good." Let us see about this. In its issue of Dec. 27, last, it gave this sneering notice of the annual meeting of a large, important and useful "body of farmers:"

Wool Growers' Association.—"The New York State Sheep Breeders' and Wool Growers' Association" held its annual meeting at Syracuse, Dec. 12th. We do not observe from the published reports that the proceedings possess any special interest. The President was of course re-elected, and the usual resolutions in support of a high tariff were passed.

The Association thus contemptuously treated by the C. G. comprises many of the most prominent, intelligent and wealthy farmers of this State; and yet instead of being given the privilege "cheerfully accorded" the smallest Farmers' Club, the members are grossly insulted by the humble journal which is so anxious to benefit farmers! Suppose the RURAL NEW-YORKER should, two or three weeks hence, "cheerfully accord" a similar notice of the proceedings of the Annual Meeting of the N. Y. State Ag. Society (to be held this week,)—stating that "*the Treasurer* (Prof. L. H. T. of the C. G., who seems to possess a chronic love for the position) *was of course re-elected*,"—would it be considered fair or just to the officers, members, or the farmers of the State?

ORNAMENT YOUR HOMESTEADS.—All farmers should do this, not only for the comfort and pleasure of their families, but as a permanent pecuniary investment. Aside from the benefit derived by the family, and the keeping at home sons and daughters who would else leave it for uncertain city avocations, the planting and culture of an abundance of fruit and ornamental trees, shrubs and flowers, will largely enhance the cash value of the farmer's homestead. This subject has often been discussed in the RURAL, but never more ably than in the address of P. BARRY, Esq., at the recent meeting of the Fruit Growers' Society of W. N. Y., which we publish elsewhere. Read Mr. B.'s sensible and timely suggestions, and do not forget them when the planting season arrives.

NEW POTATO BUG—PROGRESS EASTWARD.—The Wisconsin Famer has an article on the progress of the Colorado potato bug Eastward. The army of invasion moves forward in a kind of crescent line, having a base of about seven hundred miles. The southern flank is supposed to be retarded in its movements by climatic influences, and the northern one by interposition of the lakes in the direct path of advance. They first became common and annoying at Madison, Wis., and vicinity, during the last summer. Their advance is at the rate of 25 or 30 miles a year.

PEAT IN IOWA.—In a recent letter Mr. W. S. HARDING of Macon City, Iowa, writes to the RURAL:—"I would say to those intending to emigrate to Iowa that we have one of the best climates in the world, and as good prairie as can be found this side of the Rocky Mountains. What we lack in forest is made up in peat. The geological survey is now being made, and in almost every county in the State, thus far, peat has been found in abundance. A scientific investigation has been made in this (Cerro Gordo) County. Reports are very encouraging."

AGRICULTURAL SOCIETIES.—We continue our lists of officers, giving those received the past week:

Maryland State Ag. Society.—The Executive Committee of this Society, at a recent meeting, elected WILLIAM H. DEVRIES, Esq., of Baltimore, to the Presidency.

New Jersey State Ag. Society.—President—N. N. HALSTED. *Vice Pres't*—J. C. Deacon. *Cor. Sec.*—R. S. Swords. *Rec. Sec.*—W. M. Force. *Treas.*—B. Haines.

Kansas State Ag. Society.—President—R. G. ELLIOTT. *Sec'y*—H. J. Strickler. *Treas.*—C. B. Lines.

Ontario Co. Ag. Society.—Pres't—STEPHEN H. AINSWORTH, West Bloomfield. *Cor. Sec'y*—Harvey Stone, Gorham. *Rec. Sec'y*—Isaac B. Smith, Canandaigua. *Treas.*—J. Harvey Mason, Canandaigua.

Delaware Co. Ag. Society.—Pres't—WILLIAM B. DAWIE, Andes. *Sec.*—Porter Frisbie, Delhi. *Treas.*—G. W. Hanford, Walton.

Palmyra Union Ag. Society.—Pres't—WILLIAM P. NOTTINGHAM. *Vice Pres'ts*—George Hoffman, N. Y. City; H. Westfall, Marion; Jacob Norris, D. Gates and E. Ennis of Palmyra. *Cor. Sec'y*—M. B. Riggs *Rec. Sec'y*—C. D. Johnson. *Treas.*—L. M. Chase.

Trenton Union Ag. Society.—This Society is located in Trenton, Oneida Co., N. Y. *Pres't*—M. A. BLUE. *Sec.*—Storrs Barrows. *Treas.*—George King.

WOOD-SAWING MACHINERY.—(G. B. W., Steuben Co., N. Y.) We do not know that EMORY's machinery for sawing wood is manufactured in this State, or nearer than Chicago.

HORTICULTURAL.

FRUIT CULTURE ON THE FARM.

BY P. BARRY, ESQ.

[When Mr. Barry was President of the Fruit Growers' Society of Western New York, he was requested by a resolution of the Society to prepare and deliver a discourse on the subject of the cultivation of the finer fruits by the farmers of Western New York. In response to that resolution the following Essay was prepared, and was to have been given at the last meeting of the Society. Mr. B. gave the substance of the address verbally, and was requested to furnish a copy for publication. Regarding the subject as important, and admirably discussed, we take pleasure in laying the address before Rural readers, trusting that every owner of a farm or homestead will note and heed its suggestions.—Eds.]

Twelve years ago this Society was organized for the purpose of collecting and disseminating information on the subject of Fruit Culture, and to press its importance upon the attention of the Agriculturists of Western New York in particular. In this work it has moved steadily forward, year after year, and has, I think, been rewarded with a fair degree of success. Orchards and vineyards have been multiplied with a rapidity which it is no exaggeration to call wonderful, and already fruit culture is recognized as an important branch of our Rural Industry, although its development has but commenced. The apple crop of a single county, in 1865, has been estimated in round numbers at a million of dollars, $720,000 worth having been actually sold and shipped before the close of navigation. This was the County of Orleans. In several other counties the receipts for apples were very large, and if we were able to foot up the entire value of all the fruit produced in Western New York, in that season, the figures would, I am convinced, exceed the estimate of the most sanguine among us.

But it is asserted, and I think with considerable truth, that, altho' we are making great progress in the culture of fruits for market, the cultivation of the finer fruits for family use is comparatively neglected by a large portion of the farming population; that few families are yet well supplied with the best varieties of pears, cherries, plums, grapes, strawberries, raspberries and currants. If this be really so, why is it? It is not because country people do not esteem these delicious fruits. Nor can it be because their cultivation is expensive or difficult, for, thanks to our favored soil and climate, they can generally be produced cheaply and in the greatest perfection.

Then I would ask again, why is it that every farmer's table is not supplied with an abundance of these health-giving, delicious fruits in their respective seasons? Doubtless many reasons might be given, but if I am not mistaken, the most potent of all is *the absence of order or system in their cultivation;* and to this single point I intend to address, mainly, the few remarks I propose to make on this occasion.

In every branch of cultivation, whether in the field, the orchard, the vineyard, or the garden, there must be order and system to insure successful results. No truth is more firmly established by actual experience than this. Every farmer knows and will acknowledge it. He follows a system in the arrangement and culture of his fields and his orchards, as well as in the breeding and rearing of his farm stock, and the more perfect his system the more complete his success. How is it with the culture of the garden fruits to which I have alluded? Let us ride into the country and as we pass along glance at the premises of each farmer and see how and where he cultivates his pears, cherries, plums, peaches, strawberries, raspberries and currants, and what do we find? In many cases,—yes, in a majority of cases,—we shall find a pear tree in one fence corner, a plum tree in another, a cherry tree here, a peach tree there; a few currant bushes growu wild, and perhaps small patches or plots of raspberries and strawberries, neglected and grown into a tangled, hopeless mass of weeds. This picture is certainly not overdrawn; the only difference of opinion which can exist is as to how general it is. Now, what I propose is this—that instead of scattering these fruits, as I have described, in fence corners, door yards, and out of the way places, they be assembled together in a separate plantation, which we shall call the Fruit Garden to distinguish it from the orchard.

This fruit garden may consist of one, two, three or five acres, according to the means, wants and tastes of the family. Here all the finer fruits can be systematically planted, cultivated and trained, and here, too, can be grown, if desired, all the culinary vegetables for family use—another department which does not receive the attention it merits. A flower garden may also be comprised in the plan, which will add greatly to its attractiveness, especially for the female portion of the family. A very good way to do this is to have a grass walk running through the center of the garden, with a flower border on each side, or the walk may be gravel and the borders on each side grass, with flower beds cut out on them. Either plan will be satisfactory if properly executed.

I do not intend to detain you now with any extended remarks, either on the mode of laying out, planting or management of the Fruit Garden. Any one who desires this information may find it all in the books which treat on this subject. What I desire to do at this time is, in a few words, to call the attention of country people to the advantages they may derive from a plantation of this kind. They are these:

1st. It will insure to themselves, their families, and friends who may visit them, an ample supply of all the finest fruits in their season. It needs no words from me by way of argument or explanation to show that this is an object of no small importance. Think of having a plentiful supply of delicious strawberries on your table every day for a period of six weeks,—to be followed by raspberries, currants, gooseberries and blackberries, which fill up the season until grapes begin to ripen. The cherry may be enjoyed full six weeks; plums for three months; pears for six months. How many of the well-to-do farmers of Western New York can set a dish of fine, melting pears on their tables every day from the 1st of August till the 1st of January. Very few, I think, and yet the pear is as easily produced as the apple. It is true that the tree is subject to more diseases or accidents, but it makes up for this, in part at least, by bearing a crop *every year.*

But I need not dwell longer on this point; the value of these fruits is universally acknowledged, and were there no other advantage but this one, it should, as it appears to me, be sufficient to induce every farmer to plant and cultivate his Fruit Garden.

The next advantage I shall call attention to is the increased market value it will give to the farm. If we suppose two farms adjoining of 50 to 100 acres each, one of which has a well stocked Fruit Garden and the other none, would not the one with the garden sell for a much higher price per acre—at least from $10 to $25 per acre, according to circumstances, other things being equal? According to my experience and observation, improvements of this kind help greatly to sell a place. And now, if you consider the daily supply of fruits your garden will yield, and the enhanced value of your property, what better investment can you make?

But this is not all. If you are within a moderate distance of a market, and a majority of the farmers of Western New York are, the surplus products of your garden can readily be turned into money. A bushel of good pears is always worth from $3 to $10,—late pears in December last were sold here at $10 to $15 per bushel. All other fruits sell well. I did not intend to allude to the sale of fruits, and mention this incidentally.

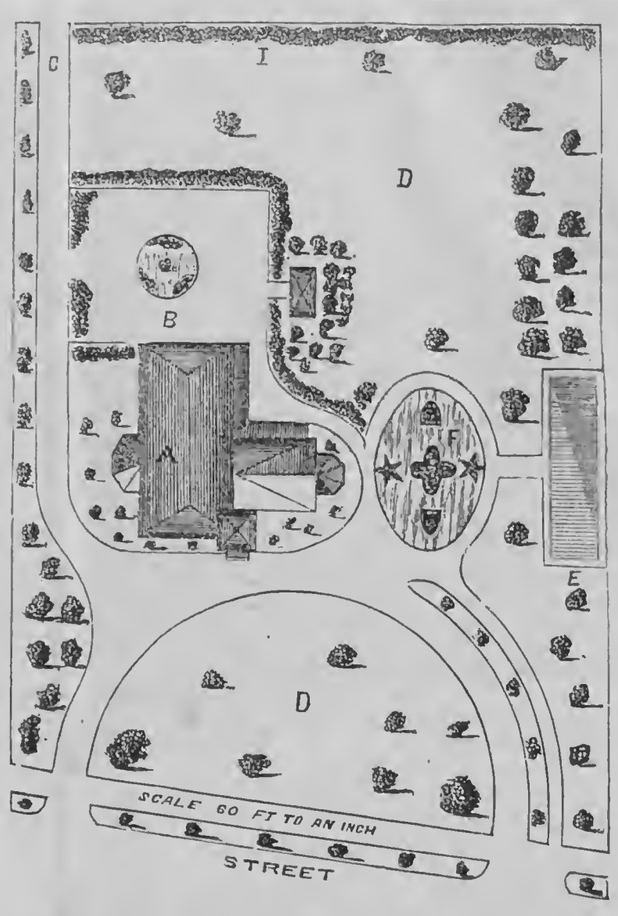
I have now spoken of the Fruit Garden as a source of daily comfort, and as a source of wealth,—for whatever adds to the value of our farms, augments the wealth of both the individual and the State. Only ten dollars per acre added to the value of the farms of this county would be a gain of no small magnitude. Now I shall speak of advantages partaking more of the moral than the material, but which, of all others, in my opinion, commend themselves to every farmer.

Intellectual Culture and Enjoyment.—A plantation of fruit trees is really one of the most interesting objects in the world of Nature. What a scene of beauty and variety, whether we view them in blossom or in fruit. Even in winter they are full of interest; the peculiar growth of each variety, the color of the bark, the form and size of the buds, give to each variety a character of its own. Then the same trees are constantly changing, and this change from day to day, and from year to year, invests them continually with a fresh interest.

The planting, pruning and training of fruit trees is a most interesting work, and of necessity leads the mind to a study of the laws of vegetation in general, as well as of the peculiar habits of growth and bearing of each species and even of each variety of fruit. The discussions of this Society furnish a strong proof of this. Here we see how every variety of apple, and pear, and cherry, and strawberry and grape has been watched and studied, in order to arrive at a true estimate of its value. The search after insects which infest fruit trees, and the efforts to guard against their ravages, lead to the study of another branch of natural history, and thus we see how fruit culture leads us on, step by step, in the study of Nature and her laws. I might dwell at great length on this point, but I will pass on to another and the last, and this is, the importance of making home attractive, and of training up children with a taste for gardening pursuits and natural history. The neglect of this among the farming population is widespread and painfully manifest. How common it is to see intelligent and very well educated families of young men and women brought up on the farm. The simplest elements of tree culture are unknown,—pruning, grafting, budding, layering or striking cuttings, are to them mysterious operations. The insect world around them, too, is a sealed book. The result of this is that the cares and labors of the farm are to these young people mere drudgery—fatiguing, dull and irksome,—and they seek to get rid of it. They feel no real attachment to home, and this is the reason why the greater number of the brightest young men seek other employments and the rural population of the finest districts of our State is daily decreasing; the land is not producing one-fourth what it might. This, it appears to me, is a serious question for the farmers of our country, and one which claims their immediate attention.

Now, if there be any truth in what I have attempted to show,—that the culture of the Fruit Garden on every farm will greatly augment the comforts of farm life, increase the value of the farm, furnish a pleasant intellectual variety of labor, educate their children to industrious habits, cultivate their taste for rural pursuits, incite them to a study of natural history and strengthen their attachment to home,—will not every farmer set himself to work in this direction? It seems to me this is one way, and a sure way, to elevate farm life and labor and make its poetry a reality instead of a fiction.

And now, before closing, I have a suggestion to make on another subject. We have for twelve years, two or three times each year, met and occupied ourselves in the discussion of topics connected with fruit culture exclusively. These subjects are far from being exhausted, and they never will be exhausted. Every year's experience brings up something new to be considered; new fruits and modes of culture are in this age of progress, and in this country of progress, to be expected;—but it seems to me we might sometimes turn our attention profitably to some other branches of horticulture, and thus extend the sphere of usefulness of this Society. The cultivation of ornamental trees and plants, and even of garden vegetables, are of interest to all our members, and to many who are not much interested in fruit culture and who might become members if we offered them this inducement. This would enable us to vary our discussions and give them a fresh interest. The best shade trees for street, the best lawn trees, the best flowering shrubs, the best evergreens, roses, &c. The public greatly need information on these topics, and my suggestion is this, that we consider the propriety of making this a Horticultural Society—not for mere shows, as ordinary Horticultural Societies, but for shows and discussions, as we have heretofore done.



PLAN OF LANDSCAPE GARDEN—NO. IV.

References to Plan.—A, Dwelling; B, House Yard, inclosed with Arbor Vitæ Hedge; C, Road to Stables; D, D, Lawn; E, Grapery; F, Flower Garden; G, G, Carriage Entrance; H, Stone Sidewalk to Dwelling; I, Hemlock Hedge.

LANDSCAPE GARDENING.—No. IV.

BY WILLIAM WEBSTER.

In my last communication the attention of the amateur was drawn to the importance of harmonizing the different objects so as to prevent discord. I now desire to attract the reader's notice to the blending of form and color, so as to produce a like result.

The practical landscape gardener, in managing and planting his trees, fully realizes the importance of this, so that in the intermingling of the various trees and shrubs, his attention is continually directed to this one object; but as no precise rule can be laid down for the guidance of all, the most that can be offered are such hints as may be taken advantage of by the improver. In this way much can be accomplished by the amateur, and particularly so if he study well the points which I will mention. First, the height and form of the tree or shrub he is about to plant, and the ultimate height or size it is likely to attain. Second, the color and peculiarity of the foliage, or the form and color of the flower. One of the finest effects which can be produced in planting is by grouping or massing the different species and varieties of trees together; but as this can only be carried out on a large scale, the improver of an acre or less must confine himself mostly to shrubs, for the reason that however admirably evergreens mingle with deciduous trees, they can only be used sparingly on small places; and if used at all, evergreens should not predominate, because the place would be rendered too gloomy. This, however, does not apply with such force in the introduction of shrubs,—for a most beautiful contrast may be produced by the intermingling of evergreen and deciduous shrubs. Let any one observe for himself the gorgeous hues which a forest of maples presents in autumn, and mark the contrast if a few pines or hemlocks are scattered through them. The same thing may be carried out in miniature, or something very similar, by intermingling among such shrubs as are conspicuous for the autumnal tints of their foliage, the color and brightness of their berries or the variegation of their leaves, with Junipers, Mahonias, Kalmias, or any other dwarf evergreen. The main point to be observed in the decoration of any place, whether large or small, should be the intermingling of all objects in such a way as to maintain harmony and preserve the beauty of expression throughout.

The Design here shown is for a gentleman at Lockport, N. Y., who gave me a diagram of his ground, and is a result of the study on his part of Design No. 3. It comprehends, I believe, but a small portion of his place, and is intended solely for ornamental purposes. The grapery, as will be seen by a reference to the engraving, is located on the west side, where it shuts out an objectionable view. The planting on this side is rather dense, to provide shelter, as the prevailing winds come from that side. The kitchen garden is provided for in another part of the grounds, in rear of the lawn.

The Swaar Apple should always, if possible, be grown on sand and the Newtown Pippin on limestone land, or else apply copious surface dressings of lime.

AMONG THE CRANBERRIES.

The Agricultural editor of the N. Y. Times, has been prospecting among the cranberry fields or marshes of New Jersey. The "Head Center" of the business is at or near "Tom's River Village," where about 125 acres of boggy land have been reclaimed and planted to the Cranberry. But comparatively small portions of the settings are yet of the fruiting age. One company has seventy-five acres planted—part in a bearing condition—from which they gathered last autumn 1,000 bushels of berries. Another had twelve acres planted—five bearing—from which 750 bushels of fruit were secured. A third party had eight acres which produced between eight and nine hundred bushels of berries. A fourth section, the smallest of the series, yielded 400 bushels. Here we have an aggregate of some 3,000 bushels of fruit from land which, till appropriated to the purpose of Cranberry growing, was good for nothing. It costs money to prepare the ground—a large portion being a cedar swamp—but it pays munificently in the return of fruit for the care and expense of production.

Horticultural Notes and Queries.

Catalogues, &c., Received.—The most complete thing of its kind we have received for a long time is "Ellwanger & Barry's Catalogue of Green-House and Hot-House Plants, select Bedding Plants, Chrysanthemums, Dahlias, etc., cultivated and sold at the Mount Hope Nurseries, Rochester, N. Y." It embraces many new and rare plants, shrubs and flowers, and will prove especially interesting to all wishing to ornament their yards and grounds.——The "Descriptive and Retail Catalogue of Small Fruits, and other stock, for sale by A. M. Purdy, Proprietor of the South Bend Nursery and Small Fruit Farm, South Bend, Ind.,—also containing valuable information as to planting, growing, marketing, etc."—Is a good thing for every one engaged, or about to engage, in cultivating small fruits.—— The "Descriptive Catalogue of Fruit and Ornamental Trees and Small Fruits, for sale at the Mound Hill Fruit Farm and Nurseries, Des Moines, Iowa, by Mark Miller," is creditable to Bro. Miller (editor of the Iowa Homestead) and the Hawk-eye State.

Facts About Pear Blight.—A correspondent of the Horticulturist states that for twelve years he had been successful with pear trees. Last year he manured a piece of ground heavily, on which stood fifty pear trees. The ground was well worked. The result was two-thirds of the trees were destroyed by blight. Another piece containing forty trees on clover sod escaped entirely. In this case cultivation and manure seemed to induce the blight.

Grape Vines—White Willow.—(A. W. M., Ill.) Go to a reliable nurseryman near you and get him to select your grape vines for family use, or apply to a fruit grower. Plant cuttings or rooted vines, don't think of sowing seed. In regard to the willow for fence we should say if you can find a good fence made of this material, and think best after seeing it and hearing its history to invest in white willow, why—go in.

Native Fruits of Nebraska.—W. H., Ogle Co., Ill., having noticed an account of some of the native fruits of Nebraska in a recent number of the Rural, thinks that the dwarf cherry there described would suit Illinois. As it is said to grow readily from cuttings it could readily be disseminated. If really valuable its merits will soon be found out by enterprising fruit growers.

Horse-Radish as a Market Crop.—Peter Henderson, one of the great market gardeners in New Jersey, states that horse-radish is considered one of the surest and easiest crops to grow. It is planted in the spring and dug in the fall; sent to market in barrels, and sold by weight. The sales are from $500 to $800 per acre.

Sending Grafts by Mail.—These may be readily sent in this manner, and choice fruit should be spread extensively by this cheap and simple means. First, wrap the grafts in oil silk, tying the package neatly and strongly; then envelop the silk in wool or cotton and over all wrap a strong paper envelope.

Osage Orange Plants.—C. B., East Bloomfield, N. Y., inquires where he can obtain Osage Orange plants nearer than Illinois.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Salt Rising Bread—Improved.—After the sponge is light, have ready a kettle of mush, and to each loaf of bread add one pint of warm mush. The bread needs more kneading, but is sweeter and keeps moist much longer, and one can scarcely perceive the corn meal in it.

A Good Way to use Cold Beefsteak.—Chop together cold steak and a few pieces of dry bread; place in a pan and turn boiling water over it; season with butter, pepper and salt; then make a crust as for biscuit and line a deep dish; turn in your mixture, and sprinkle flour over it, and put on the top crust. Bake quickly, and you have a chicken pie, (minus chicken, but just as good.)

To Bleach Cotton.—To bleach cottons that have yellowed by time and poor washing, lay them in very sour milk two or three days; take out and wash and boil, and they will be pure white.

Soft Gingerbread.—Six teacups flour; three of molasses; one of cream; one of butter; one tablespoon ginger; one of soda.

Loaf Cream Cake.—Twelve cups flour; seven cups sugar; six eggs; one pint of cream; one teaspoon soda; salt and spice to suit the taste. —J. M. I., *Adrian, Mich.*

German Puffs.—One pint of milk; four eggs; five spoonsful of flour; bake in cups fifteen or twenty minutes. Beat butter and sugar till they are light, and you will have a nice sauce for the puffs.

A Pretty Dessert.—Take the yolks of four eggs and beat till they are light, adding four spoons of sugar; boil one quart of milk and season with rose or lemon brandy; pour this mixture on stale sponge cake; then beat the whites of the eggs very light and rub in some currant jelly; with this cover the top of the cake, and you will have a nice dessert.

Oyster Fritters.—Blanch some oysters in their own liquor; then place them for some time in vinegar water, with salt, bread, parsley, and small white onions, sliced; then dry them well; dip each in batter and fry.

Fried Ham and Eggs.—Broil thin slices of ham; fry eggs in the gravy, or in butter, and serve one on each slice of ham; or the eggs may be poached.

Tomato Catsup—Excellent.—Boil one bushel of tomatoes until soft; squeeze them through a fine wire sieve, and add half a gallon of vinegar; one and one-half pints of salt; two oz. of cloves; one-fourth lb. of allspice; three oz. of Cayenne pepper; three tablespoons of black pepper; five heads of garlic, skinned and separated. Mix these together, and boil three hours, or until reduced one-half; then bottle without straining. If you want half the quantity take half the above.—M., *Olivia, Ark.*

Dyeing Cotton Blue.—Some time ago there was an inquiry in the Rural for a recipe for dyeing cotton blue. Several answers have been given, undoubtedly all good; but I have a method which is much more simple, and is also a durable color. It is:—One oz. oxalic acid, dissolved in about two quarts of soft water; one oz. prussian blue, dissolved in the same quantity of water; dip the goods in the acid water first; dry, and dip in the blue. Use earthen vessels which are not used for cooking.

Inquiry.—Can some of your lady readers give me a recipe for making pressed meats or chicken? —M. D., *Auburn, N. Y.*

Artificial Honey.—Take one-fourth pint alcohol; add five drops best rose oil; put in a bottle and keep corked tight. Then to two lbs. white sugar add one-half pint of water in a tin pan, and boil briskly for two minutes, or until it is likely to run over. Then take it off, and add one-half teaspoon of pulverized alum, and twenty-four drops from the bottle, and stir it well in, and set it away to cool. It is the nearest like bee's honey of anything I ever tasted, and where one cannot get bee honey it is a good substitute.—C. J., *Townsend, Ohio.*

Bottling Cucumbers.—C. B. presents this inquiry:—"For the information of others, and myself, particularly, will you give your readers the whole process of bottling cucumbers for pickles? What is done to them after cut from the vine; what liquid is applied after put into the bottle; what the liquid costs, &c.?" Who will answer?

Pilaff.—This is the great dish of the Orientals, and is so truly delicious and so cheaply and easily made, that it is a wonder it has not become, ere this, a common dish in other countries. It is prepared in the following manner: Boil sufficient rice (according to the number of mouths to feed) in a large quantity of water. It should be put in cold water, with a little salt, and not stirred while cooking. When thoroughly done, strain off the water through a colander or sieve, and each kernel will be separate and solid. Then season with salt, pepper, butter, and a little tomato sauce; cut up (not very fine) roasted or boiled mutton, or veal, and mix with the rice in proportion of about two-thirds to one-third meat. Let them simmer together a few minutes, and serve hot with the meat gravy. The water that the rice has been boiled in makes the very best starch for fine work.—*Germantown Tel.*

To Housekeepers.—Weigh your Saleratus when you buy a paper. You will find D. B. De Land & Co.'s *Best Chemical* is full weight, and that others are not. Try all things and hold fast to that which is *best* and true on weight and quality both.

Ladies' Department.

Written for Moore's Rural New-Yorker.

"AS UNTO THEE."

A witching, roguish maiden
In clouds of sunny curls,
Was pictured in the window
Framed with lacelet-pearls.
And soft as childish dreaming
She sang the quaintest rhyme,
While the silvery echoes murmured
"Touch us gently, Time."

O mischief-loving maiden,
Whose eyes' unfathomed blue
Beamed love on dimmest pathways,—
I held thee fast and true,
As beneath the languid willow
In that summer's droning prime,
My full heart breathed thy anthem—
"Touch us gently, Time."

So long ago—that summer.
So long ago—that prayer:
Yet ne'er has crimsoned winter
Brought a furrowed drift of care.
Ah, till life's oars are silent,
Till we reach the better clime,
Till the hands are folded quiet—
"Touch us gently, Time."

O. VON K.

Written for Moore's Rural New-Yorker.

WOMAN'S DRIFTING.—No. II.

The sunset was glorious that autumn night as we went out to Grand Junction, just as gorgeous as thousands we lose the glory of only because we will not look up. "The pale silver moon" was rising modestly at our left, more like a "gude wife" than a queen. The wives of great men are seldom noticeable, you know, only as they dress up now and then and come out to ornament the sleeves of their lords. If they are women of worth, they fill the home-sphere all the more perfectly that they have not the husband's aid to depend upon. When Lieut. Reynolds' wife became "Mrs. Major Reynolds of Illinois," rumor said he wanted a divorce. It will not do for a man and wife to be any more than equal in their respective spheres, if the more is on her side. So the moon did her duty when the sun went out of sight; the stars and the light-house and the flames leaping from the chimneys of the "Wyandotte smelting works," did all they could to help her, and one or more of the shining lights met with splendid success.

The train left us at Hillsdale, the midnight lamp of Heaven showing us the plain brick college walls in their sleeping beauty, one lone window of the broad front glowing golden from within, perhaps the light of the study table, perhaps a sick one's couch. There is a world inside of such walls—the lives loved of a thousand hearts, the hopes of many a home whose echoes are fainter for their absence; and under all the Tempter lurks, and over all the Father watches.

We look into life in its different phases for various objects; and, among others, if you would know your own self, mingle with humanity. To find your "calling," go where every emotion of the human heart is touched by different hands, and learn the responses that thrill your inmost being. That is, if you are not called to duties just where and as you are; for nine hundred and ninety-nine of a thousand seek for some other sphere than the one they are just adapted to, and lose all their "peace of conscience" trying to do what they were never made for, neglecting the work their hands might find to do, and sighing away life's precious moments because they fail. Yet among the many you must be original, must show your true nature; there is no avoiding it. The strongest elements of your organism will unfold themselves, and the weaker will take the back-ground; so that while you study what others are, others will learn you. The rust and mold and dust of solitary life will rub off, and self-esteem will distinguish itself from self-conceit, secretiveness from deception, courage from bravado, and principle from form, in whatever your aims and actions are; and to know what you are, look when alone into that perfect mirror, the memory of thoughts, words and acts when you were not alone, and name the motives that impelled them.

Do not measure yourself by others in goodness or power; "whoever does that measures downward and will progress downward; but take that standard of perfection, Christ's life and teachings, and you measure upward toward an exaltation to which you will tend the more, the more you measure yourself by it."

These student-lives stand out before you in the exercises of the term as public; and yet every life is a private one, and you may learn but not teach its individuality. There are ideas wholly original to be gathered up and put away in your treasury, as the specimens of the world's productions have been gathered in the college cabinet, and you may see but not appropriate them—romances that lie out in plots of inner and outer life, that thicken or divide, and all work together in one fabric—the one where we all cast a thread bright or dim, coarse or fine, weak or strong; and the texture of the whole is either better or worse for our share in it.

All of this world we can see or hear and thus take into the "spirit-world" of our own hearts and keep there, is ours; and the better we people that world with the beautiful and true the more there is of us individually, the larger we are within ourselves and the more confidence we have and are worthy of in our own resources.

There was one picture I wanted; and so four of us one day climbed two flights of stairs to the chapel, a longer one to the belfry, and then ladders to the cupola, the highest possible altitude but one of the building. "College Hill," we were told, is the highest point of land in the State; and the view near and far was worthy to linger long under an artist's eye. The city lay south and west—city and forest intermingled it seemed, so wide are the lots and so thickly shaded with the at that time many-hued maples. Bawbese lake lay farther east; the narrow St. Joseph river threaded through vale and wood and village; the path of the locomotive was marked distinctly across the field; and at the north-west appeared the little cluster of brick and wood and paint and mortar, Jonesville—all flooded with the sad October sunlight.

The spirited breeze that always frolics and capers on the school ground, seemed to take us wholly in charge, and tossed curls and ribbons and fringes "without regard to cost." It is never a gentle, loving air, but full of vitality, and will find your brain and bring out your ideas sharp and clear, making room in your soul for more and helping you to gather them.

There are different things that cluster around the affections and attach them to such a place—the varied aims and interests that call us to it, and to those who have familiarly trodden the halls and made homes of little rooms, the many memories pictured on the mystic canvas we all reach without seeing, and paint indelibly without pencil. And among the loves and hopes and aspirations are there any, I wonder, that reach quite to those of the pulpit and rostrum where

"Men of thought and men of action
Clear the way"

for those young feet that follow or turn aside as they choose, from the grand mountain path up higher forever? any others that quite as fully wake up the better part of our drowsy, dreamy souls, and strengthen them for the onward march so often as we "remember?"

There are three men at the school you will see more of than either other three, and one of these is Prof. Whipple. If public men do not wish to be criticised they must not be public, and there are few compulsions in saying just what one thinks of one who does the same by every one else, to them or of them, and who would seem at least to take with the same nonchalance as he gives.

There is an aged English gooseberry bush out in the garden that hasn't been trimmed for years, and the thorns are sharp and stubborn and stand out every way from twigs that do the same. The leaves are green and velvety in spring, and in summer darker and thicker and less beautiful; but go close and among them, you find large, clear berries, and you get rubbed and pricked, and may be a little bit angered getting at them; but when you do accomplish what you undertook you are glad you tried it; for they *are* delicious, and you make up your mind the "old torment" is worth saving just where it is, and in fact doesn't need any trimming either. And that's like Prof. Whipple.

"President Fairfield" is written all over the little man with the large hat; and if you think "been to Europe" shows in rather too large characters next after, do not say anything until you hear him talk of America; and if you are loyal you will forget everything else only that he is; and then if you shake hands with him you will presently feel as if you had been to Europe too. It is of no use trying to tell anything he has said unless you can take him right along and have him say it; for the style of the man multiplies everything he speaks; he carries you with him and shows you all he has seen, and you hear as he did all he has heard. When he speaks in double earnest, he rises—without doubt imperceptibly to himself—on tiptoe, and as the sentence is ended he strikes his heels back upon the floor with an emphasis that would do credit to a man of "three hundred pounds."

Prof. Dunn appears to the stranger all heart, and that heart all sympathy. If the darts of enemies are ever hurled at it, it will not struggle or rebel, but bleed and quiver in silent agony, and, losing none of its benevolence, ache for others' sorrows with keener feeling than for its own.

There is nothing quiet or evasive in the man; every phase of life is to him real and deep, every motion is the semblance of a thought. You have seen a white rose, fully blown and ripe, covered with heavy dew, and knew that one stirring breeze would sever the petals from the stem and scatter them far and wide to wither and decay. And when you look at this man you think of it, and the purest spot in your heart tenderly prays that the breezes may never touch him; and the answer seems to come with an assurance that unerring angel hands will gather every fragment of the slender life and carry it safely to the Father; and then a fairer light seems around him; and when you go away from the sound of his voice you step softly and speak low, and the evil one is farther away from you than he ever went before.

Ionia, Mich., Jan., 1867. Grace Glenn.

Brides.—An impudent writer treating on the "natural history of brides," classifies them thus:—Sentimental brides, who marry for love; speculative brides, who marry for money; anxious brides, who marry for the sake of being married; accommodating brides, who marry because their lovers ask them; unresisting brides, who marry because their friends desire them to marry; inquisitive brides, who marry for curiosity, and invalid brides, who marry to restore their health.

FORBEAR.

Forbear! wrath only kindles wrath.
And stirs up passion's fire;
While answering softly, mildly tends
To check the bitterest ire.

A Chinese maxim says:—"We require four things of woman. That virtue dwell in her heart; that modesty play on her brow; that sweetness flow from her lips; that industry occupy her hand."

The number of ladies' waterfalls exported from France to England last year was 11,954, with hair sufficient for 7,000 more. The United States were the next best customers.

TO CONTRIBUTORS.

The following contributions are respectfully declined for the reasons annexed:—"Our Suffering Saviour," A. P. The striking passages of Scripture are almost invariably weakened by paraphrasing.—"In Memoriam," C. W. B. Your principal idea, in the last stanza, is not new.—"Rebus," M. D. Too long.—"Drifting," J. J. M. We cannot understand the drift of your lines.—"The Thoughts of Youth," J. S. Some rhymes incorrect, some sentences won't parse.—"Misery and Death," N. S. Tell the story in half as many words and be a little more careful about the rhythm, and it will be acceptable.—"Returning Compliments," H. P. Four times too long.—"The Snow Storm," F. W. J. You rhyme prettily and correctly, but you must think more vigorously.—"A Valenthe," L. S. Identical syllables do not make a rhyme.—"Names," L. L. Not new, nor complete—"A Husband Found," A. S. Four of the six stanzas rhymed incorrectly.—"To Nellie in Heaven," K. W. Actual experience may make an old subject as interesting as ever to an individual; but it should not be set before the public except with decidedly new thoughts or expressions.—"The Happy Home," S. L. C. Your best lines may be found in the hymn book.—A correspondent inquires if any of our readers can furnish the lines entitled "Peace, be Still," commencing "Once upon a heaving ocean."

Choice Miscellany.

Written for Moore's Rural New-Yorker.

SUSPIRIA.

What balm is there in loud lament,
Or solace in the salt of tears?
Can age's croon give me content,
Or childhood's plaints soothe manhood's fears?
No matter: like the panther's whine,
As much a pang as a relief,
I pour this nightly wail of mine—
Ah me, my black and bitter grief!

Hope's mirage long ago went down,
And faded fancy's tropic weeds—
All sunken under doubt's dark frown
The trusts that pillared up my creeds:
What thrills were of ambition born,
What comforts twined round firm belief,
How sweet seemed love, both flower and thorn—
Ah me, my black and bitter grief!

Truths I had deemed might never fail
I've seen confuted one by one:
Money and might o'er right prevail;
A gifted soul die out unknown;
A self proud fool win wide applause:
Malice exile a noble chief;
Hot hatred warp the deep-grooved laws—
Ah me, my black and bitter grief!

A bright illusion still did bloom
That one rich heart all pangs would pay
And somewhere, from the crib to tomb,
Near paradise would wind my way—
Far doth such compensation seem,
And since the frost has touched the leaf
'Tis vain of [illegible] and fruit to dream—
Ah me, my black and bitter grief!

Creations of a sickly brain,
Vague shapes of phantom woes are these.
What then is labor's overstrain
And debt and failure and disease,
And strife within a home once blithe?
Behold mine life, a woful sheaf
With self-contempt for binding wythe—
Ah me, my black and bitter grief!

So much to love the good and fair,
A Sybarite in heart and mind,
A cruel lot is mine to bear,
Thistles and tares to reap and bind.
Lethe for me were wine of bliss,
A welcome guest the final Thief,
Like love's first pledge a fever's kiss—
Ah me, my black and bitter grief!

So made a tropic sea to sail
And drink in joy midsummer's calm
Where Cuban winds all eve exhale
The honey's scent, the flower's balm—
I northward drive with night around,
My sleet-stiff sails I cannot reef,
The autumn gale aloft doth sound—
Ah me, my black and bitter grief! ***

POLITENESS AND POLICY.

Do not discard all ideas of policy because you so often hear it contrasted with principle. Do not make the common mistake of supposing that morality requires you to forego all the advantages arising from that prudence which takes cognizance of the irreconcilable differences of people in respect of temperament, education and ruling motives. You observe the universal rules of courtesy, don't you? But they are all founded on general principles of policy; and if you refuse to give those same principles a further application to suit the peculiarities of your every-day intercourse with various persons, you simply put youself at needless disadvantage in all your dealings and fail to secure justice for yourself. The object of politeness is merely to lubricate the machinery of society, and your strictest observance of it can be no more than your fair contribution toward the general ease and good feeling. The ends of policy are more selfish, but it is none the less just and proper—nay, even necessary. You certainly should not try to appear better than you are; but neither, on the other hand, have you any right to allow yourself to pass for less than you know yourself to be worth. If you discard policy, you are like a coin unstamped; and only those who possess a nicely balanced judgment of character will be able, however well disposed, to determine your true value. Have a policy of your own, not only in your business or professional, but in your social relations also. Be systematic as far as possible. Though you can not and ought not to suppress all action that is prompted by involuntary moods or emotions, yet, other things being equal, you will find your success increasing very nearly in proportion as you do nothing for which you can not render a reason. Make a sharp distinction between feelings and figures, and never let the former invade the province of the latter. If a crisis occurs and a little silent calculation convinces you that there is no alternative for the risk or the sacrifice presented, submit to it at once as if it were all a matter of course to you or something about which you were entirely indifferent. You will thus at least get the credit of being superior to circumstances. By observing a few such principles, you will soon build up for daily use a systematic policy that will often enable you to secure justice for yourself to balance the large drafts which politeness often makes upon you for the benefit of others.

HARSHNESS.

How many little throbbing hearts are forever soured by the use of some some small, harsh or angry word, spoken thoughtlessly,—word that the speaker would gladly recall, were it not for overbearing pride that masters the better feelings of human nature. Did you ever notice the look of pain that rested upon the young face when you spoke those angry words of command or threat? Did you ever look beyond the mere present effect, and see the probable future result of your own wrong-doing? If not, pause where you are, and see the lowering brow, that almost infant brow, as it leaves your presence. See that dark cloud of resentment! You think you can subdue it if it breaks out,—do you? Ah! my friend, you have planted a thorn in that youthful mind that will rankle there until its life dissolves into the great unknown eternity. Perhaps there was *some* cause to impel you to the utterance of passionate words; still, you are none the less the greater wrong-doer of the two; because you did not stop to inquire whether the child was willfully the trespasser. No! no! from the stand-point of your mature mind you looked upon the little one as possessing a mind qualified to discover instantly the right. You have made an enemy that will trouble you through life. Those words will be treasured up in that little mind, and no future act of yours can atone for that one outbreak of passion. Remember this, and use no more harsh words. R. P. A.

POPULAR LIES.

The following stories are constantly reported in the newspapers, and as often as once a year they all find lodgment in one setting or another throughout the country. It is time they were set at rest.

Number One.—That Charles Dickens is habitually in pecuniary difficulty; that he lives beyond his means, and is obliged to go into chancery once or twice a year. That he has made up with Mrs. Dickens and they now live together again.

Charles Dickens is not only in the yearly receipt of very large sums, both from his books and his readings, but he is one of the best business men in England, husbanding his means most judiciously, while his benevolence is nobly conspicuous. His wife has *not* come back to him, but still lives in her own establisement in London, while his residence is at Rochester, thirty miles away from the city.

Number Two.—That one of Mr. Longfellow's daughters was born without arms; that she draws and paints beautifully with her feet.

This error arose from a photograph which, by a mistake in position, gave the impression of an armless child.

Number Three.—That Samuel Rogers, the English poet, kept a million pound note framed and hung up in his library.

This lie was started by an Englishman in America, and was first printed in a foolish account of some London authors in a book called "Pen and Ink Sketches." The writer's name was John Ross Dix, who hoaxed the reading public in various ways.

Number Four.—That the lyrical poem beginning "I am old and blind," was written by John Milton.

The piece was written by a lady of Philadelphia, some years ago, who never pretended Milton had anything to do with it.

Number Five.—That Humboldt said of Bayard Taylor he had never met with a traveler who had gone over so much ground and seen so little.

This malicious anecdote was invented by an envious lecturer in New York, who wished to write down Taylor and write up himself.

Concerning New Year.—The old Romans divided the year into ten months only; it was Numa Pompilius who added January and February. The former took its name from Janus, to whom it was dedicated. As it opened the new year, they surrounded its commencement with good omens, and thence came the custom of visits between neighbors, of wishing happiness and *New Year's Gifts*. The presents given by the Romans were symbolic. They consisted of dried figs, dates, honey-comb, as emblems of "the sweetness of the auspices under which the year should begin its course," and a small piece of money called *stips*, which foreboded riches.—*Attic Philosopher.*

An Opinion of Boston.—A recent visitor in Boston, writing to a journal in New York State, gives his opinion of the New England metropolis in the following felicitous style:—"Boston is chiefly distinguished for its Yankee enterprise, magnificent harbor, crooked streets, spacious Common, big organ, dilapidated State House and the Atlantic Monthly."

Editing a newspaper is a good deal like making a fire. Everybody supposes he can do a little better than anybody else. We have known people doubt their fitness for apple peddling, or driving and counting laths; but in all our experience we never met with an individual who did not think he could double the circulation of any paper in two months.

We find self-made men very often, but self-unmade ones a great deal oftener.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

SEPARATED.

BY ROSE.

Apart from thee! Beloved, I hear naught else
But this sad echo in my throbbing heart!
Ah, how can we, whose yearning souls have met
In truest recognition, live apart?

Apart from thee! I leaned on thee to lead
Me into wiser ways, but now I take
The cross thou bid'st me bear, and in Christ's strength,
I will be brave and patient for thy sake.

Apart from thee! God grant the way be short,—
He fills few lives with sorrow's starless night
To the drear end. We may not know, perchance,
"At eventide," for us "there shall be light."
Riverside, Jan., 1867.

Written for Moore's Rural New-Yorker.

THE LORD'S PRAYER.

In the services of all Christian congregations the impressive custom prevails of repeating, more or less frequently, the Lord's Prayer. Sometimes, to our sorrow, we have heard clergymen vary the words, enlarging upon and paraphrasing the simple, grand original. Against this—to us—unhappy practice, allow an earnest protest. When our Lord's disciples said "Teach us to pray," then said He, "When ye pray, say 'Our Father who art in Heaven.'" We will use these words as they were taught us by the blessed Jesus; and let no vain trifling by misjudging mortals be indulged. There are no words so sweet, so expressive to the Christian heart, as those his Saviour used; and though oft they be repeated, he shall never weary of nor desire to exchange them.

The Sacred House.—Amos Brown, D. D., at the late meeting of the Schuyler county Sabbath School Association said:—"I never wear my hat across the room of the house of God. You may call this superstitions. It is not. We are all under the influence of association and habit, and cannot help it. I accustom myself to this because I would have nothing common connected with the sacred place. I would have everything remind me that it is the Sanctuary, and would allow no act within its walls which would lessen the solemn sanctity of the place." B. W. S.

THE LONELINESS OF CHRIST.

Did you ever think of that correction of Christ where He spoke of Himself as being alone, and instantly said that He was not alone? You will find in the Berlin gallery one of Raphael's pictures of the Madonna, in which there is an exquisite seizing of one of the most fugitive passages of time. The mother has a book, and she is reading, and the child is putting its hand in her bosom; and she has the expression of being absorbed in the book, and yet of having sufficiently noticed the child to look up at it. Her expression is caught just at that subtle moment of time when she is thinking of the book which she is reading, and yet is not quite thinking of it, but is thinking of the child. The whole picture presents that thought, and you see it clearly. And where Christ speaks of Himself in this instance, it is one of those subtle transitions where He is thinking of Himself in His relation to the world, and He speaks of Himself as being alone, and yet, instantly lifting His thought to God, says, "Not alone." This sublime discrimination, how full it is of meaning, and comfort, and consolation to us in our various relations of life.

PULPIT INGENUITY.

A preacher in the neighborhood of Blackfriars, London, not undeservedly popular, had just finished an exhortation strongly recommending the liberal support of a very meritorious institution. The congregation was numerous and the chapel was crowded to excess. The discourse being finished, the plate was about to be handed around to the respective pews, when the preacher made this short address to the congregation:—"From the sympathy I have witnessed in your countenances, and the strict attention you have honored me with, there is only one thing I'm afraid of; that some of you may feel inclined to give too much; now it is my duty to inform you that justice, though not pleasant, should always be a prior virtue to generosity; therefore, as you will all be called upon in your respective pews, I wish to be thoroughly understood that no person will think of putting anything in the plate who cannot pay his debts!" It need not be added that this advice produced an overflowing collection.

The Purse.—A Methodist laborer of Wesley's time—Captain Webb—when any one informed him of the conversion of a rich man, was in the habit of asking, "Is his purse converted?" Without the conversion of *his purse*, the good Captain would give no credit to the conversion of *the man*. In this he agreed with Dr. Adam Clarke, who used to say "he did not believe in the religion that cost a man nothing." The religion that costs a man nothing is no religion at all; and the being converted, *all but the purse*, is no conversion at all.

Family Prayer.—Robert Hall, hearing some worldly-minded person object to family prayer as taking up too much time, said that what might seem a loss will be more than compensated by that spirit of order and regularity which the stated observance of this tends to produce. It serves as an edge and border, to preserve the web of life from unraveling. "The curse of the Lord is in the house of the wicked; but He blesseth the habitations of the righteous."

The Reviewer.

THE SANCTUARY: A Story of the Civil War. By GEORGE WARD NICHOLS, author of "The Story of the Great March," with illustrations. [12mo. pp. 286.] New York: Harper & Brothers.

To a romancer who wishes to build his story upon a bold yet complicated plot, and to fill it with thrilling incidents, the scene and time of a civil war offer perhaps the most inviting field possible. And decidedly the most romantic chapter in our late war was the "march to the sea"—the disappearance of a vast army in the heart of the enemy's country, the rumble of its mysterious movements, the breathless anxiety that awaited its advent, and finally the glad shout that burst from its unbroken columns as they hailed the blue sea and the friendly fleet. Gen. NICHOLS told the story of that wonderful march, in glowing words that bear the impress of living truth, because he had himself seen and participated in what he described. So far as the volume before us presents pictures of the strange situations and private calamities of the war, it is readable and praiseworthy. But, considered strictly as a novel, it certainly cannot be ranked very high. Much of the conversation put into the mouths of persons of little education is too stilted for possibility; and the author has signally failed in making his characters stand out distinctly as living individuals. For sale by STEELE & AVERY.

CATALOGUE OF CASTS OF FOSSILS, from the Principal Museums of Europe and America, with short descriptions and illustrations. By HENRY A. WARD, A. M., F. G. S., Professor of Natural Sciences in the University of Rochester. [8vo.—pp. 228.] Price, muslin, $1.25; paper, 75c.

THE WARD Geological Cabinets, in the University of Rochester, have been pronounced by the highest authorities the most extensive and valuable on this continent. Prof. WARD, though still a young man, has achieved a most wonderful success in bringing together fossil remains from every part of the world and giving them a complete scientific classification and arrangement. The Professor has a laboratory in Rochester, where several accomplished workmen are constantly employed in making casts of these specimens, to supply the demand for colleges, academies and private collections. The casts are like the Chinaman's cups, showing every crack and seam of the original, and are colored like the real specimens. This catalogue describes over twelve hundred of these casts, and gives accurate pictures of nearly two hundred. The prices, which vary from 15 cts. to $250.00, are annexed, and there is also a convenient index. The book will be sent by Prof. WARD to any address, on receipt of the published price.

THE LAWYER IN THE SCHOOL ROOM: Comprising the Laws of all the States on important Educational Subjects. Carefully compiled, arranged, cited and explained. By M. MCN. WALSH, A. M., LL. B., of the New York Bar. [12mo.—pp. 161.] New York: J. W. Schermerhorn & Co.

THIS little volume supplies a long-needed authority on the subjects discussed—a work containing much valuable information, and that will prove both convenient and instructive to many. The volume should be read by every one interested in educational matters, and especially teachers, school officers, ministers and lawyers. It is a handsomely executed work, full of useful and reliable information, and we trust will have, as it merits, a myriad of careful readers. The author is a native of this city, and a graduate of the State Normal School. A teacher of ability and experience—having taught in this county, Albany, and subsequently in Europe—Mr. W. is qualified to discuss the important subjects treated upon in his work.

JOSEPH II. AND HIS COURT. An Historical Novel. By L. MÜHLBACK, Author of "Frederick the Great and his Court," "The Merchant of Berlin," "Berlin and Sans Souci," "Frederick the Great and his Family," "Story of a Millionaire," "Two Life Paths." Translated from the German by ADELAIDE DEV. CHAMPION. [8vo.—pp. 343.] New York: D. Appleton & Co.

IN this ponderous romance an authoress who has acquired some reputation in her own country exercises her imagination upon court life in the eighteenth century and makes herself for the nonce familiar with the private apartments and individual characters of kings and queens. The narrative is written with considerable spirit; but whatever interest it is expected to derive from illustrious names will fail it among the sturdy republicans on this side the Atlantic, who care little for those who are "born great"—the littlest of the great—except as they affect history by their official acts. Sold by ADAMS & ELLIS.

CRADOCK NOWELL. A Tale of the New Forest. By RICHARD DODDRIDGE BLACKMORE, Author of Clara Vaughan. [8vo.—pp. 218.] New York: Harper & Brothers.

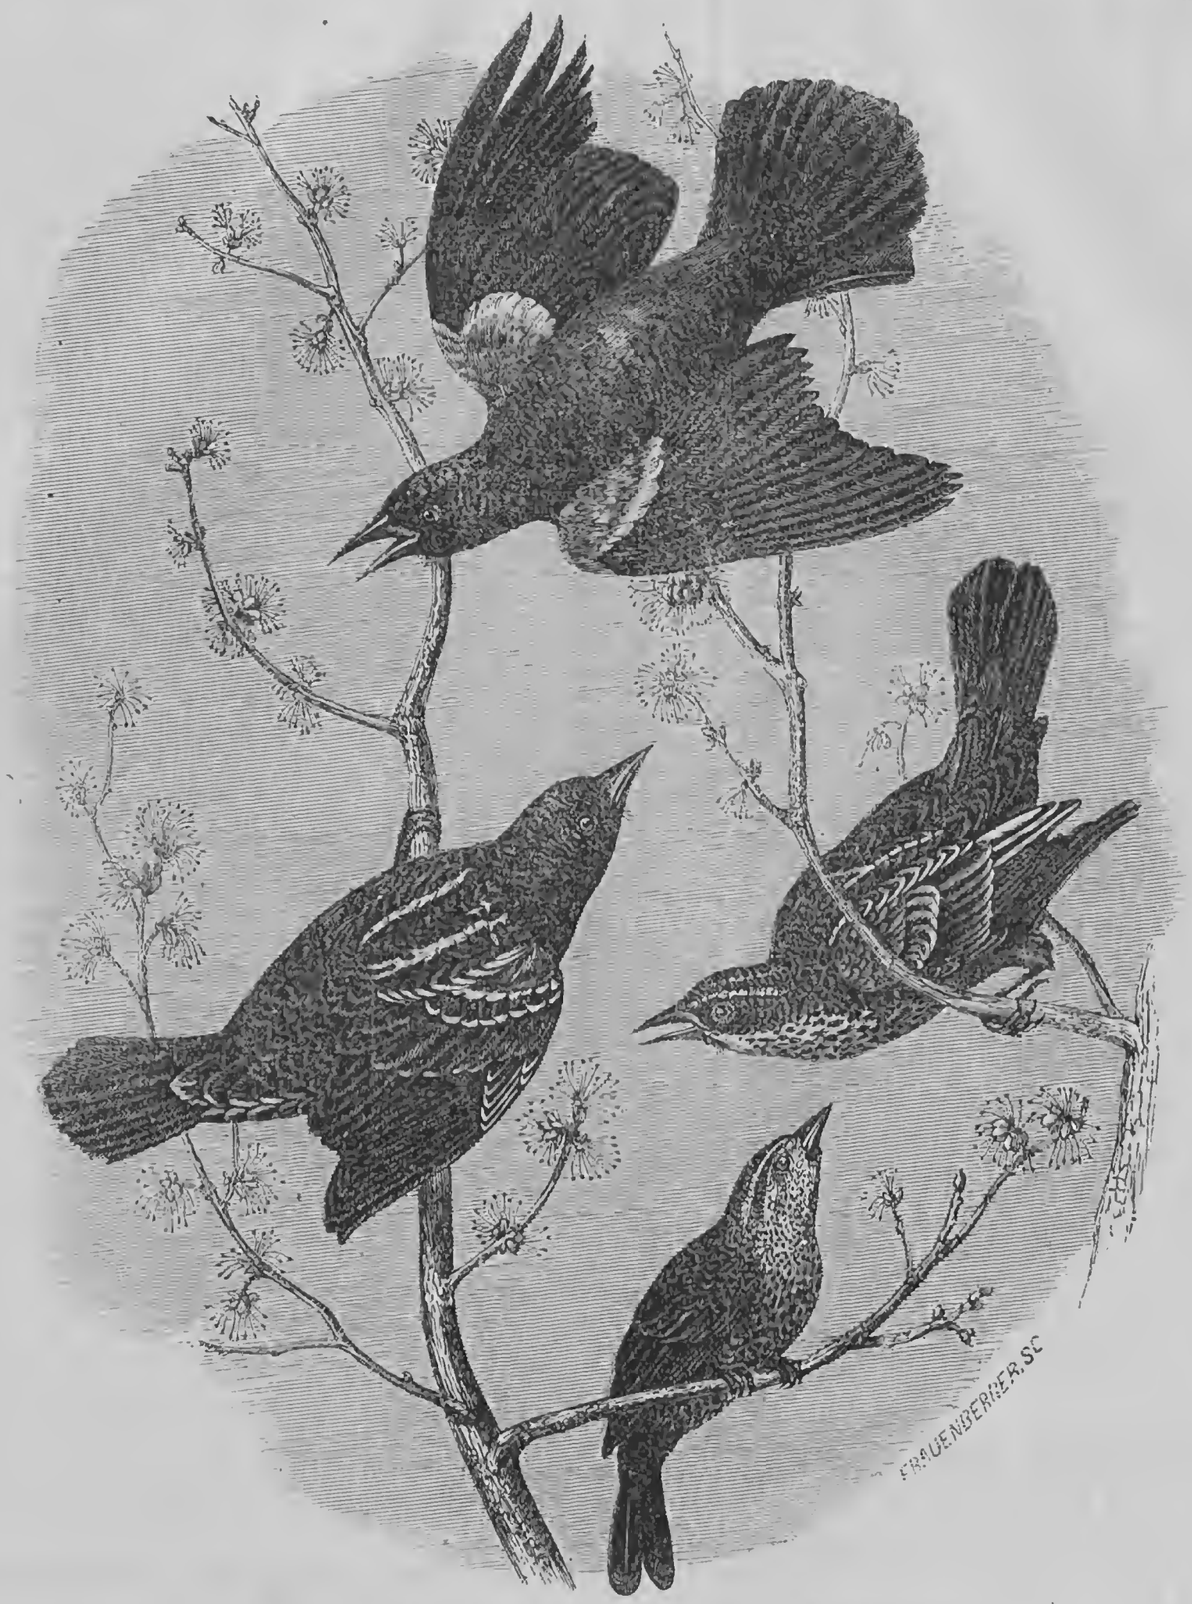
THE idea of sacrificing the life of the mother at the birth of the hero or heroine in the first chapter of a novel, for the mere sake of enlisting the reader's sympathy, or giving a touch of pathos to the story, is so old that it now excites a smile at every repetition. "Cradock Nowell" is one of the hundreds of tales of English country life that are written every year, and serve the purpose of staying for a while the stomachs of novel devourers. It opens as indicated above, and wades through a mass of 200,000 words to its close. When an English novelist resorts to the strange expedient of putting delicate things in Greek, it seems to indicate that he considers or intends them to be indelicate. For sale by STEELE & AVERY.

SCHOOLDAY DIALOGUES. Compiled by ALEXANDER CLARK, A. M. [16mo.—pp. 352.] Philadelphia: J. W. Doughaday & Co.

IN our schooldays a book of dialogues was in great demand among our fellow pupils, and their recitation on the stage with a little theatrical costuming the height of glory. But most of the dialogues in the books of those days were wretched enough, many of them being the loud-mouthed parts of absurd German plays, where Roderigo raves and Gomez moralizes or expostulates with vehemence and gesticulation *ad lib.* The compiler of this volume has endeavored to get together something a little more home-like and interesting, and presents a good many entirely new dialogues of real merit. Nothing is so efficacious in getting boys out of the sing-song style of speaking pieces as the recitation of dialogues.

THE FRENCH MANUAL: A New, Simple, Concise and Easy Method of Acquiring a Conversational Knowledge of the French Language; including a Dictionary of over Ten Thousand Words. By M. ALFRED HAVET. [pp. 300.] New York: D. Appleton & Co.

THE mastery of modern languages, especially French and German, is becoming rather a necessity than an accomplishment with those who would be well educated or who expect to travel. The design of the present work, which has been revised and corrected from the last English edition, is to make the grammar as brief and comprehensive as possible and give more than usual attention to conversational exercises and the acquisition and ready use of idiomatic phrases. For sale by ADAMS & ELLIS.



THE AMERICAN RED-WINGED STARLING.

THE American Red-Winged Starling (*Agelaius Phœniceus*) is named after the European Starling, which it resembles, except in color. It extends over a wide range of country, from Labrador to Mexico. In the North it is migratory, but in the Southern States and Mexico it remains all the year round. The male measures nine inches in length, and the female a little over seven. In color they are so distinct that they would never be taken for the two sexes of the same species. The male is of a beautiful glossy black, with the shoulders scarlet; the female is brownish-black above, mottled and streaked with brown or white; the head has two stripes of cream color on each side over the eye; and the lower surface is of a whitish cream color, streaked and spotted with black. The young male bird greatly resembles the female, but soon begins to show indications of belonging to the superior sex in the reddish markings of his shoulders, a distinction of which the females are always destitute. They pair about the middle of April, and build their nests a fortnight later—generally in marshy places, six or seven feet from the ground. The outside of the nest is of rushes and long grass, the lining of softer material. The female lays generally five eggs, pale blue, slightly tinged with purple, and marked with lines and spots of black. If the nest is robbed, they build again soon after in the same meadow. When taken alive, or reared from the nest, it soon becomes familiar, and sings frequently, bristling out its feathers. Its notes, though not remarkably various, are very peculiar. The most common one resembles the syllables *conk-quer-ree*; others, the shrill sounds produced by filing a saw; some are more guttural; and others remarkably clear. The most usual note of both male and female is a single *chuck*. In some instances the red-winged starling, like his European namesake, has been taught to articulate words pretty distinctly.

In the South the starlings collect in immense flocks during the winter, frequenting old rice and cornfields. During the spring and summer they feed on grubs, caterpillars and other insects. WILSON, the ornithologist, pleads strongly for the bird, on the ground that its destruction of noxious insects is so extensive as to over-balance all the mischief it does, but says:—"For their principal attacks upon the farmer's property the starlings select the months of August and September, when the ears of the Indian corn are young, soft and succulent, and present a temptation too great to resist. At this time, reinforced daily from all parts of the interior, they pour down on the low countries in prodigious multitudes. Here they are seen, like vast clouds, wheeling and driving over the meadows and devoted cornfields, darkening the air with their numbers. Then commences the work of destruction on the corn, the husks of which, though composed of numerous envelopments of closely-wrapt leaves, are soon completely or partially torn off; while from all quarters myriads continue to pour down like a tempest, blackening half an acre at a time; and, if not disturbed, repeat their depredations till little remains but the cob and the shriveled skins of the grain. What little is left of the tender ear, being exposed to the rains and weather, is generally much injured."

Reading for the Young.

"GOOD NIGHT."

"Good night, good night!" said a lovely child,
As she turned her face, with affection mild,
To receive a tender mother's kiss,
Ere she sank away to her dreams of bliss.

"Good night!" and she uttered her little prayer
To "Our Father in Heaven" in silence there,
While guardian angels took their stand
To watch her through the dreamy land.

The angels looked and sweetly smiled
Upon the face of that lovely child,
And said, as she uttered that little prayer,
"Of such the kingdom of heaven are."

THE LITTLE SOLDIERS.

"WIFE," said a man when the war broke out, "I *must* enlist. If it is necessary for my neighbors to go, it is for *me* to go. I can't stay at home *easy*, anyhow."

"Oh, William, must you?" said his wife sorrowfully, "must you? How can me and the boys get along alone?"

"Yes, father, go," cried little Will. "I think you *ought* to go. They won't take *us*, or we'd go in your stead. Some of the family ought to go to keep the family credit good. Don't you know, father, how many times grandma has told us how her father left his oxen in the field and went to fight the enemy at Lexington, without even going home to bid the folks good-bye?"

"Yes," said Sammy, "We'll take care of home for you; we'll help mother. Go, father, and fight for the flag of freedom."

"Thank you, my brave boys," cried the mother, "thank you. Go, father, enlist."

The man enlisted, and the boys, as good as their word, took care. There was a large patch of ground near to the house which Will dug, hoed, planted, and raised a good supply of vegetables on, enough to eat and some to sell. He did it all himself, for Sam worked for Dr. Blake.

One day a gentleman came along, who, looking into Will's premises and seeing the thrifty state of things, "Why, I thought your father had gone to the war," said he. "Where did all this come from?"

"Work did it, sir," said Will.

"Work will do almost everything," said the gentleman.

"Yes, sir," said Will, "father's fighting, I'm digging, and mother's praying."

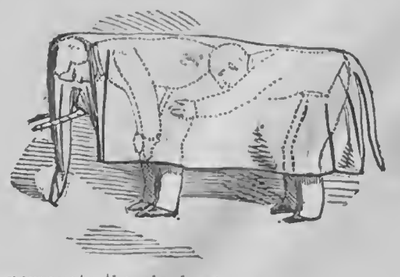
"Fighting, digging, and praying," cried the gentleman, "that's the patriotism that will bring the country out of her distresses. Would that every family went to work so."—*Child's Paper.*

RUINS OF BLUEBEARD'S CASTLE.

A TOURIST writes from France:—"There are several localities in the vicinity of Nantes which are well worthy a visit. For instance, I imagine not a few of our little folks in America would like to have joined me in an excursion I took the other day to the ruins of Bluebeard's castle—that very identical castle where the story book tells us the murdered wives hung in a line in the mysterious chamber! The original of Bluebeard, it seems, was one ferocious old chevalier Duval, who was, in truth, a ferocious old bigamist, and lived in this castle so long ago that hardly anything except tradition in regard to him yet remained. The excursion is a delightful one, and you may reach the ruins either by a road which conducts through a charming rolling landscape, or by the pretty little river Erdre, which winds romantically northward from the center of the town. Just outside the primitive village of Jandiniere, immediately upon the sloping bank of the stream, you encounter some crumbling walls, so thickly covered with moss, ivy and brush that you can hardly discover them, and in the midst of a pretty wood, and this is all that still exists of Bluebeard's castle. They undertake to place you on the very spot where the murdered wives were transfixed; for tradition takes strong hold on the ignorant, superstitious minds of those French peasants, and I doubt not that the old woman who shows the ruins for a few cents thoroughly believes the story from beginning to end."

THE ELEPHANT.

THIS is a most comical diversion, and never fails to elicit applause. Two boys are required



to personate the elephant; one represents his fore, and the other his hind legs. The two boys place themselves as shown in the illustration; a quilt doubled over *three* or *four* times is now placed on the backs of the boys, which serves to form the back of the elephant; a large blanket or traveling shawl is then thrown over them, one end of which is twisted to represent the trunk of the animal, the other end serving in a similar manner to represent his tail. Two paper cones enact the tusks, and the elephant is complete. A bright and witty boy should be selected to perform the part of keeper, and he must lecture upon the prodigious strength, wonderful sagacity and extreme docility of the animal, proving the latter quality by lying down and permitting the elephant to walk over him. It always amuses a company to *show them the elephant.*—*The Play-Room.*

A MEMORIAL.

ANDREW VAN VALER, born in 1786, in humble circumstances, was reared to the trade of cabinet-making, from which he passed to the avocation of farming among the hills of butter-making Orange county, in this State. Possessing by nature an unusually ingenious faculty, combined with extravagant love of music, he, in his manhood, turned his attention in leisure hours to the investigation of the structure and mysteries of musical instruments; and, although having never served either a long or short apprenticeship among musical craftsmen, in process of time he wrought out various instruments, such as violins, violincellos, etc., and at length two pianos of the kind, size and capacity then in use. In the further prosecution of his efforts he occupied himself with constructing an organ—gaining his knowledge and ideas from mere personal inspection of such an instrument, together with occasional counsel and direction from mechanics in the trade. His labor resulted in the production of a four-stop organ, which for many years stood in his own parlor, until it was afterwards removed to the church where he was then an attendant. A few years later he built a second organ of similar dimensions, lately transferred from his daughter's house to the church where he is *now* an attendant.

Mr. VAN VALER has now reached the age of eighty years; and yet upon the twenty-third day of December last he completed the setting up and tuning of his third organ, which for capacity of sound and range of pipes, as well as for elegance of finish, far surpasses either of his former efforts in the same line. The instrument last completed was begun in August, 1865; it has five stops, four and a half octaves of keyboard notes, a swell and one octave of pedal notes. Its pipes are, as in all such instruments, part of metal and part of wood; the latter he built himself, as he did all the wood-work of the entire instrument. The case is of chestnut, finished upon the surface with a high polish, the grain being of unusual beauty; the front is highly ornamented with elaborate carvings, gilt pipes, mouldings, etc. To crown all, the sweetness as well as the volume of the tones emanating from this "child born out of due time" are unsurpassed by any of the productions of the best factories, and the whole work stands to-day a proud monument to the skill, labor and energy of an old man, at a time of life when, ordinarily, there is neither capacity, ability nor inclination for achievements of this description.

Watkins, N. Y., Jan., 1867. B. W. S.

ANCIENT EGYPTIAN CIVILIZATION.

PROFESSOR ÜLGER, the celebrated Viennese botanist and palæontologist, has recently published some remarks on the bricks of the ancient Egyptians, especially those of the pyramid of Daskour. On examining them through the microscope, the Professor discovered that the mud of the Nile, out of which they were made, contained not only a quantity of animal and vegetable matter, but also the fragments of many manufactured substances, whence we may conclude that Egypt must have enjoyed a high degree of civilization upwards of four thousand years ago. Professor Ulger has been enabled, by the aid of his microscope, to discover in these bricks a vast number of plants which at that time grew in Egypt. The chopped straw clearly discernible in the body of the bricks, confirms the description of the manner of making them, as we find it in Herodotus and in the Book of Exodus.

THE PACIFIC PEARL COMPANY.

PANAMA correspondence reports the operations at that place of a Company recently organized by wealthy capitalists in New York, called the Pacific Pearl Company. The Company intends to operate at the Pearl Islands, about thirty miles from Panama. A sub-marine boat has arrived, capable of carrying ten or twelve men at one time, who can work under the water for many hours, and so constructed that it can be lowered or hoisted at a moment's notice, and so arranged that when lowered they can open the boat at the bottom, by means of two trap-doors, allowing a space of ten feet square in each, for working purposes. The Company expects to commence operations in about a month, and hopes to realize a fabulous fortune. Miss McFlimsey may anticipate an extensive reduction in the price of pearls.

EDUCATION IN GERMANY.—The Fourteenth Congress of the Schoolmasters of Germany has just been held at Manheim; the sittings have lasted three days. Among the questions discussed were the best methods of developing memory in children; the means of awakening in them a love of country; the advantages resulting from a larger share of time being given the gymnastic exercise in education; the study of music, especially of national songs; the necessity of teaching children, with the greatest care, the history of their country, and especially the great deeds and victories of the German people, &c. There are now in the German States sixty-three educational periodicals.

NEWS DEPARTMENT.

ROCHESTER, N. Y., FEBRUARY 16, 1867.

NEWS OF THE WEEK.

From Washington.

THE President has signed the bill to punish dealing in counterfeit public securities and currency. It prohibits printing professional cards or notes on the currency. Also the bill granting powers to U. S. Courts to grant writs of habeas corpus in case of imprisonment in violation of the Constitution or treaty.

The Secretary of State informs Congress that authentic evidence of the ratification of the Constitutional Amendment has been received from the following named States: — Connecticut, Tennessee, New Jersey, Ohio, Vermont, West Virginia, Kansas and Missouri; and that a printed copy of a joint-resolution ratifying it has been received from New Hampshire.

The following is the current statement of the public debt of the United States on the first of February, 1867, as appears from the books of the Treasurer's returns in the Department:

Debt bearing coin interest 5 per cent. bonds, $198,091,350.; six per cent. bonds of 1867-1868, $15,779,441.80; six per cent. bonds of 1881, $283,745,250.00; six per cent. 5-20 bonds, $910,029,500.00; navy pension fund, $12,500,000.00; total, $1,420,145,541.80; debt bearing currency interest 6 per cent. bonds, $12,922,000.00; three years compound interest notes, $663,686,100.00; total, $819,672,740.00; matured debt not presented for payment, $115,791,451.31.

Debt bearing no interest on United States notes, $381,429,090.00; fractional currency, $28,743,733.72; gold certificates of deposit $19,992,980.00. Total, $2,685,773,539.83.

Amount in the treasury — coin, $97,354,603.69. Amount in the treasury — currency, $41,069,187.58. Total, $142,423,791.27. Amount of debt less cash in treasury, $2,543,349,748.56.

The Secretary of the Treasury has transmitted to the House an elaborate report of the Hon. Israel T. Hatch of New York, in reference to a resolution of that body upon our inland commerce and its transportation lines to the seaboard commerce. It claims to have demonstrated that the Erie Canal is the natural and cheapest channel for western commerce; that it has carried heretofore as it will carry hereafter the bulk of western commerce; that the geographical and commercial causes which have prevented any serious diversion of business from the Erie Canal by Canadian canals will operate more powerfully in the future than in the past for free exchange of products and free transit of the country.

It argues the co-operation of the West with the State of New York to secure national aid in favor of its former proposition. The Secretary in his letter transmitting the report to Congress says the investigations have evidently been made by Mr. Hatch with fairness and fidelity.

The conclusions which naturally arise from considerations presented by him, point to an improvement and enlargement of our means of transportation through our territory for our vast Western commerce, in preference to those of the Canadas.

George Peabody has addressed a letter to Robt. C. Winthrop, Hamilton Fish, Bishop McIlvaine, Gen. Grant and others, tendering as a gift the sum of one million dollars, to be held in trust and interest thereof applied, for the promotion of intellectual, moral or industrial education among the young of the more destitute portions of the South-western States, without other distinction than their needs and opportunities of usefulness. He gives permission to use from the principal within the next two years not exceeding forty per cent. He also gives planters' Bank bonds of the State of Mississippi, amounting with interest to eleven hundred thousand dollars, on which no interest has been paid since 1840, but the validity of which never has been questioned.

The bill to admit Nebraska as a State into the Union has been passed over the President's veto — in the Senate by a vote of 31 to 9; in the House by 120 to 44.

Mr. Dixon of Connecticut, has laid before the Senate a new scheme of reconstruction, embodied in the following proposed amendment to the Constitution, devised by leading Southerners in Washington, and said to meet the approbation of President Johnson:

ARTICLE 14—Section 1.—The Union under the Constitution shall be perpetual—no State shall pass any law or ordinance to secede or withdraw from the Union; and any such law or ordinance shall be null and void.

Section 2 forbids repudiation of the national or assumption of the rebel debt.

Section 3 abolishes all considerations of race or color in the matter of U. S. citizenship.

Section 4 provides that a State excluding on account of race or color any portion of its population from voting shall have such population excluded from its basis of representation in the House of Representatives and in the Electoral College.

Also the following to be part of the Constitution of each State:

Every male citizen a year in the State and six months in the county, immediately preceding an election, and who can read the Declaration of Independence and United States Constitution in the English language, and is the owner of $250 worth of taxable property, shall be entitled to vote, provided no person who has voted shall be excluded from voting.

This scheme is said to meet with little favor from the dominant party in Congress. It is significant, however, as indicating a narrowing of the breach between them and the adherents of the President.

The Executive Mansion has been thoroughly renovated at a cost of forty thousand dollars. The new carpets and curtains were specially imported from England.

The report of the Agricultural department for January contains an elaborate compilation of statistics of wages of farm labor throughout the country. It is based upon the original returns from every State in the Union. It also includes the general average rate of wages for white labor without board, which is made $20.00 per month, and $15.50 per month with board. The average rate of freedmen's labor $16 per month, and with board furnished, $9.75. The highest rate is in California, which is about $45. Massachusetts pays the next highest, $38. The average rate for the Eastern States is $33.30 per month; in the Middle States, $30.07; in the Western States, $20.90.

The increase in the price of labor since 1860 is about 50 per cent.; since 1833, upon average estimates, 70 per cent.

The rate of wages with board, in the States forming the belt from Pennsylvania to Iowa, varies but twenty-four cents, varying from $18.72 to $18.96.

From Albany.

THE State Workingmen's Assembly met in Albany on the 5th. The attendance was large, and from all parts of the State. Wm. McArthur of Troy, was elected President, and James Coney of Albany, Secretary, for the ensuing year. The principal questions discussed were the eight hour law and the apprentice system. The time for holding the annual meeting was changed to the fourth Tuesday in January, and it was resolved that hereafter the Committee of Ways and Means shall consist of one member from each county represented.

Resolutions were adopted in favor of at least semi-monthly payment of wages, and to petition the Legislature for a law giving wages preference over all other claims in cases of insolvency.

A bill has been introduced into the Senate providing for a State Convention to amend the Constitution, and for the election of 128 delegates on the fourth Tuesday in April next, the Convention to meet on the first Tuesday in June, and the new Constitution to be submitted to the people at a general election in November. Mr. Folger said there was no one of the important features of the bill which received the assent of the whole committee, and that the various features were adopted by a majority vote. A bill for the same purpose introduced into the Assembly differs from that mentioned above in that it does not allow colored men to vote for delegates.

From the South.

A TERRIBLE hurricane swept over Onachitta River and the adjoining parishes in the neighborhood of Pine Bluffs, La., on the 1st, causing great destruction of property and loss of life. The inhabitants fled to the open fields for safety.

The agent in Alabama of the Freedmen's Relief Commission writes as follows: — "The great cry is for bread, and we have felt that it was better to give bread to 500 than bread and meat to 300." He furthermore says that not less than 4,000 persons will have to be fed by public charity until a crop is matured, and a larger number will require a partial relief. Not a county in the State, says the Commissioner, to which we have not been compelled to send food for the poor. The grain crop of last season was very light in all parts of the State; on the thin lands of the poorer and mountainous counties, almost an entire failure. Nearly one-half of the grain necessary to supply the State will have to be imported. In many sections the crops raised are already consumed. The greatest suffering is to be found in the mountainous portion of the State, lying between the prairie and cane lands of Central Alabama and the valley of the Tennessee River. These counties had the largest white population previous to the war, and have now the largest number of destitute widows and orphans.

The Louisiana House of Representatives has adopted the Constitutional Amendment. The House unanimously concurred in the bill calling a constitutional convention.

A great fraud has recently been unearthed in cotton transactions. Previous to the surrender of the rebel army, 80,000 bales of Confederate cotton at Mobile, Ala., were placed at the disposal of Dick Taylor, for the purpose of paying his legion. A large amount of gold was furnished a rebel quartermaster, named A. K. Shepherd, by parties in Memphis, Tenn., (then in possession of the federal forces,) to exchange for this cotton. After the surrender the cotton was seized by the United States treasury agents, sent to New York and sold on Government account. Recently Lewis E. Parsons, late Provisional Governor of Alabama, as agent of Shepherd, has obtained treasury warrants for 18,000 bales of this cotton, amounting to $1,440,000.

Official information received from Fort Mc Intosh, Texas, reports that twelve or fifteen bandits are roaming about the country between the Neuces River and San Antonia. They killed eight persons and pillaged their houses. Major Hogan with a small party started in pursuit and succeeded in killing three of them and capturing twelve horses, with a loss of one man. Capt. John A. Wilcox, with a scouting party, on the 18th of January, near San Saba, passed a party of Indians, overtook and killed two of them. They abandoned their horses and sought refuge in the mountains.

The Storm.

THE storm of Saturday night, the 9th inst., reached over a wide extent of country, and did a great deal of damage in some places. A Providence, R. I., dispatch says: The heavy rain of Saturday night carried off most of the remaining snow and caused a damaging flood in all our mill streams, surpassing anything of the kind since 1837. Dams and bridges are carried away in various parts of the State, and many mills and mill tenements were partially submerged. The Air Line Railroad bridge near Woonsocket is partially swept away. The loss in this vicinity may reach $200,000.

A Norwich, Ct., dispatch says: The heavy rains of Saturday and Saturday night have swollen the streams in this vicinity to an almost unprecedented height. The Sheetucket and Thames at this place have overflowed their banks, and the lower part of the city is inundated. The connection track between the New London, Northwestern and Worcester railroads is submerged, and in some places completely torn up so that the Boston train Saturday night was compelled to load passengers at Allyn's Point, where they took the steamer.

At Albany there was a strong gale from the northwest all day; but the ice in the river did not break up.

At Rochester there was a considerable fall of snow, commencing about dark, and a strong wind prevailing through the night.

The ice in the Delaware was broken up; and the Lehigh rose several feet.

From Candia.

A CORRESPONDENT of the New York Tribune relates the following instance of the heroism of the Cretans in their struggle with the Turks:

The army left here about 15,000 strong. At Alikiame, a town at the foot of the north-east slope of the White Mountains, ten or twelve miles from here, they first met with resistance. The skirmish line was an advance guard of Greeks, and from there to the first stronghold, Lakus, they were nearly a week making their way, though it is but three hours' walk. The Cretans held the defiles leading to Omalo, a great plateau in the White Mountains, where were their depots.

At Karis, a little village near Likus, the Turks were badly repulsed, but a division being ordered up from the central districts to flank their position, the insurgents fell back on the defiles themselves; and finding the passage to Omalo impracticable, the Pasha moved along by the right to gain the passages to Selinois, which are very difficult if well defended.

Discussions took place among the Cretan commanders; and Mustapha, moving suddenly after three days of rain which deluged everything and killed his own men by hundreds, took the pass of Phronka by surprise, and after a sharp combat of four or five hours and considerable loss, pushed a column through and effected the passage of his whole army without further opposition. The Christians retired to the mountains of Sphakia, the southern portion of the White Mountains, and left Selinois to the discretion of the troops.

NEWS PARAGRAPHS.

LORD DERBY has expressed a wish that Secretary Seward would state plainly the claims upon which an adjustment by arbitration was desired.

A NEW Atlantic cable, by way of the Azores to Halifax, is talked of. The prospectus promises that it will send twenty-four words for twenty dollars.

FOURTEEN tribes of Indians, represented by delegates, have agreed to surrender the leased lands of the Creeks and Seminoles, and to sell their land in Kansas.

THE House Committee on Agrienlture has been instructed to inquire into the expediency of a commission to investigate the causes and results of the Texas cattle disease.

THE Omaha Republican says: — Capt. Hatch has been authorized to raise a regiment of Pawnee Indians for service on the plains, and has commenced to work, with fine prospects of success.

INDIAN traders are hereafter to be allowed only to sell such quantities of arms and ammunition to the Indians as shall be specified and supplied by the commanders of the districts in which they trade.

FROM St. Domingo news to the 28th ult. is received. President Cabral has pardoned all political prisoners. Tobacco promised to yield a good crop. All kinds of provisions were scarce. The health of the island was good.

THE President has approved the bill providing that alcohol made or manufactured from distilled spirits, upon which the taxes imposed by law shall have been paid, and burning fluid made or manufactured from alcohol or spirits of turpentine or camphene, upon which the taxes imposed by law shall have been paid, shall be exempt from tax.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Feb. 12, 1867.

THERE is an increased supply of money at the East, and a better feeling in financial circles. Rates of interest are lower, and call loans are made in New York at 6 per cent. on miscellaneous securities, and at 5 per cent. on Government bonds. Government securities were decidedly strong at the close of last week, and the transactions were large. The 5-20s of 1862 sold at 108¾; the consolidated 5-20s of 1865 sold at 105¼. Notwithstanding the advance in gold on this side, 5-20s have continued firm in Europe.

There is a better feeling in regard to trade in New York and Boston than existed ten days since, though sales are not large. The severe storms of this winter have operated unfavorably upon trade all through the country, and prospects of better weather increase the hopes of a better trade. The bank deposits everywhere are less than usual, which indicates that trade is dull and collections slow. At Cincinnati and Chicago financial affairs are slowly improving.

The examination of Mr. Van Dyck, Assistant Treasurer at New York, before a committee of the House of Representatives at Washington in regard to improper management in the sale of gold, has resulted in his entire exculpation. The committee say "that there is no ground whatever for the statements, allegations and charges contained or implied by the House resolution of Jan. 15."

The gold bill has been defeated for the present, and it is now extremely doubtful whether any financial measures will be perfected by the present Congress. The amendatory tariff bill, it is expected, will be reported to the House about the middle of this week. It is said the Ways and Means Committee have resolved to adopt the recommendation of Commissioner Wells regarding the income tax, and will report in favor of a five per cent. tax on all incomes exceeding $1,000.

The bankrupt bill has been defeated in the Senate by a majority of two. It will come up again on a motion to reconsider, when its friends anticipate they will have a majority.

A strong effort is being made in the Massachusetts Legislature to abolish the usury laws. The Boston Commercial Bulletin advocates the measure, and in its last issue gives twenty-four reasons for a change in the present law.

There has been a good deal of excitement among the New York Insurance Companies for the last ten days. Declaring large dividends, and the employment of irresponsible agents, have very much weakened some of the Companies, and people have been led to inquire with some earnestness in regard to Insurance Companies in whose affairs they were interested. The Sun Company recently canceled its outstanding scrip, in order to balance its losses.

WHEAT AND FLOUR.—The markets East show no advance. Western holders of wheat are rather firmer, believing that the amount to come into market in the spring will be comparatively small. Milwaukee papers say that Minnesota can spare but little if any more.

WOOL.—There is no improvement in prices of wool in this locality or at the West, and very little doing. There is a better look in the Eastern market, though prices have not materially advanced. The Boston Commercial Bulletin of Saturday says:—"The wool market has been active during the past week, the exigencies of consumption having brought in a large number of buyers. Sales of domestic for the week foot up 1,200,000 lbs., at 45@70c. for fleece, and 35@60c. for the various grades of pulled. The outside figure for pulled was for Rochester and other extra lots." The sales have not been as large in New York, but the market is firm.

PORK PACKING AT THE WEST.—The Cincinnati Gazette of the 6th says:

We continue the publication of pork packing returns from the packing points in the interior:—Packed to date, 1,941,304; estimate for the season, 2,156,190—total packed last season, 1,432,993. The footings now show an increase, so far, of 723,197 this season. As a general thing, the reports indicate an increase in the weight, but what the actual increase is cannot now be ascertained with any degree of accuracy. The total number of hogs packed in the West last season was 1,683,474, and the previous year 2,451,619.

PETROLEUM.—The oil market is reported very dull. The Pittsburg Gazette says Venango oil is offered at 9c. Buyers, however, are scarce at anything above 8½c. Refiners manifest little disposition to contract ahead. The home consumption of petroleum in 1866 was 29,410,149 gallons.

SING SING GRAPE VINES.
The Best in the Market!
All my large stock of No. 1 and No. 2, Iona and Israella Vines is sold, except a small quantity I have reserved to use in filling retail orders.

As has been the case every season, the demand for *really good* vines has been beyond my ability to supply. That my vines sell so readily at FULL RATES, argues well that the QUALITY of vines offered will hereafter have much to do with their sale. Buy good vines at a good price, rather than vines advertised at reduced rates. You may be sure that with the present great demand for vines, all of good quality will be sought after at good prices. Send for Price List.

I have also for sale good wood of Iona and Israella Vines, grown under glass, at $40 per $1,000 buds.
J. F. DELIOT, Vine Grower, Sing Sing, N. Y.

Special Notices.

Small Fruits.—We have received the SMALL FRUIT CATALOGUE advertised in this paper by A. M. PURDY of South Bend, Indiana, and have found it to be a very desirable and instructive pamphlet. It will be found very valuable to those who wish to set a small bed or large plantation of Strawberries or other small fruits. It is sent to all applicants for the small sum of 10 cts.

Success. The enormous sales of COE'S DYSPEPSIA CURE is in a great measure owing to the fact that those who use it are cured and tell their friends and neighbors of it, so thousands of tongues are advertising this conqueror of Dyspepsia, Indigestion, and kindred evils.

Itch. Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.

For sale by all druggists. 855-52t

FOREIGN NEWS BY TELEGRAPH.

QUEENSTOWN, Feb. 9—Evening.—The Cunard steamship Asia from Boston via Halifax, arrived at this port to-day, and after landing mails sailed for Liverpool.

FLORENCE, Feb. 9.—Humbert, the Crown Prince of Italy, and Commander-in-Chief of the Italian army, will soon marry an Arch Duchess of Austria.

LIVERPOOL, Feb. 9—Evening.—The cotton market closes firmer. Sales of the day reached 12,000 bales. Middling uplands are quoted at the extreme price of morning, 14⅜.

BREADSTUFFS.—The market remains steady without change in rates. Mixed western American corn still quoted at 40s. per quarter.

PROVISIONS.—Lard has declined 1s. per 100. Sales made to-day at 50s. The demand for beef is brisk, with sales India mess at 125s. per tierce.

From England.

A LONDON dispatch says the Queen opened Parliament at 2 o'clock P. M., on the 5th, in person. There was a fine military display. The crowd about Westminster Hall manifested no enthusiasm for either the Queen or the Prince of Wales when they appeared. The band played "God Save the Queen," but no response came from the people. The Queen, superbly robed, ascended the throne and read the speech in a clear, firm voice. Her subsequent return to Buckingham Palace was even more dismal than her departure. Cries of "reform" greeted the Queen as she passed, and the people chatted the police and the soldiers; but there was no cheering. The police behaved with great moderation, or trouble would have ensued, as the crowd was ripe for mischief. The general prediction is that this is the last Parliament which the Queen will open in person.

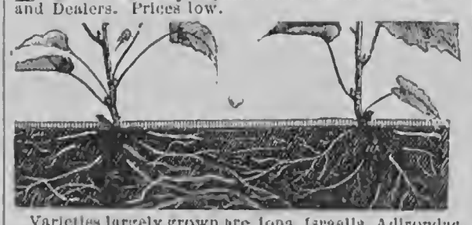
WANTED!

AGENTS IN EVERY COUNTY IN THE UNITED STATES,

TO SELL THE YOUTH'S HISTORY OF THE GREAT CIVIL WAR—the only History from a Democratic standpoint. It sells for $1,50. Is intended for the million. All who wish to see both sides buy it. The price is no objection to it. It is intended for old as well as young. Is written in a racy style, has sixteen illustrations, and is pronounced by agents THE BEST SELLING BOOK they ever canvassed for. Agents are now making from $30 to $75 per week in selling it. 30,000 copies have been sold in a few weeks.

☞ Send for terms, territory, &c., and address
VAN EVRIE, HORTON & CO.,
No. 162 Nassau St., New York.

PERRY'S GRAPE VINES—FOR THE Garden or Vineyard, merit the attention of Planters and Dealers. Prices low.



Varieties largely grown are Iona, Israella, Adirondac, Concord, Rogers' Hybrids, Norton's Virginia, Creveling, &c. By the use of my improvement in propogating vines and plants, secured to me by letters patent, March 27th, 1866, I can produce the best vines for future growth and productiveness grown on the American Continent. For particulars see Illustrated and Descriptive Catalogues, price 10 cents. Spring Price List sent on application. Will exchange Grape Vines for Grape wood.

Address F. L. PERRY, Canandaigua, N. Y.

THE WILSON EARLY BLACKBERRY.

Average size.

Most profitable variety yet introduced. Why? Because it is second to no other in size or productiveness; sweet, firm, and last but not least, ripens before peaches.

See testimonials. Also

Genuine No. 1 Plants.

No extra charges for packing of Kittatinny Blackberries, 5 varieties of Raspberries, Grape Vines, Currant Bushes, Asparagus Roots, 21 varieties of Strawberries.

☞ Descriptive Catalogue of 12 pages sent free. Send and get one now. JOHN S. COLLINS, Moorestown, N. J.

KEYES' EARLY PROLIFIC TOMATO.

HOVEY & CO. have the pleasure of announcing that they have secured the whole stock of this new Tomato, the most distinct, remarkable and valuable variety ever produced, being

30 Days Earlier than any Tomato.

Plants dwarf, compact and vigorous, producing immense crops. Tomatoes of medium size, brilliant red, quite smooth, and free from ribs, perfectly solid, and of excellent flavor; they are produced in large clusters, of 10 to 20 each, with from 7 to 20 clusters on each plant, and the tomatoes ripen up together, so that the main crop is ripe and ready for the market 30 days before the Tilden or any other variety, when they command the highest price. The foliage is very large, entire, and has no smell. The Early Prolific is the most valuable Tomato ever raised. Specimens exhibited by Mr. Keyes at the Show of the Massachusetts Horticultural Society in September last, attracted great attention, and the Vegetable Committee in their annual report pronounced it "a new and distinct variety, worthy of trial."

We cultivated the Early Prolific, the past year, and from our personal knowledge of its great merits, purchased the stock of Mr. Keyes, who raised it in 1864. We can confidently recommend it, after a trial of 3 years, as the greatest acquisition yet made to this popular and valuable fruit.

The seeds are put up in sealed packets, and only to be had genuine of us. SINGLE PACKETS 25 CENTS. The trade supplied by the 100 or 1,000 at liberal rates.

☞ Address HOVEY & CO., Importers and Dealers in Seeds, 53 North Market St., Boston, Mass. 891-3t

THE GREAT AMERICAN TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ℔.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ℔.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ℔.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ℔.
UNCOLORED JAPAN, $1, $1.10, best $1,25 ℔.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 30c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,

Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,

31 & 33 Vesey-st., cor. of Church.

Post-Office Box, 5643 New York city.

[For manner of getting up Clubs see former editions of this paper.] 883-tf

FARM FOR SALE.—The Subscriber offers for sale the farm known as the Chellborg property, situated about a mile west of the village of Geneva, N. Y. It contains 130 acres, 15 of which are wood-land—the balance in a high state of cultivation, thoroughly underdrained, and well adapted for nursery purposes. A never-failing brook turns a water-wheel of 1½ horse power. House large, two and a half story, brick, containing fourteen large rooms, commodious and in good repair. Barns, carriage house, ice house, and other out-buildings, all in good order. House and barn supplied with water from a never-failing spring.

For further particulars, terms, &c., address or apply to McDONALD & ROSE, No. 8 Seneca-st., Geneva, or to the subscriber on the premises. 890 C. F. CHELLBORG.

THE HERALD OF HEALTH AND JOURNAL OF PHYSICAL CULTURE.

This is a Monthly Magazine of Fifty-six pages, devoted exclusively to the Physical, Intellectual and Moral regeneration and development of the race.

IT WILL TEACH the Laws which govern the physical organization of Man, and how to obey them.

IT WILL TEACH the Causes of Disease, how to avoid them, and the best and safest method of treatment, by the use of agents which do not poison the system.

IT WILL TEACH how Children should be born and reared, so that they may become perfect Men and Women.

IT WILL TEACH the Structure and Functions of every organ in the body, and the best method of keeping it in a healthy condition.

IT WILL TEACH what is the natural food for man, and how it should be prepared.

IT WILL CONTAIN articles upon Bathing and Clothing, upon Exercise, Rest and Sleep, upon Recreation, Amusements and Social Enjoyments, upon Education, Topics of the Month, Home Treatment of Disease, Answers to Correspondents, and upon all subjects calculated to improve the condition, and promote the happiness of mankind.

Each No. for 1867, will contain an article of

HENRY WARD BEECHER'S

upon subjects relating to health.

DIO LEWIS, HORACE GREELEY, O. B. FROTHINGHAM, Dr. BELLOWS, and many other of the best writers of the age will contribute to its columns.

The articles in the Jan. No. on

"Human Development,"
By HENRY WARD BEECHER,
on
"The Sacredness of the Body,"
By Rev. O. B. FROTHINGHAM,
and
"How to Train up a Child,"
By L. N. FOWLER,
are well worth a year's subscription.

The February No. contains

Health Laws and their Penalties.
(By H. W. BEECHER.)
Sources of Muscular Power.
(By Prof. R. KING BROWNE.)
BUILDINGS FOR THE POOR.
(By HORACE GREELEY.)
BODY AND BRAIN.
(By Prof. NELSON SIZER.)
HOW TO BATHE.
(By E. P. MILLER, M. D.)
Memory and how to Improve it.
(By L. N. FOWLER.)

And more than FIFTY other articles of high interest and value.

READ OPINIONS OF THE PRESS:

"A valuable Family Journal, which deserves a kindly welcome as an efficient aid to the progress of Popular Education."—[New York Tribune.

"In families it is calculated to accomplish much good by a diffusion of needed knowledge of Physiology and the Laws of Health."—[New York Evening Post.

"The 'Herald of Health' has assumed a high literary character, and its pages are enriched by contributions of some of the most eminent practical writers of the day."—[Ohio Farmer.

"The 'Herald of Health' is a sprightly, spicy, interesting monthly, devoted to physical culture, hygienic medication and the laws of life. For variety of interesting and suggestive reading in its line, it is not surpassed in this country."—[Liberal Christian.

As editor of "The Massachusetts Teacher" I have read your "Herald of Health," for years, and think it one of the most sensible and useful Magazines in the United States. You are doing good, and may God bless you.
W. E. SHELDON, Principal Hancock School, Boston.

This Magazine ought to be in every family. It will save many times its cost in Physicians' fees, besides promoting health, and prolonging life.

Agents wanted in every neighborhood. Price $2.00 a year; 20 cents a Number. For 30 subscribers and $60.00, we give for a premium **Wheeler & Wilson's Sewing Machine,** worth $55.

15 Laight-St., New York City.

SHORT-HORNS.—YOUNG BULLS and 10 young Cows and Heifers for sale, by 890-3t C. K. WARD, Le Roy, Gen. Co., N. Y.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.

Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 890-4t

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

VERBUM SAT.

I WONDER where old Verbum sat,
And how he looked while sitting there.
And where he hung his Sunday hat,
And did he use an easy chair?
Did Mrs. Verbum always look
Angelic, when her husband smiled?
And what was Verbum's favorite book,
And had the Verbums e'er a child?

But no! the subject's wrapt in gloom,
Scant Verbum legends can I trace.
Impenetrable as the tomb
The darkness is ore all their race.
The solitary record left,
And consolation comes from that—
The fact that Time has not bereft
The nation of is, Verbum sat!

The Story Teller.

Written for Moore's Rural New-Yorker.

THE GOLD WATCH;
OR, TOO POOR TO TAKE A PAPER.

BY R. P. ALLEE.

I AM a veteran campaigner. Not one of the sort who roam around, living upon other people's substances. Not at all! I travel upon my own muscle, dine from my own table, sleep in my own bed. My campaigns, although conducted with my "lines" spread out many miles, are all "planned" and "executed" within the four square walls of my office, where I now sit writing.

"A funny campaign," I think I hear some old war-horse, besmeared with the smut of a score of battles, exclaim. Funny or not, that they have been conducted with energy and promptness, I call upon the publisher of this paper to affirm. But hold on!—I was not intending this praise of self when I set out to write this article.

Does anybody know a penurious man? Are there any of them existing who have their names upon the subscription book of a newspaper? I guess so. Far too many of them for their own good. Who are they? Where do they live? I must be excused from answering that, or those questions. Reader, "cast yourself about you," and see if you know one! You do? *That's the man!* I met him the other day, and asked him to join my clubs for the RURAL NEW-YORKER and Tribune, and what do you suppose his answer was? Here it is:

"I would like to take them both, but can't afford to pay two dollars and a half for the RURAL. Can you afford it any cheaper?"

"No sir; that is the lowest club rate."

"Well, I think I will only take the Tribune this year. If I can raise the money I will come again in a day or two and see about it."

"Very well, sir; then I shall put you down for both of them."

"BOTH papers! Why, I tell you I *can't afford* them both!"

"Which is the cheaper?"

"The Tribune, of course. I can get that for a dollar and a-half."

"I know that,—but, talking about prices, why, I will furnish you with the World for *one* dollar per year, which is cheaper still; but you must consider that you are paying out your money for that which has been hawked all over the country through the daily papers, for a week, and when the publisher can make no further use of the material, he forms it into a sheet and calls it *Weekly* Tribune, *Weekly* World, and fools you out of your money by pretending to furnish you a *newspaper*."

"Well, I'll think about it."

"Wait a moment, Mr. B., and see which is the cheapest paper. When you reflect that the reading matter in the RURAL is fresh from the pen of its authors, and that the material thus gathered is set up especially for *that* and *each* number, instead of being some stale, *repeated* matter, you will see *which* is the cheapest in reality. Now be honest enough to confess which is really the cheaper one of the two, considering the money you pay."

"I never looked at it in that light, but will think it over."

"Very well."

"Good day, sir."

"Good day, Mr. B."

Thus we parted—he to "think it over," and I, reposing full confidence in my ability to "secure him," to enter his name under the heading "look after," in my subscription book. A few days after that conversation Mr. B. came smiling into my office, and said:

"I want a money order, Mr. A."

"Yes, sir. What amount?"

"Five dollars and a-half."

"Where payable?"

"Williamsburg, New York."

"In whose favor?"

"VINCENT, WILLIS & Co."

"Ah, indeed! They're old friends and acquaintances of mine, Mr. B. I've known them a long time, and they seem to be doing a flourishing business. I suppose you have been lucky enough to draw a *gold watch*. Any objection to my seeing your ticket, Mr. B.?"

"No, sir."

Whereupon he drew from the envelope inclosing his letter of order the much coveted "ticket," and with an air as much as saying "ain't I lucky?" handed it to me, upon which I read as follows:

"Upon return of this certificate and five dollars, with fifty cents to pay postage, we will send the holder ONE HUNTING CASE GOLD WATCH, VALUE $85. Warranted a perfect time keeper, hunting case, full jeweled, patent lever, pearl face, sunk hands, 18 carat fine solid gold.

(Signed) "VINCENT, WILLIS & Co.,
"Williamsburg, N. Y."

"A pretty good offer, Mr. B.—only five and a-half for a gold watch."

"I think so! You said you knew them; are they reliable?"

"Oh, yes, perfectly reliable as far as getting the money is concerned; but as for your getting the watch, why, I can't warrant that."

"Has anybody else sent to them?"

"Yes, a good many."

"Did they get the articles?"

"Some of them did, but most of them did *not*."

"If some did, why not all?"

"Sharp practice, Mr. B.—sharp practice."

"What do you mean by that?"

"Why, sir, the fellows probably thought it would be for their interest to send a few at first, as recommendations, knowing well that by so doing they could gull a good many."

"Eh!" And his eyes opened like two great oysters, while surprise and astonishment seemed vieing with each other for the mastery, at the same time saying, "You are only joking me because of my good luck in drawing such a valuable article."

"Very well, you are entitled to the privilege of doubting my words,—but really, supposing you do not get the watch, can you afford to lose the money?"

"Certainly I can. But then I shall not lose it if this post-office order system is safe."

"Oh, that's safe enough! I'll pledge myself to refund the money to you if *they don't get it*. But I tell you, Mr. B., it is the last you will ever hear of that money." Whereat I gave him the names of several individuals who had been caught in the same net.

"Well, there's nothing like trying! I'll see what there is of it, and if they don't send me the watch, and a good one, too, it'll go hard with them."

Knowing to a certainty that he was simply *throwing away* his money, I changed my tactics in my endeavor to dissuade him. But as he remained obstinate and seemed determined, and not wishing to make him a mortal enemy, I ceased my objections, feeling sure that I now "had" him upon his ability to "take two newspapers."

"How soon ought I to have an answer?"

"By next Saturday. If you do not get it then, you never will; still, four days is time enough to test the matter."

"I will be in town on Saturday; if it comes before then, you take care of it."

"Certainly."

"The thing is all right now, I suppose?"

"As far as *they* are concerned, but *you* are not all right, however. I think you told me the other day that you could not *afford to take both the* RURAL and Tribune, at a cost of four dollars, while you now are able to *give* away five dollars and a half."

He seemed rather taken aback at the manner in which I pilloried him, and said, "I had forgotten that; will speak to my wife, and see what she thinks about it."

"But, Mr. B."

"I know, but I'm in a hurry now," and away he went. I did not see him again until Saturday, when, punctual to his promise, he came in and inquired:

"What have you for me to-day?"

"Nothing."

"*Nothing!*" And a shadow of blank amazement passed over his features, which gave him the appearance of being covered with shame at the way in which he had been swindled, and that, too, with his eyes wide open. Your man who is caught in the meshes of the sharper, with the warning words of experienced friendship still ringing in his ears, is a man to be pitied. You may smile at his confusion and dismay, but although the loss be a small one, still you should remember that nothing short of *actual experience* will cure the penurious man of his greed for "smart bargains."

When I see a farmer driving through the streets of some village with a load of wood upon his sleigh or wagon, and see him driving and driving back and forth for hours, refusing seven dollars for his load, in the hope of getting seven and a half, I say to myself, "That man is overreaching himself. He is not alive to his own interest. He just refused seven, and may have to wait two hours of wear and tear, and time, before he can find another man who will even *look* at his wood for seven and a-half. Ten chances to one he will be obliged to draw it home again. He loses half a day in his search for half a dollar, that might have been spent in making barrels for use in the next season's apple packing. He does not realize that "a nimble sixpence is better than a slow shilling." That was just the trouble with farmer B. He was after a "prize," and drew a —— *blank*.

"Do you think the letter could have been miscarried, Mr. A?"

"No, sir. Your letter went straight enough."

"Is there any way to make them send the watch or refund the money?"

"Not that I know of. They are altogether too smart for the police of the city. How do you think you can accomplish that which the law-officers of the city fail to effect?"

"Can you find out if they really got the money?"

"Certainly! Nothing easier than that! I will inquire into it if you wish me to do so."

"If you will, I will pay you for your trouble."

"All the pay I want is for you to own up that you can afford to take the two papers we were talking about the other day. Shall I put you down for them?"

"I forgot that. I will have a talk with my wife, and see about it, and let you know the next time I come in."

"That's just what you told me the other day. How about your being *able* to take them?"

"You've got me there, Mr. A."

"I rather think I have! What do you say, will you have them? Yes or no?"

"Yes."

"All right." And I took his money, and while putting his name in the proper places, I remarked, "I hope to have an answer from Williamsburg by next Wednesday; if you are in town call in."

"I will do so."

I immediately penned a note to the Post-Master at Williamsburg, inquiring if such and such a money order had *been paid* to VINCENT, WILLIS & Co., and in due course of mail received my original letter endorsed as follows:

"PAID JANUARY 10TH."

It is now ten days since that payment was made. What are the chances for "getting satisfaction" out of the thing? Let farmer B's answer decide it:

"GONE UP!"

Wit and Humor.

ACCIDENT INSURANCE.

THE "Fat Contributor" gives some of the wonderful results of accident insurance, which we copy:

The other day a man in Chicago fell out of a fourth story window. He had no insurance and consequently he was killed. Another man, on the same day, *fell out* with his wife. He was insured in the "Breakneck," and is ready to fall out again.

A cripple in Boston had his legs taken off—a rhymster *took them off* in verse. No insurance.

A fellow took a drink of whisky at a saloon in Cincinnati. Suddenly recollecting that he had no insurance, he immediately took an emetic, and then he took out a policy in the "Breakneck." He now takes drinks with impunity—if impunity treats.

A young man in Portsmouth, Ohio, was jilted by a young lady and sued her to recover damages. Insured in the "Breakneck." Fifteen dollars a week until he recovers.

A man was sentenced to solitary confinement for life in the Michigan State Prison. Policy in the "Breakneck." Fifteen dollars a week as long as he is *confined to his room*.

A woman driving a spirited horse in St. Louis was run away with. Being insured against accidents, she wasn't alarmed a bit—stopped the horse and came back so. Her policy running out, she neglected to renew it. Shortly after she was run away with again. Her husband's partner *ran away* with her this time, and she hasn't come back yet. Don't fail to renew your policy, particularly if it is the "Breakneck."

A boiler exploded at Memphis, blowing the engineer into the air quite out of sight. He will receive fifteen dollars a day until he comes down again.

RIDDLES.—BY TWO SIMPLETONS.

SIMPLE SIMON wishes to know—

Why a story handed down from generation to generation is like the thing on which the butler carries up the luncheon, and at the same time like every thing on it?

S. S. supplies the solution: Because it is tray-dish-an'-all. [The word which S. S. means is, therefore, *traditional:* so we've guessed it.]

Simple Solomon sends this:

My first is one of several exclamations,
'Tis also used for gardening operations:
Of it the slave is oft a holder.
A negro will carry it on his shoulder.
My second is what I will not do
About my whole, my friend, to you.
My whole is where I think I'll stop,
And so I will: so let it drop.

We have guessed it. The word is—*Ho-tel.*

Latest and Bestest.—If you saw the Great Kahn of Tartary laughing fit to kill himself, why might you be sure that he wasn't a Tartar?—Because he would evidently be *A Merry Kahn.*

A MODERN DOGBERRY.—An irascible old gent, who formerly held the "posish" of a justice of the peace, was going down the street one day, when a youth accosted him in a manner that did not come up to his honor's idea of respect due him. "Young man," said he, "I fine you five dollars for contempt of court." "Why, judge," said the offender, "you are not in session." "This court," replied the judge, thoroughly irritated, "is always in session, and consequently always an object of contempt."

NATURAL FEELING.—Sowerkrout, the old bachelor, was admiring a young lady dressed in the highest style of fashion, when we ventured to remark, "That's a fine-looking lady; but the change in the weather this evening seems to affect her—she seems to feel cold." "Happy to hear it," said he snappishly; "I'm glad she has one natural feeling left."

FENCES AND FENCING.—Good fencing is essential on a farm. Get a good "fencing master" to teach you. A *rail* fence is better than an imaginary one. You can't repair a *worm* fence by taking vermifuge. Neither can you cut good whitewash brushes out of *brush* fences. Minzter can tell you that.

NO MORE LEFT.—"According to Milton, Eve kept silence in Eden to hear her husband talk," said a gentleman to a lady friend, and then added in a melancholy tone, "Alas! there have been no Eves since." "Because there are no husbands worth listening to," was the quick retort.

SYMPATHY.—Giles (ruefully:) "William, I've been an' gone an' 'listed!" William: "Lor'! 'ave yer, though? Got the shillin'?" Giles: "Yes." William: "Well, then, let's go an' 'ave a glass at the Barley-Mow. Don't let's be down-carted!"—*Punch*

AN editor at a dinner table being asked if he would take some pudding, replied, in a fit of abstraction, "owing to the crowd of other matter, we are unable to find room for it."

Corner for the Young.

For Moore's Rural New-Yorker.

ILLUSTRATED REBUS.

Lowell, Mich. RAY S. ALTHOUSE.

☞ Answer in two weeks.

For Moore's Rural New-Yorker.

GEOGRAPHICAL ENIGMA.

I AM composed of 24 letters.
My 16, 7, 23, 10, 6, 13, 7 is a city in Canada.
My 7, 20, 5, 22, 9, 10 is a lake in New York.
My 21, 4, 10, 17, 1 is a county in Pennsylvania.
My 24, 7, 18, 12, 19, 22, 23 is a river in Iowa.
My 15, 4, 6 is a river in France.
My 1, 8, 14, 22, 6, 24 is a city in Greece.
My 2, 7, 6, 9, is one of the West India islands.
My 3, 19, 6, 6 is a mountain in California.
My 19, 11, 2, 4, 6, 10, 19, 24 is one of the United States.
My whole is a true saying.

Gainesville, N. Y. SARAH BRAINERD.

ASTRONOMICAL QUESTION.

THE month of February, 1872, will contain five Thursdays. In what year will the same thing occur again? J. M. B.

Wyoming Co., N. Y.

☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 889.

Answer to Miscellaneous Enigma:—Doubtful things are very uncertain.

Answer to Anagram:

And what is hope? A fairy gleam,
A charm that soothes awhile;
An empty, vain, delusive dream,
More fleet than fortune's smile.

A rose that buds but never blooms
To bless the longing sight—
A fated wretch "among the tombs,"
A shadow of the night.

Answer to Riddle:—Mouse.

Answer to Arithmetical Problem:—12 fat sheep, 18 store sheep, and 70 lambs.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one, free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

The Publisher to the Public.

Back Numbers of this Volume (from Jan. 5,) can still be supplied,—so that those who desire them may yet secure all the numbers of the RURAL for 1867, and thus have the whole volume, complete for binding and reference, at the close of the year. Tell your neighbors of this, and especially chronic borrowers of the RURAL.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

The Price of the Rural.—If any one objects to the price of the RURAL, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the RURAL (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the RURAL NEW-YORKER is really the cheapest paper of its class.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

BROWN'S BRONCHIAL TROCHES / FOR COUGHS AND COLDS

A COUGH, A COLD, OR A
SORE THROAT,
REQUIRES IMMEDIATE ATTENTION,
AND SHOULD BE CHECKED.
IF ALLOWED TO CONTINUE,
Irritation of the Lungs, a Permanent Throat Disease, or Consumption,
IS OFTEN THE RESULT.

BROWN'S
BRONCHIAL TROCHES
HAVING A DIRECT INFLUENCE TO THE PARTS, GIVE IMMEDIATE RELIEF.

For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases,

TROCHES ARE USED WITH ALWAYS GOOD SUCCESS.

Singers and Public Speakers

will find *Troches* useful in clearing the voice when taken before Singing or Speaking, and relieving the throat after an unusual exertion of the vocal organs. The *Troches* are recommended and prescribed by Physicians, and have had testimonials from eminent men throughout the country. Being an article of true merit, and having *proved* their efficacy by a test of many years, each year finds them in new localities in various parts of the world, and the *Troches* are universally pronounced better than other articles.

OBTAIN only "BROWN'S BRONCHIAL TROCHES," and do not take any of the *Worthless Imitations* that may be offered. SOLD EVERYWHERE. 881-13teo

GOOD AND CHEAP BOOKS FOR
Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER.** We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Sharp Shooter	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	20
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	30
Architecture (Cummings & Miller,) 882 designs and 714 illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored illustrations	9,00
Bement's Poulterer's Companion (120) illustrations	2,00
Browne's Field Book of Manures	1,50
Breck's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	50
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50
Dadd's Modern Horse Doctor	1,50
Dadd's American Cattle Doctor	1,50
Darlington's Weeds and Useful Plants	1,75
Directions for Preserving Natural Flowers	1,50
Domestic Poultry Book, with over 100 illustrations	50
Downing's Cottage Residences	2,50
Everybody his own Lawyer	1,25
Farm Drainage, by H. F. French	1,50
Field's Pear Culture	1,25
Flint on Grasses	2,00
Flowers for the Parlor or Garden	3,00
Fruit Trees of America	1,50
Fuller's Illustrated Strawberry Culturist	20
Fuller's Forest Tree Culturist	1,50

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,
Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,
Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

LOCAL CLUB AGENTS.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

☞ FOR TERMS and other particulars see last page.

WILD HORSES OF SOUTH AMERICA. [See next page.]

AGRICULTURAL.

MAKING MAPLE SUGAR.

WINTER, counting by the months which make up the season, is already nearly exhausted. One or two weeks more will bring about the sugar season in what is commonly denominated "the bush." Hence it is time for those who have the trees, for the production of this saccharine luxury, to be prepared for the running season, that not a day may be lost when the maple trees are ready to "bleed," as some of the backwoodsmen used to phrase it. Where sugar making has become a settled institution, it is presumed that the buckets for catching the sap, and the necessary fixtures for storing and evaporating it, are in order for use, or can be readily made so; but in new sections of country—if any such are left—the case may be different. Hence a few words about the necessary preparations may not be untimely or inappropriate. At points where sap buckets are not easily attainable, reliance must be placed upon a substitute, in the shape of a sap trough—an article rapidly manufactured by a good ax-man, if timber suited to the purpose is at hand. The manner of making these need not be described, and the matter is only alluded to as a hint to be ready when the sugar-making season arrives.

When everything is prepared for catching, storing and evaporating the maple fluid, much has been done toward a successful sugar season; but to make good sugar, or molasses, even, requires considerable care, and some experience in the business. And here it should be remarked and remembered that care and cleanliness are essential to the production of a good article of sugar. If leaves, decayed pieces of wood and coals from the fire are allowed to boil in the sap, while evaporation is going on, it will be impossible to make clean sugar, while the taste of the article will be impaired by these foreign ingredients. To exclude them all may be an impossibility, but the amount may be greatly lessened by proper attention in straining the sap before it goes to the boilers, and screening it during the process of ebullition. Much will depend, too, on cleansing the sirup after it is in a proper state for "sugaring off." To raise the impurities to the surface a mild degree of heat should be used, and in no case ought the fluid to be allowed to boil till the skimming is completed. When this is done the ebullition may go on, but the fire should be confined to the bottom of the evaporator, and not allowed to play up the sides, as burning is almost certain to follow from such an application of heat.

With proper care in collecting the sap, in storing it, in boiling down to sirup, cleansing it, and graining or sugaring off, an article greatly superior to that usually thrown upon the market will be produced.

In a future number we may illustrate and describe the most approved modern apparatus used in boiling maple sap, with further suggestions on the subject of sugar making.

COMPULSORY LAND DRAINAGE.

THIS is a subject which seems to attract some attention at the present time, as we infer from a petition in circulation in relation to it. The petition (to the Legislature of the State of New York) asks "that the laws in relation to drainage may be so amended that any land owner who may be aggrieved by want of a sufficient outlet for drainage, may, by due process of law, secure the opening and maintaining of such outlet through all intervening lands, and cause the expense thereof to be assessed, *pro rata*, upon all lands so drained or benefited thereby." The petitioners express a conviction that such a compulsory assessment "would be neither unjust nor oppressive," and that "it is the only basis upon which a general system of thorough drainage can be carried into effect."

This is a matter of considerable importance, especially to the farming portion of community in this State. Hence they should be careful to see that the changes made in the present law, if any, are such as are called for by the general interests of agriculture and likely to promote them. The security of proper outlets for drains is a matter of much importance to the farmer, and is provided for, to some extent, by existing laws, but these are said to be mainly inoperative from the lack of the compulsory power asked for in the petition now in circulation.

BREAKING HORSES.

SOME may object to the term *breaking* as suggestive of the tragical and terrible. Well, that is about what you want to describe when you speak of processes in vogue. Colts run wild till they have attained nearly their full strength and have acquired very positive ideas about personal freedom and the rights of horses! Then all at once the man who has been passing himself off as their *owner*, (a point not conceded by the "party of the other part,") takes it into his head that he is in pressing need of their service, and sets himself at once vigorously to work to get it. I will draw a veil over what follows; it is always sad to see brutes contending. I beg leave to add—

First—That colts should be handled and made tame from the very start.

Second—They should be accustomed to the harness and made to draw light loads when two or three years old, but never put to severe business till they are seven or eight.

Third—A broke horse should back as well as draw; should obey the rein promptly, and be made to avoid a slouching gait; should always stop at the word; should be familiar with railroad engines in full blast, and be accustomed to things about his heels; show no repugnance to the country's flag, and accept a military escort with perfect composure. No horse is educated—"*broke*," if you please,—till he has been made familiar with all these things. No horse should ever be sent out to *work* his way in the world till he is incapable of taking fright at anything. I have seen a cavalry horse hold perfectly still, and not even wink, when a bludgeon was swung furiously within two inches of his head.

Fourth—All, except heavy draft horses, should be trained for riding. They should obey the rein, walk, trot or gallop, as desired, and keep the gait they are put on till required to change. There is an ease and regularity of motion observable in circus horses that greatly assists the rider and makes pastime of what is nearly allied to torture when the animal is in a crude and undisciplined state. Horseback riding should be vastly more common than it is among men and women, boys and girls.

Fifth—Now is the time to break colts and steers, before the busy time comes;—it is hard to practice the cardinal virtue in horse-breaking, *patience*, when we are in a hurry.

Sixth—RAREY was a saint, or something of that sort. H. T. B.

BREEDING "IN-AND-IN."—THE NATURE AND HABITS OF WILD HORSES, Etc.

NUMBER TWO.

IT does not matter a straw to me, Messrs. Editors, what pietists or moralists may allege, sincerely or in sheer hypocrisy, against the institution of the Race Course. I am not arguing a religious or a moral question. The matter is one of pure physical science. And it does not matter at all whether beauty, strength, health, speed or endurance in a horse be "a delusion and a snare," to be shunned as a temptation of Satan, or, on the other hand, one of "GOD's creatures," to be cultivated and used,—the *facts*, that running fast is a test of speed; that running long is a test of endurance; that running fast and far, for a great many trials and through a long life, is a test of constitutional strength, can scarcely be denied. No more ought we to doubt that the possession of these qualities—as thus tested—through a long series of *generations*, in a degree wholly unapproached by any other family of horses, also proves these qualities *to be absolutely heritable*. The race course, then, (whatever its other nature and evils,) does prove with uncommon accuracy and fidelity, (watched, too, by all the vigilance of Avarice, with her countless treasures at stake,) whether the offspring resembles, or not, their parents and ancestors, in these powers and properties. And that is the only point I here make. You see, therefore, I am certainly not in the list of your opponents.

Nor am I one of those writers from whose statements the inference (that natural stallions revolt at incestuous couplings with their daughters,) has been deduced. On the contrary, these are the first words I have written on this subject, or, indeed, on any other, for an agricultural paper. In truth, I did not even know that the unquestionable fact ever had been published. You see, then, also, that I am neither an advocate, nor a piqued witness trying to uphold my own cause nor a former commitment. So much for that class of my qualifications as a witness.

For the rest, I have been a breeder of horses upon rather a large scale. I began some years back with one hundred and fifty-five (155) mares and stallions. And when my unfortunate "political" (Union) principles made it impossible for me longer to continue, at the same time and place, in that delightful pursuit, and also, in that (to me) most unprofitable faith, I had increased my herd on hand to more than four hundred and fifty (450.) I beg pardon of your traveler-guest, for the assumption implied in the question,—but, ought I not, therefore, to know something of the fact,—horse?

Moreover, my course of breeding and rearing horses, (in a land of plains, without stables, fences, bridles, or even halters for this use,) was as little artificial, and as much after the natural or "wild" processes, as could possibly be compatible with the relation of human ownership. The stallion was to his numerous family, husband, father, guide, guard, teacher and hence.

And now, then, with such opportunities, experiences and impartiality, I aver, in the face of your and your informant's derision of my story, and of the tantamount statement of "Stonehenge" in England, (probably the highest authority extant on the "horse,") that this refusal of stallions in a state of nature to couple with their daughters, is *not* "bosh," etc., etc.—but that, on the direct contrary, it is, to my personal knowledge, all true, in force and spirit.

I will not say, (for I do not *know*,) what the literally "wild" stallions may actually do or refuse. And what can any *man*, whether traveler or breeder, know of the parentage or the offspring of a "wild" filly, or the habits of a wild stallion, being, perhaps, the shyest of all "*ferœ naturæ*," save the argali? But this much I have seen, in instance after instance and spring after spring, in my own and in my neighbors' herds, *and that, too, without any exception*, viz: all the stallions persistently expelling their own daughters by force and arms—teeth and hoofs—as the Latin phrase has it, "*calcibus, dentibus et unguibus*," so soon as, and no sooner than, they should first indicate, like LOT's daughters, their "unnatural" desire for the embrace of their venerable sires. And I have also often seen the head stallion of one *manada* chasing his own filly from it, day after day, and until he had succeeded in his fixed purpose of expulsion and thereafter joyfully accept another filly in like state of puberty and its desires from a different manada, and *vice versa*; from which I *inferred* that the reason of the refusal and expulsion was not a subject of sexual enjoyments. [You know, Messrs. Editors, "there can be too much even of a *good* thing!] Again, I have observed that a stallion, breeding in a state of nature, will expel his daughters for the offence of discovering the sexual passion rather sooner than he will expel his sons for it, although the latter insolent shall be arching his first mane in a direct rivalship to his stately father; from which I *inferred* that the disgust for incest with his daughter was a stronger principle with him than jealousy of a sire, rival in love. All these things I have seen and know; and I presume that every horse breeder of the plains (i. e., on natural principles,) would give like testimony. As to travelers,—but what can a traveler, as such, know of these matters?

It is due to perfect fairness for me to add, that, although my fellow horse breeders seemed unanimously to accept these invariable facts as the testimony of pure nature against incestuous interbreeding, I have yet observed that my own stallions would, in like manner, refuse to engender with and expel those of their step-daughters which had been foaled in their respective herds. Others may speculate and draw fine distinctions over and about this exception, and in regard to all these facts, as they please. I have my own ideas about it and them; but I am now only testifying.

Finally, Messrs. Editors, all I have more to say is, that I trust I have given no offence, by this communication, to any person or party. I certainly have not intended it. The advocates of "in-and-in" breeding can scarcely esteem me as their unqualified opponent when they shall have read the foregoing confession of faith, and be further advised that in my new business of sheep raising (if I can compass such terrific prices,) I fully intend and expect to breed from "Gold Drop," through "Sweepstakes," up to "Old Wrinkly," and back, and then *downwards* on the same principles, until I find (what these patriarchs seem *not* to have reached nor approached,) the line of danger as to softening and enfeebling the produce. Notwithstanding this, my present belief, (*that stoutness and constitutional hardihood seem* to be the special and peculiar result of in-breeding,) I can see no reason, why I should be required or expected to shut my eyes and to close my lips upon indubitable facts because they are or seem adverse to my own theory. At any rate the question is of vast importance in every view—moral, social, religious and financial. I have thus contributed my little fact. Let naturalists and breeders reason and deduce from *all* the facts the underlying great law of generation and inheritance.

ELLMAN.

RENOVATING OLD COTTON LANDS.—No. IV.

THE decline of fertility is in proportion to the *removal* of mineral nutriment: the renewal of productiveness is in proportion to their restoration."—*Liebig.*

IN this section of the cotton zone a bale of 500 lbs. to three acres is considered an average crop. These 500 lbs.—according to Professor JACKSON—contain about seven or eight pounds of ash-constituents. To this amount of plant food the three acres is impoverished. The amount of seed taken from the bale by the process of ginning is about 1,200 lbs., more or less, which contains about 43 lbs. of ash-constituents. If both bale and seed are removed from off the farm, and nothing returned to the land, in the way of compensation, then the three acres are impoverished in inorganic cotton plant food to the amount of fifty or sixty pounds weight. It must be seen at once that continual cropping without a renewal system, rapidly diminishes the fertility of the soil. The best system of cultivation may force from the soil its last particle of mineral plant food, and it may make the soil hold out for a long time, but it does not add the least iota to the stock of inorganic material in the soil. The soil cannot be compensated simply by good tilling, or even rest, for without compensation it is found to decline in fertility.

To keep up the fertility of the our cotton lands we must restore, in the form of manures, the plant food that has been taken away by continual cropping. "But, will it pay?" is the question. My judgment, observation and experience decide in the affirmative. My best land yields, in a good season, 1,100 lbs. of lint to three acres—whereas, the same amount of thin land will only yield me 500 lbs. Now, if I can be successful in restoring my thin land to equal productiveness with my good land, I shall feel amply rewarded.

Sometimes friends will walk with me through my cotton patch. They have been acquainted with the plantation almost from the cutting of the "first stick." They will point out certain spots that were once very fertile, and tell me what enormous crops were gathered from certain fields. But they remark that it has had its day, the land is worn out, and not worth the fence around it, and they suggest, as the best economy, "to throw the field out." I have always thought different. The land was not barren. The subsoil does not contain any poisonous or sterile qualities. It only lacks humus and ash-constituents, and these can be restored. It requires labor and means, if you have any, but it is a safe investment.

We build barns, stables, sheds and cribs as necessary to the purposes of a farm. But they require a great outlay of means and expenditure of labor, and yet are perishable. They not only yield to the hand of time, but are also exposed to the hand of the incendiary. In an hour or two, either by design or accident, they may be reduced to ashes. Even while they stand, to serve the purpose for which they were built, they do not by any virtue in themselves keep up the fertility of the soil, the primary cause of their necessity. By adopting the renewal system we make an investment that will not only make more safe, but will really make more ample and valuable our most important capital, and give us large returns besides. GEO. F. A. SPILLER.

Somerville, Tenn.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To Correspondents.—Mr. Randall's address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

SHALL NEW YORK GIVE UP WOOL GROWING?

[We were intending, in this number, to attempt to demonstrate the highly injurious, if not ultimately fatal, consequences to the mixed husbandry of the "older States," of adopting the specious proposition of the Special Commissioner of Revenue, that those States surrender up wool growing to "the more favored States," in exchange for objects which will be found stated in a quotation given below. But before preparing our article, we received the following communication from our friend Major Brooks of Wyoming, N. Y., which represents our views on that subject, and his remarks are as applicable to the other "older States" as to New York.—Ed.]

Commissioner Wells, having made up his mind to advise Congress to deny the wool growers additional protection, very coolly suggests that wool growing take itself to the West. He says (Report, page 54,) "If the wool growers of the older States are wise, we believe they will recognize this necessity, and seek to hold their own by raising choice sheep to recruit and revivify the flocks of the more favored States, and in turning their attention more fully to supplying the markets with mutton, leaving what can be obtained for wool as a mere make-weight in their calculations of profits."

I do not doubt that the West, and particularly the Southwest, will grow the larger share of our wools, but I deem it of the highest importance to our permanent agricultural prosperity that we avoid any diminution of sheep in the State of New York. We ought to increase rather than diminish our sheep. Our grain sections are becoming impoverished for want of manure, and I hold that *sheep, of all other stock, are best suited to a mixed husbandry.* Doubtless dairying is destined to great prominence and success in our southern, and some of our central, counties, where grass is the principal product, but it does not mix in readily, as a subordinate interest, with other branches of agriculture.

Beef is made cheapest on bottom lands and rich soils, where grass is long, and winter short. Hogs, and the pork business, belong to the corn regions of the West. Horses are an uncertain dependence. *Sheep*, too, are kept cheapest where lands are cheap, and winters light; but our northern climate grows them in great perfection; they accommodate themselves to the necessities of the farm; they thrive on short feed, gather grass between the furrows of the plowed field, and glean the scattered herbage of the summer fallow; they trim up bush pastures, eat all kinds of grain and fodder—making a better use of *straw* than any other domestic animal; they increase rapidly, and always sell readily; supply a sudden call for fresh meat, (free from *trichina*,) pay their board every summer or oftener, and require little attention in the busy seasons. Take them all in all, and they seem better adapted to the mixed husbandry of our Middle States than any other kind of farm stock.

Stock we must keep, or become sterile. What stock can we better keep than sheep? What stock is exempt from western competition?—but will that competition always be as vigorous as now? Will pasture thirty, or even twenty, years hence, be had in Texas for nothing? *There is always and everywhere a tendency to equalization.* If Texas has peculiar advantages, *the lands of Texas will be in demand, and will advance in price*, till the profits of working them will be the same as are realized in less favored districts. The westward tide of emigration will, in fewer years than we suppose, neutralize any peculiar advantages which one section has over another in the line of profits. It cannot be denied, however, that *wool* is a commodity easy of transportation, and therefore peculiarly adapted to districts distant from markets, and that consideration will give wool growing a *prominence* in the interior which it will not have on the seaboard; but it will not so far overcome in New York, Pennsylvania and Ohio, the great advantages of raising sheep, as to make wool growing an interest not worth the fostering care of the government.

I predict that wool growing will *increase* in the Middle States, though not so fast as at the West. The necessity of feeding more stock to increase manure will soon be felt by every farmer of discernment, and sheep for this purpose will be more and more appreciated. I believe that mutton as an article of food will, to a large extent, supplant both beef and pork. As good as beef, and far better than pork, it can be afforded much cheaper than either. I think, therefore, that I am warranted in assuming that the farmers of New York should by no means suffer their attention to be diverted from sheep. Farmers should press steadily forward, enlarging and improving their flocks, perfecting their arrangements for feeding, sheltering and caring for them. Any intermission, or change of policy, will retard improvement, and occasion needless expense.

Without here expressing any opinion upon the general subject of "protection and free trade," I will say that manufactures, trade and *the currency* are so intimately connected that if one, in obedience to first principles, be brought into *natural relations*, the others must be also. This would require changes that must be introduced very gradually, and with great care and circumspection. The necessities of the Government, and the tangled condition of affairs, render heavy imposts for the present inevitable, and the question is, whether Agriculture, which sustains all, shall be the sport of all. Wool in some counties costs little, except for shearing and sacking. As has already been observed, it bears transportation better than most commodities—a hundred dollars' worth of wool frequently weighs less than three dollars' worth of corn. It can therefore be brought from the interior of distant countries, when other products cannot, and these are reasons why farmers have a right to demand for their wool *special protection*. We need to realize good returns from *wool*, in order to make sheep profitable, and to keep their number up to the point required by the necessities of our agriculture.

H. T. B.

Condensed Correspondence, Items, &c.

West Virginia State Wool Growers' Association.—This Association met at Wheeling on the 25th of Jan.—T. Sweeny, Esq., President, in the Chair. Thirty-nine counties were represented. The following resolutions were unanimously adopted:

Resolved, That in the passage of any bill by the Congress of the United States upon the subject of a tariff upon foreign imports, the interest of the producer as well as that of the manufacturer should be protected.

Resolved, That we cannot longer quietly submit to legislation which gives to wool growers of other countries the advantage over us in our own market.

Resolved, That the continuance of the present tariff on wool and woolens must, if much longer continued, prove disastrous to our great wool-growing interest; that it must in the end seriously affect our national wealth and power; check immigration, and lower the wages of the American laborer by contracting the demand for his labor.

Resolved, That the tariff bill passed at the late session of Congress, by the House of Representatives, as far as it relates to wool and woolens, is one which will bring prosperity to the grower and manufacturer of wool, and tend to the advancement of the interests of the country generally.

Resolved, That we ask our Legislature now in session to instruct our Senators and request our Representatives in the Congress of the United States to use all legitimate means to secure the passage of a law affording fair and just protection to the great wool growing interest of the country, as agreed upon by the joint committee of wool growers and manufacturers, and embraced in the bill passed by the last House of Representatives of the Congress of the United States.

Resolutions were passed recommending the organization of County Associations throughout the State, and making the State Association an auxiliary of the National one. Officers were elected for the ensuing year, as follows:—T. Sweeny of Wheeling, *President*; W. L. Crawford of Hancock Co., *Secretary*; Dr. J. C. Campbell of Ohio Co., *Treasurer*; Samuel Archer of Hancock, Member of the Executive Committee of the National Association.

The West Virginia Legislature has acted in accordance with the fifth of the above published resolutions.

Maine State Wool Growers' Convention.—This Convention met, in connection with the State Board of Agriculture, at Augusta, Jan. 23d. Hon. S. F. Perley in the Chair, and S. L. Goodale and S. L. Boardman, Secretaries. Notwithstanding the great storm, nearly all parts of the State were represented. Highly appropriate resolutions were offered by Mr. Goodale and by Mr. W. Gilbert of Bath, and supported by those gentlemen, Mr. Dana of Portland, and others, in able speeches. We regret that we have not room for the reported remarks of Mr. Gilbert. They closed with a most forcible appeal to the farmers of the State to agitate the subject of rightful protection, and to select no Representatives to Congress who have not ability, courage and fidelity to represent their views. The resolutions were passed, and the Committee to prepare resolutions to be forwarded to the Representatives of the State in Congress reported the following, which were unanimously adopted:

Resolved, That sheep husbandry ought to be encouraged among us, not only as a direct means of support, but also as indirectly tending to maintain and increase the productiveness of our soils.

Resolved, As the deep conviction of all present that sheep husbandry cannot be safely entered upon or advised as the tariff upon wool now is.

Resolved, As our own conviction, and we believe also that of all the most intelligent sheep growers in the State, that a just protection to the wool growing interest of New England requires that there should be laid upon imported wools an import duty not less than that proposed by the Cleveland Convention.

Resolved, That the interests of the Wool Grower and of the manufacturer of woolen goods ought not to conflict with each other, and that the import duty upon woolen goods should be sufficient to secure to our manufactures the home market for the same.

Resolved, That the delegation in Congress from this State be requested to take all fair and honorable means to procure the enactment of a law in accordance with the spirit of the foregoing resolutions.

Spots on the Nose.—"A Young Wool Grower," Granger, N. Y., asks "if small black spots on the nose or lips are found on full-blood Merino sheep." We have fully answered this question heretofore. Such spots were found on the Merinos originally imported from Spain into this country, and on the Silesian and Australian Merinos later imported from the choicest full-blood flocks. They are now to be found occasionally on the descendants of all of these sheep. Spots on the ear, and a dark tinge on the eyelids, are also not uncommon. "Smutty noses"—i. e. those which have numerous black spots on them—are regarded as objectionable. Indeed the great majority of breeders would prefer to have none upon any of the parts named; yet few carry their objections so far as to discard a good ewe or ram from the breeding flock because it has one or two of these marks. It is a question of taste, and has no effect whatever on the intrinsic value of the animal. Pale brown spots and brownish tips to the ears are very common in some families of Merinos, and are much less objected to than the preceding. Some prefer to see them.

Gas Tar for Ticks.—Edwin Darrow, Corfu, N. Y., writes that he marked his sheep with gas tar and lampblack, in 1864; that it blistered the sheep just sheared, but all the ticks on them disappeared; that several of his neighbors have tried it with the same results on very ticky sheep; that he now avoids blistering by not marking until two weeks after shearing; that one marking will not entirely remove the ticks from long-wooled lambs, but that, if both sides are marked, it will soon exterminate them.

Samples—Cuts.—The same gentlemen asks our opinion of two samples of rum's wool inclosed by him. Both are good. That of the tag exhibits superior style. The other is too short, if recently taken, it being but 1¾ inches long. Gentlemen whose sheep cuts are published in the Rural pay nothing for it—but they furnish their own cuts. Good drawings of sheep are generally much superior to photographs for engraving.

Longevity of Merinos.—Mr. Bragg of South Newark, N. H., (his neighbor, Mr. McKeen, writes us,) has a ewe bred by Major Goodell of Westminster, Vt., which is twenty-two years old—"hale and hearty"—and now in lamb. She sheared 6 lbs. of washed wool last year, being then dry.

Dairy Department.

MR. WILLARD'S VISIT TO EUROPE.

We have received a note from the Secretary of the American Dairyman's Association, Gardner B. Weeks, Esq., in which he requests us to correct a statement in our Report of the late proceedings of that body at Utica to the effect that the mission of X. A. Willard, Esq., to Europe, was a private enterprise, and not carried out under the auspices of the Association. The Secretary states, in his note to us, that Mr. Willard took abroad letters signed by the officers of the Association, accrediting him as its agent, and that his report was made at a late meeting in the form of an admirable Address. We are glad to make this statement. We were, in truth, somewhat surprised when the Association by its action on the Report of the Committee on sending an agent to England, ignored the official character of its agent. After Mr. Shearman, the Chairman of that Committee, had submitted the Report, some discussion took place. The President of the Association stated that the Report did not properly belong to that body, as the enterprize was carried out by private parties, and the benefits were to be available only to private parties. Consequently the Report was tabled upon motion of Mr. Leach of Chenango. In view of this we could not report otherwise than we did regarding Mr. Willard's mission, but we are glad to learn and publish the fact that the action of the Association in this respect was unwarranted, and not such as they desire the public to accept.

REQUISITES TO SUCCESSFUL DAIRYING.

BY A HERKIMER CO. DAIRYMAN.

Growth of the Dairy Interest—Location, Water and Grass—Selection of Dairy Cows—Thorough-breds, Grades, &c.

The Dairy interest of the country has increased from small beginnings, until its importance is scarcely second to any branch of Agriculture. Having spent the greater portion of my life on a dairy farm, perhaps a few suggestions from me, in relation to dairying, may prove of interest to those who are just beginning in the business. But I must confess that an attendance at the Dairymen's Association, at Utica, has given me the impression that the Dairy Farmer is not given to much speaking—believes his own practice the best—and is fully convinced that the scythe and the milk pail are of vastly more importance than the pen. I am not of that belief, however, but think that a free and full interchange of opinions, and a careful comparison of the different processes of manufacturing the dairy product, will do much towards bringing the dairy standard to a point which should be the aim of all—but which the present practice of the dairy community is far from reaching.

One of the most essential things for successful dairying is a good location. What I mean by that is—First, a soil which will produce all of the finer grasses in luxuriance, so that the pastures may remain in grass for an almost indefinite length of time, and the pasturage increase in value for making the best quality of milk; second, an abundance of pure water. No dairyman need expect the greatest yield or the best quality of milk where there is a scarcity of pure water.

After having the capabilities of the soil determined for producing the quality and quantity of grasses desired, and the quantity and purity of water settled, the next thing of importance is the selection of the dairy cow. Too much importance can scarcely be attached to this point. She should be of medium size; fine head; broad between the eyes; eye of a mild, pleasant expression; small horns of a waxy color preferred; rather a long neck, which must be thin but may be deep, particularly where it springs from the breast; light fore quarters; shanks, from the knee down, short and fine; barrel round, and ribs arching well from the back; body long; back straight; hips broad—can scarcely be too much so; tail falling at right angles with the back, and should be long and fine; hind quarters rather long and thin; udder well developed, particularly the forward part of it; teats standing well apart, of medium size, and pointing forward; the coat should be of medium length, fine, and of a silky feel; the skin should be loose and mellow, and of a yellowish tinge.

Experience has taught me that a cow combining the greatest number of the above points is the most profitable for the dairyman to keep. I believe that such a cow will give a greater quantity and better quality of milk than a larger and coarser animal. My experience in the different breeds has been confined almost entirely to the native, but I believe that a judicious crossing with milking families of thorough-bred stock would result in immense advantage to the dairy farmer. Each strain of blood has its advocates. Earnest they all are, and each is undoubtedly right to a certain extent. I would not advise any one to stock a farm with pure bred stock, of any breed, believing that grades of one-half or three-fourths blood, at the utmost, will be found most profitable in the long run.

Of the different breeds, as adapted to different localities, I will give my views in a future number of the Rural.

Remedy for Hard Milking Cows.—A correspondent writes us from Washington Co., N. Y., that he permanently cured a young heifer of hard milking by using the knife on her teats. The teat was squeezed and while the milk was running the orifice was enlarged with a very sharp blade sufficiently to allow the stream of milk to flow freely. When the wound healed, the opening was restricted again though somewhat larger than before. After two or three cuttings, however, the heifer was rendered permanently an easy milker. The operation is not a painful one or difficult to perform.

WILD HORSES OF SOUTH AMERICA.

The illustration on preceding page presents a spirited view of the wild horses of South America as they scour over the savannas of that country. Each troop, (says the author of Wild Scenes in South America,) is under the control or guard of a prond *padrote* or stallion, who not only prevents their mingling with other packs, but endeavors also to appropriate all the other mares he can kidnap from their neighbors. The conquest, however, is not obtained without a determined resistance from their rightful lords, which occasions fierce combats between the rivals. When a stranger approaches, the whole troop boldly advance toward the object of their alarm, neighing, snorting, and throwing their slim and beautiful forms into the most graceful attitudes. When at the distance of a hundred paces, they all halt, and five or six scouts are detached from the main body to reconnoiter. These approach still nearer, and stretching their necks and ears, seem, with wild glance and cautious movement, to inquire of the stranger the object of his intrusion. Meantime the head or directing stallion keeps the whole troop in order ready for instant retreat if necessary. If the scouts report danger, away the troop bounds with the freedom and speed of the wind till a place of safety is reached. These troops consist of from one to two hundred horses—the commanding stallion invariably being upon the rear during the flight. When this is over he passes to the front and resumes the direction and control of affairs.

Rural Spirit of the Press.

Potatoes—Varieties—Yield.

In the Cultivator and Country Gentleman we find a communication from Jonathan Talcott of Rome, N. Y., giving his experience, during the past season, in the cultivation of several varieties of potatoes. The soil planted on was sandy gravel, about one-third of which was used for potatoes the previous year. Twelve varieties were planted the last season and produced, per acre, as follows:—*Dykeman*, 200 bushels, rotted about one-half. *Jackson White*, 150 bushels, first rate—some rot, but less than Dykeman. *Early Goodrich*, 36 bushels from half bushel seed, best yield the grower ever had; product good and will be a favorite variety for the next season. *Ohio Russet*, equal to 200 bushels per acre; good potato and not much affected by the rot. *Garnet Chili*, 300 bushels per acre; large sized and but little affected by the rot. *Fluke*, a good baking potato; fair yielder, but not likely to be popular in that region. *Calico*, a moderate yield and not promising for cultivation. *Gleason*, yield 24 bushels from half bushel seed; a promising variety. *White Peachblow*, yields well but is insipid, not a favorite. *Jersey Peachblow* the same. *Carter*, a superior table potato, but much affected by the rot; their want of hardihood is against them. *Prince Albert*, a good variety and yielding about 300 bushels to the acre; its table qualities commend it for cultivation.

Automatic Plow.

In a late number of the N. Y. Observer was a notice of an automatic plow which was seen operating in a field near the city. A two-wheeled iron truck is secured to the plow-beam, one wheel running in the furrow and the other on the surface above it. To make it run level the furrow wheel has several inches of diameter more than the other, which throws the plow, as it were, on an even keel. A sway-bar regulates the size of the furrow-slice as in the ordinary plow, while the depth is adjusted by means of a screw. This plow, it is said, requires no guidance, hence is destitute of the handles common to the others, and so perfectly does it work that a small boy is competent to the management of it. The trial was made in soil of a clay and gravelly texture, and though stones of considerable size were occasionally encountered the plow was not thrown out, but cut a furrow with more uniformity than is customary with plows with handles and under the guidance of ploughmen of mature years. This implement is said to be much used in Germany, where it is regarded with marked favor.

Garget in Cows—Cure.

A correspondent of the Massachusetts Ploughman says that he some years since purchased a farm of a man who said he could not keep cows on it because they were sure to be troubled with garget. The new owner put cows to pasture on the farm and the experience of the previous possessor of it became his also. After these cows were attacked he commenced feeding them small quantities of bone meal, twice a week, which effected a cure in a short time. By pursuing this course further trouble from this source was obviated.

A New Cattle Disease.

The Watchman and Reflector, Boston, states that an alarming disease recently appeared among the dairy stock in the town of Waltham. Some farmers lost the milk of from ten to twenty cows, while in several instances the animals died. An examination disclosed the fact that the disease was local and caused by an article called *sprouts* or cowleswort, derived from a brewery in the neighborhood; an article in common use, but in this instance poisonous from some unexplained cause.

Choked Cattle.

Sometimes cattle, while eating potatoes, get a whole one in the gullet and suffer much in consequence, and if not timely relieved must die in consequence of the obstruction. In such a case a correspondent of the Rural American says he places the animals a few rods from a pair of bars, when, by a smart application of a whip, he compels them to jump over the obstruction. When they touch the ground the potato will fly out of the mouth.

Rural Notes and Items.

Our Advertising Rates.—Hereafter the price of advertising on the last page of the Rural New-Yorker will be Seventy-Five Cents a Line, each insertion. The price for inside pages will continue at Fifty Cents a Line for advertising, and One Dollar a Line for Special Notices, until otherwise announced.

The Rural's "Progress and Improvement" this year—especially in typography, illustrations and quality of paper—is the subject of a congratulatory and very complimentary note from a discriminating contributor. As other correspondents, and several brethren of the Press have alluded to similar improvements, we conclude that our efforts to make Volume XVIII. of the Rural far superior to either of its predecessors, or any contemporary journal, have thus far been sufficiently successful to be recognized and appreciated. Yet we hope to do still better in future, our aim being to equal, if not excel, in typographical appearance, as well as contents, the best printed newspapers in the land. If we fail of this it will not be for want of well-intended efforts and expenditures to accomplish the object. We believe, with our friend, (first alluded to above,) that the "fine white paper upon which the Rural is now printed, the many fine and original engravings it contains, and the careful manner in which all its departments are filled, with the neat typography and printing, must give it precedence and popularity among people of taste and discrimination everywhere;" and hence we shall continuously strive to elevate its standard in all these essentials. Meantime we suggest to its friends all over the land that every addition to its subscription list will aid us to improve *their* paper, and that the present is a favorable time to increase its circulation.

Canvass for the Rural at the Town Meetings!—One of the most efficient recruiting officers for the Rural Brigade (E. C. Bliss, Esq., Ex-Pres't of Chautauqua Co. Ag. Society,) in sending a goodly list of additions to his club, says:—"One week from next Tuesday will be our Town Meeting, when I hope to get more names." All right. We hope hundreds of our friends will do likewise. Elect the best men to fill the respective offices, and then see that the Rural has a few (or many) votes—subscribers. A little canvassing will secure a handsome club, for the Rural is a candidate for whom men of all parties can safely vote,—and the canvasser will be rewarded for his efforts. It will be an easy matter to secure a $5 Union Gold Pen or Photograph Album, a $12 Dictionary, or some other valuable premium for a little extra effort at Town Meeting. How many will note and heed this hint for their and the Rural's benefit?

Valuable Forest Trees.—The Attica Atlas states that Stephen Ellis of that place, lately cut and marketed an oak tree, grown on his farm in Darien, which sold, timber and wood, for about $100. Since that Mr. Phelps of the same place, brought to the village the butt cut of a primeval soft maple five feet in diameter, which, counting a ring for a year's growth, was over 500 years old. It was beautifully curled, 12 feet long, and would make over three thousand feet of inch lumber. This is a very valuable species of lumber for veneering and much sought after by cabinet makers. That log will bring a handsome sum to the pocket of the owner.

Coloring Clay to Make White Brick.—A Subscriber at Pontiac, Mich., writes:—"Should any of the readers of the Rural know of a book that tells how to stain or color clay white for making white brick, they would confer a great favor by making it known, through the pages of the Rural. Or, any one understanding the art would confer a favor to many by explaining how it is done and what is used."

Cure for Caked Bag.—I. N. S., Manlius, N. Y., writes us that he has cured several cases by giving a tablespoonful of saltpetre daily, and applying strong bittersweet ointment to the bag twice each day. The ointment is made by boiling the bark of the bittersweet root in water to get its strength; the liquor is then put into lard and again boiled, but care must be taken not to burn.

DOINGS OF AGRICULTURAL SOCIETIES.

New York State Agricultural Society.—The annual meeting of this Society was held in the Assembly Chamber, Albany, on the 13th inst., the President, J. Stanton Gould, in the Chair. The Treasurer, Mr. Luther H. Tucker, made his annual report, showing the receipts and expenditures of the Society during the past year. The former were $27,598.02 and the latter $18,305.63, showing a surplus on hand of $9,292.39. The report of the Secretary, Col. B. P. Johnson, was read and adopted. It contains interesting and valuable information on several subjects.

The customary committee of twenty-four—three from each Judicial district—was appointed to nominate officers for the ensuing year. After consultation the Committee reported a list which was accepted and the persons named were elected, as follows:

President—Marsena R. Patrick, Geneva, N. Y.
Vice Presidents—First District—Thomas H. Faile, of New York. 2d, Samuel Thorne, Dutchess. 3d, Adin Thayer, Rensselaer. 4th, Milo Ingalsbe, Washington. 5th, Samuel Campbell, Oneida. 6th, Joseph McGraw, Jr., Tompkins. 7th, H. T. E. Foster, Seneca. 8th, Jas. H. Plumb, Erie.
Corresponding Secretary—B. P. Johnson, Albany.
Recording Secretary—Erastus Corning, Jr., Albany.
Treasurer—Luther H. Tucker, Albany.
Executive Committee—George H. Brown, Dutchess; John Havens, New York; S. T. Tabor, Queens; T. L. Harrison, St. Lawrence; H. M. Ely, Broome; James Geddes, Onondaga; W. Chamberlain, Dutchess; J. G. Masten, Erie.

No definite action was taken, as to the location of the next State Fair. But two propositions were received—one from Utica and the other from Buffalo—and the matter went over for future decision.

Broome Co. Ag. Society.—Officers elected at late annual meeting: *Pres't*—O. C. Crocker, Union. *Vice Pres'ts*—Geo. W. Stoddard and A. H. Green. *Treas.*—Wm. E. Taylor. *Cor. Sec.*—Harris G. Rogers, Binghamton. *Directors*—George Hyde, Samuel Bayless, and Walter L. Peck. It was resolved that, hereafter, no premiums should be offered at annual fair for trotting or racing horses.

Addison Co. (Vt.) Ag. Society.—Officers for 1867: *Pres't*—Victor Wright. *Vice Pres'ts*—H. O. Gifford and E. S. Stowell. *Sec's*—George Hammond and A. J. Child. *Treas.*—Edward Vallette.

Franklin Co. (Vt.) Ag. Society.—Officers: *Pres't*—R. J. Saxe. *Sec.*—L. H. Hapgood. *Treas.*—W. S. Green.

Marion Co. (Ind.) Ag. Society.—Officers: *Pres't*—Layton Hawkins. *Vice Pres't*—Dr. Isaac Furnas. *Sec.*—John H. Nicholson. *Treas.*—David M. Mills. *Librarian*—Benjamin Hale.

Cincinnati Wine Growers' Association.—Officers: *Pres't*—E. A. Thompson. *Vice Pres't*—Wm. Stoms. *Sec. and Treas.*—W. P. Anderson.

HORTICULTURAL.

MEETING OF THE WESTERN NEW YORK FRUIT GROWERS' SOCIETY.

[Concluded from page 47.]

INFORMATION about berries being called for, Mr. THOMAS said we knew little about the new blackberries in Western New York, but he had hopes that some of them would supersede the Lawton. PERRY, Canandaigua, said the Lawton was one of the most profitable crops grown in New Jersey. Growers received from five to eight hundred dollars per acre. The canes must be pinched back. SYLVESTER, Lyons, had grown the Lawton for ten years and never missed a crop. It sometimes kills back, but never so badly as to destroy the crop. No fruit excels this for canning. Mr. PILLOW had sold $265 worth from one-quarter of an acre and used much besides. BRONSON spoke highly of the Dorchester. YOUNGLOVE stated that four quarts of berries made one pound of dried fruit; thought it profitable to grow them for drying at twenty-five cents per pound. QUIMBY thought the blackberry one of the most profitable crops. Clipped the canes to a height of three feet. FROST, Rochester, said that on upland the Lawton seldom winter-kills, on alluvial soil there is more danger. HOOKER, Rochester, had seen the Lawton and Dorchester side by side, and the latter did not bear half as well as the former. ELLIOTT, Cleveland, had seen acres of Lawtons trained by twisting the canes of each alternate hill together, when they had reached the height of about five feet.

The meeting had the pleasure at this time of listening to able and instructive essays from Messrs. BARRY, GRIFFITH and BROOKS. We gave our readers that of Mr. BARRY last week, and hope to lay before them at some future time the others.

The subject of publishing the proceedings of the Society was next called up and a voluntary contribution taken up to aid in effecting this purpose. It is to be hoped that another year the Society will be in condition to publish their proceedings.

The vote for the best twelve varieties of grapes was then taken, twelve names being voted on one ballot. Thirty-eight votes were cast with the following results:—Whole number, 38.—Diana, 38; Delaware, 37; Concord, 33; Iona, 31; Creveling, 30; Adirondac, 26; Israella, 26; Rogers' No. 4, 22; Isabella, 23; Rebecca, 26; Hartford Prolific, 27; Catawba, 13; Rogers' No. 19, 15; Union Village, 7; Clinton, 7; Allen's Hybrid, 6; Ives' Seedling, 2; To Kalon, Rogers 44, Rogers 39, Perkins, Maxatawney, Norton's Seedling, Corlelle and Cuyahoga, one each.

The following grapes were at the head of the list in the order named:—Delaware, 25; Iona, 7; Creveling, 1; Adirondac, 1; Isabella, 2; Catawba, 1.

The following stood second on the list, in the order named:—Delaware, 7; Diana, 10; Creveling, 3; Iona, 7; Isabella, 6; Adirondac, 1; Concord, 1; Israella, 1; Hartford Prolific, 2.

On the opening of Thursday afternoon session Mr. LARROWE, Hammondsport, called attention to the overbearing of grape vines. He said that twelve years' experience in the vineyard had convinced him that when a vine overbore it was injured and sometimes killed. Its constitution was enfeebled; it would not stand a hard winter, or it would make a feeble growth and the fruit would be poor. The fourth year a vine should never bear more than five pounds, and the Catawba should never bear more than ten pounds per vine. He endeavored to cut his vines back so that they will bear only five pounds each. In instances where they had overborne he had cut them down to the ground with the hope of renovating them. Vines that overbear one year are sure to show the bad effect of it the next; the wood does not mature and the vine is liable to winter kill, and next year it will not mature its fruit or wood. The amount of fruit may be in proportion to the vigor of the vine and strength of the soil; there is a difference, of course, between garden and vineyard culture. CRANE, Lockport, said all varieties are not able to bear an equal amount of fruit. Some varieties will bear all the fruit that sets; this was the case with the Delaware. He had not been able to overcrop that. One must be guided by judgment and experience; no rule could be given for all cases. BREHM, Waterloo, had two fine rows of Delawares which overbore in 1864. The next year it was "which and tother" whether they would live or die. Thought now, even, he might have to dig them up. DAKE, Irondequoit, said that mildew and leaf-blight were liable to attack overcropped vines. GRIFFITH, North East, Pa., said the man who publishes his great crop only publishes his own ignorance or folly. This evil exists among good cultivators as well as among those who do not know better. Overcropping renders the whole vine immature; we want a moderate and firm growth. BARRY had found a good deal of injury done to vineyards by overcropping; it was a very general failing. The Ohio cultivators acknowledge the fault. It was not merely the loss of one crop in the vineyard, but the result of immature wood, which destroys next year's crop. The general desire among vineyardists to produce large crops per acre, should be modified.

The question whether propagating grape vines from green wood could be recommended was next discussed.

LARROWE said it was absurd to think of growing good vines from immature wood. GRIFFITH said he believed that a sound, perfect vine could be produced from green wood; he had seen them during the past year. He did not convey the idea that it should be the practice to propagate from green wood, but that good vines might be produced in that way. CRANE said he had produced a few hundred Delawares, some years ago, from green wood, and planted those vines alongside of those grown from ripe wood, and to-day he could see no difference. No fault is found with growing vines from green layers, but take the same wood into the propagating house and an outcry is raised against it. His experience was that good vines could be grown from green wood, but he abstained from practicing it in deference to public opinion. BRONSON thought good plants could be grown from green wood. BARRY thought the buyers had the matter in their own hands. Propagators would resort to all means to increase the stock when it was valuable. Buyers should insist on having good plants—no matter how they are grown—let them be *good plants*. It is an axiom that the less of the old wood there is left on the plant the better it is. He did not doubt that good plants could be and had been grown from green wood. BREHM had no doubt that good plants could be grown from green wood if good stock were used. GRIFFITH.—"Show me the *good plant* and I wont ask where it came from." HOOKER had grown plants from green and ripe wood side by side and could see no difference; it was simply a matter of good treatment.

Peach culture in Western New York was next discussed.

HAYWOOD, Brighton, thought success in peach culture depended on location. Sandy soil was best, and the nearer it was to the lake the better. LANGWORTHY, Greece, named some varieties which he deemed least subject to disease, and most worthy of cultivation. These were Hill's Chili, Honest John, Early Crawford, Early Purple, Early Barnard and Hale's Early. It was very important to obtain varieties not subject to curled leaf. We should grow seedlings in order to obtain new varieties; the present ones have become, in a measure, debilitated. HOAG said the peach crop was a success last season in Niagara county. Crawford's Early is the principal variety grown there. Hale's Early promises to be the hardiest peach ever grown. It comes into bearing a year earlier than other varieties. THOMAS advised growers to improve this year—as they did not expect peaches—and cut the trees back, so as to produce new wood. BABCOCK, Lockport, described his method of pruning. It consisted in severe cutting back at the time of planting, and each year afterwards. The trees were made to branch within one or two feet of the ground. The fifth year from setting the trees bore their first crop; got 800 bushels from 500 trees. BARRY thought peaches might be grown profitably within a short distance of the shore of Lake Ontario—far away they cannot. CLARK, Medina, had had very good success with the peach; from one and a half acres, planted in 1857, had sold, during the past four years, fruit to the value of $2,800. His soil was dry, early loam, on which the wood ripened early. THOMAS said the cold injured immature wood, but it killed fruit buds on well ripened wood as quickly as on that unripe.

The Society adjourned *sine die*.

HENRY WARD BEECHER—GARDENING.

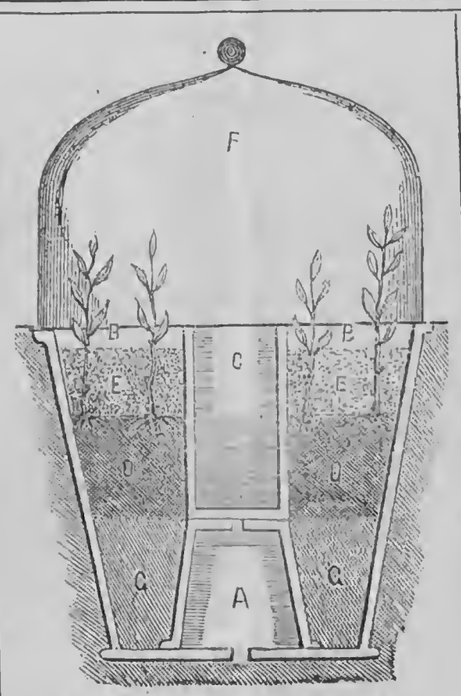
A RECENT number of the North Western Farmer contained a letter from the Rev. HENRY WARD BEECHER in reference to his early connection with the Indiana Farmer and Gardener, published at Indianapolis, three volumes of which were issued under his supervision. Referring to this period Mr. BEECHER says:—"Almost all the old nurserymen and amateur horticulturists of that day have ripened and dropped." He built a small house there and occupied it, which still remains. The grounds around it were tilled by his own hands, though he concedes the fact that his garden was not properly a model one. Being rather enthusiastic he always laid out more ground than he could properly cultivate, hence the weeds and grass sometimes got the advantage of him and his crops. One day while working among his flowers he was accosted by an acquaintance of teutonic derivation, with:—"I suppose you enjoy it." "Indeed I do," responded Mr. BEECHER. The other added, with a kind of suppressed chuckle, "Well, the prettiest flower in the whole garden, I think, is a cabbage!"

THE WHITE FLY ON ROSE LEAVES.

EDS. RURAL:—In reply to the inquiry of your correspondent as to a remedy for the ravages of this insect, it may be as well to state that a decoction of quassia chips is said, on high authority, to be the best application. Tobacco tea darkens the leaves, and lime and sulphur also deface their appearance. The decoction should be applied to the under side of the foliage more particularly. It is a remedy valuable in case of attacks by the green slugs, the aphides, &c. In all cases where other applications fail, I am disposed to think that a saturated solution of the bi-chloride of mercury (corrosive sublimate) diluted somewhat with water, will be efficacious. Experiment with this poison so fatal to insect life, should be made on branches ready for the pruning knife, to ascertain whether the strength of the preparation will injure the vegetable texture. Nor should it be used on currant and gooseberry bushes, when the fruit is upon them, lest serious results should follow, if the fruit is plucked by children and eaten before a very thorough washing of the same. A strong decoction of ailanthus leaves and twigs is considered valuable for the purpose of driving insects from roses and other shrubs.

If a strong tobacco tea is used, the branches infested should be dipped in it for one minute, and then washed off in pure water. This remedy is sometimes employed by gardeners. G. H.

SQUASHES.—"A Farmer's Wife," residing in Illinois, has got the squash-fever and wants to know the name of the largest variety, as she is competing with others in the production of this article and wants to come out ahead.



A MINIATURE GREEN-HOUSE.

WE illustrate a convenient and ornamental apparatus for growing flowering house plants, or for starting cuttings or seeds early in the season that are afterwards to be transplanted to open ground. B, B, is a large earthen vessel or pot, in the center of which, at the bottom, the small pot, A, is inverted. The space, G, G, around this is filled with drainage material. On the top of this pot a smaller one, C, of porous earthen, and having straight sides is set, and the space around this, D, D, and E, E, is filled with mold and sand in which two circles of plants may be set. The pot, C, is filled with water, which percolates through the porous sides and keeps the mold moist enough for purposes of vegetation. Over all the bell glass, F, is placed. If the bell glass and large pot cannot be obtained conveniently, the same principles can be nearly carried out by constructing a square box of wood and framing panes of glass for the cover.

COAL TAR INJURING FRUIT TREES.

EDS. RURAL:—Having used coal tar to some considerable extent on fruit trees, and having from my own bitter experience formed an adverse opinion regarding its merits, I have resolved to communicate the result of my experiments, hoping it may benefit some who contemplate using it.

In the fall of 1865, having a luxurious crop of clover in a young orchard of five years' growth after setting, and being quite anxious to pasture it with sheep, I applied coal tar to the trees to secure them from injury, having previously read of and heard it recommended for that purpose. The application was tried upon one hundred and seventy-five trees in an orchard of five hundred, the balance being too large to require it. I then pastured with sheep during the fall, and noticed no injury from barking except in two or three cases where the covering was light, which was promptly suppressed by a second coating of tar. I also applied it to about forty young pear trees to guard against girdling from mice, which proved a sure protection in every case, and I congratulated myself upon my good fortune in having found such an easy and cheap preventive for the ravages of those secret enemies of young fruit trees. My satisfaction, however, was short lived, and was succeeded by disappointment and regret, when, in the spring after warm weather came on, I noticed the bark looked shriveled, turning black and becoming dry to the wood. It had every appearance of having been scorched with fire. The pear trees I scraped quite early in the spring, slitting the bark from root to branch. I am unable to say positively that this saved them, but only six of them died; while of the apple trees full one hundred and twenty-five were destroyed, and many of the others were little better than dead, having barely life enough left to overcome feebly the injurious effects of the poisonous application. It may be claimed that I used it too freely; but I know of another orchard which was treated with a more sparing application about the same time, and all of them were more or less injured, although only a few died.

I am fully convinced that anything applied to trees which forms a coating and fills up the pores is injurious. It is as sensible to suppose that a child would remain healthy with its legs and body painted and varnished, as that a tree will thrive under such treatment. I am certain that tar applied in sufficient quantity to prevent sheep from gnawing the bark will result in serious injury to the trees.

It is said that "experience is the best of teachers;" I trust it proved so with me in this case, but the tuition came *very high*, and I have no desire to see others learn the lesson at such a *costly rate*. M. C. R.

Sennett, Cayuga Co., N. Y., 1867.

CIDER APPLES.

HARRISON, Campfield and Smith's Cider are the most productive and profitable varieties for cider making purposes. We would not recommend any variety for its cider making qualities alone, but would give them mainly for the fruit, as any apple will make good cider vinegar, and that article at the present time is more needed, with a rapidly increasing demand, than almost anything else. Hence, Smith's Cider is the only one of the above to be recommended for extensive cultivation for cider, as it is a very profitable market apple if not wanted for cider, and, in the opinion of those who have made the test, inferior to no other apple for cider.

This is an important feature connected with the apple crop that is not usually taken into account, in fact is almost entirely ignored, owing to the lack of thought and information on the subject. It will astonish many persons to hear it asserted that at the present high price of apples, it would still be more profitable to convert them into vinegar. The facility with which the fruit can be gathered and the ease with which it can be converted into vinegar, even without the use of any artificial means, added to the great and growing demand for pure cider vinegar, at high remunerating prices, challenges the attention of all fruit growers. Extensive cider depots will be established, at no distant day, in different sections of the country, not, as at one time, to convert it into whisky, but into vinegar, so that all the surplus stock of unsalable market apples, in addition to the cider apples, will pay well to convert into cider. This will alone have the effect of keeping a very large portion of fruit now seen on sale out of market, an end much to be desired surely, for it is lamentably true that a large portion of it, well educated swine would turn from, in search of something more palatable. This last is said in sorrow, in these progressive days of Pomological science.

We would therefore recommend the planting of good, productive market varieties,—carefully pick and send the very best and no others to market, and make the balance into cider, bearing in mind at the same time that apple juice and water does not make either pure cider or vinegar, besides it is not very honest, (and farmers as well as everybody else ought to be honest), and does not make a very good article to build a reputation upon, which is very important, for upon it depends a ready sale and increasing demand at least 25 per cent. above the common market price. The villainous stuff now sold and used by nearly every family, as cider vinegar, has by careful analysis shown in innumerable cases the entire absence of cider, but was composed of all the various poisonous compounds used in the manufacture of the so-called cider vinegar sold in the markets, damaging and destroying the health of those using it, comprising, it is estimated, at least nineteen-twentieths of the community.—*Trans. Indiana Hort. Soc'y.*

Horticultural Notes and Queries.

CATALOGUES, &C., RECEIVED.—Catalogue of Flower and Garden Seeds, containing a list of all valuable and rare Varieties, Novelties, &c., obtained from the Seed Establishment of FREDERIC WILLIAM WENDEL, Erfurt, Prussia, and for sale by THEODORE C. WENDEL, 518 Washington-st., Boston, Mass., sole agent for the U. S.—— Tenth Annual Catalogue of Plants—containing descriptive lists of Roses, Verbenas, Heliotropes, Geraniums, Petunias, Dahlias and Hardy Plants, cultivated and for sale by EDGAR SANDERS, Lake-st., Chicago, Ill.—— Descriptive and Priced Catalogue of the newest and best varieties of Strawberries, Philadelphia, Doolittle, and other Raspberries, Wilson's Early and Kittatinny Blackberries, Grape Vines, Currant Bushes, &c., for sale by JOHN S. COLLINS, Moorestown, Burlington Co., N. J. —— The Illustrated Horticulturist's Almanac for 1867, containing a Calendar of Operations in the Orchard, Vineyard, Farm, Garden and Greenhouse, for every month in the year. Published by GEO. E. & F. W. WOODWARD, 37 Park Row, New York.

THE LAKE SHORE WINE COMPANY.—The Fredonia Censor devotes considerable space to a notice of this company, which is located at Brocton, Chautauqua county, with a capital of $100,000. Last year additional buildings and greatly enlarged cellarage were supplied to meet the demands resulting from the steadily increasing enlargement of the vineyards connected with the establishment. During the past season, however, the vineyards, owing to premature frosts, were less productive than was anticipated and fewer grapes used in the manufacture of wine. About twelve thousand gallons were manufactured, or three thousand less than during the preceding one. About one hundred and fifty acres of bearing vines and five hundred planted to young vines constitute the vineyards connected with the buildings and cellars previously alluded to.

ONIONS—THEIR EFFICACY.—The onion is reputed to be among the most healthful of the bulbous family, but, owing to its strong and pungent aroma, is less a favorite in "refined circles" than it ought to be. In our changeable climate, where colds and coughs in spring and autumn are the rule and exemption from them the exception, a free use of the onion would prevent much suffering. A portion of a raw onion, eaten just before retiring to rest, will generally give repose to such as are suffering with lungs overburdened with oppressive and irritating matter. The breath of the onion eater may not be quite so fragrant as is desirable, but the nightly repose of such will be enough sweeter to balance the account.

PLUMS ON CHERRY STOCKS.—The Maine Farmer notices the successful grafting of the Washington Plum on wild cherry stocks, and supposes that other varieties will prove equally successful. A writer in the Philadelphia Evening Post endorses this conclusion, rendered certain by many examples witnessed by him in West Virginia, and other localities further south. The principal advantage claimed by this system of crossing consists in the fact that the "black knot" is wholly obviated by it, while securing a more certain and munificent yield of fruit.

FRUIT GROWING ON SENECA LAKE.—Increased attention is being given to fruit growing, especially to the culture of the grape, on the borders of Seneca Lake in this State. Farms have changed hands at high prices, one sale at $300 per acre being recently made. This is an outside figure, but the soil and climate in the vicinity of the range of small lakes in Western N. Y. warrant heavy investments in capital for the purpose of fruit growing.

ONIONS—A GOOD YIELD.—According to a Cohasset correspondent of the Mass. Ploughman, Mr. HARVEY CLAPP of that place raised, the past season, on 96 rods of ground, four hundred and sixty-seven bushels of onions. This is at the rate of 778 bushels to the acre, which, even at the low ruling of last autumn, would give about $330 to the acre.

LA BELLE ANGEVINE PEAR.—A dish of this variety of pears was recently exhibited in Covent Garden London, which averaged the weight of three pounds each. Size and appearance are the best qualities of this pear, however; on the table they please the eye but not the palate.

Domestic Economy.

THE GREAT AMERICAN TEA COMPANY.

EDS. RURAL NEW-YORKER:—Seeing that the Great American Tea Company advertise extensively in your columns, I thought it would not be improper to inquire of you concerning them,—whether they are sufficiently reliable for farmers to depend on them for their teas,—whether they have a large amount of capital in it, or not, &c. Or, is it one of the many humbugs with which our country is infested now-a-days? Please answer through the RURAL, and you will greatly oblige many of its constant readers.—M. W., *West Liberty, Iowa, Dec.*, 1866.

REMARKS.—The above inquiry was received some weeks ago, and although we were confident the Company alluded to was reliable, we wished to "make assurance doubly sure," and therefore wrote to an intelligent friend in New York city for information on the subject, inclosing the note of M. W. To our letter of inquiry we have received substantially this reply:—"I am confident the Great American Tea Company is "*reliable*" in *every sense* of the word. The Company has, I believe, *eight* large stores in this city and Brooklyn. It sells, probably, one-third of all the tea imported in New York. In furnishing farmers by the club system, every pound of tea is warranted to give satisfaction, or money returned. Satisfaction is always given, so far as it would appear from the testimony of the subscribers to the religious papers of this and other cities, and the Company is endorsed and recommended by the editors of the same papers, and other influential journals. I learn that nearly fifty persons, from the offices of these papers, are buying constantly of the Company, and you know printers and editors are not likely to patronize humbugs. If any person is fearful that he will not be treated fairly by the Company, let him write to any one of the thousands of persons whose names have been published as its customers. I have taken time to find out that the statements here made are correct."

In confirmation of the statement of our correspondent, we will only add that several prominent religious and other journals of New York strongly endorse and commend the Great American Tea Company, and that, though we have advertised it for months, we have never received a complaint from any of the large number of RURAL readers who must be its customers. We therefore feel like commending the Company as eminently reliable and worthy of confidence.

VARIOUS ORIGINAL RECIPES, &c.

CRULLERS.—Dissolve a teaspoonful of soda in four tablespoons of milk; strain onto a half pint of flour, four tablespoons of melted butter, and a teaspoon of salt; beat four eggs with six heaping tablespoons of sugar; work together with some grated nutmeg; add flour till stiff enough to roll out; cut in any shape to suit the fancy, and fry in hot lard.

MOLASSES CAKE.—One and one-half cups of sirup; one cup sour milk; one cup butter; one-half cup vinegar; one-half cup ginger; one teaspoon soda, and a small lump of alum dissolved in hot water. Makes two cakes.

ALICE CAKE.—Five cups of flour; one of sugar; one of butter; one-half of molasses; four eggs; one teaspoon of cloves or other spice; one teaspoon soda.

BUCKWHEAT PANCAKES.—Put up a batter of the proper consistency with buckwheat flour and warm water; stir in a teacup of lively yeast, and let it stand over night in a warm place. If you wish to have the cakes brown, put part skim milk instead of all water. If they appear sour, a half teaspoon of soda will make them all right.

TO MAKE YEAST.—Take one large handful of hops; two potatoes sliced; boil in two quarts of water; have it boiling when they are put in; strain it while boiling hot on flour enough to make a thick paste. Let it stand until lukewarm; then stir in a teacup of good yeast, and keep it in a warm place until light, which will be in three or four hours.—CONSTANT READER.

KEEPING GREEN CORN.—As many of your lady friends, as well as myself, have been somewhat puzzled to keep green corn, I will give them my friend's recipe, which I can testify to being a good one, from having eaten some of the corn in January, as nice as fresh. It was cut off from the cob, as for cooking, and packed in jars, with a thin layer of salt alternately with corn, and on the top place a weight. It gradually makes a brine. Cover tightly from the air, and change the water two or three times when you cook it. I think sweet corn far superior to common field for table use.

Will some one inform me through the RURAL the nicest way to make a shell frame, and how to prepare the shells. I have looked over the last two volumes, and cannot find the information I desire.—M. L. W., *Union City, Ind.*

MOLASSES CANDY.—A subscriber wants to know how to make molasses candy and have it hard and not sticky. Who can tell him?

"ECONOMY IS WEALTH."—*Pyle's O. K. Soap, Pyle's Saleratus, Pyle's Cream Tartar—Standard articles, designed for the intelligent and economical everywhere.* For general usefulness and good weight they have no superior, and the proprietor, believing that consumers are the best judges, respectfully solicits a fair trial. All first-class grocers keep these goods, and every package bears the name of JAMES PYLE, Manufacturer, 350 Washington street, corner of Franklin street, New York.

IS IT RIGHT to put up 14 to 15 ounces in a paper and call it a pound of Saleratus? D. B. Le Land & Co. think not, and therefore always put it up full weights.

Ladies' Department.

Written for Moore's Rural New-Yorker.

MATTERS MATRIMONIAL.

Having a devoted companion of our own, we sincerely sympathize with the luckless wight, author of "Matters Matrimonial," and fully agree with him that material for good wives is sadly wanting in these degenerate days of fashion and folly. Hoping that he may *yet find* the fair being of his imagination, to whom he may doff *his hat* and make his *best* bow, we send these few lines for his especial perusal:

THE PAST AND PRESENT TIMES.

When my good mother was a girl—
Say thirty years ago—
Young ladies *then* knew how to knit
As well as how to sew.

Young ladies *then* could spin and weave,
Could bake, and brew and sweep,
Could sing and play, could dance and paint,
And could a secret keep.

Young ladies then were beautiful
As any beauties now;
Yet they could rake the new mown hay,
Or milk the brindle cow.

Young ladies *then* wore bonnets, too,
And with them *their own hair;*
They made them from their own good straw,
And pretty, too, they were.

Young ladies *then* wore gowns with sleeves
Which would just hold their arms:
And did not have as many yards
As acres in their farms.

Young ladies *then* oft fell in love,
And married, too, the men;
While men with willing hearts and true,
Loved them all back again.

Young ladies *now* can knit and sew,
Or read a pretty book,—
Can sing and paint and joke and quiz,
But cannot *bear* to cook.

Young ladies *now* can blithely spin
Of "street yarn" many a spool,
And weave a web of scandal, too,
And dye it in the wool.

Young ladies *now* can bake their hair,
Can brew their own cologne,
In borrowed plumage often shine,
While they neglect their own.

And as to secrets, who would think
Fidelity a pearl?
None but a modest little miss,
Perchance a country girl.

Young ladies *now* wear lovely curls,
What pity they should *buy* them;
And then their bonnets—heavens! they fright
The bean that ventures nigh them.

Even *love* is changed from what it was,
Although true love is known;
'Tis *wealth* adds luster to the cheek,
And melts the heart of stone.

Thus *time* works wonders—young and old
Confess his magic power;
Beauty will fade; but virtue proves
Pure gold in man's last hour.

Mrs. N. Shields Witheron.

Dawn, Mo., Jan. 1st, 1867.

DRESS AND COMPLEXION.

No point of taste in dress needs more careful study, and none perhaps is more generally left to hap-hazard experiment, or what is mysteriously called the "taste" of the milliner or mantua maker, than the harmonizing of dress with the complexion. A little study of the laws and phenomena of optics will show that the harmonizing of colors depends upon certain fixed principles and may almost be reduced to a science. An anonymous writer, proceeding from these facts, lays down some general rules on the subject, which are well worth bearing in mind.

Of all colors, perhaps, the most trying to the complexion, are the different shades of lilac and purple. The fashionable and really beautiful mauve and its varieties are, of course, included in this category. In accordance with the well-known law of optics, that all colors, simple or compound, have a tendency to tint surrounding objects with a faint spectrum of their complementary color, those above-mentioned, which require for their harmony various tints of yellow and green, impart these complementary colors to the complexion. It is scarcely necessary to observe that of all complexions, those which turn upon yellow are the most unpleasant in their effect—and probably, for this reason, that in this climate it is always a sign of bad health. But, it will be asked, is there no means of harmonizing colors so beautiful in themselves, with the complexion, and so avoiding these ill effects? To a certain extent this may be done, and as follows:

Should the complexion be dark, the purple tint may be dark also, because, by contrast, it makes the complexion appear fairer; if the skin be pale or fair, the tint should be lighter. In either case the color should never be placed next the skin, but should be parted from it by the hair and by a ruche of tulle, which produce the neutralizing effect of gray. Should the complexion still appear too yellow, green leaves or green ribbons may be worn as trimmings. This will often neautralize lilac and purple colors, and thus prevent their imparting an unfavorable hue to the skin.

Scarcely less difficult than mauve to harmonize with the complexion is the equally beautiful color called "magenta." The complementary color would be yellow-green; "magenta," therefore, requires very nice treatment to make it becoming. It must be subdued when near the skin, and this must be done by intermixture with black, either by diminishing its brightness by nearly covering it with black lace, or by introducing the color in very small quantity only.

Yellow, also, is a difficult color to harmonize with the complexion. A bright yellow, like that of the buttercup, contrasts well with black, and is becoming to *brunes*, when not placed next to the skin; but pale yellow or greenish yellow suits no one, especially those with pale complexions. Its effect is to diffuse, by contrast, a purple hue over the complexion, and this is certainly no addition to beauty. Blue is favorable to most complexions; light or sky blue especially so to fair persons with golden hair; fuller tints to those who are less fair, or in whom years have developed some of the color of the sere and yellow leaf peculiar to autumn. It often happens that as persons advance in years, colors which suited them in youth cease to be becoming; pink, for instance, agrees with a youthful complexion and fair skin, but it does not harmonize with the yellow tints of more advanced age; in this case either sky-blue, or pure deep blue, will be substituted with advantage for pink.

A PLEA FOR EARLY MARRIAGES.

Rev. Henry Morgan lectured in Boston not long since on the subject, "Young Men and Early Marriages." The following is the Herald's report of the lecture:

"Nature, history, and revelation declare, 'It is not good that man should be alone.' He needs a help mate—a wife is the balance-wheel, the regulator, the guardian angel of a husband's trust, confidence and prosperity. Politically, socially, morally and spiritually, man requires a wife. Man needs a home. The Romans gave bachelors no legacies. Corinth denied them sepulture. Athenians scourged them. In Plato's commonwealth, at the age of thirty-five they were fined. Man is but half a man without a wife. In all your gettings, get a wife, and never rest from getting till you get married. Better live in an attic, under the hallowed influence of a wife, than revel in a palace of dissipation. Man needs a home. Marriage is the legitimate basis of a genuine home. Look at the deplorable condition of the young men of this city without homes. Boarding houses have no elevating society of women, no home influences, no place of mental or moral improvement, no altar of prayer, no angel of love. In Philadelphia there are more homes in proportion to its population than in Boston; hence Boston has an unequal contest in the battle of morals."

TAKE CARE OF THE CHILDREN'S FEET.

Life-long disease and sudden death often come to children through the inattention of the parents. A child should never be allowed to go to sleep with cold feet; the thing to be last attended to, in putting a child to bed, should be to see that the feet are perfectly dry and warm; neglect of this has often resulted in a dangerous attack of croup, diptheria or fatal sore throat.

Always on coming from school, on entering the house from a visit or errand in rainy, muddy or thawy weather, the child's shoes should be removed, and the mother should herself ascertain if the stockings are the least damp; and if so, should require them to be taken off, the feet held before the fire and rubbed with the hand till perfectly dry, and another pair of stockings, be put on, and another pair of shoes, while the other stockings and shoes should be placed where they can be well dried, so as to be ready for future use at a moment's notice.

Clothes on Fire—What to Do.—There are many lives lost annually, especially of females, by the accidental ignition of their clothing. When an occurrence of this kind takes place it requires cool and prompt action to render assistance effectual. Hesitation, brief though it be, generally renders subsequent efforts at relief unavailing. The Scientific American suggests that when the clothes take fire a woolen garment should be immediately clasped around the person, and the body be placed in a recumbent position as the clothing will burn less rapidly than when an erect attitude is maintained. The burning clothing must be removed as soon as possible and the burned portions of the body be sprinkled with flour, which will soothe and heal the wounds speedily unless very deep. In the latter event other applications may become necessary, but as a first one this will be found of excellent service.

Loss of Time.—An impatient Welshman called to his wife—"Come, come, isn't breakfast ready? I've had nothing since yesterday, and to-morrow will be the third day!" This is equal to the call of the stirring housewife who roused her maid at four o'clock with, "Come, Bridget, get up! Here, 'tis Monday morning, to-morrow is Tuesday, the next day's Wednesday—half the week gone and nothing done yet?"

An Excellent Sewing Machine.—A young man out West was entrusted with the money to bring his father home a good family sewing machine. He carried off a neighbor's daughter to Chicago, married and brought her home, declaring she was the best family sewing machine he could procure.

A Valuable Skirt.—An aged woman, who spent her time in rag-picking, has just died in Charlestown, Mass., amid scenes of the greatest distress, filth and poverty. Prior to her decease a skirt was found in her apartment, in which there was sewed up several thousand dollars in gold.

Dividing the House.—"I think," said a wife who could not agree with her husband—"I think, Mr. Jibbs, we had better divide the house. You shall live on one side and I on the other." "Very well, my dear," replied he; "you take the outside, and I'll have the inside."

There is no doubt that of all the States, the one in which the most earnest heart-prayers are offered up for the Union is the State of Single Blessedness.

TO CONTRIBUTORS.

The following contributions are respectfully declined for the reasons annexed:—"Let there be Light," S. M. Your metaphors are mixed; and the article, for one of the kind, is too long.—"Iona and Staffa," W. R. B. Of your forty-five lines of blank verse, twenty-three cannot be scanned.—"Solitude," J. S. B. Try a more practical and newer subject.—"Thought of Yore." Write prose.—"Life's Changes." N. G. The style is good, but the matter is not new, and the subject is too compositiony.—Several manuscripts on hand must lie over for consideration next week. A word of advice: do not send us articles "written in haste." The apology avails nothing. Keep them until you have leisure to revise them; and do not presume too much on the fallacious saying that "printers can read *any* thing."

Choice Miscellany.

THE LONG AGO.

BY RICHARD MONCTON MILNES.

On that deep retiring shore
Frequent pearls of beauty lie,
Where the passion waves of yore
Fiercely beat and mounted high.
Sorrows that are sorrows still
Lose the bitter taste of woe;
Nothing's altogether ill
In the griefs of long ago.

Tombs where lonely love repines,
Ghastly tenements of tears,
Wear the look of happy shrines
Through the golden mist of years.
Death, to those who trust in good,
Vindicates his hardest blow.
Oh! we would not, if we could,
Wake the sleep of long ago.

Though the doom of swift decay
Shocks the soul where life is strong,
Though for frailer hearts the day
Lingers sad and over-long,
Still the weight will find a leaven,
Still the spoiler's hand is slow,
While the future has its heaven
And the past its long ago.

BEYOND THE SIDEWALKS.

Residents of the rural districts sometimes entertain romantic ideas of the possibility of getting lost in the city. The complicated labyrinth of streets and avennes, the endless blocks of stores and dwellings, one just like another, and the motley crowd forever hurrying past,—all combine to confuse the points of the compass and distract the reckoning of the stranger. But in truth people bred in the city sometimes find it quite as difficult to go straight to a destination in the country, without names to the roads or numbers to the houses. For instance, we have a very distinct recollection of traveling in the country once when a boy, and being told that to find our destination we must "go straight ahead until you pass a wind-fall, and then take such a turn." What could be simpler? But our idea of a "wind-fall" was a mass of prostrate trees overturned by a tornado. The consequence was that we rambled over half the township and finally learned that a wind-fall might be only a few scarcely perceptible hummocks, covered with a second growth of timber, indicating the path of a whirlwind of last century.

Not many years ago a young gentleman of our acquaintance ventured beyond the sidewalks a short distance for an evening call on a fair cousin. It seems he was not familiar with the place and had forgotten the precaution of consulting the almanac on the question of moon. When he left the house the night was as black as the ace of clubs,* and a slight rain was falling. His adventures in finding the homeward road were such that he says he will never go there again without a lantern, a ball of twine and a pocketful of crackers. A letter which he soon after wrote to the lady has come into our possession, and we quote the story of his wanderings:

"You may be interested in learning how I found my way back to the city that dark night. Well, I went right along, as per directions, only running a the tree now and then, until I came to a fence, which I discovered by the sense of touch. I explored it for some distance both ways, confident of finding a gate, but was disappointed, and at last climbed over. Taking it for granted that I was then in the lane, I turned, as I thought, toward to the road. After a few more encounters with the trunks of mysterious trees, I found myself apparently in a narrow and deep gorge, with perpendicular walls—they might have been wood-piles—rising on either hand. Directly before me, at what distance I could not tell, rose against the faintly luminous sky the outline of a gable. Concluding that I must be astray, I turned back. But presently I found that I must have made some unnoticed turn or climbed one fence too many; for

Hogs to right of me,
Hogs to left of me,
Hogs in front of me,
Grunted and thundered.

And pretty soon I took a chorus of continuous grunts, more savage and more in tune than before, as evidence that they were making a grand charge on me. I knew of course that my only hope was in a masterly retreat. But by this time I was unable to say which way was retreating. However, I chose one and made pretty good time, keeping my hands extended before me and nimbly dodging the trees with which the ends of my fingers came in contact, wondering who would care for mother now, thinking of all my dear friends, and wishing I might come to a fence—which I did quite suddenly, and in a moment put it between myself and my perhaps imaginary pursuers. But where was I then? I might never have known until morning, or might then have been found, like young Excelsior, lifeless and beautiful, had I not espied the gleam of a friendly lamp. Guessing it came from

"Thy chamber window, sweet,"

I made for it, over the roughest ground I ever navigated, where the waves were knee high. Having got back to the house, I passed around by the front door—wondering by the way whether the dog was chained—leapt the hedge and started for the mulberries, of whose topography I had some slight knowledge. Perhaps I destroyed some future melons in my progress; for which I beg cousin Sam's pardon. Down the long arcade under the mulberries all was dark as one of Dumas' plots. Now and then an elbow of a tree gave me a friendly nudge as I passed; or a low hanging limb took it upon itself to teach me manners. At last I discovered the fence by the road, as I had the others—suddenly and by the sense of touch. As I climbed over it there was a noise as of men and beasts among the trees behind me, which I did not turn back to investigate. One wild leap to clear a ditch that I knew was there somewhere, and the night's adventures were over. Next time I stay at your house so late I shall come away earlier."

* The ace of spades, which is universally used as a symbol of extreme blackness, is *never* black.

WHAT'S IN A NAME?

From the Saxon we have "Ada," which means happy, and "Eleanor," all fruitful; "Richard," very rich, or richly honored; "Edward," defender of property; "Edwin," gainer of property; and "William," defender of many.

The Gothic gives us "Adelaide," the princess; "Alphonso," our help; "Charles," one who is crowned; "Charlotte," a crowned; "Emma," one who nurses; "Ernest," ardent of soul; "Everard," well reported; "Francis," freeman.

From the French we borrow "Amelia," beloved; "Arabella," beautiful altar; "Isabella," olive-colored; "Rosabella," a beautiful rose; "Rosalind," elegant rose.

From the Latin we obtain "Augustus," increasing, noble; "Barbara," strange; "Beatrice," one who blesses; "Clara," clear; "Grace," favor; "Viola," the violet; "Jane," peace; "Julius," soft-haired; "Julia," soft-haired woman; "Juliette," little and soft-haired; "Letitia," joy; "Margaret," a pearl; "Miranda," admired; "Oliver," olive man; "Blanche," white.

From the Greek we take "Agatha," good; "Agnes," chaste; "Basil," kingly; "Bertha," bright; "Catherine," pure; "Erasmus," worthy to be loved; "Eugene," nobly descended; "Theodore," a gift of God; "Cyrus," lord; "George," a farmer; "Helen," one who pities; "Matilda," stately; "Phœbe," light of life; "Philemon," one who kisses; "Philip," a lover of horses; "Sophia," wisdom.

We also receive many of our names from the Hebrew, as "Anna," kind; "James," the supplanter; "John," the grace and mercy of Jehovah; "Madeline," noble-minded; "Ruth," trouble; "Mary," a salt tear—a beautiful and touching name, there never can be too many Marys; "Martha," trouble or bitter; "Susan," a lily; "Elizabeth," the house of strength; "Jonathan," the gift of God; "Sarah," princess, or my lady.

"William Henry," for men, and "Mary Elizabeth," for women, are united more frequently than any other two names, to form a double name.

HOW TO LIVE EASILY.

The art of living easily, as to money, is to pitch your scale of living one degree below your means. Comfort and enjoyment are more dependent upon easiness in the detail of expenditure than upon any degree in the scale. Guard against false associations of pleasure with expenditure—the notion is absurd that because pleasure can be purchased with money, therefore money cannot be spent without enjoyment. What a thing costs a man is no true measure of what it is worth to him; and yet how often is his appreciation governed by no other standard, as if there were a pleasure in expenditure *per se*. Let yourself feel a want before you provide against it. You are more assured that it is a real want, and it is worth while to feel it a little, in order to feel relief from it. When you are undecided as to which of the two courses you would like best, choose the cheapest. This rule will not only save money, but save also a good deal of trifling indecision. Too much leisure leads to expense; because when a man is in want of objects, it occurs to him that they are to be had for money, and he invents expenditure in order to pass the time.—*Henry Taylor.*

Self-Dependence.—Many an unwise parent works hard, and lives sparingly all his life for the purpose of leaving enough to give his children a start in the world, as it is called. Setting a young man afloat with money left him by his relatives, is like tying a bladder under the arms of one who cannot swim; ten chances to one he will lose his bladders and go to the bottom. Teach him to swim and he will not need the bladders. Give your child a good education. See to it that his morals are pure, his mind cultivated, and his whole nature made subservient to the laws which govern man, and you will have given what will be of more value than the wealth of the Indies. You have given him a start which no misfortune can deprive him of. The earlier you teach him to depend upon his own resources and the blessing of God, the better.

But for the thought of Providence, one would say that the world went all wrong; but it is rather we who do not the right. We complain, we get frightened, just as though God were not there. Never let us forget that it is he himself and not man who guides us; else there would indeed be reason to despair, and to set out, like Columbus, in search of a new world.

Sabbath Reading.

RELIGIOUS LITERATURE.

Our costliest buildings, our finest specimens of architecture, are the churches. We wear our best apparel (at least, most of us do,) to the house of worship, and observe within its walls a stricter decorum than anywere else. This is exactly as it should be, springing from the natural desire to avoid as far as possible having anything rude or uncomely connected with our religion. But in painful contrast with it stands the fact that that part of our literature which is devoted to religion is, generally speaking, the weakest and shabbiest, the least worthy of preservation. Much of our pulpit oratory is of the most artificial kind; and a large, perhaps the larger, part of the discourses delivered weekly in the temple to the best disposed audiences possible are stale or insignificant in their matter, dull in their manner, logically lame and rhetorically ridiculous. You listen now to an interminable series of syllogisms intended to prove some proposition that no one disputes, and now to a jumble which can only be described in newspaper language as "a column of all-sorts." You open the hymn-book at the page announced, and the chances are that you light upon four to seven stanzas of what, were it not on a religious subject, you would dignify with no better name than doggerel. The metaphors, few of which are at all poetical, run into each other like dissolving views; the rhymes are many of them faulty; and the rhythm is rugged and unmusical. We sometimes think that the obscuring of the words by modern choir singing, which has been so often ridiculed, is a mercy for which the hearers can not be too thankful.

Nor is this all. The more pretentious portions of our religious literature are equally poor. When, in the first year of the late war, a call was made for reading matter for the soldiers, and it was announced soon after that the pious people of the North, thinking the poor fellow in the presence of such awful danger would necessarily turn his mind away from earthly things, had sent all their religious books to the army, everybody appreciated at once the stupendous joke which had been unconsciously perpetrated; for everybody knew that nine out of ten soldiers would rather scale the bloodiest bastion of the enemy than wade through the stupidities of many who have taken it upon themselves to write religious books.

And the commentaries on the Bible, which ought to be the most concise and simple kind of writing, what are they? Let us open one at random—at the xixth chapter of Job, we read: "The early part of this chapter contains an attempt on the part of his friends (so called) to overwhelm him with eloquent and severe speeches, for which there was too much ground. But when he addresses the same language to the Almighty himself, and accuses Him of violence and wrong, nothing can excuse or palliate his crime, but the multitude and extremity of his afflictions; which none but He who inflicted, and he who bore them, duly could appreciate." The axiomatic inanity of such commentaries—and we have quoted a fair, nay, a favorable specimen—needs no demonstration. They are written for the mere sake of writing something. Their authors escape the condemnation which falls upon men of like ability who thus treat other subjects, only as of old the murderer escaped the law by taking refuge in the sanctuary.

A book recently written and published anonymously in London has made a great stir in the religious world. Repeated editions have been called for, and every possible guess at the identity of the author circulated in the papers. Yet there is nothing wonderful about "Ecce Homo," except as compared with the generality of religious books. It is simply a clear, sharp and frequently suggestive analysis of the life and character of our Saviour and the plan of salvation; and it has made a sensation merely because clear, sharp and suggestive writing is unusual in that department of literature.

A celebrated divine is now traveling in Palestine. We have just read one of his letters, in a popular religious journal. It is almost entirely made up of repetitions of this formula:—"This morning we started from —— and journeyed so many miles to ——, where we stopped for refreshment. The place reminded me of the —— the chapter of ——. How thankful I am that the Lord has permitted me to see this land." About as entertaining and instructive as the parasangs of the Anabasis!

Perhaps all these things will be regulated by time, and had better be left to it. But if a reform were proposed, we would offer a few suggestions for its beginning. First, let our thousand hymns be overhauled by a committee who know something of the universal rules of poetry, and winnowed down to about one hundred. Then let us burn all our commentaries, preserving only the original Bible which they have buried up, and call upon learned men for their views on passages of doubtful meaning and explanations of such ancient customs as are alluded to. Thirdly, let us get into the habit of applying to sermons precisely the same laws of logic, the same canons of criticism, by which we approve or condemn other discourses. We reserve for a future article the discussion of what a sermon should be.

Life, we've been long together,
Through pleasant and through cloudy weather.
'Tis hard to part when friends are dear,
Perhaps 'twill cost a sigh, a tear;
Then steal away, give little warning.
Choose thine own time,
Say not good night! but in some happier clime
Bid me good morning! [*Mrs. Barbauld.*

They that deny themselves for Christ, shall enjoy themselves in Christ.

Educational.

ACADEMIC DISCIPLINE.

The government of schools for children must necessarily be of an absolute nature, depending from day to day on the will and word of the teacher. There must be no debate between master and pupil, no disputing by the latter of the former's complete authority, no criticising of his motives or his policy, but strict obedience in every case and a reference of all supposed unjust treatment to parents or trustees. But in seminaries and colleges, where long dresses and short beards abound, and the students are supposed to have arrived at something like years of discretion and to be capable of understanding the causes of things, the little in-door world is more like a community, and government on any other than an approximately democratic basis is absurd. In this matter, as well as in that of the cast-iron curriculum, we need a revolution. The idea that it is not the best thing for the development of a hundred young men of diverse tastes and capacities to jam them all into the same college molds, is faintly dawning on the minds of boards of managers and faculties. What they want to learn next is to treat the young gentlemen and ladies under their charge as responsible human beings possessed of some little share of the sense supposed to be common among men and women, not as unreasoning children. It is time the old blue laws that have been handed down from generation to generation in our colleges, with not a single line erased or a single word obscured, were abolished completely. The foolish or malicious pranks which make college students appear so puerile or contemptible may be attributed in a great measure to the specific rules intended to prevent them, which are all founded on the assumption that they are mere boys continually on the watch for opportunities for mischief. They have just enough of the boy in them to knock off the challenge chip when it is presented to them so temptingly. Do away with all those regulations and the system of espionage and give students to understand that in college they are to be governed by precisely the same codes of morals and politeness which they must observe after they leave it, and the general character of the undergraduate will at once become more manly and dignified.

A similar revolution is very much needed in the government of advanced schools for young ladies. We have before us the last catalogue of one of the most flourishing female colleges in the country; and in the "general regulations" we find the following:—"After the ringing of the bell which gives the signal for preparing to retire, young ladies are required to abstain from all noise which may disturb others, so that the retiring bell may be followed by complete stillness throughout the building. * * * It will be regarded as highly improper for any student to take any article of food or refreshment from the kitchen or store-rooms to any private room." Rather a keen bit of satire that, to forbid "young ladies" behaving like unruly children! Again we read:—"Calls may be received only in hours of recreation, in the college parlor, and not in private rooms, except in cases of parents or lady friends from home. * * * On the Sabbath young ladies are not allowed to visit each other's rooms without permission, nor to indulge in anything that may disturb others, or may be inconsistent with the Sabbath as a day of serious reading and devotion. * * * Young ladies will not be allowed to accept the company of gentlemen, either in walking or riding, except by written consent of parents or guardians. * * * It will be considered an impropriety deserving of special censure for any young lady to hold correspondence by writing with persons in the city, or with any person not known or approved by parents or guardians." These young ladies are nearly all daughters of Christian parents and may be supposed to have been brought up with a regard for the ordinary rules of morality and propriety; yet the regulations just quoted at once presume them to be ignorant of common politeness from residence in the backwoods and to have acquired a propensity for the cheapest kind of flirtation on the streets of a city.

Laws of Teaching.—Know thoroughly and familiarly whatever you would teach.

Get and keep the attention of your pupils, and excite their interest in the lesson.

Use language which they thoroughly understand, and carefully explain the meaning of every new term you need to use.

Begin with what is already *known*, and proceed to the *unknown* by easy, natural steps, making each step thorough before taking the next.

Excite the self-activities of the pupils, and tell them nothing which they can easily discover for themselves.

Require them to re-state correctly, and in their own language, whatever they have learned.—*Mich. Teacher.*

A School Music Book Wanted.—There is much need, in our schools, of a new music book. It should contain both sacred and secular pieces in due proportion—the sacred music for opening and closing exercises, and the secular for other occasions. The selections of music and words should be such as to make every page available and popular. It is unnecessary to ask parents to accept the burden of two music books: one of the proper character would answer every purpose. Some person of the requisite musical ability and sound judgment should undertake the task of preparing such a work.—*Educational Monthly.*

Self-Government.—The poorest education that teaches self-control is better than the best that neglects it.

MOUNT VERNON, THE HOME OF WASHINGTON.

Various Topics.

HOME AND TOMB OF WASHINGTON.

Herewith we present the readers of the Rural accurate representations of the home and grave of George Washington, the commander of our Revolutionary army, the first President of the United States, the great hero of American history. The mansion and grounds were purchased a few years since by contribution and presented to the United States. The tomb of Washington is a spacious vault of brick, with an arched roof. Its iron door opens into a vestibule, in which, seen through a picketed iron gate, stand two marble sarcophagi, containing the remains of Washington and his wife. Over the vault door is this inscription:—"I am the Resurrection and the Life. He that believeth in Me, though he were dead, yet shall he live."

The family of Washington has been traced back to the Twelfth Century, when it had an estate in the county of Durham, England, and its founder, William de Hertburn, is recorded in the "Bolden Book" as transferring his residence to the village of Wessyngton and changing his name to de Wessyngton, from which the modern name of Washington is derived. George, eldest son of Augustine Washington and his wife Mary Ball, was born on the 22d of February, 1732, in Westmoreland Co., Va. The house was destroyed by fire a few years afterward; but one of the chimneys is still standing, and a stone with a suitable inscription was erected on the spot in 1815. It is now properly enclosed and belongs to the State of Virginia.

He married Mrs. Martha Custis, widow of John Parke Custis, Jan. 17th, 1759. Soon after he moved to Mount Vernon, where he resided until his death, which occurred on Saturday night, Dec. 14th, 1799. The sentiment commonly quoted in reference to him—"first in war, first in peace and first in the hearts of his countrymen"—is from the resolutions adopted on his death by the House of Representatives, which were drawn up by Gen. Henry Lee, a member from Virginia.

Heretofore the anniversary of the birth of Washington has not been observed with any regularity, and seldom with proper demonstrations of respect and gratitude. But public opinion seems setting strongly toward the conclusion that the 22d of February should be made a legal holiday and publicly celebrated every year. No nation is so poor in holidays as ours; while few have so many events in their history so well worthy of commemoration as the birth of the immortal Washington, the achievement of our independence, the emancipation of three million slaves and the triumph of the instinct of nationality over the heresy of secession.

It would be difficult to tell the simplest of our readers anything new about Washington. Everything pertaining to his life has been eagerly read, from the story of the hatchet in the primer to Irving's elaborate biography. He has been heard of in every land and talked of in every tongue. He is one of the few characters in history concerning whom there is no detraction from the general praise. Frenchmen grow enthusiastic at mention of his name; but Englishmen, from the defeat of whose armies sprang his military reputation, are generally silent. We believe but one British poet, Byron, ever mentioned him in verse. The fact, however, will not seriously damage his chances of immortality. Biographies, statues and pictures of Washington have been multiplied beyond enumeration; almost every State in the Union has a town or county of Washington; his portrait is the most familiar of any in American homes; and in some neighborhoods every fifth boy is christened after him on principle.

THE MOUNT OF OLIVES.

Friend Moore:—In the Rural of the 19th inst., you give us an engraving of the Mount of Olives, followed by some very interesting historical facts, "which have rendered the Mount of Olives one of the most (if not the most,) sacred spots on the face of the earth." As a sequel to your article, I here quote a short sketch from a "Book of Travels," by Lamartine, the French poet and historian, who visited the Holy Land thirty years ago. He says:

"Not far from the cave of Gethsemane there is a little spot of earth still shaded by seven olive trees, which popular tradition designates as the trees under which Jesus laid down and wept. These olive trees really bear on their trunks and enormous roots the date of eighteen hundred years which have passed since that memorable night. These trunks are immense, and are formed like those of all other very old olive trees, a great number of stems which seem bound together and incorporated under the same bark, thus forming an assemblage of united pillars. Their branches are almost withered, but they still bear some olives. * * * I have visited every country of the globe where olive trees grow. They live for ages; and I have never yet seen any so large as these, though planted in a rocky and arid soil. I have seen on the summit of Mount Lebanon, the cedars said to have been Solomon's. This is by no means impossible. Nature has given to certain of its vegetable productions more duration than to empires; certain oak trees have seen many dynasties pass away; and the acorn we tread under our feet, the olive stone I roll between my fingers, and the cedar cone that is swept by the wind, may reproduce, may flourish and cover the ground with shade, when hundreds of generations which may come after us will have given back to the earth that handful of dust that they alternately have borrowed from it."

According to Biblical chronology, Solomon lived about one thousand years before the birth of Christ. Probably in Solomon's time these cedars were large and old trees. If so, they are now more than 3,000 years old—having outlived more than one hundred generations of men.

Warner, N. H., Jan. 24, 1867. Levi Bartlett.

JOHN O'GROAT AND HIS HOUSE.

In the reign of James IV. of Scotland, three brothers, Malcolm, Gavin, and John O'Groat, natives of Holland, came to the coast of Caithness, with a letter in Latin from that monarch, recommending them to the protection and countenance of his subjects thereabout. They got possession of a large district of land, and in process of time multiplied and prospered until they numbered eight different proprietors by the name of Groat. On one of the annual dinners instituted to commemorate their arrival at Caithness, a dispute arose as to the right of precedence in taking the door and the head of the table. This waxed very serious, and threatened to break up the annual gatherings. But the wisdom and virtue of John prevented this rupture. He made a touching speech to them, soothing their angry spirits with an appeal to the common and precious memories of their native land, and to all their joint experiences in this. He entreated them to return to their homes quietly, and he would remedy the current difficulty at the next meeting. Won by his kindly spirit and words, they complied with his request. In the interval, John built a house expressly for the purpose, of an octagonal form, with eight doors and windows. He then placed a table of oak, of the same shape, in the middle, and when the next meeting took place, he desired each head of the different Groat families to enter at his own door, and sit at the head of his own table. This happy and ingenious plan restored good feeling and a pleasant footing to the sensitive families, and gave to the good Dutchman's name an interest which it will carry with it forever.—*Elihu Burritt.*

A Cloud of Locusts.—A letter from Tenez, in Algeria, says:—"I was walking with a friend in the lower part of the town, when, at about two in the afternoon, we perceived what appeared to be a thick mist coming rapidly upon us, which we took for a flock of birds of passage. But hardly five minutes had elapsed when we found ourselves enveloped in the cloud. It might have been about one kilometer (five-eighths of a mile) in width by six in length, and was from forty-six to seventy feet in thickness. It was formed not by birds but by locusts of passage, of the color of wine lees and of great size. They continued their course from the west to the east, passing behind Cape Tenez, from which point they turned towards the north, driven doubtless by the south wind, which has for several days past been blowing violently."

Smoking Cars Needed.—The English papers are discussing the morals, etiquette, and legality of smoking in railroad carriages. A case recently came into court from the Southwestern Railway, in which one gentleman sued another for knocking his cigar out of his mouth. The jury found for the defendant. On a motion for a new trial, the Lord Chief Justice is reported to have said that it is a very serious question whether, when a smoker has been requested by his fellow passengers to cease smoking, and has refused to do so, they are not entitled to take the cigar from him. His lordship is further reported to have suggested that his blowing the smoke of his cigar in the face of a fellow passenger might be considered an assault.

China.—A country where the roses have no fragrance and the women no petticoats; where a laborer has no Sabbath and the magistrate no sense of honor; where the roads bear no vehicles and the ships no keels; where old men fly kites; where the needle points to the south, and the sign of being puzzled is to scratch the antipodes of the head; where the place of honor is on the left hand and the seat of intellect is in the stomach; where to take off your hat is an insolent gesture, and to wear white garments is to put yourself in mourning; which has a literature without an alphabet, and language without grammar.

THE TOMB OF WASHINGTON, AT MOUNT VERNON.

Reading for the Young.

Written for Moore's Rural New-Yorker.

A BRAVE YOUTH.

Not long ago there might have been seen a lad of perhaps ten years old, sitting in a clump of bushes, on the bank of the Mississippi River, fishing in an eddy, which was formed by a ledge of smooth-faced rocks, projecting out into the channel a short distance above him. As he sat carelessly holding his rod, and looking dreamily into the waters, he was startled by the sound of the footsteps of a small child, who had wandered, unnoticed by its mother, from the door of a little cottage, a short distance from the river, and was now walking along the rocks by the eddy. The youth jumped up, parted the bushes that hid the child from his view and looked out, when he saw the child standing on the edge of the rocks and looking over into the swift running waters below. "O, Frankie, come away!" he passionately pleaded; for he knew that a misstep, or a slip of the child's feet, and he would fall into the swift waters, and be carried far out into the channel, where no human aid could save him from a watery grave. But his plea only served to make the matter worse. The child, being startled by the voice so near him, turned around, tottled backwards, and, with a frightened cry, fell into the eddy.

The boy was not the only one who heard that cry. No! The mother heard it, and guessed the meaning in an instant. Running out of the house to the river, she saw the child's skirts just as it disappeared beneath the water. "God save my child!" she cried, and sunk helplessly to the earth. Not so with the brave youth. His cheek paled for an instant; but, quickly regaining his presence of mind, he hurriedly ran to the spot where the child had fallen into the water. Nor did he stop at the edge of the rocks, but as he caught sight of the child just rising to the surface, he plunged in to rescue it or perish in the endeavor. For a moment he was under, then rising he struck out toward the child, boldly buffeting the boiling waters that threatened to overpower him. Just as the child was being swept into the outward running current of the eddy, he lunged forward to make the final effort, knowing that when once in that current all his efforts could not save it. He was successful. Catching the child with one hand, he turned his head toward the shore.

Oh! that was a hard trial of strength, between that boy and the whirling, hissing waters. But at last he emerged, pale and exhausted; from the water, and gave the child to the almost frantic mother. "God bless you! You have saved our child!" she said, clasping it to her bosom. A glow of pride flashed across his youthful brow, when he saw the child still lived.

That night, when the father came home from his daily labor, the wife, with mingled tears of joy and grief in her eyes, told him how the boy had saved their child; and they both knelt down and prayed long and earnestly for God to bless that noble-hearted youth, who risked his own life that he might save that of their little one.

Again may be heard that pattering of little feet; not upon the rocks by the river's side, but in its cottage home, and that little voice, which was so well nigh hushed in death, still cheers its fond parents with its prattling music.

And again may be seen that brave youth, with fishing-rod in hand, sitting among the bushes by the eddy, in whose black waters he never looks but with a shudder as he thinks what might have been! Effie L.

Alma, Wis., August, 1866.

WORDS OF THE WISE.

Lord Bacon has said so many wise things, that we can hardly dip into his works at any place without finding something that will repay the deepest attention. We have gathered a few sentences from him about money, love for it, and its influence. Here they are:

"Alexander sent to Phocion a great present of money. Phocion said to the messenger, 'Why doth the King send to me and no one else?' The messenger answered, 'Because he takes you to be the only good man in Athens.' Phocion replied, 'If he thinks so, pray let him suffer me to be so still.'"

"Chilon said 'That the gold was tried with the touchstone, and the men with gold.'"

"He that defers his charity till he is dead, is, if a man weighs it rightly, rather liberal of another man's than of his own."

"The tears of an heir are laughter under a vizor."

"The coward calls himself a wary man; and the miser says he is frugal."

The following apothegms have more than a passing significance. The first hits the politic preachers hard; the last is worth its weight in gold:

"There was a politic sermon that had no dignity in it, that was preached before the King. The King, as he came forth, said to Bishop Andrew, 'Call you this a sermon?' The Bishop answered, 'And it please your Majesty, by a charitable construction, it may be a sermon.'"

"Solon compared the people unto the sea, and orators to the winds; for that the sea would be calm and quiet, if the winds did not trouble it."

Temperance Best for Travelers.—Bruce, the celebrated African traveler, in giving advice to strangers about to visit "the putrid climates of Lower Arabia, Abyssinia, Sennaar, and Egypt itself," says:—"I lay down, as a positive rule of health, that spirits and all fermented liquors should be regarded as poisonous; and for fear of temptation, not so much as to be carried along with you, unless for outward application. Spring or running water, if you can find it, is to be your only drink."

LOOK HERE, FRIENDS!

THERE IS YET TIME

To Form Clubs and Secure Prizes!

Read the Rural's Premium List, *(which is promptly sent free to all applicants,) and you will see it is the* **MOST LIBERAL** *ever offered by a Publisher.*

☞ For a list of Ten NEW Subscribers, at club rate, ($2.50 each,) or Seven at $3 each, you can have either a *Photograph Album* or a *Union Gold Pen*, price $5.

☞ For Fifteen NEW Subscribers, at club rate, two bound volumes of the RURAL (cash price $8,) or $7 in books from our list, published in the RURAL.

☞ For Twenty NEW Subscribers at club rate, (or ten new at $3 each,) a copy of *Webster's Illustrated Unabridged Dictionary*, lowest cash price $12.

☞ For Thirty Subscribers (30 of them being NEW,) at club rate, a heavy *Silver Plated Castor*, cash price $15; *or*, a *Field Croquet Set*, price $15—*or*, a *Library* worth $15

☞ For Forty Subscribers (30 of them being NEW,) at club rate, a *Silver Watch*—Hunting-cased, Full-jeweled and Warranted—cash price at least $25.

☞ For Fifty Subscribers (forty being NEW) at club rate, a WHEELER & WILSON SEWING MACHINE, Cash Price $55—or, the same premium for only Thirty Subscribers (20 of them being new) at $3 each!

. (For other Premiums, larger and smaller than above, see List.)

Now's your Time to form a Club and make it Pay. We can still supply back numbers (from Jan. 5,) so that all may have the volume complete, with Title Page, Index, &c. If you want large Show-Bills, Specimen Numbers, &c., we will send them free.

☞ ***Look over our Premium List, and then "pitch in" and strike us with a Club — which will secure you a Valuable Return.***

Back No's of this Vol. can still be supplied.

NEWS DEPARTMENT.

ROCHESTER, N. Y., FEBRUARY 23, 1867.

OUR ADVERTISING RATES.—Hereafter the price of advertising on the last page of the RURAL NEW-YORKER will be Seventy-Five Cents a Line, each insertion. The price for inside pages will continue at Fifty Cents a Line for advertising, and One Dollar a Line for Special Notices, until otherwise announced.

NEWS OF THE WEEK.

From Washington.

THE House of Representatives has passed, by a vote of 109 to 55, Mr. Stevens' bill for the establishment of military governments in the Southern States.

Mr. Schenck, of the Military Committee, reported in the House the new bounty bill. It is substantially the same as that passed by the House last summer but not acted upon by the Senate, with two differences, one providing for cases of lost discharges and one made necessary by the allowance of additional bounty made under the act of July 28th, 1866.

Mr. S. said this bill proposed to a certain extent to equalize the bounties, whereas the act of July 28th, 1866, only gave additional bounties to all soldiers. It was impracticable in the present condition of the Treasury, to bring the bounties of all soldiers up to the standard already paid, some soldiers having received as high as $1,200 to $1,500; but the first expectation of the soldier might be met by establishing some standard up to which all bounties should be brought. The standard adopted by the Committee on Military Affairs, which met the approval of the House last session, was to secure to each soldier as much as $100 per year bounty. The bill was not to give bounty to those who had received much, but to those who had received little or nothing.

Mr. Rollins moved to amend by striking out of the second section the clauses making deductions for local bounties, which was rejected—yeas 74, nays 85—the vote being sectional, not political. The western members voted solidly against it, and the eastern members went generally for it.

The bill was finally passed by a vote of 95 to 68.

The House refuses to concur in the Senate amendments to the Bankrupt bill.

The Commissioner of Agriculture is in receipt of a letter from a prominent citizen of Virginia, who states that after due inquiry he has ascertained that the cotton crop estimate of 1,758,000 bales, four hundred pounds each, of the Agricultural Department was not too large, but that it will probably reach 2,000,000 bales.

A Washington dispatch of the 15th, says Hon. G. M. Chilicott, delegate from the Territory, and member of Congress elect from the State of Colorado, has arrived here direct from Denver City. He says the feeling there in favor of the passage of the bill for the admission of that State over the veto is very general, and says that there is no doubt of the ratification of the fundamental principle of admission by the Legislature; that there will be a ready compliance with its requirements by the people, and that the emigration to the Territory is very large, and there can be no reasonable doubt that before the end of the year the population of Colorado will be over one hundred thousand. He further says that the rapid approach of the two branches of the Pacific Railroad has infused new life into almost every interest in the State.

Mr. Davis has moved in the Senate a curious amendment to Mr. Wade's one term bill. It provides that each State shall, on the first Monday in January preceding the expiration of the President's term, nominate to Congress one of its citizens for the office of President. The two houses shall then meet and proceed to elect from these candidates, dropping the lowest on each ballot; and the person elected shall not be eligible for re-election.

The Secretary of War has decided that every claimant for bounty who enlisted for three years, but was sooner discharged, shall be regarded as having served the full time and entitled to the additional bounty under the act of July 28, 1866.

Reform in England.

A DISPATCH from London, dated Feb. 12th, says of the reform demonstration:

There were 20,000 people present in the procession, and the streets were lined with more than 200,000 spectators. A hundred mounted pioneers, dressed as cavalry, headed the procession. The best order was maintained during the march. The day was bright and full of sunshine, and was in striking contrast with the day on which the Queen's procession took place. All London seemed to be out doors; flags and banners were everywhere displayed; the American, French and Italian flags were carried in the procession. During the march the bands played "Yankee Doodle," the "Marseillaise," "John Brown," and the "Garibaldi Hymn."

The Prince of Wales and Prince Alfred observed the display from the United Service Club, but their presence elicited no cheers. A superb ovation took place at the American Embassy, and all the men in the procession took off their hats as they passed. The following mottoes, which were liberally displayed on their banners, indicate the sentiments of the people: "No surrender," "Liberty, Equality, Fraternity," "Suffrage," "Serfdom is infamous," "The voice of the people cannot be opposed with safety," "Taxation without representation is tyranny," "Liberty to those who dare demand it," "Trust God, but keep your powder dry." The procession terminated its march at Agricultural Hall, where an immense meeting was held. Thirty thousand people were present. A letter was read from John Stuart Mill, M. P. The O'Donoughue, Mr. Potter and Mr. Taylor, members of Parliament, made speeches. Resolutions were passed denouncing the Derby government and demanding manhood suffrage.

A Fenian riot was expected at Chester; but no serious disturbance took place.

From the Plains.

THE troubles with the Indians seem likely to continue for some time yet. The editor of the Salt Lake Vidette states that at Dawner's station he saw seven thousand Indians who had met other tribes to decide upon war or peace. One old chief who appeared friendly told the coach driver if he wanted to save his life he had better leave the line before the grass was grown. A lady was told at one of the stations by one of the principal chiefs that he would have her for his squaw before long.

The Sioux have made a proposition to guarantee the safety of travel through their country, and also of the frontier settlements, provided the Government will authorize the organization of not less than 250 men belonging to their band, under an officer satisfactory to themselves. They fix the compensation at $60 per month and rations for themselves, families and horses. They will furnish their own arms, ammunition, horses, transportation, &c.

Recent Fires.

DURING the past two weeks fires have occurred at the following places, with losses indicated by the figures annexed:—Lexington, Ky., Baptist Church, $15,000; New York, $70,000, $10,000, $50,000, $30,000; Marblehead, Mass., including Baptist Church, $150,000; Columbus, O., no estimate; Ogdensburg, N. Y., $250,000; Elmira, $40,000; Baltimore, $50,000; Balize, La., the whole town, $60,000; Mobile, $100,000, and $800,000, a whole square; St. Louis, $90,000; Baltimore, $40,000; Philadelphia, $20,000; Chicago, $40,000; Cincinnati, $35,000; New York, $1,450,000; Rutland, Vt., $7,000.

Floods.

DISPATCHES of a recent date, report floods in various parts of the country, in some places accompanied with serious results.

At Aurora, Ill., the island or lower part of the city was overflowed by the Fox river, covering the first floor of the shops and business houses, and compelling families to leave their dwellings.

At Dakota, Iowa, the cellars were filled. At Dyersville, Iowa, the long bridge and mill dam are swept away, and the loss is heavy.

At Waterloo, Cedar Falls and Iowa Falls the rivers are on the rampage and much destruction is feared.

From Albany.

THE Senate has passed the bill to facilitate the construction of the Plattsburg and Whitehall Railroad. Also, the bill to prohibit the employment by corporations conveying passengers for hire of persons who use intoxicating liquors as a beverage. Also, the amendatory act for prevention of the spread of rinderpest.

The bill amending the Central Railroad law, giving equal facilities to express or freight companies, has passed both houses of the Legislature.

From Canada.

THE present strength of the volunteer forces in Canada amounts to 63,500 men, including 22 troops of cavalry and 8 batteries of artillery. The provincial gunboats now in winter quarters are to be immediately made efficient for service on the lakes.

THE winner of the ten thousand dollar greenback prize in New York is a poor man, John F. McLaughlin, about 60 years of age. He had been in the Government employ as saddler for forty years, and had to give up work in consequence of a severe attack of paralysis. He had religious scruples about buying a ticket, but his wife overcame them.

THE decision of the Court of Claims at Washington in the case of allowance for servants to officers of the army from the first of May, 1864, to the 3d of March, 1865, entitles each officer who served during that period, to $40 extra for each servant employed, being the differences per month between $11 and $48, the amount paid and the amount which should have been paid.

Foreign News—By Telegraph.

PARIS, Feb. 14.—The Emperor Napoleon in his speech before the Corps Legislatif on the assembling of that body said:—Serious events have happened in Europe, almost fulfilling the great Napoleon's idea to unite all the great homogeneous nations hitherto separated and which is the only possible balance of power in Europe. German and Italian events have paved the way to it—their success cannot disturb France. I stood aloof and helped the peace which Prussia and Italy made without dismembering Austria. France was just and neutral.

In another part of the globe we have been obliged to employ force to redress legitimate grievances, and we have endeavored to raise an ancient empire. The happy results at first obtained were compromised by an inauspicious concurrence of circumstances. The guiding idea of the Mexican expedition was an elevated one to regenerate a people and implant among them ideas of order and progress; to open vast outlets to our commerce and leave the recognition of services rendered civilization to mark our path.

Such was my desire and yours; but as soon as the extent of our sacrifices appeared to exceed the interests which had called us across the ocean, I immediately determined upon the recall of our army corps, that the Government of the United States might comprehend that want of conciliation had embittered relations which, for the welfare of both countries, should remain friendly.

The Emperor then proceeds to say that the great powers ought to act in concert to satisfy the Christians, protect the rights of the Porte, and prevent complications. The Rome treaty of September has been executed, whereby the Government of the Pope has been placed in a new phase, and he is sustained by his own strength, and the veneration of the great powers for the head of the Church. Europe will sustain his temporal power against demagogues.

Our relations with England are intimate, and both the powers agree on all great questions.

The perpetuation of Austria is necessary to the balance of power. The Emperor says he is certain that the peace of the world is not to be disturbed; is sure of the present and confident of the future. I have fulfilled your wishes in regard to the developments of our institutions upon a liberal scale. France will use her new rights for which she is respected abroad; but, the conditions being changed, she must increase her defences. The army bill has been so drawn as to lighten the burden in times of peace and to increase the resources in times of war.

LONDON, Feb. 15.—The wires in the insurrectionary districts have been cut in all directions, and the meagre news received from that quarter is suppressed by the authorities for prudential reasons.

A large Fenian party have been surrounded by national troops in Toomies' Wood. The chances for escape look exceedingly small. The band of eight hundred which retreated to the hills near Killarney is still at large. The uprising is thus far confined to Kerry and Cork counties, and it is not believed the trouble will spread further.

LONDON, Feb. 15—Noon.—The Government stated to Parliament to-day that Col. Horseford's force was altogether too small to follow the armed band of Fenians into Toomies' Wood, but that the Colonel had already hopes of surrounding the insurgents and preventing their escape. The authorities in Ireland have assured the British Government that the present rising is totally stopped.

LONDON, Feb. 16.—Ireland is entirely quiet. Chief organizer Stephens is reported there, but the danger seems past. Toomies' Wood, where the Fenians took refuge when closely pressed, was scoured by British troops and insurrectionary bands dispersed. The Government, however, will immediately send more ships and troops to Ireland.

The county of Kerry has been proclaimed in a state of siege.

It is now said that Col. O'Conners is none other than Stephens himself.

BERLIN, Feb. 16.—At the recent elections in Prussia the Liberals were triumphant. No less than ten districts returned Count Von Bismarck as their representative.

LONDON, Feb. 16—Evening.—A terrible earthquake has occurred in the Island of Cephalona, on the western coast of Greece. Every town in the island is in ruins. The loss of human life and property was very great.

LONDON, Feb. 17.—It is now considered certain that the determined resistance of the Cretans and the spirit of concession recently shown by the Turkish Government, will result in the complete independence of the Island of Candia.

LONDON, Feb. 18—Noon.—Ireland is perfectly tranquil. A small number of rebels concealed in the woods are endeavoring to make their way to the coast, but the national troops have been so disposed that escape is thought to be impossible. Troops have been sent to Malahide, a watering place in Dublin county, Ireland, in the hope of overhauling Stephens, the C. O. I. R., who is reported and believed to be in that neighborhood.

LIVERPOOL, Feb. 15—Noon.—The cotton market opens dull, and prices are quoted at a decline. Sales to-day not likely to exceed 8,000 bales. Middling uplands quoted at 14d. and middling Orleans at 14½d. Advices from Manchester unfavorable. The market in that city dull and inactive, and prices ruling down.

The market for breadstuffs is generally quiet and firm. Western corn quiet at 33s. 3d. per qr.

The provision market generally firm. Lard has advanced. Market for produce very firm.

LONDON, Feb. 16—Noon.—Consols, for money, 91. Erie, 38½. United States 5-20's, 72½. Illinois Central, 78½, extra dividend.

FORTY-FIVE cents will get you, in London, a copper plate with your name engraved on it, fifty cards, and a handsome card-case.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Feb. 19, 1867.

THERE is little change to notice in financial affairs. Money matters in this locality, at the East, and in the large commercial towns at the West, remain much as heretofore noted. Bankers are watching with considerable interest the bills introduced in the House of Representatives, at Washington, by Messrs. Hooper and Randall. It is so near the close of the present session that any important financial measures will hardly be perfected. The currency questions will of course be taken up by the next Congress, which meets on the 4th of March.

The Government offers to pay express charges, both ways, to parties who desire to convert their August 7-30s to new 5-20s, provided they are sent on before the last of March.

The indebtedness of the Government maturing this year is larger than has been generally supposed. It is in the aggregate $312,107,620. The Government has also the option of paying off something over five hundred millions of 5-20s. It is not expected, however, that the Secretary of the Treasury will see his way clear to retire any considerable portion of these long bonds the present year.

The bill to abolish the usury laws in Maine has been defeated. In Rhode Island there are no usury laws. Contracts, where no rate is specified, must be settled at 6 per cent.

There is now a fair prospect that Congress will pass the bankrupt bill the present session.

Senator Sherman's bill, which passed the Senate last week, provides for the funding of the compound interest notes in three per cent. certificates, not more than $100,000,000 of which shall be outstanding at any one time.

The following is a correct statement of the whole amount of compound interest notes yet outstanding, and also of the proportion which falls due in 1867:

	Whole amount.	Falling due 1867.
Principal	$143,061,640	$99,665,000
Interest	27,761,921	19,340,122
Total	$170,826,561	$119,005,122

WOOL.—The sales in Boston were not as large last week as the week previous, but prices are unchanged and the market firm. The stock held by eastern dealers is becoming so much reduced that buyers must soon be looking to the region of production for a supply. This will create activity in the western markets. Through the winter wool has been cheaper at the consuming markets than in the localities where grown. Therefore manufacturers, when they go west to purchase, will be obliged to advance the price, or holders must moderate their views, in order to effect sales. Manufacturers will purchase sparingly unless at rates they think future prospects will warrant. If the proposed tariff prevails, holders can very reasonably expect an advance in prices. The New York market is firm and sales fair. Fine fleeces are still in special request.

HOPS.—No change in prices. The supply has recently increased. In this and the Eastern States it is estimated the supply not yet taken by consumers is about 14,000 bales. There are perhaps 1,000 bales at the West.

DRY GOODS TRADE.—The dry goods trade in New York and Boston, though improving a little as the season advances, is not what it usually is at this time of the year. Buyers generally have too many goods on their shelves at home, and have received too small a percentage of the pay for what they have sold to venture largely. Jobbers, knowing their condition, are not as urgent in pressing sales as last season. They are vastly more demonstrative when cash customers call.

COTTON.—The prices of cotton have been drooping for some days. Middlings at the close of last week sold for 23@31½c. The quantity of Sea Island raised is comparatively small, and sells at a much higher figure. Receipts of all descriptions, at all the ports of the United States, from Sept. 1, 1866 to latest mail dates, 1,147,000 bales. Exports from all the ports, from Sept. 1, 1866, 554,000 bales. Estimated stock on hand, 665,000 bales.

SHOE TRADE.—There are more buyers in the eastern market than heretofore, but they decline to pay higher rates. Strong houses are not pressing sales.

COAL.—The largest sale of coal ever made in New York at any one time, 200,000 tons, took place last Wednesday. The prices were as follows:—165,500 tons lump coal at $5; 37,050 tons steamer coal, $5,12½; 20,700 tons grate coal, $5,12½; 18,600 tons egg coal, $5,25; 14,250 tons stove coal, $5,40; 11,900 tons chestnut coal, $4,25. The entire lot was fresh mined Pittston coal. The above figures show a decline since the August sales of 87½ cts. to $1,02½ per ton.

WHEAT CROP.—An unusually large breadth of land was sown to wheat last fall, particularly at the West. In almost all localities, until within a few days, the ground has been covered with snow, which has been favorable. The weather for the next four weeks will have an important bearing upon the coming crop.

☞ For Price Lists address HOLTEN & ZUNDELL, Haverstraw, Rockland Co., N. Y.

GREAT INDUCEMENTS TO PURCHASE OR LEASE TERRITORY.

The inventor has obtained letters patent for two machines, known as

H. Ingraham's Curved Tooth, Double Pointed, Adjustable Thill and Wheel Cultivators or HORSE HOES.

Or The Young Challenger and The American Champion. These machines have been thoroughly tested and pronounced by competent judges to be the most systematically constructed, and the greatest labor-saving machines of their kind in use. They have been exhibited at the last State Fair, and at eight County Fairs in this State and in the State of Michigan, where they have been awarded the First Premium without an exception.

The important advantages these machines have over many others, are:—1st. The height and peculiar curve of the teeth, which prevents them from clogging, turns the soil lightly over, effectually covering and subduing the weeds. 2d. The side teeth can be adjusted at any angle to cut a wide or narrow furrow, so as to do much, little, or no hilling, and 3d. May be reversed so as to turn the soil to or from the row. 4th. The machine may be adjusted to the different width of rows. 5th. The thills can be adjusted to suit the size of the horse, and gague the depth of the furrow. 6th. They can be used with either steel or cast iron shares; the cast iron shares being chilled are durable. 7th. The shares are double pointed and reversible. 8th. The frames are put together without a mortice, and are cheaply made or repaired.

9th—And drilling there is none to do,
In moulding it is done for you;
As much hard labor is avoided,
The inventor claims to be rewarded.

For further particulars send for circular containing a full description of the machines, with cuts, testimonials, &c. H. INGRAHAM, P. O. address, Naples, Ont. Co., N Y

VALUABLE AND INSTRUCTIVE SMALL FRUIT CATALOGUE FOR SPRING OF 1867.—Tells how to plant, grow and market. How to make your own and *the best* quart boxes and shipping cases, with other valuable hints by which the garden beds or large field plantations can be made to yield *large* and *sure* crops. WANTED—A CORRESPONDENT in every town in the U. S. Liberal reward for services given and will not interfere with other business. Enclose stamp for particulars to
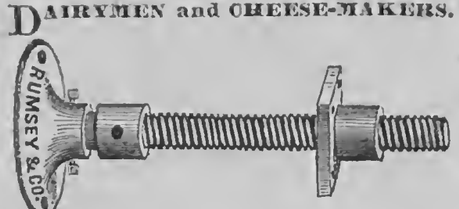
JAY M. CLARKE, Brooklyn, N. Y.

FOR SALE—A CHOICE FARM OF 384 acres, with nearly 300 acres in a high state of cultivation, and 110 acres of wheat on the ground, lying seven miles south of Battle Creek City; on the premises there is a good house, barn and orchard. Said land is unequaled either for white wheat, timothy or clover. Price $50 ₱ acre, with wheat on the ground, or $45 without wheat. For particulars inquire of
892-2t SIMEON BAKER, Battle Creek, Michigan.

FARM FOR SALE.—The undersigned offers for sale a valuable Grain Farm, which is also admirably adapted for Stock Raising, situated in the town of Clarence, Erie Co., N. Y., ½ mile west from Clarence Center, (a station on the Canandaigua and Niagara Falls, RR.,) containing 118 acres of land, 13 acres of which are timbered, the balance is in a high state of cultivation with a large two story frame house, a large bank barn, out houses, a fine Apple Orchard of about 100 Trees Grafted Fruit. Also a variety of other Fruit Trees such as Pears, Cherries, Grapes, &c. The farm is crossed about the center by Ransom's Creek, (a never failing stream,) and the Canandaigua and Niagara Falls, RR. For further particulars apply to ANDREW METZ, Clarence Center, Erie Co., N. Y.

DAIRYMEN and CHEESE-MAKERS.



We are making the best Cheese Press Screws in market, made from the best refined iron. Send for Circular of Sizes and Prices. Address.
RUMSEY & CO., Seneca Falls, N. Y.

FARM FOR SALE—CONSISTING OF 560 acres of rich tillable land, situated in the town of York, Livingston Co., N. Y., in a high state of cultivation. A large and commodious house, with all necessary outbuildings; orchard and garden, well stocked with fine variety of fruits. A large part of the purchase money may remain on bond and mortgage. Apply to or address DAVID PIFFARD on the premises.

CANE SEED.—Regular Sorgo—or the original Chinese Cane. LIBERIAN—a new and a very popular variety. Does not blow down. OOMSEEANA—sometimes called Otaheitan. Best for Sugar. NEEAZANA—or White Imphee, a short stout cane, stands up well and is generally liked.
The Cane from which the above Seed was produced was grown and the Seed harvested and cured under our immediate observation. The Seed is all true to the varieties designated, and absolutely free from admixture with base and worthless Canes.
The Cane from which the Seed was produced yielded from two to three hundred gallons of Syrup per acre.

PERUVIAN GUANO SUBSTITUTE!
BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,
SOLE PROPRIETORS & MANUFACTURERS,
DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A.

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

Especially recommended to the Growers of
STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND
ALL SMALL FURITS.

BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME,

Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.
IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.
Our NEW PAMPHLET, "HOW TO MAINTAIN THE FERTILITY OF AMERICAN FARMS,"—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.

PEACH TREES, GRAPE VINES, &c.—Large stock for sale at the Niagara Nurseries.
889-8t E. MOODY & SONS, Lockport, N. Y.

THE
GREAT AMERICAN
TEA COMPANY

Have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.
All goods sold are warranted to give satisfaction.

PRICE LIST.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.
Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

Great American Tea Company,
Nos. 31 and 33 VESEY-ST., cor. of CHURCH.
Post-Office Box, 5643 New York City.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.
The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery*."

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.
Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.
N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey-st., cor. of Church.
Post-Office Box, 5643 New York city.

[For manner of getting up Clubs see former editions of this paper.] 888-tf

For particulars see Illustrated and Descriptive Catalogues, price 10 cents. Spring Price List sent on application. Will exchange Grape Vines for Grape wood.
Address F. L. PERRY, Canandaigua, N. Y.

KEYES' EARLY PROLIFIC
TOMATO.

HOVEY & CO. have the pleasure of announcing that they have secured the whole stock of this new Tomato, the most distinct, remarkable and valuable variety ever produced, being

30 Days Earlier than any Tomato.

Plants dwarf, compact and vigorous, producing immense crops. Tomatoes of medium size, brilliant red, quite smooth, and free from ribs, perfectly solid, and of excellent flavor; they are produced in large clusters, of 10 to 20 each, with from 7 to 20 clusters on each plant, and the tomatoes ripen up together, so that the main crop is ripe and ready for the market 30 days before the Tilden or any other variety, when they command the highest price. The foliage is very large, entire, and has no smell. The Early Prolific is the most valuable Tomato ever raised. Specimens exhibited by Mr. Keyes at the Show of the Massachusetts Horticultural Society in September last, attracted great attention, and the Vegetable Committee in their annual report pronounced it "a new and distinct variety, worthy of trial."
We cultivated the Early Prolific, the past year, and from our personal knowledge of its great merits, purchased the stock of Mr. Keyes, who raised it in 1864. We can confidently recommend it, after a trial of 3 years, as the greatest acquisition yet made to this popular and valuable fruit.
The seeds are put up in sealed packets, and only to be had genuine of us. SINGLE PACKETS 25 CENTS. The trade supplied by the 100 or 1,000 at liberal rates.
☞ Address HOVEY & CO., Importers and Dealers in Seeds, 53 North Market St., Boston, Mass. 891-3t

THE TILDEN TOMATO!
GET THE GENUINE!
TRUE SEED WILL GIVE SATISFACTION!

Seldom, if ever has a new Fruit or Vegetable seeking public favor, met with so flattering a reception as has this Tomato. Hundreds in attesting to its value, declare it to be the only and truly *Perfected Tomato*. There seems to be no room for or want of an improvement; it possessing every quality which goes to make up a good Tomato. It is very prolific, early, fruit large, smooth, free from ribs or wrinkles, of excellent flavor, very solid, few seeded, and admits of being pared without waste as readily as an apple. Its keeping and carrying qualities are all any one can ask for. I take the utmost pains in securing seed, using none but the best specimens. No other varieties are grown on or within one mile of my place. Single packets, containing seed enough for 200 plants, sent post-paid, on receipt of 25 cts; 3 packets, 50c; 12 do, $2; 100 do, $12,50. Address
886-eotf HENRY TILDEN, Davenport, Iowa.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

Written for Moore's Rural New-Yorker.

A WINTER NIGHT.

BY ALVAH BEEMAN.

Tick! tick! tick!
The pendulum sways to and fro;
While out in the chilling blast, the snow
Is falling quick;
Its trooping drifts go past with a shout,
For old Winter is holding his polar rout;
While the heat of the embers is dying out.

T-i-c-k! t-i-c-k! t-i-c-k!
Slower and slower, while columns of sleet
In fury against the windows beat.
The ice grows thick
On the penciled panes, while under the door
And through the key-hole with screech and roar,
The snow is drifting upon the floor.

T—i—c—k! t—i—c—k! t—
Tis dead! the clock; and out on the street
I hear no patter of passing feet;
But shrub and tree
And gable and blind all groan aloud,
As the ice sweeps down from the flying cloud
And covers the earth with a spotless shroud.

Time, old Time,
Is silvering locks of the raven's glow,
And life's and passion's tides move slow
In their decline;
And I hear the storms of age aflow,
As they gather their forces, sure but slow,
To lay the vigor of manhood low.

Spring, sweet spring,
Shall come again, with sunshine and dew,
The trees and flowers and fruits to renew,
New life shall bring
To the earth, in the drops of the early rain,
As it falls on the winter-frozen grain;
And man, though dying, shall live again.

The Story Teller.

Written for Moore's Rural New-Yorker.

THE CONSUMPTIVE.

BY JOHN P. JACKSON.

It was a beautiful evening in the month of August, 1864, as the good steamer "City of Boston" left her pier in New York and proceeded on her voyage up the Sound. The decks were crowded with passengers of both sexes, many of whom were denizens of the busy metropolis, rushing away from the turmoil of the city for the purpose of spending a short vacation in the country. The day had been intensely hot, and the breeze on the upper deck was hailed with delight by all, and by none more than by young SMEATON, a clerk in a large Broadway establishment, who had determined to spend a few days among the hills of his native Vermont.

But the charms of nature were not the only attractions that drew young SMEATON homewards. He was a lover of the wild and romantic scenery of his native State, it is true; but the ever-present vision of a pair of dark, laughing eyes had as great an influence upon his mind as the thought of the pure air and ample exercise of country life.

Let us take a glance at him as he stands on the deck of the steamer, watching the receding spire of Old Trinity and smiling as he looks joyously forward to a happy meeting with the loved ones and the thought of a bright, auspicious future. His cheeks are of a marble paleness; but it is an unnatural hue, brought on by close application to business; and now as the breeze grows stronger and brushes back the long, black hair from his noble brow, the whole countenance impresses the gazer with a degree of respect and reverence which is seldom accorded to one so young.

Two hours passed quickly by in viewing the enchanting scenery of the Sound, when young SMEATON went down into the cabin, determined to secure a good night's rest. He had not been long in his berth, however, when he found that the heat, together with the breath of two hundred sleepers, was insupportable. Already he was in a high state of perspiration, and sleep was out of the question.

"Oh for a draught of pure air," he cried, as he tossed wildly in his cramped up bed; "and I will have it, too, as it is so easy to obtain."

In a moment he stood on the upper deck enjoying to his heart's content the delightful yet insidious night air. Little did he think when sitting in the front of the boat inhaling that night air, that he was receiving his death. As well might the hand of the assassin have plunged the dagger into his heart. Death would have been instantaneous then; but the victim would have been spared many a hopeless hope, and many a fruitless longing for health that could never be regained and youthful visions that could never be realized.

At last he began to feel chilly. He got up, but his limbs were quite stiff, and his tongue refused to speak except in inaudible whispers.

Towards noon on the following day he arrived home. But he was no longer the same ambitious youth who had set out from New York with such pleasant anticipations. He no longer felt a disposition to wander among the woods and valleys. "It is too chilly," he cried.

But chilly as it was, it did not deter him from going a few miles to see his beloved AMELIA; and in her presence he found a solace which cast a bright glow upon his whole nature. With her he seemed to feel new inspiration, new strength; but it was only transitory. The fire of love may live forever, but the inspiration which it gives is only momentary.

Day after day would bring him to his AMELIA; but the fact could no longer be concealed that he was rapidly sinking. There was no mistaking the lines of the consumption that gradually but surely drew its victim graveward. AMELIA saw it, and she hoped bravely against manifest destiny. She knew that she could not save him, but she determined to do all she could to cheer him in health.

Ten days had elapsed, and the date of young SMEATON's furlough had expired, and he began to prepare himself for his return to the city. His parents entreated in vain. He understood not his own position. AMELIA was almost heart-broken.

"Leave me, leave me?" she cried, "I will never leave him. If he goes, I go too. He is too near his death-bed now for me to desert him. I cannot live separated this distance and he so ill. No; I will go with him. I must be near him. Who is there to look after his comfort? None."

Two days after this, Mr. and Mrs. SMEATON were in New York. He returned to his office, and in a few days his condition appeared more favorable. A faithful wife AMELIA proved to him. But all her care and nursing was in vain. Gradually he grew worse, and the doctors advised, as a last resort, that he should try the bracing air of the Alleghanies; and before the following Sabbath he was enjoying the mountain breezes under the constant companionship of his loving wife.

It was Saturday. The morning had broke in all its autumn loveliness. The night had been cold, very cold; but the genial rays of the sun had soon dissipated the dew, and now nature appeared in her loveliest garb, the million-tinted hues of the Indian summer.

The inmates of the hotel—for such it was—were all astir, and the buggy of the village doctor stood at the open door. Young SMEATON had determined to go down to the village two miles away, and he thought that he felt quite strong enough to walk the entire distance, and as he had all the day before him, he would have no occasion to hurry.

"You had better jump in and ride down," said the good-natured doctor, "I am going to the village, and shall be back again by noon."

"No, thank you," he replied; "I have all the day on hand, and I think it will do me good to walk."

The doctor drove away, and shortly afterwards young SMEATON took the by-road which led to the village, accompanied for a short distance by his wife.

"Now, you will promise not to be long away, dearest," she said, imprinting a kiss upon his pale cheek.

"I shall be back in less than four hours. I have nothing to hinder me, and shall enjoy myself among these fields and woods which I shall have to cross; adieu,"—and with a kiss the now happy wife returned to the hotel, looking round every now and then to see what progress her husband was making towards his destination.

Four hours passed away and he had not returned, nor had the village doctor; and the lonely wife thought that he might wait for him and then both would return together. The afternoon passed slowly on to the anxious young wife, and as the moon began to rise over the distant hills the sound of horses' hoofs were heard in the distance, and in a few moments the doctor drove up alone.

"Where is he? where is my husband?" cried the almost frantic wife.

"Your husband! why, has he not arrived yet? He was detained in the village a few hours, but he started for home three hours ago."

"He must be lost. Perhaps he has missed his way. I must go and seek him."

"He told me he should walk home across the woods; he certainly cannot be long; but you shall not go alone."

The doctor gave his horse into the hands of a groom, and the two proceeded towards the path taken by the invalid in the morning. The night was piercing cold, and the dark clouds which now loomed across the horizon threatened a thunder storm. They had proceeded nearly a mile, and no trace of the lost one could be found, and at last the big drops came pattering down upon the leaves, and in a few moments the storm broke in all its fury, accompanied by loud roaring thunder, and bright and quick successive flashes of lightning.

There was evidently no use in trying to go further, and the two commenced to retrace their steps, the silence being broken alone by the violent sobbings of the young wife. The doctor ventured the opinion that he must have been invited to stay in the village all night. The conjecture was eagerly clutched at, and she became more calm. At last the hotel was reached. No tidings of the missing man had been heard, and when the doctor mentioned his ill success to the landlord, the latter, concurring in the opinion that he had lost his way, immediately sent out five or six men in search, but all returned after long and fruitless toil.

Let us now return to the invalid. When he started out in the bright morning he was full of hope, and, rejecting the proffered ride, thought that he was strong enough to bear the fatigue of such a short distance. He reached the village in good time and transacted his business with a little delay, and, after a rest, commenced to retrace his way homeward. He had not gone far, however, before he began to feel weary, and sitting down upon a sunny bank, he soon fell asleep. When he awoke the sun was well nigh set, and he made haste to reach the hotel. He had to pass through a dense wood where the path ran along the top of a high hill, and in the valley below leaped a little limpid stream. He reached the top of the hill, and had sat down on the stump of an old tree. It was now near dusk, and the air was rather damp; but he thought he should get home all the better after a little rest. Suddenly a gust of wind blew away his light summer hat and deposited it far in the valley below. Weak as he was, he managed to scramble down the almost precipitous bank, but his search was long and fruitless, and by the time that he gave up the task it was quite dark. In vain he attempted to regain the path. He could discern nothing but the glimmering stream, and he was continually running against the trunk of some forest monarch. It was in vain that he shouted for assistance. No one was within a mile of him. He was lost.

Tired of searching for the lost path, and overcome with fatigue, the poor invalid sank down exhausted. The moon had now become overcast, and the big rain drops began to fall. Creeping to the trunk of an old decaying elm, he sat down upon its roots, and wrapping his head in a newspaper which he found in his pocket, and resting against the trunk, in a few moments he dropped asleep, and was soon entirely oblivious of the raging storm that was going on overhead.

How long he slept he knew not. When he awoke he was drenched to the skin. With the greatest difficulty he managed to rise, and once more attempted to regain the path to the hotel. This time his efforts were rewarded with success; and before an hour had elapsed he was clasped in the arms of his wife, who had never ceased to watch for his coming.

But it was the final blow to his fast sinking constitution. It was seen that his end was not far distant, and the doctor shook his head mournfully as he turned away from the invalid's couch.

"Tell me the worst, doctor," cried the young wife. "I can bear it all. I know he cannot live long."

"Take him home. The home of his childhood may, perhaps, revive him for a while; and it is better that he should die surrounded by his friends than breathe his last among strangers here."

The wife could no longer bear the weight of her sorrows, and she sank down quite overcome by her emotion. She dare not tell him the sad news. Recovering her composure she advanced to where he was lying and asked him if he would not like to go home.

"Home! home!" he cried,—"yes, take me to my home. I know I cannot live many more days, and I would like once more to see my native hills."

He did go home. The following day he was in bed, never to rise again. Around him stood his parents and his faithful young wife.

"'Tis a short honeymoon for you, dearest," he cried, clasping his sobbing wife to his bosom, "but we shall have a brighter and a longer one there," pointing his finger upward.

The snow had commenced to fall early in the day, and now the earth was covered with its canopy of white.

"It is so chilly," he said, looking at the descending snow flakes.

His hands were cold, as if frozen, and in a few moments the spirit had fled.

Three days after, and a newly cut mound was seen in the village churchyard. The snow was still falling in large flakes, and the grave was soon covered with its winding-sheet. By its side stood one solitary mourner, upon whom the storm played unheeded. Her heart had gone with its love. She waited only to be called to the eternal home where her lover had gone, where she might enjoy a long and never-ending honeymoon, and where all would be joyous and happy.

Wit and Humor.

A BARGAIN.

Little Frank—"Great Cæsar, mother, what a big apple!"

Mother—"It's wicked, Franky, to say Great Cæsar. I've often reproved you for using this bad word, which you have learned from the boys in the street, but you keep on repeating it. Now I will tell you what I will do. I will give you five cents not to say 'Great Cæsar' any more."

"It's a bargain, mother," cried the little four year old, and the money was paid.

Two or three days afterward little Frank came running into the house from his play on the street, his eyes glistening and his cheeks red with excitement. "Mother, mother, I've learned a new word from the boys. It's 'Great Peter.' Give me five cents more, and I'll quit saying that, too."

"You have no children, madam?" said a partienlar proprietor of a quiet house, before letting a lady the best apartments. "They are in the cemetery." A tear was attempted on the part of the landlord, the lease was signed, and the next day the lady arrived with a bundle of babes. "I thought your children were—were—in the cemetery." "So they were yesterday, sir, placing a few flowers on the grave of our former landlord, who was nervous, and, to tell the truth, so irritable, that——" "I understand, madam—your children killed him."

"MARY, do you remember the text this morning?" "No, papa, I never can remember the text, I've such a bad memory." "Mary," said her mother, "did you notice Sarah Brown?" "Oh, yes. What a fright! She had on her last year's bonnet, done up, a pea-green silk, a black lace mantilla, brown gaiters, an imitation Honiton collar, a lava bracelet, her old car-drops, and such a fan!—oh, my! oh, my!" "Well, my dear, your memory is improving."

A MARVELOUS WOMAN.—A Lincolnshire paper apprises us that a "thoroughly domesticated Christian lady is requiring a re-engagement as housekeeper where one or more servants are kept. *She was eleven years in one position*, and has been accustomed to children. Good references. Address X."

TALLEYRAND died a few hours after having signed a formal recantation of the errors of his extraordinary life. "He died like a man who knew how to live!" said a lady. "After humbugging all this world, he ended by wishing to humbug the other," said M. de Blanemesnil.

A REAL estate agent informs the public that he has "a beautiful cottage in Westchester county for sale, containing ten rooms and eight acres of land."

Corner for the Young.

AN ENIGMA.

THE following ingenious and complicated enigma was originated by the late STEPHEN STANLEY of Elmira:

I AM a couplet of thirty-five letters,
My feet fast locked in mystery's fetters;
To solve me my parts must first be inspected,
And then to view my whole be subjected.

35, 22, 3—I limit nouns,
And define their bounds.
9, 10, 9, 18—A noisy, strutting warden,
Tint scratches in the garden.
9, 19, 11, 12, 7—Plagues at best—
The farmer's pest.
2, 31—Preceded by 9
I am made feline.
26, 10, 19, 4—I come with the light,
But am gone before night.
31, 10—Tho' in size diminutive,
I'm before the infinitive.
1, 17, 13, 16, 29, 6—A harbinger am I,
And rapidly I fly.
35, 22, 20—Tho' but a particle,
I'm a definite article.
23, 30, 12, 15—Daily visits I pay,
But neither night nor day.
34, 1, 21, 8—An adverb of time,
With a biped I rhyme.
6, 17, 32, 9, 3, 4, 23, 33—A downward motion I express.
What I am you sure can guess.
28, 19, 10, 14—I render assistance
To indicate distance.
22, 5, 32—A pronoun possessive
Of property expressive.
13, 10, 11, 33, 27—A place of rest
For bird, not beast.
35, 11—I fulfill my mission
As a preposition.
32, 21, 25, 13, 9, 22—Whatever I'm "took for,"
I mean to look for.
28, 11, 19—I am a preposition
Denoting transition.
1, 24, 33—A pronoun um I,
Which you can supply.
25, 11, 25, 32, 27—An article of food,
Both healthy and good.
My parts being scanned,
My whole will stand
A picture of sorry confusion;
But the figures below
A secret will show
Which will lead to a happy conclusion:
16, 29, 27, 3, 19, 4, 2, 34, 24, 10, 8, 11, 28
29, 20, 35, 34, 21, 13, 32,
12, 5, 29, 29, 19, 21, 15, 6, 34, 1, 20, 28, 3, 35, 34, 20,
13, 32.

ANSWERS TO ENIGMAS, &c., IN No. 890.

Answer to Miscellaneous Enigma:—An ounce of preventative is worth a pound of cure.

Answer to Anagram:
On the tree of life eternal,
Man, let all thy hope be staid,
Which alone, for ever vernal
Bears a leaf that shall not fade.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

The Publisher to the Public.

Back Numbers of this Volume (from Jan. 5,) can still be supplied,—so that those who desire them may yet secure all the numbers of the RURAL for 1867, and thus have the whole volume, complete for binding and reference, at the close of the year. Tell your neighbors of this, and especially chronic borrowers of the RURAL.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

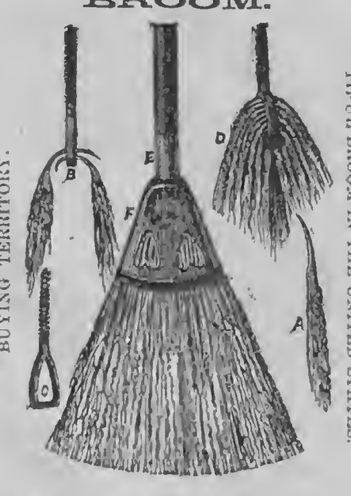
Additions to Clubs are always in order, whether in ones, twos, threes, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time, and we shall send from it for some weeks, unless directed otherwise. Please note.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

SILVER'S PATENT EXCELSIOR BROOM.

GREAT INDUCEMENTS OFFERED TO AGENTS AND FARMERS TO SELL IT WITHOUT BUYING TERRITORY.



HAS BEEN ACCEPTED FOR THE PARIS EXPOSITION AS BEING THE SIMPLEST, BEST AND MOST BEAUTIFUL BROOM IN THE UNITED STATES.

This celebrated broom has been before the public for one year, and has proved itself to be as represented, the cheapest, simplest, most beautiful, durable, light, and ELASTICE one in the United States. It has been awarded the first premium wherever exhibited, including the New York, Ohio, and Kentucky State Fairs of 1866, and is highly recommended by the leading journals and scientific men of the country, as the following unsolicited notices of the press and testimonials will show:

From The Scientific American.

Silver's method of constructing a broom makes a much better article than the old-fashioned one, for the shank is stiff and held fast, thus obtaining a spring or elasticity which is valued by house keepers.

The head F and ferrule E are made of polished sheet brass or German silver, are seamless, and will last for years.

From The American Agriculturist, after Three Months' Test.

SILVER'S PATENT BROOM.—This is a novelty, certainly. By means of a cap and screw the brush can be removed at any time. We have no broom-corn at hand to test the removal of the old brush and the putting in of new, but we do not see why it cannot be readily done by any one, and farmers thus raise a little plot of broom-corn and make their own brooms after buying a patent handle. The one we are using has a superior elasticity.

From the Boston Cultivator.

Everybody who sees it says it is perfection, and that it will soon supersede all others.

From a Report of the American Institute "Farmers' Club," in The New York Weekly Tribune.

After giving a full description of the Broom it said—A CHILD TEN YEARS OLD CAN MAKE A NEW BROOM IN TEN MINUTES.

EMPORIUM OF FASHION, No. 473 Broadway, N. Y.

MR. SILVERS:—The beauty and practical utility of your "Excelsior Broom-Head" are too self-evident to require commendation. I cordially indorse all you claim for it.
MME. DEMOREST.

From Prof. O. S. Fowler, the celebraied Phrenologist.

DEAR SIR:—In my judgment your broom embodies the very best sweeping instrument extant. You will save dollars to every cleanly family, and thousands per annum to our country by its introduction—in doing which you are public benefactors.

From E. P. Cooley, the noted Corn Broom and Brush Manufacturer, No. 291 Pearl St., N. Y.

Silver's is the only Patent Broom I have ever seen that is of any account. This patent, for simplicity, durability, beauty, elasticity and cheapness, seems perfection itself.

From Miles, Greenwood & Co., Cincinnati.

Having examined Silver's Patent Excelsior Broom Head, we have no hesitation in recommending it as being one of the most perfect we have seen.

THE ELASTICITY of this Broom is so great that it will wear twice as long, sweep with half the effort, AND DOES NOT WEAR OUT THE CARPET one-fourth as fast as the ordinary broom. It is fast becoming a universal favorite, and IS THE ONLY PATENT BROOM EQUALLY ADAPTED TO CITY AND COUNTRY, as the filled loops D will be supplied by all dealers at two-thirds the cost of the common broom.

The Brass Metallic parts Thread Loop or Ferrule sent by mail or express, pre-paid, for $1.50, or the complete Brass Head Broom by Express, pre-paid, for $2, with full instructions how to make your own Brooms.

☞ TO AGENTS.—We want an Agent in every County in the United States. We charge nothing for the right to sell, but let it stand on its own merits. All of our Agents are doing well. Mr. George A. Wellercil sold 1,100 in Athens County, Ohio, and expects to sell as many more in Morgan County. William Marvin made $24 in the first day's canvass in Ulster County, N. Y. A. Goodale, Agent for Orange County, N. Y., writes that he expects it will supersede all others in his County, as the ladies say they will use no other when the "SILVER'S" is to be procured.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HENRY S. RANDALL, LL. D.,

Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS,

Late Pres't N. Y. State Ag. Soc'y, Southern Cor. Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

LOCAL CLUB AGENTS.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

OVER a large portion of the territory in which the RURAL circulates, farming operations for the coming season will be commenced with great activity during the present month. The notes of preparation for the farmer's spring campaign are already sounding, and it behooves every one belonging to the Grand Army to gird himself for the work and not fall a laggard in the rear. The winter's rest has quickened his energy, recuperated his strength, and its leisure has enabled him to acquire knowledge and mature plans that will direct his toil to a larger and surer success. He must begin his work with Faith, and if he continues it with Perseverance and Skill, abundant harvests are the promised compensation.

Stock—Require increased and jealous care at this season. Straw and corn stalks will not meet the requirements of store cattle or sheep, at this time of year. Their food should be nutritious and plentiful—especially so with those nearing the period of maternity.

Milch Cows—Should have plenty of the best hay, and roots if possible. Corn and oats ground together are preferable to clear meal. It pays to feed well, as they not only give more profit for it during the spring, but also *much more during the summer*, for this generous spring feed. Cows should be carefully sheltered from storms and cold winds, and when the weather is severe tepid water should be given them to drink. Examine them, and all the stock, for lice, and if any are found, apply kerosene sparingly—too much will take off the hair.

Calves.—Raise all the best blooded hiefer calves; no stock will pay better.

Teams.—Exercise these daily, and increase their feed of grain. Fine cut hay, mixed with ground grain and wet, is greatly preferred by horses to dry hay and oats, and we think their taste in this a safe and profitable guide to follow. Horses should be well and regularly groomed; they need this care more while shedding their coats than at other times. Don't let them stand in the stable with their legs cased in dry mud.

Breeding Sows.—Give each one a separate pen; give plenty of fine bedding. A pole placed round the pen, ten inches above the floor, will prevent the mother from crushing the pigs between herself and the wall. There is little danger of her lying on them in other positions. If she inclines to devour her offspring, a dose of hard cider, or anything that will partially intoxicate her, is said to be a sure remedy. After she has pigged keep her as quiet as possible for a week, and feed very lightly. Overfeeding at this period has destroyed many a fine litter.

Poultry—Are decidedly musical this month, and generally "shell out" liberally. After eating freely of their products the next best use you can put them to is to hatch out a few early broods of chickens. The cocks will be prime to broil in harvest time, and the pullets will lay during next winter, if warmly housed and well fed.

Drains.—Look to the outlets of drains and see that they are clear. Make as many new drains as you can afford this spring. You can afford a good many if you have wet land. See that the surface drains in the wheat fields are clear, and cut sluices to carry away ponds of water which may collect thereon. There is one very important drain on your farm and that is the one to the barn-yard; perhaps it is wasting a great deal of manure.

The Wheat Field.—If your wheat was drilled and no grass seed was sown on it last fall, take a light harrow and pass over it in the direction of the drilled rows as soon as the ground is dry enough. Sow your grass and clover seed before the harrow, and you are sure of a "good catch." The drag breaks up the crust, thus admitting light and air to the roots of the plants, and also destroys May weeds. This course is practiced with the best results by many excellent farmers.

Repairs.—Fences may be extensively repaired this month. New ones can be made. Outbuildings and fences may be painted with cheap paints or washes. Repair all the tools, from the plow to the pitchfork; get plow-points, clevises, chains; overhaul and oil the harness; sharpen the harrow teeth—in short, *look ahead* and get everything in readiness, as far as possible, to meet each season's work.

Cellars.—We repeat our advice about cellars, given the first of the year, to clean them thoroughly and remove all unsound vegetables. Air them freely, and whitewash from top to bottom. Foul cellars are sources of serious disease.

THE GRASS LANDS.

WHAT can be done with the grass lands this spring to increase their yield of products and the consequent profit arising from them? Barn yard manure, unless very fine and thoroughly rotted, should not be applied in the spring, and most farmers, indeed, cannot afford to apply their barn yard manure to grass lands. The cultivated fields absorb all of this. Guano, if of the best quality, would greatly benefit meadows and pastures if applied early in the season; so will plaster, lime, ashes, and salt. Marl and muck, in many places, are useful.

The application of liquid manure, we think, would be a paying operation. In many places it can be cheaply made, and the product of meadows might be doubled by its timely use. Irrigation should be resorted to in all places where possible. Water is the cheapest and most effective fertilizer ever used on grass lands. Scarifying the sod will sometimes greatly increase the yield. A sharp-toothed drag will do this if thoroughly used. Don't neglect the grass lands; improve them by some means, for grass is the most profitable and important product of the American farmer.

RURAL FARMERS' CLUB.

Effect of Mixing Ashes and Plaster.

J. C. MCV., Scottsville, N. Y., writes us on this subject as follows:—"Mr. N. N. MARTIN, in your issue of Jan. 5th, 1867, tells us what crops and how much he raised from a seven-acre lot, in about the same number of years. Now, how does Mr. M. know whether it was plaster and ashes that made his seven-acre lot produce the amount of clover seed, oats, wheat, &c.? Have we any evidence that it produced any better than it would had he not used either? If he had sown one-fourth of his lot to ashes and plaster, one-fourth to plaster alone, one-fourth to ashes alone, and the other one-fourth without any fertilizer, he would know, and would be able to tell the readers of the RURAL something of value; but as it is it amounts to nothing. I claim that no person is able to answer any such question without an actual experiment, as I have described.

"I have no doubt that Mr. M. alludes to an article written by me in June last. I would say to Mr. M. that chemistry is a science, like that of figures, which will tell no lies; and just as sure as six and four are ten, just so sure the alkali will neutralize the acid, and by the union or combination a neutral salt will be formed (sulphate of potassa,) differing entirely from the acid and the alkali, and which has never been used as a fertilizer to any extent, to my knowledge. I know that Mr. M., in mixing his plaster and ashes, did actually destroy the plaster, or a large proportion of it, and also the potash in the ashes, and perhaps entirely. That is to say, had he put just enough ashes among his plaster to neutralize the acid in the plaster, it would be no more plaster or sulphate of lime, but ground limestone."

Pipe Wells—Again.

J. D. F. WOOLSTON thus answers, through the RURAL Farmers' Club, queries on the above subject:—"In reply to THOMAS HAZARD, Monroe Co., N. Y., in reference to pipe wells, I will say:

"1st. They will not work in quicksand unless you drive the pipe down below it; then I can see no reason why they will not. They will draw water with one air-chamber only 33½ feet, the same as any other suction pump. I think in his circumstances he might dig down to within 30 feet of the water and stone it up like a well, and then drive the pipe 30 feet lower, and use two air-chambers—one within 30 feet of the water, the other one 30 feet above. The air-chamber is where the valve and bucket work. Where the well is deep I would not use more that 1¼ inch pipe, and get a pump with a long lever.

"2d. I paid one dollar per foot for that size pipe, and paid for pump extra. They cost from $5 to $10.

"3d. I know of no manufactory where pipe wells are made. As I before stated, you take iron pipe, put in a pointed iron plug, and drill the lower end full of small holes to let in the water, (and this can be done at any machine shop,) drive down pipe, screw on a cast-iron pump, and you have a well.

"I have learned quite recently that in some localities where they find water near the surface which is poor, they drive the pipe down into the *water* a hundred feet or more until they find good water."

Hops—Horizontal vs. Pole Training.

A CORRESPONDENT writes us that the horizontal method of training hops with short stakes and strings is by far the cheapest of any now in use. He has ten acres trained in this manner, the poles being ten feet long. The disadvantages are that "I have to ride on horseback to train the vines which makes the work hard and tedious, and the work must be repeated every two or three days while the vines are running, or until the vines intermingle with one another, when they will be self-supporting, even if the strings break. But one can't make a hop vine run an inch around a twine horizontally. Last year, before picking, good judges estimated my crop at from eight to fifteen hundred pounds per acre, but when I came to harvest them I found the vines so thick and shaded that I got but little over six hundred pounds per acre. If I had had long poles, at a cost of twelve cents each, I should have got enough more to have paid for the poles, and would have had less work in training and harvesting. My pickers object to this kind of picking. I am poling my new yard, and would do so if the poles cost twenty cents each."

Horses Overreaching—Remedy.

A CORRESPONDENT says:—"Make the shoe its natural length, or a trifle longer, with the toe calk of the forward shoe high and the heel calk low. The hoof will then stand further forward and more removed from the stride of the hind foot, which, being shod with a low toe calk and high heel calk, will strike the ground before it reaches the fore foot. An interfering horse usually strikes with the inside of the hoof about two inches from the toe; therefore make the shoe straighter on the inside and rasp the hoof accordingly."

Do Oxen Sweat?

So queries a correspondent, adding:—"Animals that *loll* never sweat. The reason is, the opening of the mouth and protruding the tongue prevent perspiration." We *guess* our correspondent has never driven oxen when the mercury was up among the "nineties." He would have seen them sweat. He can easily test the theory that "the opening of the mouth and protrusion of the tongue prevent perspiration." Try it next July, and if the exercise be as ardent as the desire for knowledge there will be some "sweating."

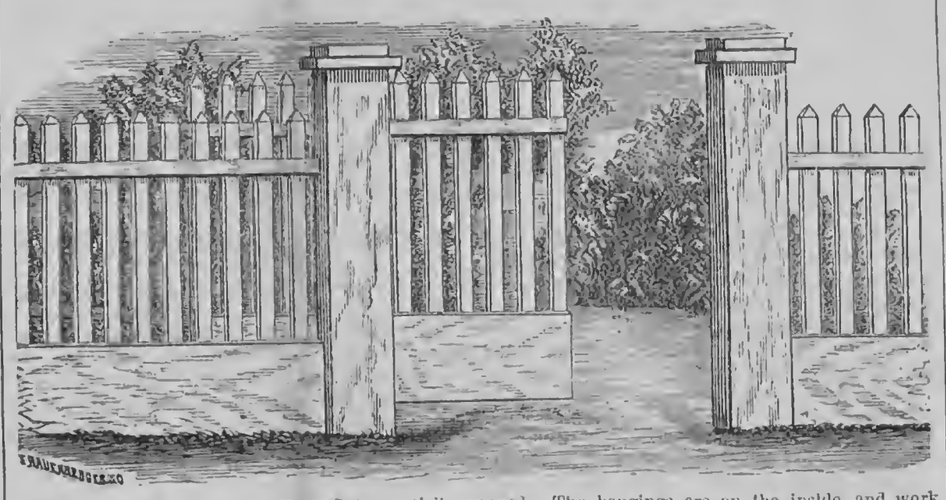
Arches for Boiling Sap.

"WHEEL BARROW," Erie Co., N. Y., sends us a description of his arch for setting a pan in which to boil sap, which he claims is the "best he ever saw." "The walls are twenty inches thick, the front eighteen inches, built up straight and smooth to within six inches of the pan. The walls then widen so as to allow one inch space between the sides of the pan and the arch. The pan is supported at the corners and in the middle on each side, the latter supports being raised one inch to allow for sagging. The top tier of brick draws in and closes upon the pan. The arch should be filled up to within four inches of the pan; height above the bar, for wood to rest on, fifteen inches. By this arrangement the hot air circulates all round the pan, keeping the whole of it boiling with the use of but little fuel."

Heading Off the Woodchucks.

"S. H. N.," Erie Co., N. Y., writes us that his method is to fill their holes with Canada thistles that have wilted half a day in the sun. "Of nine holes thus treated but one 'chuck' ever got out or in that I could discover, and then some three feet from the old hole. I filled this hole again, and that was the last of Mr. Woodchuck in my cornfield." So Canada thistles are good for something.

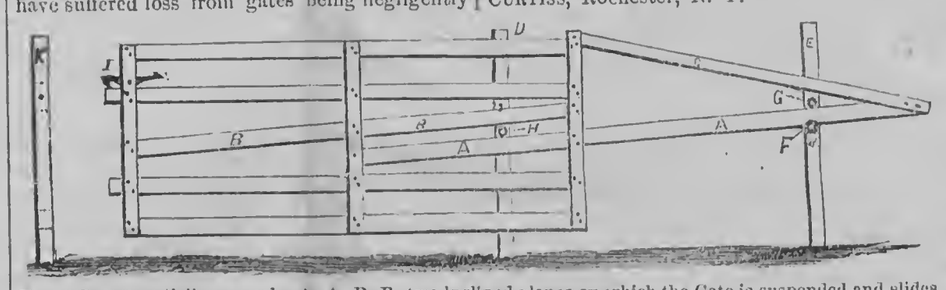
CURTISS' PATENT IMPROVED SELF-CLOSING YARD AND FARM GATE.



This is a front view of the Yard Gate, partially opened. The hangings are on the inside, and work substantially as represented in the Farm Gate.

WE have examined this gate—herewith illustrated—and it appears to us to possess the following advantages to commend it to the notice of owners of farms, village and city lots. It is a sliding gate and so attached to the posts as to avoid sagging them, consequently large and costly ones are not necessary. By using the principle of the inclined plane it is raised from the ground as it opens, thus clearing all obstructions, and it closes by its own weight when the force that opened it is removed. This is an advantage which will be appreciated by those who have suffered loss from gates being negligently left open. Its simplicity of construction renders it cheap and easily made by any one who can handle a saw and hammer. The inventor estimates the cost of materials for a common farm gate, including the rollers, &c., at 90 cents. It may be made of pickets or boards, and as expensive and ornamental as may be desired. The principle may also be applied to most gates already in use at slight expense, which fact greatly widens the usefulness of this invention.

For further information see advertisement in this paper, or address the inventor, GEO. G. CURTISS, Rochester, N. Y.



FARM GATE, partially opened. A, A, B, B, two inclined planes on which the Gate is suspended and slides. C, upper brace. F, G, H, pullies on which gate slides. I, double-acting latch.

THE AG'L PRESS AT THE SOUTH.

IT is refreshing to find the Southern Agricultural Press so astutely wise as to be unwearied in its endeavors to promote the industrial interests of the South at this time, when the political press there lends itself to encourage the worst passions of the people by a daily tirade against Yankees in general and the radical party at the North in particular, just as though a Yankee was not of their own flesh and blood, and that grumbling and vituperation would be as effective in conquering the selfishness of the ruling party as to live down its hostility by that quiet industry and economy which alone can make the South great and all-important to the North, and its own social prosperity truly respectable.

Mr. REDMOND of the Southern Cultivator at Athens, Ga., in an address before the Richmond Co. Ag. Society, says:—"I fully believe if we would only totally ignore that bitter curse of our people, party politics, and the too general, and (at the present time particularly) utterly profitless discussion of political questions,—if we would, instead, address ourselves earnestly and faithfully to the improvement of our lands and the development of our immense mineral resources, we should soon exhibit to the world a degree of success and material prosperity such as no nation has yet presented. But 'the gods help those who help themselves,' and if we sit down with folded hands, mourning over our 'political inequality,' or go about discussing the fanatical Congress, gloomily anticipating the speedy spoilation of the little yet left to us, all the advantages we really possess will avail us nothing, and we shall rapidly sink to that helpless condition, wished for only by our worst enemies."

Again, he says:—"If we would restore the scepter to our own once powerful, but temporarily dethroned 'King,' before it is snatched away by other hands, we must be up and doing. We must, by improved culture, abundant production and *superior quality*, endeavor to regain that position of supremacy in the commercial world which will enable us again to exact the tribute to our skill and industry which other States and nations have been heretofore reluctantly compelled to pay."

Mr. R. strongly advocates the employment of their long-tried servants, the freedmen and freedwomen, making it to their interest to be faithful and industrious by generous privileges and good wages. The Cultivator also endorses the following extract from another paper:—"There is a great deal of Southern writing on the subject of labor. Some advise to 'hang on to the negro;' others talk about 'a supply of labor from the toiling millions of Europe;' others want to procure 'intelligent labor,' while others look to the Coolies of China and Hindostan for relief; but no one talks of doing the work ourselves. The foreigners, the Coolies, are all very well in their way, but neither the one nor the other, nor all of them together, will supply the great void of labor while we ourselves continue to talk, grumble, loaf, and brag what we used to be. The stubborn truth of the matter is, that Southern men and women and their children have got to work, if they may reasonably expect to repair their shattered fortunes and render the 'land we love' other than a Jamaican or Haytien waste."

LXXVI.

To remove warts from cattle, anoint them once in three or four days with a mixture of equal parts of blue vitrol, lard and honey.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To CORRESPONDENTS.—Mr. RANDALL'S address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

ANNUAL FAIR OF THE N. Y. STATE SHEEP BREEDERS' AND WOOL GROWERS' ASSOCIATION.

AT AUBURN, MAY 8TH, 9TH, 10TH, 1867.

CLASSIFICATION.

PRIZES are offered on six classes of Sheep, as follows:

First Class—AMERICAN MERINOS.

Second Class—FINE MERINOS—yielding a wool adapted to the manufacture of fine broadcloths and other fabrics requiring a staple of equal quality.

Third Class—DELAINE MERINOS—yielding a wool adapted to the manufacture of delaines and similar fabrics—length of staple being a leading consideration, but in which neither extreme fineness of fiber, as required in the second class, nor great weight of fleece, as required in the first, are to be regarded as absolute essentials.

Fourth Class—LAMBS—of preceding classes.

Fifth Class—LONG WOOLED SHEEP—including the Leicesters, Cotswolds, Lincolns and other breeds and varieties usually comprised under that designation.

Sixth Class—MIDDLE WOOLED SHEEP—including Southdowns and other sheep usually so classed.

PRIZES.

Prizes of $30, $20 and $10, respectively, are offered in each of the above classes, except Fourth, for the first, second and third best Rams, two years old or over; same for the first, second and third best Yearling Rams; same for first, second and third best pen of 5 Ewes, two years old or over; same for first, second and third best pen of 5 Yearling Ewes.

Prizes (4th class) of $15, $10 and $5 are offered for the first, second and third best pen of five Lambs, without respect to sex.

A separate sweepstakes will be opened to competitors in each of the classes—excepting the 4th—the winners to receive the diploma of the Society. Ewes to compete in pens of five.

No sheep competing for prizes are required to be shorn, but the sum of $5 will be added to the prize received by any Ram, or any pen of Ewes, which is sheared on the ground and the fleece weighed under the direction of the Executive Board. The Board will decide how many out of each pen of Ewes are to be shorn. Each exhibitor will provide his own shearer.

Prizes of $10, $8 and $6 will be awarded to the three best shearers. Competitors not engaged to shear Prize Sheep may provide others for that purpose.

All prizes must be claimed within thirty days of the Fair, or they will be considered donated to the Association.

SPECIAL PRIZES.

D. D. T. MOORE offers a prize of $25 for the Merino Ram's fleece, of one year's growth or thereabouts, sheared at the Fair, which, on being cleansed, shall be found to give the greatest weight of wool, in proportion to its time of growth and to the live weight of the animal.

WILLIAM R. PITTS offers a prize of $25 for the Merino Ram's fleece, of one year's growth or thereabouts, sheared at the Fair, which, on being cleansed, shall be found to give the greatest weight and value of wool, in proportion to its time of growth, without reference to weight of the animal.

A. F. WILCOX offers a prize of $25 for Merino Ewe's fleece, conditions same as for the MOORE prize.

DAVIS COSSIT offers a prize of $25 for Merino Ewe's fleece, conditions same as for the PITTS prize.

HENRY S. RANDALL offers a prize of $25 for English Long Wooled fleece, conditions same as for the PITTS and COSSIT prizes.

VIEWING COMMITTEES.

First Class—Rams 2 years old or over.—F. J. Marshall, Wheeler; Richard Peck, Lima; ——, ——.

Rams, yearlings (or "yearlings past.")—Peter H. McMillen, Canandaigua; ——, ——.

Ewes, 2 years old or over.—William T. Remer, Penn Yan; Lionel Sherwood, Newark; ——, ——.

Yearlings, (or "yearlings past.")—Thomas Densmore, Geneva; Charles D. Champlin, Hammondsport; ——, ——.

Second Class—Rams 2 years old or over.—A. Y. Baker, Hammondsport; Ambrose Clark, Fayetteville; Isaac Clapp, Ponghkeepsie.

Rams, yearlings (or "yearlings past.")—Matthias Hutchinson, Ledyard; John Gilmore, York; Wm. M. Holmes, Greenwich.

Ewes, 2 years old or over.—A. G. Percey, Newark; John Stebbins, Cazenovia; Oscar Granger, Saratoga Springs.

Ewes, yearlings (or "yearlings past.")—Wm. Hayden, Auburn; Obadiah Thorne, Skaneateles; Wm. Armstrong, Hoosick Falls.

Third Class—Rams 2 years old or over.—Joseph McGraw, Jr., Dryden; Jeptha A. Potter, Penn Yan; John Maltman, Canandaigua.

Rams, yearlings (or "yearlings past.")—Thomas Van Etten, Owasco; Monroe Woodford, Thorn Hill; Loan J. Burgess, No. Hoosick.

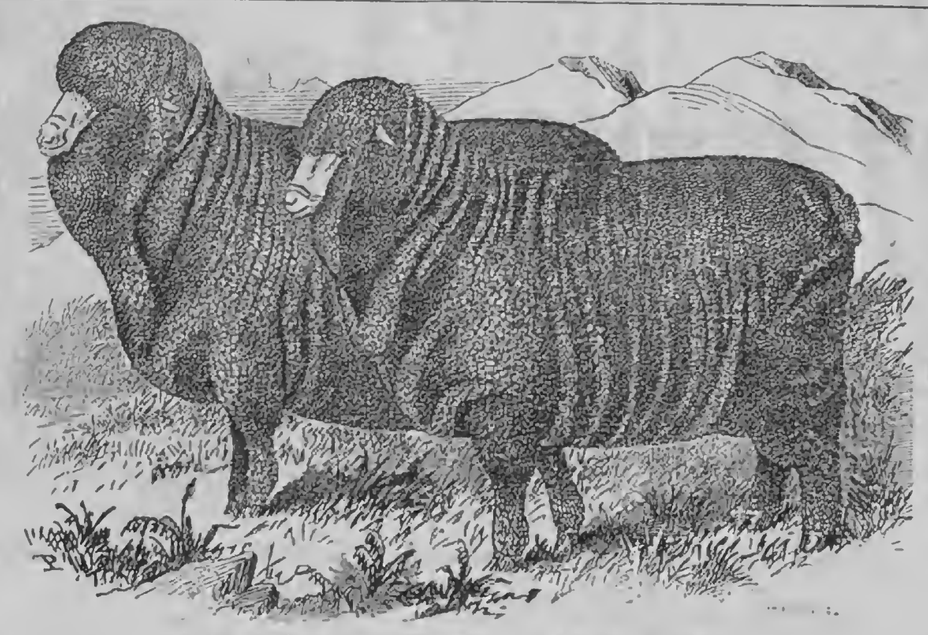
Ewes, 2 years old and over.—R. A. Avery, Gloversville; John W. Aikin, Scipio; Elbridge Kinney, DeWitt.

Ewes, yearlings (or "yearlings past.")—George Root, York; Charles O. Wood, Auburn; Judge Ketchum, Clyde.

Fourth Class—Lambs.—W. B. Sweet, Pompey; P. L. Atwood, Poplar Ridge; Justin N. Knapp, Spafford; Wm. Curtis, Groveland; E. W. Harrigan, Comstock's Landing.

Fifth Class—Rams.—Lewis F. Allen, Black Rock; Francis H. Hibbard, Cortland Village; John T. Hart, Dryden.

Ewes.—George H. Chace, Union Springs; Charles Taylor, Cortland Village; Wm. Hallock, Rush.



PRINCES "GOLD DROP," AND "DIAMOND QUEEN,"

INFANTADO EWE TEGS,—BRED BY AND THE PROPERTY OF F. L. UPHAM & SONS, WEATHERSFIELD, VT.

Sixth Class—Rams.—A. Thayer, Jr., Hoosick Falls; John R. Page, Sennett; Wm. Jackson, Canoga.

Ewes.—H. J. Redfield, Batavia; George H. Brown, Washington Hollow; Joseph Harris, Gates.

Sweepstakes.—The Chairman of the first, second and third classes will award the diplomas in those classes. The Chairman in the fifth and sixth classes will be allowed to select one or more persons to act with them in awarding diplomas in those classes.

REGULATIONS OF THE FAIR.

1. All premiums may be competed for by residents of the United States or any other country. Persons competing for premiums must be Life Members, or Annual Members of the Association by the payment of one dollar during the current year.

2. No pens shall be allotted to Exhibitors until the first morning of the Fair, and then in the order of application. (The allotment of pens will be under the direction of the General Superintendent.)

3. Sheep competing for premiums must be entered and brought upon the show grounds on the first day of the Fair, and they must not, without a special permit from the General Superintendent, be removed therefrom before the third day, nor on the third day, until the General Superintendent shall, by direction of the Executive Board, make public proclamation that all exhibitors are at liberty to withdraw their sheep.

4. Entries of sheep competing for premiums shall be accompanied in all cases by an affidavit, specifying according to the best knowledge and belief of the Exhibitor, the age of the sheep, the age of the fleeces then on them, the manner in which they were last shorn, the manner in which they have been fed and the amount and kind of feed given to them for the last year preceding the Fair, their general treatment, and any special treatment intended to affect their condition or appearance. Such affidavits are to be made by filling in printed blanks which will be furnished to every Exhibitor by the Secretaries; and a proper officer will be present to administer oaths. It is understood that sheep may be shown in any condition, at the option of the Exhibitor, provided the required facts are stated. The Viewing Committees will require the affidavits to be as full and explicit as the circumstances admit of,—and that if not made on the personal knowledge of the exhibitor, it shall be so stated, and the sources of his information fully and distinctly specified.

5. No person shall act as a member of the Viewing Committee who has any direct or indirect pecuniary interest in any sheep submitted to the inspection of said Committee for a premium. Committeemen who resign their places will be allowed to exhibit.

6. No general or special prizes shall be awarded except on animals of superior merit; and, in case of the former, only such as the Viewing Committees shall consider them entitled to. (Thus the third premium, or the second and third premiums may be drawn, while the first is unawarded.)

7. All reports of Viewing Committees shall be made in writing and signed by the members of the Committee agreeing to them. Printed blank forms of reports, with instructions to Viewing Committees, will be delivered to the latter.

8. The Viewing Committees shall deliver their report to the President or Secretary at or before 9 o'clock A. M., on the third day of the Fair.

The principal Auburn hotels will only charge their usual rates for board and lodging during the Fair.

For Life and Annual Membership tickets apply to the Treasurer of the Association.

Arrangements with railroad companies for transportation of sheep to and from the Fair, will be published as soon as they are made.

OFFICERS OF THE ASSOCIATION.—*President*—HENRY S. RANDALL of Cortland Village. *Vice-Presidents*—Hugh T. Brooks of Pearl Creek; D. W. Percy of No. Hoosick; Wm. Chamberlain of Red Hook; Alex. Arnold of Avoca; Wm. R. Pitts of Honcoye; Silas Hillman of Avon; H. Willard of Cayuga. *Cor. Secretary*—E. B. Pottle of Naples. *Rec. Secretary*—H. D. L. Sweet of Syracuse. *Treasurer*—Asel F. Wilcox of Fayetteville. *Executive Committee*—Davis Cossitt of Onondaga; A. H. Clapp of Pompey; E. E. Brown of New Hope; A. M. Clark of Auburn; I. V. Baker, Jr. of Comstock's Landing. *General Superintendent*—A. M. Clark of Fleming.

WISCONSIN STATE WOOL GROWERS' ASSOCIATION.

THIS Association met at Madison Feb. 5th, President STILSON in the chair; T. H. GOODHUE, Secretary. Hon. G. F. WHEELER, Col. J. S. HASELTINE and Hon. JESSE HAND were appointed a committee on resolutions. They reported the following, which were adopted:

Whereas, The question of a tariff has been, and is at the present time, engaging the attention of Congress, and there being a diversity of opinion among honest men as to the measure of protection demanded by some of the leading agricultural interests of our common country; therefore,

Resolved, That it is the duty of the General Government to protect the labor and industry of the country against foreign competition, and that the interests developed by the wool-producers of the country demand that protection, in favor of wool and the manufacture of woolen goods, in the tariff bill, which has already passed the Senate and is now pending in the House of Representatives, so far as it relates to the interests specified, ought to receive its early attention and sanction.

Resolved, That the Wool Growers' Association of Wisconsin heartily approve of the action of our State Legislature in instructing our Senators, and requesting our Representatives in Congress to favor such legislation as shall secure the protection demanded by the foregoing resolutions.

Resolved, That a copy of the foregoing resolutions be forwarded to each of our Senators and Representatives in Congress.

Resolved, That it is with regret and dissatisfaction that we find some portion of the press of the Northwest using their influence against so important a branch of industry as the wool-growing interest; at the same time we appreciate the judgment and fidelity of those journals which have stood by us, and pledge them our hearty support.

Other resolutions were also passed in favor of enforcing the dog law of the State; in favor of an increase of bounties on wolves; recommending the organization of County Wool Growers' Associations; and endorsing the Illinois resolutions against the importation of shoddy and declaring its use a fraud.

Condensed Correspondence, Items, &c.

WEIGHT OF FLEECES IN THE SOUTH.—D. CURTIS, Ovid Center, Clinton Co. Mich., having observed by the U. S. Census of 1860 that sheep south of 38 degrees produce less wool than in the Northern States, wishes to know to what it is to be attributed; and he asks if as heavy and fine fleeces can be grown in Virginia, Kentucky and Tennessee as in Vermont, New York and Michigan? We have no doubt that sheep will produce as much *wool* in the Southern as in the Northern States mentioned, provided the *breed* and *treatment* are the same. As a general thing sheep have received far less attention in the South than in the North, and the proportion of the improved heavy-fleeced varieties introduced is far less. Southern sheep often roam at will through forests and thickets, and being of that "native" variety which begin to shed their wool early, much is lost from these causes. The pasture season is much longer, during all of which they are exposed to drenching rains, and they usually receive but little shelter in winter, so that no yolk or "grease" is left in their wool. In the Northern States named most sheep run on clean pastures; receive adequate shelter in winter; "fancy" sheep are housed in summer; many of the greasiest flocks are not washed at all; and a large proportion of the fine sheep which are washed, have that process so performed that far more yolk (a substance that possesses considerable *weight*,) is left in the wool, than is contained in *unwashed* Southern fleeces. The effect of these facts on the Census returns is obvious.

INJURY TO THE SCROTUM.—JOHN G. MCKEEN, South Newark, N. H., asks us to state the cause of the following disease:—A ram teg, belonging to a neighbor, refused to eat and heaved at the sides; his sheath and scrotum were swelled to four times their natural size; and "the belly around was as hard as a stone." On opening the scrotum on the fourth day "the testicles were found one mass of bloody looking water and would all run out." It would appear from this that the testicles themselves had become entirely disorganized, but we hardly think that the writer means to be literally understood thus. Our impression is that the scrotum had received some severe contusion which produced an intense local inflammation which extended to the adjacent parts.

Communications, Etc.

MICHIGAN AGRICULTURAL COLLEGE.

EDS. RURAL NEW-YORKER.—In your issue of Jan. 12, I notice a communication from "J. P." in reference to agricultural colleges in general, and the Michigan Agricultural College in particular. Many of J. P.'s statements respecting the Michigan Ag'l College are erroneous. The College *has* failed entirely to meet the expectations of the farmers and mechanics of the State, for whose especial benefit it was founded. This is evident from the fact that numerous petitions, largely signed by this class of our population, are being sent to the Legislature, praying that no more appropriations be made in aid of said institution. After a trial of ten years, and an expenditure of nearly $300,000, we are compelled to admit that it is a failure, so far as any practical good or valuable experiments are concerned. The farm was to be "an experimental farm," yet no valuable experiments have ever been tried upon it. Only eighteen students have ever been graduated at the College; and but few of these have ever become farmers. J. P. concludes, because 108 students attended the College this (last) year, it must be meeting "public expectation." The fact is, very many of the students go there because they can get an education—all things considered—cheaper than at any other institution in the State. It will be seen, however, by the President's Report, that 51 of the students were in the preparatory department. Now, every one of the students ought to have been in our primary or graded schools. They ought to have been studying the "front part of the spelling book" rather than attending College. They could learn "muchly" in our common schools, and it is vastly cheaper to educate them there than to send them to the College. Then again, twenty of the students were from other States. Now, I do not believe the people of the State of Michigan care to be taxed to educate students from other States. If we cannot fill up the College from our own State, let those coming from abroad pay the full amount of their tuition.

It will be news to the people of the State to learn that "two railroad trains pass the College, each way, every day." The fact is, the nearest railroad—the Lansing and Jackson Road—is three miles from the College. The College will have to be moved to a more desirable location, and be managed differently from what it has been, to "meet public expectation."

WOLVERINE.

Rural Notes and Items.

OUR PREMIUMS APPRECIATED.—During the past two months we have given away scores of WEBSTER'S Illustrated Dictionaries, WHEELER & WILSON Sewing Machines, and many other valuable articles—such as gold and silver Watches, silver-plated Castors, Photograph Albums, &c., &c. And almost every day we are receiving from Agent-Friends handsome acknowledgments of the receipt of premiums. For example, this morning (Feb. 25,) we received the following from Mr. R. F. DUTCHER of Niagara county:

"I have received the Dictionary and am well satisfied. Any young man will be *well paid* if it costs him one month's labor to get it."

And among this morning's letters was also the following from Miss (or Mrs.) ZILPHIA LARKIN of Onondaga county:

"Received the Sewing Machine in good order. I am highly pleased with it, and return many thanks for the favor. I feel well paid for the effort of obtaining subscribers."

—It will be observed by reference to notice at head of our News page that the above and other premiums are still offered, and hence any person so disposed can secure a prize by making proper effort. Any wide-awake young (or middle-aged) man or woman can procure subscribers enough in a week to make sure of a Dictionary, Sewing Machine, or other premium, and *now is the time to do it*, for we can still furnish back numbers from January, or Clubs may begin now or with the new quarter, April 6th. How many of our readers will form a Club, and thereby secure a valuable return,—getting Good Pay for Doing Good?

THE CENTAL SYSTEM.—The Cental System, or buying and selling grain by the 100 lbs., was first recommended by the Albany Board of Trade, and has since been adopted by the Boards of Trade in all the large grain marts of the country. It is to take effect on the first of March. For a time there may be some confusion in the quotation of prices, but people will very soon become accustomed to the new method. Some papers have published long tables, giving prices per bushel, and at the same rate per cental. Such tables are not always accessible, and we therefore give a rule by which buyers and sellers can make their own calculations. The standard weight of Wheat per bushel is 60 lbs.; Corn and Rye, 56 lbs.; Barley, 48 lbs.; Oats, 32 lbs. The price per bushel being given, to find the price per cental multiply the price per bushel by 100 and divide by the number of pounds in the bushel. For instance:—At $1.50 per bushel for Wheat, what is the price per cental? — 150 × 100 = 15,000 ÷ 60 = $2.50, which is the price per cental. Again: The price per cental being given, to find the price per bushel multiply the price per cental by the number of pounds in the bushel and divide by 100. Example: At $2.50 per cental, what is the price per bushel of 60 lbs.? — 2.50 × 60 = 15,000 ÷ 100 = $1.50, the price per bushel.

AGRICULTURAL IMPLEMENTS AT THE SOUTH.—The Chronicle & Sentinel, (Augusta, Ga.,) has come to the conclusion that the farmers of the South must hereafter rely mainly on the employment of agricultural implements suited to the farm industry of that section of the country. It says the former field laborers show a growing disinclination to the performance of farm work, preferring a precarious living in the cities and large towns to labor in the cotton fields. Inventive genius, spurred on by necessity, will probably soon develop implements suited to the new order of things, materially diminishing the amount of hand labor now required in planting operations in the cotton States.

WOOL BUYERS' CONVENTION.—The wool buyers of Western New York have called a Convention at the City Hall, Rochester, on Tuesday, the 19th of March, for the purpose of adopting resolutions relative to the purchase of wool for the future. The call is based on the assumed bad condition in which wool is put up for market—a defect which it is the purpose of the Convention to remedy for the future, if possible. If the wool buyers will resolve to and then actually *discriminate in making their purchases*—instead of paying the same price for dirty that they do for clean, merchantable wool, thus paying a premium for fraud—they will adopt an *effectual remedy*.

HOP ROOTS.—C. S. B., Painesville, Ohio, writes us: "A friend of mine wishes me to write you and learn if there can (or where there can) be obtained enough *roots*, or the requisite material for setting out five acres of *Hops*, and the value of them by the bushel or count. Please advise, stating particulars, at an early day."—We cannot answer definitely. See advertisement of BRITT & DAY in RURAL of Dec. 1, 1866, and of A. W. MORSE, Eaton, N. Y., in January numbers of this year;—and if they don't "fill the bill" look for others in future issues.

LOUISIANA STATE FAIR.—This Fair will open at Baton Rouge, La., on the first Monday in May next. Many of the most energetic citizens of the State are engaged in the enterprise, and determined to make it a successful one. It is designed to be a mass meeting of all who have fine stock, mechanical, scientific and agricultural machinery and inventions to exhibit, as well as of those who wish to avail themselves of the privilege of witnessing the character of the one or the operations of the other.

THE WHEAT CROP.—We observe, in sundry of our exchanges, speculations as to the probable character of the ensuing wheat crop. In the South it may be possible to predict, at this early day, with some approach to accuracy, the result of the coming wheat harvest, but in the Northern and Western States, where winter yet reigns with unabated rigor, such speculations are unreliable and valueless.

ALDERNEY CATTLE.—"C. W. B.," Whitney's Point, N. Y., writes:—"I have watched your paper for a long time, thinking that I might learn where thorough-bred Alderney cattle may be had. Are they not choice *milkers?*" They are one of the best milking breeds. Have you watched our advertising columns closely? Every reader should; valuable information may be found there.

Doings of Agricultural Societies.

N. Y. State Ag. Society—Winter Meeting.—In the last RURAL was a brief notice of the proceedings of the annual meeting of this Society, including a list of officers elected, etc. There were, however, some other proceedings, since reported, which it may be interesting to notice, though in a summary manner. Among these may be mentioned the address of X. A. WILLARD, Esq., giving the results of his observations in Europe, among the dairymen and stock breeders. In these observations he failed to discover anything in the dairy practice of the old country which could be regarded as an improvement on our methods. In most things having relation to this business, the English system was decidedly inferor to that acted upon in this country. But as regards meat making he places the English in the front rank and mainly for the reason that they use for food more sheep and much less hog than do the Americans. He is of opinion that a liberal introduction of English sheep among the farming community here, would conduce to the health of the people, as mutton is preferable to pork as food, and much the cheaper article for family consumption. He recommended vigorous precautionary measures against the rinderpest—an evil which could only be kept away by sleepless vigilance.

DR. ASA FITCH read an instructive paper relative to the insects whose yearly ravages are so detrimental to the hopes and labors of the farming community.

The address of the new President, Gen. PATRICK, is said to have been brief, earnest and to the point, and commendable for the practical good sense which it evinced.

The address of Ex-President GOULD was replete with information relative to the past labors of the State Society and the promising results likely to flow from them to the agricultural interests of the State. He said the estimated value of farm stock in the State was put down at $750,000,000, but thought to advance the figures to $1,000,000,000 would do no injustice to the truth. The difference between these figures was accounted for by the low estimate of acre products in the State made at Washington, as compared with what they actually are. The Hon. GEO. GEDDES of Onondaga had supplied a carefully prepared estimate of production per acre in his section, which was much greater than that supplied from the Census Bureau of Statistics. The address contained numerous suggestions for future improvement in agriculture, some of them perhaps hard to reduce to practice.

THE WINTER EXHIBITION of farm products was rather meager as to numbers and variety of articles, but very good in quality. It embraced seeds for the garden and field, products of the dairy, models of farm gates, horse forks, horse yokes, harrows, &c. We subjoin a list of the

PREMIUMS AWARDED.

Spring Wheat—1. E. T. Wilder, Bristol Center, Ontario Co., crop of 126 2-5 lbs bushels, from 3 acres, 151 rods—value of crop $375.10, straw $20—total $395.10—less cost of cultivation, $51.79, leaves profit of $340.31—Premium, $15.

Winter Wheat—1. Felix O. Case, Bristol Center, crop of 113 bushels from 2 acres, 42 rods—value $345, less cost of culture $41.20—profit $301.00—Premium, $15.

Winter Barley—1. Martin Goff, Bristol Center, crop 283¾ bushels from 3.11 acres—value, (including straw,) $267.63, less cost of culture $59.50—profit $208.13—Premium, $15.

Grain and Seeds—Rye, I. H. Schoonmaker, Cedar Hill, 54 lbs. per bushel, $3; 2. A. E. Van Allen, De Freestville, 56 lbs., $2. 4-Rowed Barley—1. H. Wier, 48 lbs., $3. Oats—2. H. Wier, (Poland variety,) 37 lbs., $2. Yellow Corn—1. R. W. Schoonmaker, 55 lbs., $5; 2. H. Schoonmaker, 56 lbs., $2. White Corn—1. H. Wier, 60 lbs., $3. Peas—1. L. L. French, Richfield Springs, (Black-eyed Marrows,) 64 lbs., $3; 2. H. Wier, 67 lbs., $2. Beans—1. H. Wier, $3. Flax Seed—1. L. L. French, 50 lbs., $3; 2. H. Wier, 52 lbs., $2. Buckwheat—1. H. Wier, 51 lbs., $3; 2. H. Schoonmaker, 51 lbs., $2. S. Allen, Greenbush, exhibited "Early Samaritan Potatoes," favorably noticed in the report.

Butter—Best 3 tubs in any season:—1. C. D. Davenport, Lowville, E. B. Gibbs, Harpersfield, each $15; S. L. L. French, Trans.; three tubs made in June, Aug. and Nov.—2d and 3d, to L. L. French, $10 and Trans. Winter Butter—1. C. D. Davenport, $5; 2. C. Eames, Rutland, $3; 3. L. L. French, Trans.

Fruit—Apples, best collection, P. Van Wie, Cedar Hill, $4; best dish—1. P. Van Wie, (Baldwins,) S. S. M.; 2. T. C. Houghtaling, Coeymans, Trans. Pears—Ellwanger & Barry, Rochester, (Doyenne d'Alencon and Josephine de Malines,) S. S. M. Grapes—T. C. Houghtaling, S. S. M.

Miscellaneous—Hay Fork, C. C. Blodgett, Watertown, Dip. Dish Washer, J. H. Best, Cortland, Dip. Farm Gate, E. & A. Buckman, East Greenbush, Dip. Horse Yoke, B. F. Baker, Ballston, Dip. Garden Tools, S. T. Thorburn, Albany, Trans. Seeds, Grains, Flowers, &c., (some 200 articles,) S. T. Thorburn, Dip. and S. S. M. Domestic Goods, etc., Mrs. H. Wier, $25. Carcass Mutton (Leicester 2-year old wether,) dressed 120 lbs., E. Purvis, Lisbon, Dip. Sorghum Sirup, Sugar, &c., made on Correy's Evaporator, Mix & Correy, Syracuse, $5. Maple Sugar, D. A. Bulkley, Trans. Draining Tile, D. W. Seeley, Albany, Trans. Vegetables, (50 samples,) D. W. Seeley, $2. Afghan, Mrs. K. A. Gardner, S. S. M.

On the whole, the annual meeting of the State Agricultural Society seems to have been one of much interest and full of promise for the further development of the farming resources of the State.

Stock Breeders' Association.—The annual meeting of the Association of Breeders of Thorough-bred Neat Stock was held at the Agricultural Hall, Albany, Feb. 14th. The following officers and committees were appointed: *President*—E. H. HYDE of Stafford, Ct. *Vice Pres'ts*—J. F. Anderson, South Windham, Me.; J. O. Sheldon, Geneva, N. Y.; Burdett Loomis, Suffield, Ct.; J. W. Freeman, Troy, N. Y.; E. D. Pierce, East Providence, R. I. *Sec'y*—J. N. Bagg, West Springfield, Mass. *Treas.*—H. M. Sessions, So. Wilbraham, Mass. *Short-Horn Pedigree Com.*—S. W. Buffum, Winchester, N. H.; S. W. Bartlett, East Windsor, Ct.; P. Stedman Chicopee, Mass. *Ayrshire and Hereford Com.*—George B. Loring, Salem, Mass.; H. S. Collins, Collinsville, Ct.; Wm. Birnie, Springfield, Mass. *Devon Com.*—H. M. Sessions, South Wilbraham, Mass.; B. H. Andrew, Waterbury, Ct.; E. H. Hyde, Stafford, Ct. *Alderney Com.*—John Brooks, Princeton, Mass.; O. B. Hadwin, Worcester, Mass.; James Thompson, Nantucket, Mass. Adjourned to meet at Springfield, Mass., the second Wednesday of February next.

Crawford Co. (Pa.) Ag. Society.—Officers: *Pres't*—E. W. SHIPPEN. *Vice Pres't*—George W. Watson. *Sec'y*—H. L. Richmond, Jr. *Treas.*—Geo. Hamilton. *Ex. Com.*—A. J. Whipple, J. B. Cochran, Hugh Smith, Geo. Shearer, Arthur Johnston, S. B. Dick, J. McClure, F. W. Huidekoper, Isaac Powell, S. E. Ellis. *Auditors*—E. H. Henderson, John Porter, J. C. Hays. *Chief Marshal*—D. V. Derlchson; Assistants, George Johnston and James H. Davis.

Brookfield (Mad. Co.) Ag. Society.—Officers: *Pres't*—H. O. HULL. *Vice Pres'ts*—D. L. Fish, E. S. Curtis, Wm. M. Brand, Stephen Hoxie. *Sec'y*—William N. Stillman. *Treas.*—Dr. A. L. Saunders. *Directors*—R. S. Langworthy, Henry Main, P. B. Burch, Riley Stanbro, Jr., M. L. Brown, W. D. York. The next Annual Fair of this Society will be held on the grounds of the Society at Clarksville on the 1st and 2d days of October next.

Vernon (Oneida Co.) Ag. Society.—Officers: *Pres't*—Dr. LUCIUS W. MCINTOSH. *Vice Pres't*—Grove Lawrence. *Treas.*—Everett Case. *Sec.*—Levi T Marshall.

GRAIN ON QUICKSAND.—"Agent" inquires what kind of grain will grow best on quicksand; also what fruit trees would be most profitable on rich soil.

HORTICULTURAL.

FARMERS' GARDENS.

We propose writing a few seasonable articles on farmers' gardens, giving plain, practical directions for their management, accompanied with suitable illustrations, which shall assist any one having a small plot of ground to cultivate, to grow thereon a year's supply of vegetables and small fruits for a family. Perhaps there is no one thing connected with the culture of the soil so badly and universally neglected by farmers as their gardens. How many in your neighborhood, reader, have what may be strictly termed a good garden from year to year? How many grow an abundant supply of small fruits for the use of the family? How many have asparagus, radishes and salads plentifully or at all, early in the season; melons, cucumbers, squashes, tomatoes, cabbages, peas, beans, green corn, &c., in the summer months; and celery, vegetable oysters, parsnips, turnips, horse-radish, &c., in the fall, winter and early spring? All farmers should and can have them—nothing which they eat is cheaper, more grateful or healthful than these, together with the summer fruits. If we can persuade you to take the pains and incur the slight expense necessary to their production, we shall be amply rewarded for our labor by the gratitude and satisfaction which we known those feel who are dependent on you for support, and who eat daily at your table.

Have you a garden spot? It should be a choice piece of land; not large, but rich, dry, warm, near the dwelling, and enclosed to prevent the depredations of fowls and animals. If the soil is poor you have the means at hand to make it rich; if heavy and wet, thoroughly underdrain it—as it is small, you can afford this expense. We repeat, it need not be large, for a small garden *well tilled* is much better and less costly than a large one overrun with weeds and cultivated like your fields. Leaf mold from the woods, with ashes, lime and plaster, are the best manures you can use, unless you can spade or plow in *deep* fine barnyard manure. This year you should make a compost heap, and have it on hand for the next.

If the garden is small it is best not to plow but rather spade it. First of all lay it out well; make a bed or border, as they are called, four or five feet wide all round the outside. Next to this a walk; then one or two broad cross-walks, and reserve the rest for beds and walks as crops and circumstances shall dictate. Make up your mind now to have a good garden this year; and in our next article we will try and tell you how to start the early vegetables and seeds in a cheap and simple manner.

GRAPE VINES FOR TEMPORARY BEARING.

Geo. L. Pratt, Orleans Co., N. Y., writes us as follows on planting out grape vines for temporary bearing:—"I would advise setting double the number of vines in the row that you intend to let remain permanently. Fruit the temporary vines the third, fourth, fifth and sixth years, and then dig them out of the way. You can thus favor the permanent vines by not fruiting them until the fourth year, and then but lightly, giving them an opportunity to get well established for a long-lived vineyard. The past season I set two and one-half acres to Iona, Israella, Delaware, and Clinton, planting the vines ten by twelve feet apart. Between each vine I set an Isabella, at a cost of five dollars per hundred, with the intention of fruiting the latter heavily for about four seasons, then removing them and leaving the first named vines in full possession of the ground. With my experience I am satisfied that ten feet by twelve is near enough together to have strong growing vines when they are seven years old."

EARLY WORK FOR A VILLAGE GARDEN.

During the late cold weather and snow storms I have got a large pile of the best manure, made by a single cow, bedded night and morning with leaves, saw-dust, and other refuse. Now, on the 16th February, the snow is gone and the frost is out of the ground. Thanks to underdrains, that part of the lot not ridged in the fall is now dry enough to spade into ridges to be benefited by coming frosts; hence, instead of increasing my pile, I fill the wheel-barrow with the fresh made manure at the stable door and wheel it directly to the garden. I spade this in, always throwing the soil into ridges, not only to incorporate the manure with the soil and to get the benefit of the frost, but to save the labor of another spading if the surface was flat, as the spring rains would then make it too compact and hard to be planted without it. I always prefer spading the soil into ridges, even in the spring, unless it is to be planted immediately. The labor of leveling when you are ready to plant can be done with the hoe at the rate of a square rod in five minutes; the nitric acid the exposed ridges collect ten times pays for the labor of leveling, and the mechanical state of the soil is perfect.

If your flower border was not covered with stable compost in the fall, now the snow is off it should be no longer neglected; for even the crocus, the daffodil, and the polyanthus, if thus well protected, will put on a much earlier and more expansive bloom. David Thomas used to say, when people came to him for bulbs and plants, that it pained him to give seeds and delicate flowering plants to those who would be certain to neglect their culture, but it was a pleasure to give to those who loved Flora for herself, for they would not see her suffer either from neglect or the lack of proper aliment. He was of the opinion that no florist could cultivate a lily so large, delicate, and beautifully perfect as Nature sends up from the rich vegetable deposits of a stagnant pool. *

DECIDUOUS SHADE TREES FOR PRIVATE GROUNDS.

[The February issue of The Horticulturist has an excellent and timely paper on this subject. We copy a good portion of the article below, and will give the remainder in a future number of the Rural.—Ed.]

In our last December number we named some few varieties of trees that we consider eminently

Fig. 1.—American Beech.

deserving to be planted for street shades. We now designate a few of the many beautiful trees that we regard as especially desirable for planting in private grounds. First of all, we name our American Beech, as combining more of beauty, grace and magnificence than perhaps any other of the forest trees. True, it has not the grandeur of the oak; but, with its stateliness of upright, spreading growth, every line and twig is one of graceful ease, and from the first opening of the buds in spring, onward until in full foliage, its glossiness and changing shades are a constant but varying feature of beauty. In winter, its delicate spray, combined with the prominence of its long-pointed buds, make it especially an object of attraction and admiration. Some planters object to the Beech on account of a tendency to sucker, but we have never found any such tendency where the roots remained unbroken by cultivation.

Young trees should always be procured with branches starting from near the ground, and rarely does it need the knife applied to give it regularity and symmetry of form. A deep loamy, rather moist soil, gives it most vigor and causes it to grow to a large size; but it also grows freely in poor, thin soils, as the roots spread widely and keep near the surface.

Of fancy varieties of the Beech, the true Purple-leaved is most desirable. It has rather stronger limbs and twigs than the common plain variety, and the young shoots and buds are of a rose color, while the foliage when young or half grown is of a reddish purple tinge, and when mature becomes dark purple, forming a pleasing and attractive contrast with the green of other trees. The Cut-leaved forms, while young, a vigorous, well-marked tree, with leaves variously cut, resembling in some cases ferns, in others, willows; as it gets age, however, these markings of the foliage become less and less distinct. The Variegated-leaved, Crested, etc., are all singular, but of feeble growth, and only desirable in an arboretum.

The family of Maples are all good as shade trees for lawn or roadside, but among them, the *Rubrum*, red-flowering, or, as generally termed,

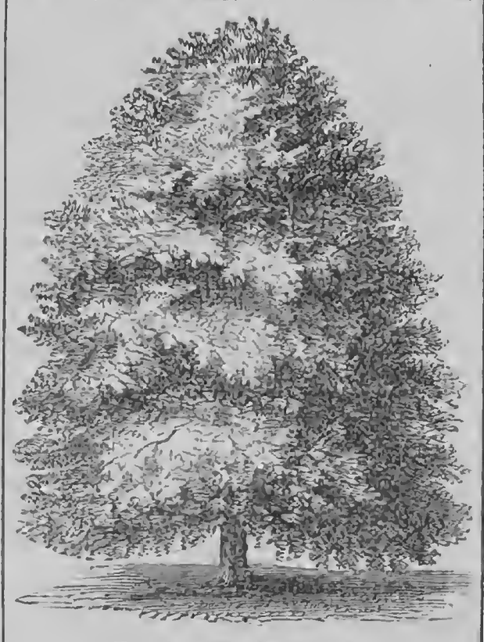


Fig. 2.—Scarlet Maple.

Scarlet Maple, is most to be prized. Its red flowers and leaves in early spring or beginning of summer, its brilliant shades of red foliage in autumn, taken in connection with its rapid growth and upright, half-spreading form, render it one of the most ornamental of hardy trees. Although a native, and abundant in many parts of our Northern Middle States, one or more trees of it should be found in all grounds of half an acre or more in size. In places of considerable extent, when variety as well as beauty is desired, the following are varieties that possess characters rendering their introduction requisite, viz., the Tartarian, on account of the early opening of its leaves. The Striped-barked, because of the stripes, white and black, upon its young, green wood, making it always a curiosity and attractive to visitors. The Norway, from its contrast with others in spring and fall, the foliage then being yellow, is deserving a place. Next to the Norway, and similar to it, is the Sycamore Maple, a variety of rapid growth, and forming at maturity a large and stately tree. As an avenue tree, or standing by itself singly, it is always effective. Of the fancy varieties, the *Purpurea* is the only one that is particularly desirable. Its leaves are purplish underneath, and pale green above when fully expanded; and at midsummer, and thereafter until the fall of the leaf, every breeze that ruffles and disturbs them produces a singular effect.

Magnoliar.—To this family, many varieties of which are the pride of our Southern States, too little attention is given by the majority of tree planters; whether it is because of good plants being difficult of obtainment, or from their being rather sensitive and unwilling to be carelessly and negligently handled when transplanting, we find few planters make room for them on their lists or in their grounds; but we do not see how any landscapist can form an extensive group of evergreens and deciduous trees without using more or less of Magnolias. In our experience we have found no difficulty when transplanting, provided we kept the roots from cold, drying winds, or clear, burning suns; exposure to either of which, by reason of their soft, spongy texture, is injurious, and often destructive of life. Of the varieties, all are beautiful; but

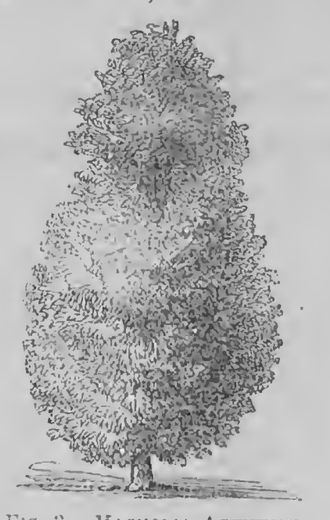

Fig. 3.—Magnolia Acuminata.

some are not perfectly hardy when grown in our Northern States. The *Acuminata*, or Cucumber Tree, as it is frequently called, is upright, almost cone-like in its form, and for back grounds or the center or groups one of the most desirable of all deciduous trees. The *Glauca*, or Swamp Magnolia, is almost a sub-evergreen, often retaining its foliage until January, even in our Northern States. Unless grafted or budded on the Acuminata, it is only a dwarf, growing from six to twenty feet high—more like a bush than a tree. In moist, cool situations it often flowers all the season—from June to September. The fragrance

Fig. 4.—Magnolia Glauca.

of its flowers, together with the rich, glossy, pale green foliage and young shoots, form for it a shrub tree that, were it now to be newly introduced, would cause an excitement, in the arboricultural world, that is rarely known. Some sub-varieties, as *Longifolia Gordoniana*, etc., are better because larger in foliage, and perhaps a little stronger in growth, but their actual hardihood in all positions we think remains to be tested. Magnolia *Tripetela*, called Umbrella Tree, when grown north of Philadelphia, seldom acquires much size, but sends up numerous stems from its crown to replace decaying ones, which have perhaps flowered two or more years. In the the warmer parts of our country it forms a large tree, and in all grounds is especially desirable.

NAPLES GRAPES IN THE MARKET.

A writer in the Rural, over the signature of "Now and Then," says that the "Bloomfield and Naples grapes went down to a very low figure in the New York market, and that the Delaware and Concord, received October 10th from Willard & Burgess, packed in their superior five-pound boxes, sold readily at 25 cts., and were quite an ornament in the window of the Broadway dealer, and that the Hammondsport Catawba proved the best article in the market," "Now and Then" intimating that the round paper boxes and the frost greatly lessened the value and attraction of other grapes. This has the ring of a certain bell from Hammondsport, perhaps put up in New York to ring additional peals to the acknowledged renown of Hammondsport as a great grape growing region, either to sell land at high prices or sweeten the taste of their grapes. "Now *and Then*" let us look at facts and figures as they are.

Upon a geological survey of the lakes we find that Crooked Lake and Hammondsport are 200 feet higher than Canandaigua Lake and the grape growing region about Naples. This is not all. There is no section in Western New York that surpasses this for mildness of climate, so protected from the blasts of winter, and which, embracing so large a territory of sheltered hill-sides and valley lands, is so well adapted to grape culture. The soil is of gravelly drift, sand and loam, changes northward to a rich clay loam resting on slate rock at greater or less depths and connects with the rich, alluvial soil of the valley that stretches for miles to the head of Canandaigua Lake. All the popular and best varieties of grapes grown here have found a quick sale in most of our great cities as well as in those of the Canadas. The hill-sides are being rapidly bought up and put in a state of cultivation by the hand of industry and perseverance. The long lines of trellised grapes are adding beauty to the landscape and prosperity to the owners. I further state, on the authority of J. W. Clark, Esq., whose success in cultivating and marketing grapes is not surpassed by any fruit grower in the State, that the Naples grapes have steadily increased in price, during the past four years, from 8 to 10 cts. in 1862, 12 to 15 cts. in 1863, 15 to 18 cts. in 1864 and 18 to 31 cts. in 1865. They are put up in round boxes, holding two and four pounds each, made of wood and papered and labeled.

Mr. Clark filled large orders from Philadelphia, Baltimore, Pittsburg, and in far more sunny climes of the South his grapes sold for 37½ cts. per pound. Orders were received from Richmond, Va., for his celebrated Isabella grapes. He also sold his Isabella grapes in New York for 25 cts. per pound before the frost, and from 12 to 20 cts. per pound after the frost of 1866.

We will look a little further to our sale of grapes at a "low figure." Mr. M. B. Reed sold his early (picked the 10th of Sept., 1866,) Delaware grapes in the Boston market for 25 cts. per pound. A commission merchant of Philadelphia, says in a letter to Mr. J. W. Clark, that his Isabella grapes sold from 5 to 8 cts. per pound higher than the Hammondsport grapes, from the fact of their being put up in nice round paper boxes. We still continue the record, and say that the Hon. E. B. Pottle, who has a vineyard of 1,500 vines, sold his entire crop of Isabellas in paper boxes for $3,200. Mr. Oliver Chapin, the largest fruit grower in Bloomfield, while on a visit to Mr. Clark's vineyard admitted his grapes to be a week or ten days earlier than those in Bloomfield. I have no interest in publishing these facts, neither have I grape lands to sell, owning but a small vineyard. I could not let the rich expectancy, the realized success of an industrious class of fruit growers, owning the celebrated *Naples Vineyards* "go down to a low figure." S. H. S.

Naples, 1867.

Horticultural Notes and Queries.

Evergreens for Screens and Fences.—(L. E., Cayuga Co.) American *Arbor Vitæ*, or white cedar, is probably the best evergreen for a fence or hedge which it is desirable to keep rather low; if a wind screen, or barrier, ten or fifteen feet in height, would not be objectionable, (and it certainly would not around most farmers' premises,) then plant Norway Spruce. Small or large ones may be set, but they should average as near of one size as possible. We should prefer those about three feet in height, well limbed down to the ground, and stocky. We cannot give prices; those will depend a good deal on your skill in buying. If possible get them near home so you can transfer them in a lumber wagon. When the soil will do to work in the spring spade up the ground where they are to be set to a depth of twelve inches and a width of three feet. Do this work *thoroughly*, putting the bed in as good order as if you were going to plant garden seeds on it. Have some leaf mold from the woods ready, and mix in as you spade, and also scatter plenty on the top and rake it in. Beware of coarse or stimulating manures. Having your bed prepared, wait patiently until the latter part of spring for a warm, foggy, drizzling day, and then transplant your trees. Do not let the sunshine touch their roots or the wind dry them. You can transplant them very fast, having the bed all prepared. Set two feet apart, and trim the tops and sides as you would any hedge. The form of the hedge will depend wholly on your trimming; you may make it broad or narrow, oval or pyramidal, according to your fancy.

A Plea for the Robins.—A lady contributor to the Rural, S. E. W., Maple Hill, Cazenovia, N. Y., sends us a plea for her favorite robins, the killing of which was strongly advocated by some of the members of the "Fruit Growers' Society," lately held in this city. "What if they do destroy a little fruit? Do they not more than repay us for the loss by the sweet music with which they fill the air of a summer morning? Is it not just as pure, just as ennobling, to gratify our taste for *music* as our taste for *fruit*? Did God make anything in vain, and are not the birds as necessary to our happiness as the trees and flowers they inhabit?" To which the fruit growers would answer that if one's "bread and butter" depended on the fruit they would prefer that to the bird music—that they do not intend to destroy all the birds, but only drive the robbers away from the fruit; and that many of our best singing birds scarcely trouble fruit at all.

How to Plant Watermelons.—W. S. Carpenter told how to plant watermelons at a recent meeting of the Institute Club. Dig a hole two and a half feet deep and three feet across. Fill to within six inches of the surface with green stable manure, and then add good soil so as to make a hill six inches high and plant from ten to twelve feet apart. Good melons and a fine yield may be looked for by pursuing this plan of planting.

Valuable Strawberry Patch.—Dr. Abbott of Centralia, (Ill.,) mentions an acquaintance, residing near that place, who fruited the last season nine acres of strawberries. He expended in grounds and preparations $2,111, and sold berries and plants to the amount of $7,881.57. The plants remaining on hand were worth, at the rate the others sold for, $2,000, making a total product of $9,281.57, or over $1,000 per acre.

Grafting Wax—Scions.—Tallow, resin and beeswax mixed in equal parts, or with a little more tallow to make the wax softer, are the ingredients of grafting wax. Melt them together and then work it with the hands. Scions may be cut at any time in the winter; they *should* be cut before the sap starts in the least. Keep them in fine soil in the cellar till wanted for use.

Best Soil for the Delaware Grape.—(L. M. O., Wayne Co., N. Y.) It is the opinion of the most experienced grape growers that the Delaware grape requires a richer soil than most other varieties. It is commonly a slow grower, producing short jointed wood. Soil with a mixture of clay in it is excellent.

Facts About Pear Blight.—J. V., Elba, Genesee Co., N. Y., writes us that he had seventy-four trees, part of which stood on sod ground and part on cultivated. The blight struck alike on sod and cultivated ground and in two years nearly every tree was dead.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Canned Pickles.—Take small sized cucumbers; lay them in brine twenty-four hours; take them out and cover with vinegar; sweeten to taste; put in nasturtium, cinnamon and cloves; cook until tender; can as you do sauce.

Wheat Bread.—Eight or nine medium sized potatoes; mash them; take the water they boil in—about a quart all together, stir in the flour and one-half teacup of good yeast; mix early in the morning; have the sponge and flour warm, to which add a pint of sweet milk, and water if you wish to make a larger baking. Try it, and you will have sweeter and better than any baker's bread.—S. V. P., *Schenectady, N. Y.*

Washing Flannel—To Prevent Shrinking.—J. S. R., in Rural of Feb. 9th, inquires how to prevent, in washing, the shrinking of "white flannels and knit underwear."

Soak in warm water half an hour; rub lightly when you wring them out; then rub them thoroughly in a good hot suds; wring them out; put them in a tub, and pour clear boiling water on them—the more the better. Let them stand till they are cool enough to wring out by hand. You can use a wringer if you choose. Soft water should always be used. No woolen fabric should have soap rubbed on it unless you wish to shrink it.—R. B. B., *Titusville, Pa.*

Another.—Make a slight suds of soft water and soap—hard soap is best; have the water boiling hot when you make the suds; throw the clothes in without rubbing any soap on them; let them be until cool enough to rub out. They will need but little rubbing.—Mrs. H. Willcox, *Townsend, Sandusky Co., Ohio.*

Ginger Cookies.—One cup molasses; one cup sugar; one cup butter; one-half cup lard; one-half cup buttermilk; one and one-half large teaspoons soda; one egg; one tablespoon ginger; knead soft; cut in squares, and bake in a quick oven. Excellent. Try it.—Mrs. B.

Reader, Stop and Think.—We suppose the most of our readers buy and use D. B. De Land & Co.'s *Best Chemical Saleratus*, but if there are any of you who do not, just stop and think; if you buy the *Best Chemical Saleratus* you get the *Best Saleratus* made, and *full weight.*

Pyle's O. K. Soap—Hard, and not liable to imprudent waste. It recommends itself. Try it. Sold by grocers everywhere. Depot 350 Washington street.

NEW TOMATO EUREKA!—The greatest acquisition yet discovered in tomatoes, combining the tree form and excellence of the French or erect Tomato, and as early and prolific as Early or Apple shaped Tomato; nearly seedless, beautiful red color, smooth, round or oblong, solid and keeps and carries as well as the best. I kept specimens fully ripe, last season, 12 days in perfect condition, for exhibition at the Illinois State Fair, and consider it more worthy of extensive cultivation than any tomato yet sent out. It is hybrid, obtained with the greatest care in 1861 by a successful Pennsylvania amateur, and has been brought up to its present standard by patient and steady cultivation to that end, and may now be considered to be sufficiently well established for general cultivation. Some of the most prominent Philadelphia fruiterers endorse it as the best for canning, cooking, pickling, and making tomato figs, and my endorsement is that I have never seen its equal, and I send it out believing that it will prove the greatest acquisition ever yet discovered. I have control of all seed grown by the originator, and myself, and persons ordering it of me may be assured of getting it pure.
Price, 25 cents per package. The Trade supplied at $15 ₩ 100, and $130 ₩ 1,000. Address JONATHAN PERIAM, 192 Lake St., Chicago, Illinois.

GRAPE WOOD! GRAPE WOOD!—Delaware eyes, 50c. ₩ 100; $2,50 ₩ 1,000; $10 ₩ 5,000. Iona eyes, $5 ₩ 100; $45 ₩ 1,000. Wood cut before frost and stored in cellar. A small quantity of Concord and Diana wood on special terms. The usual stock of Grape Vines on reasonable terms. S. J. ALLIS, North East, Pa.

FLOWER GARDENS FOR EVERYBODY!—Wm. Webster's New American Style of Flower Gardens. The most exquisite Designs in this Elegant Style, sent by mail to any part of the United States.
Address WM. WEBSTER,
891-tf Landscape Gardener, Rochester, N. Y.

HOVEY & CO.'S ILLUSTRATED GUIDE TO THE
Flower and Vegetable Garden
FOR 1867,
is now ready, containing more than 130 pages, with 80 elegant engravings and
A Splendid Colored Plate,
With full descriptions of 2,500 varieties of the most desirable Flowers and Vegetables, and complete direction for their cultivation. ☞ Sent free to all applicants on the receipt of 25 cts. Address HOVEY & CO.,
891-3t 53 North Market Street, Boston.

$25 A DAY!—FIFTEEN New Articles for Agents. O. T. GAREY, Biddeford, Maine.

GET WELL AND KEEP WELL.—Read the Advertisement of Herald of Health, page 76.

Ladies' Department.

Written for Moore's Rural New-Yorker.

NOTHING TO DO.

BY MRS. H. M. LINCOLN.

Have I nothing to do, dear Father,
But fold my idle hands,
Gaze vacantly over the whitening fields,
O'er thy chosen and fruitful lands?
Have I nothing to do in this busy world
Where thy servants have toiled so long?
Hast thou not left me a day's work too
Somewhere in the busy throng?

The gleaming fields are teeming now,
With a bountiful harvest to reap;
There are laborers few for a work so vast,—
Should I like an idler sleep?
There is work indeed, but laborers few
With willing heart and hand,
To battle nobly with sin and self
And follow their Lord's command.

They're shrinking back with questioning heart,
Like weak and wavering me,
Forgetting that God hath work each day,
Though simple the work may be.
A noble work, though heeded not
By the busy world to-day;
If patiently done 'twill bring sweet rest
When we throw off this cumbrous clay.

Canandaigua, Jan., 1867.

TRUE ELEVATION OF WOMAN.

Treating of this subject, the writer whose contribution we publish below puts forth an idea which seems not to have occurred before to any of our lady correspondents. It is, in our opinion, the only approach to a decisive argument that has yet been urged against female suffrage. But we like it better, because thus it is more consistent and complete, in the broader form in which a friend of ours expressed it. Said he:—"I would have no person, black or white, man or woman, cast a ballot whose ultimate consequence might be war, unless he was able and ready to meet that consequence and carry out with his strength and life his idea or opinion, expressed by his ballot, to its final result. Therefore I would exclude from voting, not only women, but cripples and all who by reason of age or profession are incapable of military duty." The objection to this, however, is that it contemplates only the exceptional contingency of war, and that even then it would be doubtful policy to dispense with the ripe judgment of age and experience and the superior morals of woman, which might combine to prevent a foolish and useless war that the ardent youth of military age might feel in honor bound to rush into.

Eds. Rural New-Yorker:—While conversing, recently, with some highly esteemed lady friends, I was sorry to learn that nearly every one of them entertained notions in regard to what our privileges should be, which, I believe, tend to produce family disagreements equally with any other vice, not excepting the deplorable habit of gambling and intemperance. The notions to which I refer are these:—that women are, in nearly every respect, equal with men; that our judgment entitles us to the privilege of casting votes; and if one of us were to receive a nomination for the Presidency, it should be considered her duty, on receiving the number of votes required for her election, to enter upon the discharge of the great and numerous duties devolved upon her by a nation. Many females, it is true, have knowledge enough to lead a nation more dextrously than some Presidents we have had. But many things are possible which are by no means prudent. Woman ruled once; but that reign was destructive to the whole human family; and never, since Adam ate the poisonous fruit, has a family or nation been thoroughly prosperous where a woman has swayed the scepter.

God never designed us for judges and rulers, as our very natures prove. If we would rule over a free land, why did we not go forth and assist in fighting those great battles to secure freedom for ourselves and our children? The heavy burdens of a soldier were no harder to bear than the great responsibility resting on those who are at the head of this divided nation to-day, or especially during the time that Abraham Lincoln was our President. I do not feel inclined to believe that we are able to do justice to either the position of soldier or President. The less able, because God does not so abundantly bless the disobedient child as those who obey his commands; and when we are told that man is the head of the woman, then is it not sinful disobedience for us to attempt to elevate ourselves beyond our own heads? And again, what impartial observer has not long since discovered that the modest, obedient, self-denying, self-possessed woman is more beloved than she who wishes to gain praise by traveling in an opposite direction and disregards heavenly teaching concerning our true positions and relations to man? Sisters, I assure you, I have no selfish motive in view, but I wish to see my sex becoming more perfected daily. Neither do I think that permanent virtue can exist independent of the presence of piety. With religion in the heart, every burden becomes light and every duty easy. Then envy will not fill our minds and hearts with poison; and if we never attain to the lofty position of a conquering general, we may at least secure the honors of the obedient daughter, the kind sister, the affectionate wife and the loving mother.

The burdens of men are so great they cannot lay them down to attend to these lighter tasks which God in his wisdom bestowed upon us when he divided the labors designed for frail mortals—thus proving that he kindly recognized our weakness and made provision for our comfort. Let us therefore strive to overcome the envy which destroys our peace of mind, and cultivate in its stead, cheerfulness, love and religion; and we shall reign in the hearts of men on earth, and in heaven our crowns will all be equally bright. Kate Case.

Des Moines, Iowa, Feb. 1, 1867.

"THERE'S LIGHT BEYOND."

"When in Madeira," writes a traveler, "I set off one morning to reach the summit of a mountain, to gaze upon the distant scenes and enjoy the balmy air. I had a guide with me, and we had with difficulty ascended some two thousand feet, when a thick mist was seen descending upon us, quite obscuring the whole face of the heavens. I thought I had no hope left but at once to retrace our steps or be lost; but as the cloud came nearer, and darkness over-shadowed me, my guide ran on before me, penetrating the mist and calling to me ever and anon, saying, 'Press on, master, press on, there's light beyond!' I did press on. In a few minutes the mist was passed, and I gazed upon a scene of transparent beauty. All was bright and cloudless above, and beneath was the almost level mist, concealing the world below me, and glistening in the rays of the sun like a field of untrodden snow. There was nothing at that moment between me and the heavens." O, ye, over whom clouds are gathering or who have sat beneath the shadow, be not dismayed if they rise before you. Press on—There is light beyond.

HOW TO "FINISH" A DAUGHTER.

1. Be always telling her how pretty she is.
2. Instill in her mind a proper love of dress.
3. Accustom her to so much pleasure that she is never happy at home.
4. Allow her to read nothing but novels.
5. Teach her all the accomplishments, but none of the utilities of life.
6. Keep her in the darkest ignorance of the mysteries of housekeeping.
7. Initiate her into the principle that it is vulgar to do anything herself.
8. To strengthen the latter belief, let her have a lady's maid.
9. And lastly, having given her such an education, marry her to a clerk upon five hundred dollars a year, or a lieutenant going out to a fort.

If, with the above careful training, your daughter is not "finished," you may be sure it is no fault of yours, and you must look upon her escape as nothing short of a miracle.

GOSSIPPY PARAGRAPHS.

Mr. Tilton, of the Independent, in advocating "Woman's Rights," tells us that "Harvard and Yale belong to a former generation; their brows are ungilded with the dawn of the coming era. Put five hundred college boys by themselves for four years, without girls for class-mates, and four hundred and fifty will graduate more vulgar minded than they entered. Put both sexes under the same roof—making the college something like the family—and the result will be a mutual social refinement, and a mutual moral growth."

Coral, especially the pale pink variety, is again very fashionable in Paris for evening dresses. Tunics are frequently embroidered in sprays of coral, beads being introduced among the work so as to give it more relief. With brocaded dresses, trimmings made with precious stones are in vogue, because gimp is not considered sufficiently rich for such very handsome materials; consequently buttons made of lapis lazuli, jasper, aventurine, and amber are in great demand.

At a wedding in Raleigh, N. C., a few evenings since, the invited guests, after the ceremony, were requested to pay ten dollars each to the bride, who was in such indigent circumstances that she had not the means to complete her wardrobe. Each person present promptly responded, and the sum raised amounted to about five hundred dollars. The bride thanked her friends for their generosity, kissed them all, and went home with her husband in the best of spirits.

Shakspeare was performing the part of a king, in one of his own tragedies, standing near the Queen's box; having given orders to the attending officers, Elizabeth, wishing to know whether he would depart from the dignity of the sovereign, at that instant dropped her handkerchief, when the mimic monarch immmediately exclaimed,

"But ere this be done,
Take up our 'sister's' handkerchief."

"If you ever marry," said a Roman consul to to his son, "let it be a woman who has sense enough to superintend the setting of a meal of victuals, taste enough to dress herself, pride enough to wash before breakfast, and sense enough to hold her tongue when she has nothing to say."

Mrs. Jelliflower, who is from the rural districts, went to see Ristori at the Opera House, and thinks the ladies and gentlemen that composed the audience very unmannerly "for," said she, "they sot up and read dime novels the whole evening."

A number of the seamstresses in Paris have been attacked with severe sickness, caused, it is supposed, by getting into their mouths sewing silk impregnated by venders with sulphate of lead to increase its weight, as it is so sold in France.

Charles Dickens shocks the honest country folks about his home at Gadshill, by playing croquet with his daughters, for health and recreation, on his lawn on Sunday afternoons.

It is rumored that John G. Whittier, the poet, is to be married in his old age to a widow of Philadelphia, with whom he has been in love for thirty years.

Bismarck bonnets and needle-gun skirts are among the latest whims of fashion.

TO CONTRIBUTORS.

The following contributions are respectfully declined, for the reasons annexed:—"Bring Flowers for the Dead," I. H. Do not use more than one rhythm in so short a piece. Try a newer subject.—"Then and now," E. H. Your analysis is faulty, and the article is too long.—"Drifting," M. F. In some of the reading books you will find an extract in which Bishop Heber has carried out your figure to perfection. Practice careful revision and close criticism, and you will make a good writer.—"Invitation to Spring," G. T. You rhyme well. Try a less hackneyed subject.—"Revival in Chili," H. K. F. Put it into prose and send it to a religious paper. Your concluding lines,

"The powers of sin are giving way,
And God in Chili reigns,"

border close upon burlesque.—Frank. We were obliged to curtail your article. The latter part was a little Carlyleish.—J. J. M. Explanation perfectly satisfactory to us; but few readers would have understood the allusion. We did not, though we had seen the picture.—We have received several copies of "Peace be Still." One contributor requests us "for mercy's sake" to say nothing, in this department, of her article. As you please, of course; but one intention of it is to give unsuccessful contributors such hints as will enable them to produce acceptible articles.

Choice Miscellany.

CHANGE.

[The following stanzas, which we find floating anonymously in exchanges, are from Longfellow's translation of "Coplas de Manrique," a Spanish poem of the Fifteenth Century, and are probably the best ever written on the subject.—Ed. Rural.]

Swiftly our pleasures glide away;
Our hearts recall the distant day
With many sighs;
The moments that are speeding fast
We heed not, but the past, the past
More highly prize.

Onward its course the present keeps,
Onward the constant current sweeps,
Till life is done;
And did we judge of time aright,
The past and future in their flight,
Would be as one.

Let no one fondly dream again
That Hope and all her shadowy train
Will not decay;
Fleeting as were the dreams of old,
Remembered like a tale that's told,
They pass away.

Our lives are rivers, gliding free
To that unfathomed, boundless sea,
The silent grave;
Thither all earthly pomp and boast
Roll to be swallowed up, and lost,
In one dark wave.

Thither the mighty torrents stray,
Thither the brook pursues its way,
And tinkling rill,
There all are equal; side by side,
The poor man and the son of pride
Lie calm and still.

Behold of what delusive worth
The bubbles we pursue on earth,
The shapes we chase,
Amid a world of treachery!
They vanish ere death shuts the eye,
And leave no trace.

The cunning skill, the curious arts,
The glorious strength that youth imparts
In life's first stage;
These shall become a heavy weight,
When Time swings wide his outward gate
To weary age.

The pleasures and delights, which mask
In treacherous smiles life's serious task,
What are they all,
But the fleet coursers of the chase,
And death an ambush in the race,
Wherein we fall?

O World! so few the years we live,
Would that the life which thou dost give
Were life indeed!
Alas! thy sorrows fall so fast,
Our happiest hour is when at last
The soul is freed.

Thy pilgrimage begins in tears,
And ends in bitter doubts and fears,
Or dark despair;
Midway so many toils appear,
That he who lingers longest here
Knows most of care.

The goods are bought with many a groan,
By the hot sweat of toil alone,
And weary hearts:
Fleet-footed is the approach of woe,
But with a lingering step and slow
Its form departs.

Written for Moore's Rural New-Yorker.

THE OLD HOME.

BY L. HALSEY.

Whatever may have been the changes which have befallen him on the pathway of life, we cannot but pity the man who can approach the home of his childhood without an emotion of love. With what mingled feelings of grief and of gladness do we behold that Mecca of the heart,

"Whither our thoughts return, where'er we roam,"

the one place on earth rendered sacred by so many endearing memories. Hither we come, when our hearts are light and full of laughter, to recall the merry scenes of youth. We think of the gay gatherings, the sleigh-rides, the moonlight excursions which we then enjoyed, and of the happy faces by which we were then surrounded. Each familiar form rises before us, its features faithfully daguerreotyped upon the sensitive brain; and the friends of our younger days seem to sit once more beside us, eager to join again in scenes of merriment.

Hither, too, we come when our hearts are sad and bruised by many a sorrow, when it seems to us that the light of our life has gone out and no ray of hope pierces the clouds which lower above us. Mournful memories rise around us, not to sadden but to bring us comfort, for these memories seem filled with life and feeling, and, like fellow sufferers, to sympathise with our misfortunes.

How different the memories which the sight of that old home causes to spring up in our hearts! Here is a poor tempest-tossed wanderer, who has never known a home since his boyish feet crossed that loved threshold for the last time. His emotions are all of sadness. The joys of home are all past joys for him; and in his heart is an unsatisfied thirst, an ever-gnawing hunger after the pleasures which grow only around the altar of home. Perhaps he has lost his loved ones, and, homeless and friendless, wanders an outcast upon the face of the earth. Even the sacred sorrows of home can never be of comfort to him. He cannot say, with his heart overflowing with mournful love:—"I love this room, for here my honored father took me upon his knee and taught me to love the truth." "I'll protect that tree; for, though now decayed and barren, my father planted it, and often when a child I feasted upon the fruit fresh from its branches." "I can never enter that chamber without feeling that my heart is impressed with holy awe; for there my angel mother used to pray." Poor man! yours are the saddest memories.

Here is another, with smiling wife and merry children by his side; but can he ever forget the spot where he sported in innocent childhood? Never, if the heart of a true man beats warm within his bosom. He loves to linger where sacred memories come thick and fast around him, telling again the half-forgotten story of his happiest days. There is the house, where was once for him that "world of love at home." There his father, on his dying bed, gave him his parting blessing. There his mother knelt beside him and prayed that her son might live a good and useful man. Every object recalls the acts and thoughts and dreams of youth. There is the barn where he loved to tumble in the well-filled mow; to the left is the meadow where he often sported amid the new-mown hay; there is the majestic old maple with its wide-spreading branches, beneath whose shade he built many an air-castle whose fabric faded with his dreams.

But the most bitter memories are of life's vicissitudes, of the friends who have departed, the time which has forever passed away.

With all the mingled memories of joys and sorrows, we shall ever love to visit the sacred home of our children. Its loss would leave a void in our hearts.

"O ye who daily cross the sill,
Step lightly, for I love it still;
And when you crowd those old barn eaves,
Think then what countless harvest sheaves
Have passed within that scented door
To gladden eyes that are no more."

MEN OF GENIUS.

Tasso's conversation was neither gay nor brilliant. Dante was either taciturn or satirical. Butler was either sullen or biting. Gray seldom talked or smiled. Hogarth and Swift were absent-minded in company. Milton was very unsociable and irritable when pressed into conversation. Kirwin, though copious and eloquent in public addresses, was meager and dull in colloquial discourses. Virgil was heavy in conversation. La Fontaine appeared heavy, coarse and stupid; he could not speak and describe what he had just seen; but then he was the model of poetry. Chaucer's silence was more agreeable than his conversation. Dryden's conversation was slow and dull, his humor saturnine and reserved. Cornelius in conversation was so insipid that he never failed in wearying; he did not even speak correctly that language of which he was such a master. Ben Jonson used to sit silent in company and suck his wine. Southey was stiff, sedate, and wrapped up in asceticism. Addison was good company with his intimate friends, but in mixed company he preserved his dignity by a stiff and reserved silence. Fox in conversation never flagged, his animation and vivacity were inexhaustible. Dr. Bentley was loquacious, as was also Grotius. Goldsmith "wrote like an angel and talked like poor Poll." Burke was entertaining, enthusiastic and interesting in conversation. Curran was a convivial deity. Leigh Hunt was a pleasant stream in conversation. Carlyle doubts, objects and constantly demurs.

QUODLIBETS.

It is not the past alone that has its ghosts; each event to come has also its spectrum—its shade; when the hour arrives, life enters it, the shadow becomes corporeal and walks on the earth.—*Bulwer.*

Have the courage to "cut" the most agreeable acquaintance you have when you are convinced that he lacks principle. A friend should bear with a friend's infirmities, but not with his vices.

It won't do to be so devoted to a tender-hearted wife as to comply with her request when she asks you.—"Now tumble over the cradle, and break your neck, my dear, won't you?"

Slander is more accumulative than a snow-ball. It is like a salad, which every one will season to his own taste, or the taste of those to whom he offers it.

A sentimental young man thus feelingly expresses himself:—"Even as nature benevolently guards the rose with thorns, so does she endow women with pins."

Punch offers as a sentiment:—May the tear of sensibility be wiped by the pocket handkerchief of common sense.

True politeness is perfect ease and freedom. It simply consists in treating others as you love to be treated yourself.

Husband.—"Mary, my love, this apple dumpling is not half done." Wife.—"Well, finish it then, my dear."

Give strict attention to your own affairs—and consider your wife one of them.

Sabbath Reading.

WHAT THEN?

[Eds. Rural:—Reading the poem entitled "After," in the Rural of January 26th, brings to mind a little piece, found some years since among some old papers, which I inclose, hoping you will deem it worthy of publication.—C. E. M.]

After the joys of earth,
After its songs and mirth,
After its hours of light,
After its dreams so bright,—
What then?

Only an empty name,
Only a weary frame,
Only a conscious smart,
Only an aching heart.

After this empty name,
After this weary frame,
After this conscious smart,
After this aching heart,—
What then?

Only a sad farewell
To a world loved too well,
Only a silent bed
With the forgotten dead.

After this sad farewell
To a world loved too well,
After this silent bed
With the forgotten dead,
What then?

Mineral County, W. Va., Feb., 1867.

For Moore's Rural New-Yorker.

POPULAR IRREVERENCE.

One needs only to glance through the periodicals and papers of current times to discover that to treat sacred themes and subjects with levity, and often with sheer irreverence, is popular. Hardly can one find a sheet of public print in which will not be wounded the feelings of a true, devout, humble worshiper of God, who holds sacred and above all trifling whatever is involved in His being and service. Is not this a matter of more than mere regret? Is it not a disgrace to our boasted Christian civilization, and pregnant with foreshadowings of the ultimate visitation of the deserved punishments of offended Deity?

As a people we vaunt of Christianity. Our progress in refinement of life, and our release from degrading ignorance and superstition, we justly ascribe to the possession of the Bible, and the favor of the Infinite Creator therein revealed; yet do we, with a startling deliberation and vicious malignity, hold up to ridicule the source of our great good, and strive to pollute the fountain whence flow the blessings in which we revel. What inconsistency, and how odious this irreverence! In this, a national fault, we are all verily guilty. From high and low we hear the profane jest, the wanton use of Holy Writ for purposes of sport, and sacred names in associations of defilement. The printed sheet but panders to the vicious tastes and sinful recklessness abroad in the communities.

Where shall a reform commence? Seeing that, as a class, members of Christian churches do not condemn these practices as they ought, a dark, forbidding prospect obtrudes upon our vision. Still, we believe many need only to have their attention called to the prevalence of the evil to induce them to form alliance with its opposers. As the great, potential instrument for good or ill, the press should lend its aid in helping to undo the mischief which, with show of excuse, it has helped to accomplish. We know that those who direct the journals of the day desire the public weal, and, as a rule, would gladly contribute to the establishment and maintenance of good morals, purity of life, and reverence toward God. Do we err, then, in first of all asking that they shall carefully guard their columns from the intrusion of jests and articles which have a tendency to make common the name and attributes of Deity, the word and doctrine of Holy Scripture, and the faith and practice of the earnest Christian? Young minds, especially, feel the influence of such things, and often gain a fatal bias from a random thrust, aimed with cutting sarcasm, at objects which they erst were taught to reverence. We lay no heavier blame upon the press, for the evil mentioned, than attaches to all who claim to be our good and worthy citizens. Censure is merited by us all; but, recognizing the effect which a reform among the types would have, we bend attention thither first. B. W. S.

Watkins, Feb., 1867.

Christ Jesus was preëminently sympathetic with all around him. He touched human life at every point—lofty and lowly. He was not afraid to confront a ruler, nor ashamed to pity and heal a beggar. He did not draw back his foot when a sinful woman's warm tears trickled upon it, nor did He refuse a publican's invitation to go and be his guest. "This man *receiveth sinners*" was the sneer leveled at him by the bigoted Pharisees. It is a bastard Christianity which "snubs" honest worth in a coarse coat, or refuses to pity and shelter a harlot because she has made herself vile; or which builds a "colored pew" in a back corner of the sanctuary. The Divine Jesus was "separate from sinners" in that he possessed an unspotted holiness, an unworldly aim, and unblemished life. He was tempted, and yet without sin.

Christianity is broader than all sects; its blessed influence grows over their petty creed-hedges to renovate the outlying world, as the sunlight streams across farm inclosures and city wells, and a whole continent besides. The moral elevation of Jesus is so great that he overlooks the walls of all churches, and his benignant, spiritual features attract thousands beyond all recognized party lines. He was "the Son of man."

The Reviewer.

SPEECHES AND ADDRESSES delivered in the Congress of the United States, and on several public occasions, by HENRY WINTER DAVIS of Maryland, preceded by a Sketch of his Life, Public Services and Character, being an Oration by the Hon. J. A. J. CRESSWELL, U. S. Senator from Maryland. With Notes, Introductory and Explanatory. [8vo, pp. 596.] New York: HARPER & BROTHERS.

SPEECHES seldom read well. The orator is obliged to put each thought into an abundance of words, that the hearer may comprehend it before he passes to the next; but he who writes for print may be as concise as he pleases, and his readers may each take his own time. Thus it often happens that we wonder how celebrated orators have been so famous and powerful in their day, if all we know of them is from reading their speeches. Mr. DAVIS was a statesman of strong convictions and stood bravely by the cause of liberty and union in its darkest hours and on its most dangerous battle-ground. His speeches which are gathered into this volume exhibit wide reading, genuine scholarship and close reasoning, and are among the few that are readable. They are valuable also as historical documents. For sale by STEELE & AVERY.

"SWINGIN ROUND THE CIRKLE." By Petroleum V. Nasby, late Pastor of the Church of the New Dispensation, Chaplain to His Excellency the President and P. M. at Confederate X Roads, Kentucky. His Ideas of Men, Politics and Things, as set forth in his Letters to the public press, during the year 1866. Illustrated by Thomas Nast. [16mo.—pp. 299.] Boston: Lee & Shepard.

IT is perhaps a debatable question whether it is not carrying "our glorious freedom" a little too far to satirize so elaborately the man who, by the theory of our government, springs from the people and represents their will, and then to put the satire into permanent form for preservation. On the other hand, it may be said that no penalty is too severe to hold over the head of every man intrusted with such tremendous power as is lodged in the hands of the President of the United States. But whatever may be the diversity of opinion in this respect, few will deny that the Nasby letters, which have been copied and read from one end of the land to the other, are most admirable political satires, and exhibit a humorous faculty far beyond that of any of our *kakographists*, Artemus not excepted. Sold by FELTON BROS., Central Depot.

THE CLAVERINGS. A Novel. By ANTHONY TROLLOPE, author of "Can You Forgive Her?" "The Small House at Allington," "Orley Farm," "The Belton Estate," &c., &c. [8vo, pp. 211.) New York: HARPER & BROTHERS.

UNNATURALNESS and dullness are the Scylla and Charybdis of the novelist. Happy is he who pilots his plot safely between them. The affectation of the present run of novels is extreme simplicity; in fact, it is a little ostentatious, as when the juggler rolls up his sleeves and tips over his table, saying "you see there is no ordinary mechanical trickery, and yet I shall produce a most wonderful result." The consequence is generally more or less of dullness; and Mr. TROLLOPE'S last novel does not wholly escape it. But it is perfectly natural; and the satire, though a little fine-grained for general application, is genuine. The JULIA BRABAZONS are only too plenty; and the young gentleman who "decided to be permanently miserable" will be appreciated by every man who was ever crossed in love—and that includes all but ADAM; for which it is doubtful whether ADAM is to be congratulated or commiserated. For sale by STEELE & AVERY.

TWO MARRIAGES. By the author of "John Halifax, Gentleman," "Christian's Mistake," "A Noble Life, "A Life for a Life," "Fairy Book," &c. [12 mo.—pp. 301.] New York: Harper & Brothers.

IF a novel is to exhibit any purpose beyond that of pleasing the reader with an artistic story, it can have no nobler one than to show in their true character crimes which are intangible to the civil law and of whose enormity the blunted moral sense of the community takes no cognizance. Readers may well revolt at the introduction into fictitious literature of offences which the courts punish, and which delicacy and refinement do not like to contemplate. But when we come to it that those entering upon the most solemn of all contracts must perforce avow some other motive for it than the one which alone can sanction such a contract, then it is time the public conscience were galvanized into life again by just such stories as "John Bowerbank's Wife," the first of the two included in this last volume of Miss MULOCK'S. For sale by STEELE & AVERY.

THE VILLAGE ON THE CLIFF. A Novel. By Miss THACKERAY, author of "The Story of Elizabeth." With illustrations. [8vo.—pp. 104.] New York: Harper & Brothers.

THE great fault of this book apparently arises from the fact that the author put pen to paper too soon, before the plot was matured in her own mind. The most enthusiastic lover of music would willingly forego the preliminary scrapings that denote the tuning of the instrument. Every novel reader wants the action of the story to begin at once; and even in cases where a considerable amount of descriptive explanation is required to prepare the reader for understanding the plot, the tale always loses by it. Reflective paragraphs and bits of scenery are very well if scattered through a novel, but they should not be piled up in a great drift before the opening of the story. For sale by STEELE & AVERY, 49 State St.

OBSERVATIONS ON THE SCIENTIFIC STUDY OF HUMAN NATURE. A Lecture Delivered Before the London College of Preceptors, October 10, 1866. By EDWARD L. YOUMANS, M. D. [16mo.—pp. 41.] New York: D. Appleton & Co.

PROF. YOUMANS maintains that no study of human nature can lead to correct results so long as the body and the mind are considered as separate existences or aught but closely connected parts of one complex machine; and, true to his favorite science, he holds that the investigation must be from matter to mind. For sale by ADAMS & ELLIS.

BERLIN AND SANS-SOUCI; OR FREDERICK THE GREAT AND HIS FRIENDS. An Historical Romance. By L. MUHLBACH, author of "Joseph II and His Court," "Frederick the Great and His Court," "Merchant of Berlin," Etc., Etc. Translated from the German by Mrs. CHAPMAN COLEMAN and her daughters. [12mo, pp. 391.] New York: D. APPLETON & Co.

THIS is another of Miss MUHLBACH'S high life romances which are being translated and re-published here in rapid succession. They are written in a lively style, with the action well kept up, and will find a good many readers among admirers of what may be called the spectacular novel. For sale by ADAMS & ELLIS.

AMATEUR DRAMAS FOR PARLOR THEATRICALS, EVENING ENTERTAINMENTS AND SCHOOL EXHIBITIONS By GEORGE M. BAKER. [16mo.—pp. 252.] Boston:

THIS is just the book that is needed for a class of entertainments that are coming more into vogue than formerly, and require a well edited text-book for their perfection and success. It is very handsomely printed and illustrated. For sale by FELTON BROS.

Useful, Scientific, &c.

Written for Moore's Rural New-Yorker.

THE AMERICAN MASTODON.

BY G. K. GILBERT.

THE recent discovery of the entire skeleton of a Mastodon at Cohoes, and the general interest felt by the public in the matter, will perhaps warrant a brief description of this ancient denizen of our forests. Though he has left us only his bones for examination, it requires no especial acumen to infer his form and habits, for in all essential particulars they are the bones of an elephant, and there is such a dependence of the forms of all animals upon the forms of their skeletons that the former can always be deduced from the latter. There are as many bones in the foot of the elephant as in the feet of other animals, but they are dwarfed and crowded together, so as merely to give elasticity to the pad which terminates his leg, instead of dividing the foot into separate toes as in the dog. The same arrangement of bones in the foot of the Mastodon must have been enclosed by the same round foot. The large cavities in the front of the elephant's skull, that furnish a firm attachment for the muscles of the trunk, are equally characteristic of the Mastodon, and must have been accompanied by a similar proboscis. In fact, without this flexible nose that served for hand and drinking cup alike, he must have perished, his projecting tusks keeping him from browsing, and his short neck not enabling him to reach grass or water.

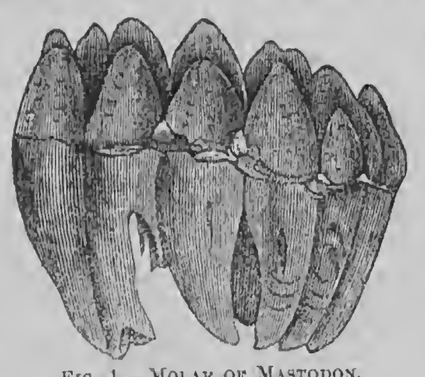

FIG. 1.—MOLAR OF MASTODON.

The vertebræ, or joints (as they are frequently, though improperly, called,) that make up the tail of the alligator are covered by rough spines to which are fastened the powerful muscles that sway it with such dangerous force. The kangaroo, who makes great use of his tail in sitting and jumping, is given strength in that organ in the same manner. And so uniform is Nature in giving strength only where it is required that, when the Megatherium, a copy of whose skeleton stands in the University of Rochester, was found to have a tail bristling with stouter spines than those of alligator or kangaroo, that member was accorded, of necessity, an active and useful part. He is believed to have reared his ponderous body upon his hind legs and tail, and pulled down with his long fore legs or arms the branches whose leaves constituted his food. The tail of the Mastodon was long and slender. Its vertebræ are small, lacking almost entirely the projecting spines; and it could have been no more than a fly-brush like that of his modern representative. Imagine the African elephant, a trifle increased in size,—not more than a foot taller,—with tusks somewhat larger in proportion, and covered with a coarse black or dun hair, and you have pictured the form of the extinct Mastodon.

But a comparison of the two proboscideans is not entirely one of resemblances, and the differences are quite striking. We will mention two of the more important. The first is in the proportional strength of the skeletons and especially of the extremities. Each leg-bone of the Mastodon is a little longer than the corresponding bone of the elephant, and is, in a greater ratio, thicker. This is but one phase of a general law in nature,—that the small are proportionally stronger than the large. The cricket leaps at one spring thirty times his own length, the rabbit only six or seven times, and the horse not twice his length, while the hippopotamus and elephant are too unwieldy to do more than walk or trot. The ant carries in his teeth loads many times heavier than his own body; the black bear is related to have borne in his mouth a carcass of about his own weight; the horse does not easily bear upon his back more than half his weight; and the Mastodon required a disproportionate strength of limb to support his own huge body merely. Thus it appears that the latter approaches the limit of size for terrestrial animals. The Megatherium, to which we have just referred, the great fossil sloth of South America, furnishes another illustration. Weighing a thousand times as much as the modern sloth, he needed (for he had) bones five times the relative strength. So it can scarcely be doubted that an animal but little larger than those we have mentioned would be unable to walk the earth.

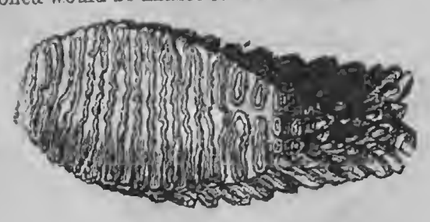

FIG. 2.—MOLAR OF ELEPHANT.

The other prominent difference between the two trunk-bearers lies in the structure of the teeth. The grinding surface of the Mastodon's molar tooth consists of a series of rounded, conical hillocks which are covered with hard enamel and of which the largest have corresponding fangs in the root (fig. 1.) The molar of the elephant is made on a quite distinct plan. It is composed of alternate layers of enamel and a softer one so placed that the edge of the pile is uppermost; and, as the softer part wears away, it leaves the enamel exposed in a series of ridges somewhat like a wash-board. Fig. 2 shows the upper or grinding surface of an elephant's tooth. Fig. 3 gives a side view of one as it is placed in the jaw, the front being turned to the right. *a* is the worn surface that meets the opposing tooth and crushes the food. *bb* are the roots, through which the life of the tooth is sustained. As the enamel is worn away the tooth at the

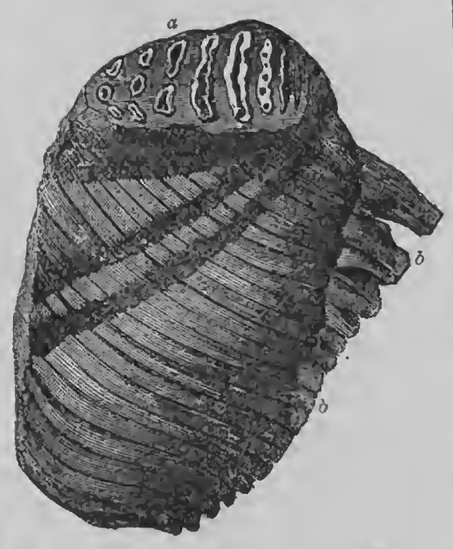

FIG. 3.—ELEPHANT'S MOLAR—SIDE VIEW.

same time advances and rises so as constantly to keep a working surface at the same place until it is all worn away. But before it is quite gone another tooth has appeared behind it in the same groove to share its work, and eventually take its place. In this manner six grinders succeed one another, so that, although in each side of each jaw he uses only one, or at most, two teeth, his full complement from first to last is twenty-four. The teeth of the Mastodon are advanced in much the same manner, except that there are always two, and sometimes three, of the six successive molars in use at once. The subject of teeth is but a dry one for the general reader, but is one of transcendent importance to the naturalist. For the Creator has adapted the teeth of all animals to their food, making them into chisels for the nut-piercing squirrel, hooks and knives for the flesh-devouring lion, shears for the grass-cropping ox, needles for the insect-catching mole and bat, and mill-stones for the twig-eating Mastodon. And from no one bone can so much be learned of the habits of an animal as from his teeth. Moreover, the hardness of teeth often preserves them from the decay which removes the rest of the skeleton, and thus their numbers have given them especial prominence among fossil remains. The tusks of the Mastodon, which are simply incisive or front teeth of unusual size and form, do not differ materially from those of the elephant. In each animal the weight of the tusks, tending to draw down the head, is sustained by a strong, elastic ligament, popularly known as whit-leather, which extends from the top of the head backwards to the spine, and so relieves the animal of the constant effort it must else exert to hold up its head. The accompanying cut (Fig. 4,) represents a tusk which was found at St. Catharines, C. W., and is preserved in the Table Rock Museum at Niagara Falls.

FIG. 4.—MASTODON'S TUSK.

CUVIER inferred from the form of his teeth that the food of the Mastodon consisted of the leaves and smaller branches of trees—an opinion that has since received very decided confirmation. In four instances the contents of stomachs have been found in connection with other remains, and in each case they were composed of broken twigs. Microscopic examination of two of these fossil dinners has assigned them to a species of evergreen resembling the spruce.

History tells us that, for every human being now living, two hundred have died; and yet the earth reveals to us the remains of these perished generations scarce oftener than those of the Mastodon, who probably became extinct before the appearance of man. The fossil, too, had a poorer chance for preservation: his "unburied remains" lay "mouldering on the plain," to be strewn by wolves and rotted by rain and sun. How many, then, must we believe, have lived and died, since we find their vestiges in nearly every State of the Union! Probably the only cases in which entire skeletons are preserved are those of accidental burial. The monster visits a pond to drink, or pluck the juicy branches that grow in marshy places, and, unwarily treading upon a quicksand, or deep, yielding mud, sinks down and is entombed entire where nothing will scatter or corrode his bones. Of the six nearly perfect skeletons that have been exhumed, one was found in Missouri, one in New Jersey, and the other four in the valley of the Hudson. The first discovered tooth, too, was found near Albany in 1705, so that New York may, perhaps, be regarded as his headquarters; but, as he ranged to Hudson's Bay, to California and to Mexico, future excavations may prove some other locality more rich in his remains.

The antiquity of the Mastodon has been the subject of considerable inquiry. The swamp in Orange county where one was mired is still a treacherous place where cattle have recently been lost. The salt licks of Kentucky, where many teeth and bones are found, were yet the resort of deer and other wild animals when they were reached by the white man. LYELL says that the cataract of Niagara has receded four miles at least since certain bones were deposited on its bank, and it now wears back only a few inches in a year. The Cohoes skeleton, naturally buried eighty-five feet under the earth, probably lay for still longer ages. It is the general belief that the race existed for a long period, disappearing (as geologists reckon time) not long ago; and the strongest evidence we have that it was not at last coeval with ours, is the negative one that no primitive arrow heads or other marks of man have been found in connection with its remains. No one can say what future researches may reveal.

We have spoken only of the North American Mastodon, technically called *Mastodon giganteus*, but in South America and in Europe, Asia and Africa similar bones have been discovered, belonging to other species. And the elephant was preceded, not only in his own tropical Africa and Asia, but in every continent and latitude from the Cape of Good Hope to Siberia, by closely related species.

Various Topics.

A PRIZE GENTLEMAN.

LEONARD W. JEROME, the New York banker, has recently given to one of our American colleges five thousand dollars, the interest of which is to be appropriated annually to the purchase of a gold medal to be voted by the graduating class to that one of their number who shall have been most worthy the name of gentleman throughout his course. The idea of offering a premium on courtesy and measuring dignity for a prize is a novel one; and the intention of the donor of this medal is unquestionably good. A little more attention to the ease and comfort of those around him, a little more care in the adjustment of his conversation, a little less of self-absorption and jesting brusqueness, would be a great improvement on Young America. If the giving of gold medals could accomplish such a result, or aid it to any extent, the money would be well bestowed. But certain facts concerning the present state of American colleges forbid the faintest hope of any such thing. In almost every one of these institutions the students are divided up into from three or four to eight or ten cliques, generally secret in their organization and proceedings. Whenever an honor is awarded by a vote of the students, the result depends entirely upon what combinations of these cliques are effected for the purpose. Suppose there to be seven of them. Represent them by the first seven letters of the alphabet. Perhaps the first four will unite in a party against the other three to carry society and class elections. This year the highest honor will go to the As—they determining in secret conclave, perhaps by lot, which member shall receive it—and the smaller honors will be distributed among the Bs, Cs and Ds. Next year the highest will go the Bs—and so on. Thus it happens that the fact of a man being elected to represent his class as orator, poet or essayist is no proof whatever that he is an orator, a poet or an essayist, or indeed that he is even a respectable scholar; it only signifies that it was "his turn." And the award of these medals for gentlemanliness, if left to a vote of the class, will be determined in precisely the same way. The possession of one of them will simply indicate that the holder happened to belong to the clique whose turn it was to have the honor in his graduating year. And perhaps his clique have fixed upon him as the recipient merely because he was defeated on the election to some other honor for which he was nominated.

PROGRESS OF THE JEWS.—The Jews are catching the spirit of reform and progress. They are building a synagogue in the fashionable part of New York, to cost $600,000. The congregation is of the reformed order—families are to sit together—the ram's horn gives place to an elegant organ. They hold that much of the law of Moses is sanitary, not moral, and not obligatory under a different clime. The hog in Palestine was diseased; if Moses could have tasted our Cincinnati ham, he would not have forbidden it. The oysters of Syria were coppery; not so the New York oysters. Had the Jews been in Russia the law against building a fire on Sunday would not have been created, as the nation would have been frozen to death!

A SIAMESE COLOSSUS.—The Bangkok Recorder describes a visit to one of the wats or Bhuddist cloisters of the city, which covers ten acres of land, contains two temples, and has an image which far exceeds the Colossus of Rhodes in size. He is reclining on the right side, with his head resting on the right hand. He is one hundred and thirty-five feet long, about twenty-eight feet around the belt, and the length of the little toe on the right foot is three feet four inches. The natives say his bowels are full of large water jars. The labor of constructing and gilding this image must have been immense, and have taken years to accomplish.

A DAUGHTER of a St. Louis chimney sweep is shortly to be married, and the father has issued no less than eight hundred cards of invitation.

Reading for the Young.

A TRAGIC STORY.

BY WILLIAM MAKEPEACE THACKERAY.

THERE lived a sage in days of yore,
And he a handsome pigtail wore;
But wondered much and sorrowed more,
Because it hung behind him.

He mused upon this curious case,
And swore he'd change the pigtail's place,
And have it hanging at his face,
Not dangling there behind him.

Says he, "The mystery I've found:
I'll turn me round." He turned him round,
But still it hung behind him.

Then round and round, and out and in,
All day the puzzled sage did spin;
In vain—it mattered not a pin—
The pigtail hung behind him.

And right and left, and round about,
And up and down and in and out,
He turned; but still the pigtail stout
Hung steadily behind him.

And though his efforts never slack,
And though he twist, and twirl, and tack,
Alas! still faithful to his back,
The pigtail hangs behind him.

[*From the German of Chamisso.*

THE PEACOCK.

THE Peacock, of which you have here a correct picture, came originally from the East Indies; and they are still sometimes seen in large flocks in the islands of Java and Ceylon. The head is adorned with a tuft of twenty-four feathers with webs only at the ends, which are of a beautiful green color mixed with gold; the head, throat, neck and breast are deep blue, glossed with green and gold; the belly is black, with a greenish hue; and the wings are reddish brown. But the noticeable thing is its train—or what at first sight you would call its tail. It rises just above the real tail (which is composed of short, stiff feathers to support the train) and consists of long feathers, the two in the middle being sometimes over four feet long, and the others a little shorter. On the end of each of these feathers is what is called an "eye;" that is, a large, round spot of varied colors. When the peacock is pleased with anything, or when in the presence of the female birds, he raises this train in the form of a fan, and shows by all his movements, the position of his head, the bend of his neck and his slow and pompous walk, that he knows how beautiful it is, and expects everybody to admire it. Hence the bird has become a symbol of pride. These feathers of his train are shed every year, and while moulting them the bird sneaks off out of sight, as if ashamed of the loss of his gorgeous plumage.

The pea hen seldom lays more than five or six eggs before sitting, in this climate; though a Greek writer, ARISTOTLE, describes her as laying twelve. The bird first gets its beautiful plumage when it is three years old, and it lives about twenty years.

In some countries the flesh of the peacock is said to have been used for food; but it is certainly not very good; and in other countries it has been cooked and preserved with spices being placed on the table with all its feathers on,—not to be eaten, but merely for show.

WELSH BOY AND HIS BIBLE.

"AS I was traveling, not long since on the mountain of Conway, there passed on the road a little boy with a big book under his arm. I asked him what book he had got, but he could not understand me. He was a little Welsh boy, and the book was a Welsh Bible. He passed on out of sight. Our party proceeded along the mountain side, and shortly after stopped to sketch. A small voice from a distance above us, caught our ear. I said to my friend, a Welsh pastor, who accompanied us, 'Climb up those rocks a little, and see who it is.' He did so. It was that little boy on the mountain top, praying to the God who made the mountain. His Bible was open before him. He read and prayed; he was asking God to bless the town of Conway, and that on the morrow (it was Saturday afternoon) many sinners might be converted, and that God would bless His servants everywhere, as they preached His word. I felt strengthened in my work the next day, and often since that, as I have thought that many such precious little ones are praying for us."—*Rev. Newman Hall.*

HE who has no opinion of his own, but depends upon the opinions and tastes of others, is a slave.

WHAT is that which goes up the hill and down the hill, and yet never moves? The road.

LOOK HERE, FRIENDS!

THERE IS YET TIME

To Form Clubs and Secure Prizes!

Read the Rural's Premium List, *(which is promptly sent free to all applicants,) and you will see it is the* **MOST LIBERAL** *ever offered by a Publisher.*

☞ For a list of Ten NEW Subscribers, at club rate, ($2.50 each,) or Seven at $3 each, you can have either a *Photograph Album* or a *Union Gold Pen*, price $5.

☞ For Fifteen NEW Subscribers, at club rate, two bound volumes of the RURAL (cash price $8,) or $7 in books from our list, published in the RURAL.

☞ For Twenty NEW Subscribers at club rate, (or ten now at $3 each,) a copy of *Webster's Illustrated Unabridged Dictionary*, lowest cash price $12.

☞ For Thirty Subscribers (20 of them being NEW,) at club rate, a heavy *Silver Plated Castor*, cash price $15; *or*, a *Field Croquet Set*, price $15—*or*, a *Library* worth $15

☞ For Forty Subscribers (30 of them being NEW,) at club rate, a *Silver Watch*—Hunting-cased, Full-jeweled and Warranted—cash price at least $25.

☞ For Fifty Subscribers (forty being NEW) at club rate, a WHEELER & WILSON SEWING MACHINE, Cash Price $55—or, the same premium for only Thirty Subscribers (20 of them being new) at $3 each!

*** (For other Premiums, larger and smaller than above, see List.)

Now's your Time to form a Club and make it Pay. We can still supply back numbers (from Jan. 5,) so that all may have the volume complete, with Title Page, Index, &c. If you want large Show-Bills, Specimen Numbers, &c., we will send them free.

☞ *Look over our Premium List, and then "pitch in" and strike us with a Club — which will secure you a Valuable Return.*

Back No's of this Vol. can still be supplied.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MARCH 2, 1867.

OUR ADVERTISING RATES.—Hereafter the price of advertising on the last page of the RURAL NEW-YORKER will be Seventy-Five Cents a Line, each insertion. The price for inside pages will continue at Fifty Cents a Line for advertising, and One Dollar a Line for Special Notices, until otherwise announced.

NEWS OF THE WEEK.

From Washington.

THE special committee appointed by the House to investigate the circumstances of the murder of three Federal soldiers in South Carolina, and the subsequent release of the murderers, have made their report. It gives a circumstantial account of the tragedy, and adds, "No special cause was assigned at the trial for this cold-blooded murder. The young men assassinated had been stationed at Anderson for two months, and the resolutions of a public meeting held at Anderson after the murder certify to their good conduct while there. Their only offense seems to have been wearing the uniform of the Republic and obeying the orders of their superior officers. Of these murderers, the Keyes family seems to have been one of the most prominent in Anderson, and Stowers was a man of sufficient consideration to have been at one time a member of the Georgia Senate."

The Reconstruction bill has passed both houses and awaits the President's signature. It is believed that he will veto it.

A special Washington dispatch to the New York Evening Post says that the Judiciary Committee is busily engaged in the examination of witnesses in the impeachment affair; but there is no possibility of a report during this session of Congress.

A little more than eighty per cent., or about nine hundred thousand dollars, of claims of the State of New York for war expenditures in 1861 and 1862 against the United States, has been allowed upon a re-examination of accounts.

Reciprocity.

THE Secretary of State has transmitted to the Senate the report of E. H. Derkley, who was specially charged with investigation, in accordance with the resolution of last July, of the practicability of establishing equal reciprocity relations between the United States and British Provinces, and also of the question of the fisheries. The report embraces a history of the fisheries, a statement of the rights of the United States in them, the decision of the British Empire sustaining our right to the Bay of Fundy and Chalteon, description of the climate and resources of the country between Canada and the Pacific ocean, the statistics of the provinces and comparison of the cost of ship building in Canada and in this country, the effects of the exclusion of lustre wool upon our manufacturers of worsteds, and the statement of the commerce of St. John in New Brunswick, and other matters connected with the relations of the two countries.

He deems the fisheries of great value to this country, providing immense edible supplies and serving as schools to rear and educate a body of hardy seamen. He states as a striking fact that Canada gives a bounty of four dollars per ton at the very moment that we discontinue the one we have paid since the commencement of the century, although her fishermen are exempted from duties and have the fisheries at their gates.

He reports that the ship yards of the provinces annually furnish 200,000 tons of shipping, and have supplied nearly one-fourth of the ships that float under the British flag. He suggests that transfers of American ships to British flags have been punished sufficiently and should no longer be excluded from our registry. He does not recommend, however, the admission of vessels to our registry and coasting trade.

It is shown that the stumpage duty paid in New Brunswick for every tree felled is replaced by an export duty of twenty cents per ton on pine timber and twenty cents per thousand on pine planks, by which a tax is levied on American timber, entitled to the free navigation of the St. John's river. This duty yielded $61,903 in 1865. It is asked, is this not an evasion of the Ashburton treaty? The merchants of the provinces, he states, find the great market for their productions not in Great Britain, but in the United States.

Mr. Derkley intimates his belief that the Provinces are ready to negotiate a new treaty on equitable terms. He proposes, as a basis for an arrangement, three schedules covering the chief productions of each country, viz: A Provincial free list, a United States free list, and a dutiable list covering farm animals, barley, peas, beans, rye, buckwheat, potatoes, fish, minerals, lumber, candles, bricks, glue, globes, wire, leather, machinery, and starch.

The Famine at the South.

THE Commission appointed to ascertain the facts in the case concerning the reported destitution and prospect of famine in the Southern States, has published an extended report, based on information by telegraph and letter from correspondents known to be reliable.

It is ascertained that in that part of our country which lies between the ridges of the mountains and the navigable waters of the larger rivers flowing through the cotton producing districts east of the Mississippi, an extraordinary drouth prevailed last summer, and that, owing to conditions resulting from the late rebellion, much less ground than usual was planted, while its tillage was extremely imperfect. In many sections but one quarter of the usual crops was harvested, and the production of food was no more than half what is required by the population. A state of famine has resulted, which must increase in severity with every day that passes until June, when green corn of the new crop may be hoped to present a means of sustenance.

Owing to similar causes, in the greater part of the seaboard country, the destitution, though less general, is also great and appalling. The planters are in many cases organizing measures to mitigate its severity, and the Freedmen's Bureau is doing much among those who are properly deemed to be, for the time being, under the special guardianship of the National Government; but there is no prospect that, with all that will be thus done, there will not remain many thousands unprovided for.

What is wanted is merely the barest means of sustenance for human beings, and the form in which this can be supplied most cheaply, and with the least liability to waste or misuse, is that of Indian corn. The Commission, therefore, propose to devote the funds with which they may be entrusted by their fellow-citizens, to the purchase, transportation, and distribution of this article. The Commission has already shipped twenty thousand bushels of corn, and the whole cost of it delivered, transportation free, at different points in the destitute region, has been, on an average, less than eighty cents a bushel. Each bushel may be expected to maintain a family in extremity for a week.

Contributions of breadstuffs, cured meats, fish or clothing will be received by the Commission and sent forward to the needy. Office Nos. 1 and 2 Adams' Express Buildings, No. 61 Broadway; depot for supplies from the East, No. 33 Water street; depot for supplies from the North and West, No. 159 Reade street.

From Canada.

OTTAWA, C. W., Feb. 19.—The reports of Dr. Hunt and Mr. Michael of the Geological Survey on the Madoc gold region, published to-day, say that gold has been found by three different associations in black carbonaceous matter, in reddish ocheroxide of iron and in crystalline orespar. The gold is of a dull reddish color. Report states that gold has been discovered in several other townships.

A special dispatch from England to the Toronto Globe announces that the name of the Confederated Provinces is to be Canada. Upper Canada is styled the "Province of Ontario," and Lower Canada is to be called "Quebec." The other provinces retain their present names. The general features of Quebec are retained. Larger grants from the Federal treasury are to be given to New Brunswick. The Crown is to have the power to enlarge the number of legislative councillors, limited in extent when necessary, to prevent a dead lock. The control of the fisheries to be transferred from the local to the general government.

From South America.

NEW YORK, Feb. 21.—Advices from Rio Janeiro state that a disturbance occurred between emigrants in Brazil from the United States, and a party of Northerners is said to have attacked and attempted to burn a saw-mill belonging to Southerners.

An uprising of 3,000 Indians is reported in Amazon; many people were killed and several of the nearest settlements destroyed.

The bombardment of Caralpaity, Patagona, by the Brazilian fleet, is confirmed.

The Patagonian works are armed with heavy cannon landed from the fleet.

Two thousand needle guns have been issued to part of the Brazilian troops, and proved very efficacious to skirmishers.

The Flood at the West.

VINCENNES, IND., Feb. 20.—The Wabash river is now at a stand. The water is higher than ever known before. It is reported that the steamers are running over the Prairies at all points on the Illinois side, picking up corn and other freight. The water is ten miles wide. The tops of the houses are barely visible. All the fences are gone. The amount of damage will be very large.

Steamboat Disaster.

THE Memphis Avalanche of the 20th inst. says: The steamboat David White, which left New Orleans on Thursday night for Louisville, with 300 passengers and 500 tons of freight for Nashville and Louisville, exploded her larboard boiler on Sunday noon near Columbia—225 miles south of this city. The forward part of the boat was literally torn to atoms and many of the passengers and crew were blown one hundred feet in the air, together with fragments of the boat. The scene is described as heartrending. The clothes were blown off some of the officers. Capt. Kinney was hurled one hundred feet into the air and landed in the river, much bruised and scalded. The clerk of the boat reports a loss of sixty-five passengers, many of whose names are unknown, as the books are lost. The boat is a complete wreck. A part of the boiler exploded upwards and a part downwards, tearing the hull wide open. The engineers and firemen on watch were blown down with the hull.

Locomotive Explosion.

AT a quarter after eight Monday morning the boiler of the Central Railroad locomotive No. 229, standing on the track below Broadway, Albany, exploded with terrific effects. The locomotive was torn to pieces and fragments went through buildings three blocks distant. About one-third of the boiler passed through the roof of John Treacy's distillery on Colloncc street. All the surrounding buildings are more or less injured—the 3d district station house being most injured No person was killed, but seven were injured.

NEWS PARAGRAPHS.

THE losses by fire in this country last year considerably exceeded $100,000,000. No wonder a good many of the insurance companies feel discouraged.

THE receipts of internal revenue in New York city for the past year amount to $25,000,000. Aggregate regular collection in four years nearly $100,000,000.

A WORKINGMEN'S Convention of 300 delegates, representing 60 unions, has been sitting in New Haven, Conn. Their deliberations are reported not very harmonious.

A CONGRESSIONAL temperance society organized recently includes about sixty members of the Senate and House of Representatives. Senator Wilson of Massachusetts, is President.

ADVICES from Panama to the 12th, state that an attempted revolution had taken place in Cayuca, in which several of the insurgents were killed, and that ended the whole affair.

IN Elgin, C. W., a few nights since, a woman heard a dog barking loudly at her door. She followed the animal for a mile through the snow and found her father in a drift dying of cold.

THE Costa Rica government has concluded to contract with John C. Fremont, James W. Nye and others for constructing a railroad from Limon Bay on the Atlantic to California on the Pacific.

THE medical students, in dissecting the corpse of a pauper at the New York Medical College, lately, found that she had died of trichinæ spiralis, the intestines being literally alive with trichinæ.

ACCOUNTS from the Isthmus say the epidemic on the transit route is disappearing, though it is reported that one hundred U. S. troops died of the disease which made its appearance in Grenada.

THE restoration of the Constitution of 1848 to Hungary by the Emperor Francis Joseph has had the effect to remove the troubles heretofore existing in that country. The people are now quiet and contented.

PLANTS of Chinese tea, grown in North Carolina, are now five feet in height and in full bloom. Five pounds of "Bohea," made in 1865 from the leaves, were considered equal to the best imported from the East.

THE Nebraska Legislature has ratified the conditions imposed by Congress for the admission of that territory as a State. The vote in the House stood 20 yeas to 6 nays, and in the Senate it was unanimous.

BEVERIDGE, who brutally assaulted Mr. Painter, correspondent of the Philadelphia Inquirer, in the Capitol last winter, has been sentenced to pay a fine of $150. Beveridge pleaded guilty and asked the court to be lenient in the infliction of the penalty.

THE lake tunnel at Chicago is now completed, the chambers having been walled up and the whole bore lined and cemented. In a few days the link connecting a temporary well with the tunnel proper will be finished, and Chicago will be furnished with pure water.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Feb 26, 1867.

REGULAR customers at the banks, of approved soundness, obtain such accommodation as the necessities of their business require. The disposition is still to contract rather than extend the line of discounts.

Money is a little easier at Cincinnati and Chicago. The Cincinnati Gazette of Friday says:—"The future is regarded with more confidence." There is an increased demand for money in Boston, and the banks are able to respond only in part to the calls of their customers. In New York the market is fairly easy.

The Senate loan bill was passed by the House of Representatives last Thursday, with an amendment substituting legal tenders for 3 per cent. certificates—the greenbacks to be used in the redemption of compound interest notes to the extent of $100,000,000. It is a matter of doubt whether the amendment will pass the Senate, as that body seems to be strongly in favor of the 3 per cent. certificates. The National Bank interest favors the interest-bearing certificates, and so does the Secretary of the Treasury, but there is strong opposition from other quarters.

The bill to abolish the usury laws in Massachusetts has passed both Houses of the Legislature. The law is to take effect on the 1st of July next. After that time parties can make such agreements in regard to interest as they choose, by putting the contract in writing. If not specified by written contract, no greater rate than 6 per cent. can be collected.

The first series of 7-30s mature in August next. The second and third issues will not mature until June and July, 1868. The first series are being converted into 5-20s of 1865, and the others probably soon will be. These consolidated 5-20s bear interest at the rate of 6 per cent. per annum, which, with gold at 135, is equal to 5 1-10 per cent. in lawful money, while the currency rate of interest on the seven-thirty notes is 7 3-10 per cent. per annum. With gold at or near the present price the five-twenties are much the best investment.

United States stocks were very strong last week, and prices advanced. There was also a decided advance in the European markets. In London 5-20s sold at 74; in Paris at 92¾, and at Frankfort at 77¾. There was a slight decline in prices at the close of the week, but the demand was large. The advance abroad caused an active inquiry in New York for shipment, and for that purpose as high as 112 was paid for bonds of 1862, and 109¾ for those of 1865. At these prices the supply was limited. It was predicted a month or six weeks since that the discussion of certain subjects in Congress would certainly cause a precipitate and large decline in our securities abroad, and consequently they would be sent home in such amounts as to completely flood our own market, and would go begging here. Instead of these predictions being realized, our bonds have scarcely been in greater demand at any time abroad than at present. Something like six hundred millions of American securities are now owned in Europe—and more are wanted.

We have inquiries occasionally as to the meaning of the terms 5-20s, 7-40s, &c., and for the information of those who may not understand the terms we give an explanation:

The 5-20s are bonds bearing interest at 6 per cent. in gold, payable in not less than 5 or more than 20 years from date. The name is given from the time of payment—not from the rate of interest.

The 10-40 bonds draw 5 per cent. interest payable in gold, and are payable in not less than 10 or more than 40 years from date.

The 7-30 bonds are payable in three years from date; they are so called from their bearing interest at 7 30-100 per cent., (7 3-10) in currency.

U. S. 5s of '71 and '74, are bonds payable respectively in 1871 and 1874, bearing interest at 5 per cent. in gold.

U. S. 6s of '67, '68 and '81, are bonds payable in 1867, 1868 and 1881, interest at 6 per cent. in gold.

The 6s of '87 were sold in New York last week at 134; 6s of '68 at 131; 6s of '81 at 110.

The entire amount of bullion extracted from the mines of Nevada since the discovery of silver there is estimated at $85,000,000.

In 1856 Borax was discovered in California. Now about two tons of crude crystal are produced daily.

The discovery of quicksilver in California was very important, as there are very few mines in the world. The New Almaden mines are the principal ones in the Pacific State. The gross product of these mines in 1866 was 30,029 flasks. The other mines in California produced in the year about 12,000 flasks, of 76 lbs. each. During the year over 17,000 flasks were exported to China, and 10,400 to Great Britain.

Hon. Samuel B. Ruggles, one of the Commissioners of the United States for the Paris Exposition, has recently addressed a letter to the Secretary of the Interior, showing the importance of the "Universal Exposition." Its financial bearing upon this country he thinks will be immensely important. He says:

Must not such an exhibition, made palpable to the vision of assembled Europe, inevitably enhance the market value of the bonds which we must shortly negotiate to meet or lessen our national indebtedness? With the inventory of our assets thus unrolled, will London, or Paris, or Amsterdam, or Frankfort hesitate to trust us? Will not the sagacious capitalists of the older world so worn by age, prefer to lend their money to a nation of the newer world, so young, so vigorous, so rapidly growing?

WOOL.—The eastern market is quiet. At Boston the sales foot up 675,000 lbs., at a range of 65 to 70c. for fleece and 35 to 68c. for various grades of pulled. Manufacturers do not seem disposed to work much ahead of the demand for their products. They purchase wool, therefore, in small lots.

SORGHUM.—A State Sorgo Convention was recently held in Ohio, at which were presented many samples of syrup and sugar of the best quality. Great improvements in refining and crystallizing have been made the last year. Mr. Clough, editor of the Sorgo Journal, has made some discoveries which are said to be of very great importance and "render the success of sorgo culture complete."

Y., 3 miles south of Pittsford village, consisting of 100 acres in a high state cultivation. A superior farm in every respect. For further particulars inquire on the premises or of J. W. ARMSTRONG, 71 Court St., Rochester. J. W. ARMSTRONG, Executor. Mrs. ANN ARMSTRONG, Executrix.

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
